Little Jean Labelle had no mother; she had died eight years before, when he was a baby. Neither did Jean have any playmates—that is, boy playmates—for there was not another boy within thirty miles.

Jean's father was a French-Indian trapper and hunter, and the school that Jean went to was the school of the woods.

This summer he and his father had come up Two-Falls Brook and were building a house of spruce logs. At least Jean's father was building it.

One day, when a cool summer breeze was tossing the poplar leaves, Jean was playing in the brook. By building a little dam of sand and stones he had made a tiny pond in which there were three shining, speckled trouties. Up in the clearing Jean's father was putting the last log on the front of the cabin. The three small fish in the pond amused Jean; he lay flat on the sand beside the water with his face close to the surface and watched them.

He was about to search for a fat worm with which to tempt his little captives, when he heard a sound at the cabin that caused him to rise on his hands and knees. His father was not in sight. There had been a loud thump on the ground, and then silence. On his hands and knees Jean waited to hear the sound of his father's axe, but he heard only the ripple of the brook and the hum of a busy bumblebee.

After a moment Jean scrambled up the bank and ran to the cabin. A sight that filled him with fright and dismay met his eyes. There on the ground lay his father, white-faced and silent. On his head was an ugly wound, and near by lay the spruce log. Jean saw at once what had happened. In putting that heavy timber into place, his father had slipped; the log had come down and struck him a glancing blow on the head.

"Father! Father!" cried Jean.

But there was no answer; and suddenly the great woods seemed more silent and lonely than ever before. Again and again Jean tried to rouse his father; he even put his lips close to his father's ear and whispered, "Please wake up; I'm going to cry; please open your eyes."

It was all in vain. Jean sat down and cried, and let the tears drip on his brown shirt. But presently he wiped away the tears with his bare hands and tried to think of something useful to do.

He was unable to rouse his father; he needed help, but where in all that great woods could he find it? Lonely lakes, stretches of dark forest, hills and swamps and streams surrounded him. Could he find anywhere in all that wide and silent land the help that he needed? He thought of the little trail that wound in and out through the trees for thirty miles before it came to the settlement at Bear Lake, and suddenly he made up his mind that he would go down that long path and get help.

He turned and, with heart beating fast and a big lump sticking in his throat, trotted away from the cabin.

For a long time Jean ran down the path. He did not know how far away Bear Lake really was; he did not remember that many trails branched off from the little path that he was following and that he could not hope to find the settlement. On and on he trotted into the forest. Once a partridge whirred up from his very feet, and once a fox ran across his path.

By and by Jean came to a stream that rushed and roared over rocks and boulders. The path followed the bank. He did not remember that he had ever seen it before.

Suddenly he stopped and stared across the stream. There on the rocks of the farther side were two figures—a dog and a man with a fishing rod. Jean shouted, but the roar of the water drowned his voice. The man did not hear. The dog, however, suddenly saw him and barked, and then the man looked across the stream and saw Jean! The little boy shouted again and waved his arms, and the fisherman shouted back, but they could not hear each other; and so the fisherman began to look for a place where he could cross the stream.

By jumping from rock to rock, while the dog jumped and swam behind him, the man succeeded in crossing the stream. Jean met him at the bank and tried to explain that his father was hurt back there at the cabin in the woods; but he talked such a queer mixture of French and Indian and English that the fisherman could not understand what he said. It was plain to see, however, that something pretty bad had happened somewhere, and when, Jean beckoned and started back toward the cabin the fisherman followed, with the dog at his heels.

Straight back to the cabin Jean led them, and there they found Jean's father still lying on the ground motionless and white-faced. The fisherman seemed to know just what to do; he got water from the brook, sprinkled the injured man's face and got him into a comfortable position. After a little while Jean's father opened his eyes and tried to sit up, but sank back and put his hand to his head. Soon, however, he was feeling better, and after a while the fisherman made a bed for him and bound up his head with clean handkerchiefs.

That evening Jean's father fell asleep while Jean and the fisherman were cooking the trout. The little half-breed and his big new friend slept side by side that night with the dog at their feet. The dog's name was Prince.

In the morning, much to the surprise of Jean and the fisherman, Jean's father was the first one up. His head was sore, he said, but otherwise he was as well as ever. He was very thankful to the stranger and very proud of Jean for bringing him.

When the sun was high, the fisherman helped Jean's father put the last log on the cabin; then he and Prince said good-by and went back to the stream. Jean stood in the path and never stopped waving his hand until they were out of sight, and the last thing that he saw was Prince wagging his tail.

ORIGIN OF MILITARY TITLES

REACHES FAR INTO THE DIM AND DISTANT PAST.

Many Army and Navy Titles Have Come by Slow Evolution From the Latin.

The titles of rank and command in most armies and navies either have been slowly evolved by service usage, or else when the rank was created the word sprang full armed from the brow of some monarch or statesman who was better in his own line than in etymology. Not much system runs through these titles. Their resignations of grades have small connection with the original meanings of their parent words.

Marechal, which is marshal, is the highest rank in the French army. Field marshal in the English and German armies corresponds, but with regional limitations; there may be more than one at the same time. The Spanish or Portugese is marisal, the Italian mariscalo, though the army of neither country has the rank.

All these words are derived from the Anglo-Saxon marah, a horse, and scalh, a servent, which is Anglo-Saxon or Gothic. That is, a marshal was once a horse boy.

General, the noun, and the adjective general, the antonym of particular, go back to the Latin generalis, meaning belonging to a race or kind, and itself tracing to genus gener, from gignere, to beget. Generalis in Caesar's and Pompey's day had nothing to do with the army; the Roman general was an imperator. The title general primarily means an officer holding a general command.

'Colonel' Is a Column Leader.

The Spanish for colonel is coronel, the Italian colonello. The Spaniards originated the word 400 years ago and seem to have made it by combining the sense of the Latin columna, a column, with that of corona, a crown. We follow the French spelling, but in pronouncing we retain the Spanish R, hence "kernal," as we say it. Literally it means the leader of a column or of the company at the head of the regiment in column.

Major, like mayor, is from the Latin word major, greater, the comparative of magnus, great. The French for the same adjective is majeur, the Italian maggiore; mayor, by the way, is the Spanish form. A major is "greater" than a captain, but less than a lieutenant-colonel. He is the lowest field officer.

Captain through the mediaeval Latin word capitanus, meaning pretty much the same thing, goes back to the Latin caput, capitis, which means head. In other words, the head man. Hetman has a similar derivation.

Meaning of Lieutenant.

Lieutenant is spelled alike in English and French. The Englishman pronounces it "leftenant." The Italian word is locotenente, and there you have a glimpse of the derivation from the Latin locum tenens, holding or acting in the place, presumably of some one else. The short of this long is that a lieutenant originally was the deputy or representative of his superior officer.

Combinations of the word, such as lieutenant-colonel, mean an officer subordinate and assistant to the rank to which lieutenant is prefixed. In European armies, by the way, the lieutenant-colonel is often the real commander of a regiment, its colonel being some royalty whose duties end with having himself photographed in the uniform. The Kaiser's daughter, Princess Viktoria Luise, is colonel of a crack regiment of cavalry.

Sergeant, the French for which is sergent, the Italian sergente, comes from the mediaeval Latin word servians, meaning a servant, a vassal, or a vassal soldier who seems to have acted as an orderly or striker. Tell this to your sergeant some warm day when he criticises your appearance on parade in his coarse, unfeeling manner. It will soften him. It may even melt him.

Corporal is derived from the same Latin word as captain, but with an admixture of the meaning and spelling of the English word corps. Caporali, in mediaeval Latin meant a chief or commander; hence the French caporal.

Origin of "Brigadier."

Brigadier is of course from common stock with brigade and means a brigade's commanding officer. The source of brigade is the mediaeval Latin noun brigata, from the Latin verb brigare, to contend. Brigand is an offshoot. Do not remind your brigadier of this; it would be unkind, also untrue. (Should you run across the German equivalent of a brigadier go as far as you like.) The Italian word is brigadiere and for brigade, brigata. A brigade is a party or division of several regiments, squadrons or battalions.

Adjutant is derived fairly straight from the Latin verb adjutare, to aid, and its primary meaning denotes a regimental staff officer who assists the colonel in the discharge of details.

Quartermaster has a bad heritage. It has been borrowed from the German quartiermeister. The Swedish form is qvartermastare.

Provost (French prevot, Italian prevosto) hails from the Latin praepositus, a president or chief, and signifies one who is appointed to superintend or preside, specifically the head of the army police or other disciplinary forces.

"Admiral" From Arabic, Not Latin.

There is a popular misconception of the source of the word admiral. Many people think it comes from the Latin adjective admirabilis—wonderful, amazing—as "admirable" does. The fact is that the source is the Arabic word amir or emir, meaning ruler, commander, with the Arabic article al, which usually has the force of "of." Amir-al-umara, is perfectly good Arabic for "ruler of rulers."

Pathetic picture of a Frenchwoman harvesting grain in the region of the Somme. She has no housework to do because her home has been reduced to a heap of stones by the Germans. Her baby is playing placidly beside her.

The Spanish word is almirante, the Italian ammiraglio.

The prefix vice to the word admiral originally meant much what it does when prefixed to president. Rear admiral, the grade next lower, appears to have been a pure invention, as a name. Rear is the English adjective, the antonym of front or van.

Commodore and commander are forms borrowed and corrupted from the Spanish comendador, a knight, a commander, or the superior of a monastery. The French have the word commandeur, the Italian comandatore. Commandant, however, meaning the officer of a fortified town's garrison, &c., comes from the mediaeval Latin commandator, a commander, and commandare, to command.

Ensign goes back to the Latin insigne, a standard, by way of insignia, meaning distinguished or remarkable. A rank of ensign existed in the British army till 1871, when its title was changed to second lieutenant.

To Mill Mixed Grains

In order to save for human consumption the large amount of wheat and barley which have been grown this year in many parts of Ontario, and thus to relieve the demand on wheat, mills are being prepared, under the direction of the Canada Food Board, for milling such mixed grains. Fall wheat was partly winter-killed in certain districts in Ontario, and it was necessary to re-seed the land with barley. As a result, many farmers will have mixed barley and wheat, which cannot easily be separated commercially except at undue cost. It is the intention of the Canada Food Board to standardize the flour manufactured from these mixed grains, and to give it official recognition as a substitute for wheat flour. The aggregate production of these mixed grains is estimated at about 1,000,000 bus.

Keeping a man's nose to the grindstone doesn't sharpen his wits.

Blackleg, a disease attacking potatoes, and which is quite new in those parts, is reported in a few fields in Saskatchewan this summer.

British Columbia fruit growers have been warned of the danger of an invasion of locusts from the State of Washington.

THE WEEKLY SERMON

And he answered, Fear not: for they that be with us are more than they that be with them.—II. Kings, vi., 16.

The prophet's servant could not figure it out. It seemed to him that he and his Master were in a hopeless minority. But when he got his eyes opened wide enough to see the unseen and discover the invisible host fear faded out and a great confidence possessed him.

In this world war we are prone to think only of the armies we can count; and he is a fool who would discredit them. We must continue to speed up every effort to match force with force. It is marvellous what has already been accomplished. France's slogan in this war is:—"They shall not pass"; Britain's "They cannot win"; and America's, "Never again!" The Hun shall never again threaten civilization. That is what Canada too is saying in every powder plant and shell factory and munition works. It is the cry ringing on our anvils, pounding in our shipyards, purring in our victory motors, echoing in our army camps and roaring on our battlefront. Never again!

There must be no let-up in our efforts to rush every atom of force we can muster into this great conflict.

But we must not forget that we have more than force. Time is fighting on our side. Every day that snips by shoots back, "Victory!" as its face fades out of sight.

Forces Aiding Us

Nature is with us. There never was a time when we needed to grow such crops, for we must feed all who fight for freedom, and the fields are loyal. Nature seems to be saying to the flag:—"I am with you in this war!" The soil from whose fertile lap the crops spring, the rains from heaven and the sunshine, the golden harvest fields and the green rows of corn are all shouting to their allies in France:—"Fear not; you shall have bread enough and to spare!"

Providence seems to be on our side, too. Was it accidental that the Piave, like ancient Jordan, reached flood at the psychological moment? This is no reflection on the splendid fighting of the Italian army, but as the swollen torrents of that patriotic river came pouring down into the Venetian plain the river seemed to be saying to its people:—"Let me get into this battle, too, and have a hand in driving the insolent foe from the fertile valleys whose thirst I have watered since first God made the world."

These are Our Unseen Allies

The righteousness of our cause is fighting for us. "Thrice is he armed that hath his quarrel just." When we think of the torpedo that sunk a mercy ship our souls are fired with a rage that makes the arm strong and the sight clear and every shot straight.

The idealism of our Canadian soldiers is a part of our invisible reserves. They are baptized with fire from on high. The size of a soldier is not the size of his gun but of his soul. We have sent and are sending big men to France.

There is something back here at home that is fighting on that far off battle line. To a question as to why our men are such fighters a general said:—"It is the tradition of the Canadian mother." All of reverence and honor and love of fair play, of respect for women and regard for the sanctities of life drives as the khaki gets into action.

The unity of great hearts is in our ranks. Hate is a poor binder. It is love that binds the Allies. I must believe that God Himself is still in action for all whose cause is righteous and that He not only fights for but with His people.

These are some of our unseen allies. Therefore, "Fear not; for they that be with us are more than they that be with them." The Kaiser can never whip armies thus reinforced. He could easier halt the tides or drag the stars from their sockets.—Rev. James I. Vance.

ADVANTAGE OF GOOD ROADS

Add to Value of Farm Land and Improve Social Conditions

In the state of Indiana, the average selling price of land has been increased about $6.48 per acre by improved roads. The Indiana farmers estimate that improvement of all roads would increase average land values $9 per acre. They estimate also, the average annual loss due to poor roads at 76 cents per acre, which capitalized at 6 per cent, represents a depreciation of $12.67 per acre. Another enquiry, carried on by the Office of Road Inquiry at Washington, shows that the increase in land values due to good roads ranges from $5 to $20 per acre. Nothing can show better than these figures how valuable an asset good roads are.

One of the first things the prospective purchaser of a farm wants to know about a district is the distance from the railway station and the character of the road from the station to the farm. Some branches of agriculture are much more dependent upon good highways than others. The man who is engaged exclusively in the raising of cattle which can be driven for long distances to a shipping station, is, in a measure, independent of the condition of the roads. The grower of corn and any other crops which can be stored for a time without deterioration, can manage to get along, even though the road to his shipping point be impassable at times. He is greatly hampered, however, by the necessity of doing his hauling in good weather regardless of market conditions and of whether or not his farm operations are seriously retarded by the absence of himself and his team. For the dairy farmer, the fruit and vegetable grower, and for the producer of perishable commodities of all kinds, ability to get his products to market at all seasons of the year and in all kinds of weather is undoubtedly indispensable to success. For all kinds of general farming, therefore, a good country highway is essential to the most profitable operation of the farm and to any considerable development of agriculture at a distance from a market town or shipping station. Other advantages it confers are better school facilities for the children, better rural free delivery service, greater attractions for pleasure seekers and touring clubs, better attendance at country churches and an improved social life on the farm and in the villages.

Primarily, the benefits of good highways go to the farmer, but they directly they go to the merchants and manufacturers by giving them wider markets for their goods and by decreasing the cost of distribution. In road improvement lies one of the greater attractions for pleasure seek-advancement, and Farmers Associations, Good Roads Committees, Automobile Associations and others can do much to further this work.

THE VALUE OF WHEAT

What Russia's Defalcation Means to a Hungry World.

The vegetable kingdom has the greatest bounty of all to offer to mankind. Although "man shall not live by bread alone," it is an undoubted fact that western civilization would find it difficult to get along without wheat and its products.

The world's total production of wheat approximates 4,000,000,000 bushels a year. It would take 4,000,000 of the largest freight cars, making a train reaching more than one and a half times around the earth, to move this great annual yield. Moving at twenty miles an hour, this train would take thirty days to pass a given point.

Take Russia, for instance. She has 288,000,000 acres of excellent wheat land. She was the greatest exporter of grain in the world before the war. It is to a great extent because of her defalcation that wheat is so scarce today. It is estimated that only one-third of her crops have been put in this year, while hunger grows space among her people.

WHY SUGAR IS SCARCE

French Refineries Were Destroyed by Retreating Germans.

Here is one of the many reasons why sugar is scarce to-day—and especially in Europe.

Sugar production in France has fallen to less than 25 per cent. of the pre-war output because in the early days of the war. When the German troops were retreating from occupied portions of France, they took pains to destroy virtually all of the sugar mills that would have assisted the French to maintain their sugar stocks.

During the year 1912-13, 213 French mills turned out 967,440 short tons of sugar. For 1916-17, 65 mills produced only 204,405 short tons. To further complicate the French sugar situation the yield per acre of sugar beets decreased from 13.20 short tons per acre in 1912-13 to 11.70 short tons per acre in 1916-17.

If it had not been for the assistance given by the North American continent the majority of the French people would be going entirely without sugar at the present time.

The Curate—"Have you heard that Fred Sandy has got the C.C.?" Village—"Oh, lawks! I 'ope it ain't catching. My Bert's in the same regiment."

SUPERB VALOR OF THE CANADIANS

MANITOBA OFFICER SET AN INSPIRING EXAMPLE.

Notable Achievements of the Various Canadian Battalions Will Go Down to History.

Numerous stories are coming to hand of individual gallantry and initiative in the field during the recent fighting east of Amiens. A Manitoba battalion was held up in the attack on Fonquescourt, which lies within the old Somme defences, and was very strongly held by an elaborate trench system of machine guns and wire. Realizing, however, that the capture of the stronghold was essential to success of the entire operations, the commanding officer collected all the men available and personally led a dashing assault into the heart of the enemy position. A tank coming up, he led this through the streets, and his example so inspired all ranks that their advance was irresistible, and after the village had been mopped up the battalion consolidated a position to the east and held it against all counter-attacks for two days.

Central Ontario Distinguishes Itself.

A Central Ontario Battalion did equally good work in front of Beaucourt on August 8. The cavalry had been held up here, by converging machine gun fire from the south of the Roye road and the woods to the north and east. The battalion was similarly held up, but its commanding officer realized that the key to the position was a small wood to the north-east, which was alive with machine guns. Taking advantage of the smoke screen afforded by a burning tank, he led in a hastily-collected party and rushed the wood, capturing sixteen machine guns. The battalion then took the town with a dash, the enemy retiring routed.

Very brilliant work was done by the scouting officer of a British Columbia regiment throughout the operations of August 9 to 10. On one occasion he single-handed rushed an enemy machine gun which was holding up the advance. He shot two of the crew and took the other two prisoners, but received a severe wound himself.

These cases of single-handed attacks on machine gun positions are by no means rare. The corporal of a Western Ontario battalion on August 9 worked his way up a disused trench to an enemy machine gun post, which he bombed, killing two and taking four of the crew prisoners. He then turned the gun on the retreating enemy.

Devotion and Courage.

Throughout the battle signallers did splendid work by pushing ahead their lines of communication and maintaining constant touch with headquarters, enabling the latter to make the disposition necessary to success, and so rapid was the advance of the Canadian forces in its early stages that this task was very perilous. A private of an Alberta battalion is a typical case. This signaller was one of a party responsible for the maintenance of the brigade signal communication, and was continually in the front line, working under heavy shell and machine gun fire. His devotion and courage were an inspiration to the rest of the party.

Very valuable work was done by regimental intelligence officers. Such was an officer of a Quebec battalion who established his observation post with the forward companies and thence directed his snipers where they were able to inflict very heavy casualties on the enemy and put several machine guns out of action.

Deeds of Nova Scotians.

Men of the Canadian Royal Engineers worked continuously throughout the whole battle, repairing broken wires under heavy fire. One of the most notable exploits of the battle was the establishment by the observation officer of a Maritime battalion of his post in a house at Quesnel. While the enemy still held the village, he was able to direct a devastating fire upon them, contributing materially to their defeat.

Some wonderful deeds are related of a Nova Scotia battalion which was set one of the hardest tasks of the battle. In front of Rosieres, on our left flank, there was a perfect labyrinth of machine gun nests, making the advance of the infantry very difficult. During and initiative, however, on the part of company commanders and all ranks cleared the way steadily and with a minimum loss until this very strong point was captured.

Our War Aims.

Great Britain went to war with a heavy heart but with a high conscience—in defence of those international engagements on which the civilization and the peace of the world depend and because of the violation of a treaty to which we had been a party equally with Prussia—a treaty which the German Chancellor admitted it was a crime to break and for his crime offered the slave's excuse of necessity. All this is clear. Let us not forget it. Let not the excitement and the horrors which have happened since, and must happen still, deafen our ears and hearts to these fundamental reasons for our engagement in this war. No mourning for sacrifices, however costly, must mar the the original conscience of our war.

For Sale by all Dealers

WOULD MOUNT GUNS ON FROZEN CLOUDS

THAT IS ONE OF COUNTLESS "FREAK IDEAS."

British Ministry of Munitions Receives Many Such Novel Plans For Winning War.

The inventions department of the Ministry of Munitions receives almost every day ideas of the most novel kind. All are carefully considered. Some are useful, but almost nine-tenths are wholly impracticable. In an article on the subject, published in the current number of the Ministry of Munitions Journal, it is said that the following extraordinary suggestions for dealing with hostile aircraft have been received.

The clouds are to be frozen artificially and guns mounted on them; heavy guns are to be suspended from captive balloons; the moon is to be covered with a big black balloon; airplanes are to be armed with scissors or scythes, like Boadicea's chariot, or to trail bombs behind them on a long cord; heat rays are to be projected for the purpose of setting Zeppelins afire; electric waves to paralyze the magnetos. One of the most popular suggestions of all is to attach a searchlight to an anti-aircraft gun, get the light on the object, and shoot along the beam; but, unfortunately, the path of a shell is quite different from that of a ray of light. Most elaborate "decoy" schemes are sometimes worked out for the confusion of the enemy, comprising in at least one case sham factories with chimneys and hooters complete. To prevent the polished lines of a railway showing at night, the last carriage of the last train, according to another correspondent, was to camouflage them by daubing blacking as it went along.

Other proposals were:

A balloon carrying magnets hung on strings to attract the rifles out of men's hands.

A shell to contain fleas or other vermin inoculated with disease.

A shell with a man inside it to steer it at the target.

The squirting of cement over soldiers so as to petrify them.

The sending of snakes into enemy trenches by pneumatic propulsion.

The throwing of live-wire cables carrying a high voltage among the advancing infantry by means of rockets.

Germany should be attacked in one case by making a "tube" all the way, and in another by employing trained cormorants to fly to Essen and pick out the mortar from Krupp's chimneys.

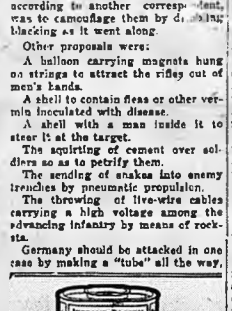
An Offensive Lawnmower.

One correspondent sent quite a number of original methods of repelling attacks, including large calipher-shaped devices which could be closed on any one intruding between the legs; a series of nets spread in front of our lines which could be drawn so as to enmesh the Germans, and a machine of the nature of a lawnmower as large as a tank to make mincemeat of them.

The purpose of the article in the Journal is to warn inventors of this sort, and frequently they are genially argued with.

One gentleman had a powder, the composition of which he declined to disclose, which on being mixed with water turned it into motor spirit. At least, so he said. Another proposed base was the grease skimmed off soup. Various constituents which have been proposed on account of their cheapness would no doubt be more or less efficient, but the enthusiastic promoters overlook the fact that if they once came into use to any extent the advantages would disappear as the price would at once soar upward.

Black Beam to Obscure the Moon.



In the process of argument some interesting scientific information is given, as for instance:

Suggestions are also frequently received in connection with colored searchlights. But color cannot be imparted to a beam, as by passing it through a color screen, without reducing its intrinsic brilliancy. Color is, in fact, obtained by a process of subtraction from the total light. At great distances all the brilliancy possible is required for effectiveness, so that colored beams are of no value for general purposes. Flame are lamps for searchlights give colored light, generally slightly yellow, but this source of light is too large for the efficient optical projection of a parallel beam, and a parallel beam, or one nearly approaching parallelism, is essential in order to reach the great distances involved. The most remarkable proposition of all in connection with searchlights is perhaps that of a "black beam," whatever that may mean, for obscuring the moon!

Another favorite subject with inventors is the "relay shell"—a shell acting as a small gun discharged in midair and expelling a smaller inner shell, the object being to obtain an increased range, which has been supposed by some to be the principle of the long-range gun with which the Germans have bombarded Paris. As to that the article says:

The objections to this idea are twofold. First, it appears from elementary dynamical considerations that the energy of the relay propellant charge would be shared between the outer and inner shells in the inverse ratio of their masses, so that unless the inner shell were unduly small, a very large proportion of the propellant charge would be wasted. Secondly, a shell in flight does not point directly along its trajector, but makes an uncertain angle with it, especially near the highest point, where the inner shell would be discharged, so that accuracy of aim would be impossible. Generally speaking, it may be said that any scheme which seriously reduces the bursting charge of a shell must offer some very remarkable advantages, before it can be considered promising.

Many of the inventors are absolutely impervious to argument or explanation, and are always dissatisfied with the treatment they receive. In this respect they contrast unfavorably with a foreigner who submitted an engine which would not work, and who wound up the correspondence with thanks and the admission that he was "completely cured" of his idea.

POSTUM

is a real factor in the present public service program.

There's No Waste, it Saves Fuel and Sugar, and it is always ready.

Not least, it is Delicious, Healthful, and it Satisfies.

INSTANT POSTUM

WHAT CANADA HAS DONE

To Help Feed the Armies and Civilians of Our Allies

Baron Rhondda's last message to Canada before his death: "Dominion Day is a fitting occasion to express, on behalf of all those responsible for food administration in the United Kingdom, gratitude to Canadian men, women and youths for the way in which they have decreased their consumption of essential foods and increased production."

Net exports from Canada of beef have been increased by nearly 15,000,000 lbs. per annum, an increase of 6,795 per cent. over the average net exports for 1910-1914.

Net exports of pork have been increased by 125,000,000 lbs. per annum, an increase of 571 per cent over a five year pre-war average.

Before the war, Canada was importing butter at the rate of 7,000,000 lbs. annually. This country is now producing enough butter to meet domestic requirements and, in addition, is exporting at the net rate of more than 4,000,000 lbs. per annum.

It is estimated that Canada exported at least 25 to 30 per cent. more wheat during the last twelve months than could have been exported, had it not been for the efforts for conservation and organization of this country's resources.

By standardization of flour and lengthening of the extraction in milling, a saving of 20,000 barrels of flour per month is being effected.

Conservation measures and voluntary saving in the homes have reduced Canadian consumption of flour from 600,000 to 660,000 barrels per month, as compared with pre-war consumption. This means a saving at the rate of 2,400,000 barrels per year, or counting the saving by lengthened extraction of milling, of 2,640,000 barrels per year. This is equivalent to saving of nearly 12,000,000 bushels of wheat.

Conservation efforts in Canada are releasing meat enough to provide the ration for what is estimated, at least 500,000 soldiers.

Canada is now saving sugar at the rate of more than 100,000 tons annually, as compared with consumption a year ago. Very large quantities of edible fats are also being released, out of normal consumption, for export.

Nearly 800 cars of foodstuffs have been saved from total or partial loss through spoiling.

An amazing reduction in waste is shown by reports to the Canada Food Board from municipal officials in all parts of the Dominion.

Profiteering has been greatly diminished and excessive profit-taking is being stopped. For example, flour sold at $14.50 per barrel in the spring of 1915, whereas the farmer had received only $6.03 for the wheat used therein. In the spring of 1918 the price of flour had been kept down to $11 per barrel, while the farmer had received $8.32 for the wheat used therein.

PAIN? NOT A BIT! LIFT YOUR CORNS OR CALLUSES OFF

No humbug! Apply few drops then just lift them away with fingers.

This new drug is an other compound discovered by a Cincinnati chemist. It is called freezone, and can now be obtained in tiny bottles as here shown at very little cost from any drug store. Just ask for freezone. Apply a drop or two directly upon a tender corn or callus and instantly the soreness disappears. Shortly you will find the corn or callus so loose that you can lift it off, root and all, with the fingers.

Not a twinge of pain, soreness or irritation; not even the slightest smarting, either when applying freezone or afterwards.

This drug doesn't eat up the corn or callus, but shrivels them so they loosen and come right out. It is no humbug! It works like a charm. For a few cents you can get rid of every hard corn, soft corn or corn between the toes, as well as painful calluses on bottom of your feet. It never disappoints and never burns, bites or inflames. If your druggist hasn't any freezone yet, tell him to get a tiny bottle for you from his wholesale house.

German's Man-Power.

Many and varied have been the theories regarding Germany's man-power.

One theory is that, for twenty years before the war, Germany falsified her population statistics, thereby throwing dust in the eyes of the world. Hindenburg is supposed to have imparted this official secret to an American lady in 1918, declaring that Germany's population was not 65,000,000, but 80,000,000. But this hardly seems likely, and the existence of the odd 25,000,000 Germans is very problematical.

A more plausible solution of Germany's fighting might lies in the preamble to the Mass Levy of 1916, by which every male German from the completion of his 17th year to the completion of his 60th year is liable for some form of service to the Fatherland.

Twelve million Germans are reckoned to have been mobilized since 1914. Of these, about half must have been put out of action, leaving six millions, plus the resources of Austria, Turkey, and Bulgaria, still in the field against us.

Some 9000 tractors and tractor-ploughs have been ordered in America for British use.

Some 2000 tractors and tractor-ploughs have been ordered in America for British use.

A Combination Of Materials

Here is the chance for a combination of materials in a most effective fashion. The sleeveless smock is developed in white heavy linen and a bright plaid is used for the sleeveless and pleated skirt. McCall Pattern No. 8460, Girl's Sleeveless Smock or Middy Dress. In 6 sizes, 4 to 14 years. Price, 15 cents.

An interesting design for combination of materials. Developed in satin and serge, it is both smart and practical. McCall Pattern No. 8439, Ladies' Dress. In 6 sizes, 34 to 44 bust. Price, 25 cents.

These patterns may be obtained from your local McCall dealer, or from the McCall Co., 70 Bond St., Toronto, Dept. W.

AN AMAZING ADVENTURE.

How Two British Airmen Escaped From the Enemy's Territory.

Reuter's special correspondent with the American army in France telegraphs:

Two British airmen have just achieved an adventure which must seem incredible to those who are only acquainted with conditions in other parts of the line. They were returning from a bombing expedition when their machine was disabled by anti-aircraft fire, and they were forced to make a landing in German territory.

In order to avoid observation, they trusted to the meagre light of the moon to effect a landing, but their caution almost proved their undoing, as they crashed into a quarry, which, however, had the advantage of completely concealing their machine. Only slightly injured, they started at once towards the German lines, running most of the way, their only chance being to reach them before daybreak. The distance proved to be over twenty miles, in the course of which they had to cross a river, apparently the Selle, a tributary of the Moselle. One of them swam the river three times, once to ascertain the conditions on the further bank, and returning to bring his companion over.

On reaching the enemy communication trenches, they had several breathless escapes from discovery, but by extreme adroitness and good fortune they succeeded in getting to the front trench, and crawling through the barbed wire into No Man's Land, in which, in this part of the line, considerable vegetation still flourishes.

In creeping under a hedge for shelter they unfortunately attracted the attention of a German sentry, who fired several rounds in their direction. Luckily, he seemed almost as scared as they were, for they remained unhit.

They spent the day in the thick growth beneath a hedge, one watching while the other slept, and when darkness fell made their way without further adventure into the French lines.

Convenience in feeding should be the main object in locating the silo, but one should always pay attention to the direction from which extremely cold winds will come.

England Oblige.

When he was just a tiny little lad,
He'd spend hours in the mailioned gallery
Dreaming about the pictured panoply
Of his great forebears: grim Lord Peter clad
In shining mail; Lord Percival, who had
Plumes, won at Naseby; young Sir Willoughby,
Painted as ensign—he was lost at sea;
And ag'ey Sir John, who fought in Highland plaid.

"When I'm big I'll go fighting too," he'd say;
And now, his wish fulfilled, he lies at rest
In Picardy, the V.C. or his breast.
His Colonel wrote: "Lord Julian was so gay,
Such an example of brave hearted grace,
He honored England and a fighting race."

GIRLS! LEMON JUICE IS SKIN WHITENER

How to make a creamy beauty lotion for a few cents.

The juice of two fresh lemons strained into a bottle containing three ounces of orchard white makes a whole quarter pint of the most remarkable lemon skin beautifier at about the cost one must pay for a small jar of the ordinary cold creams. Care should be taken to strain the lemon juice through a fine cloth so no lemon pulp gets in, then this lotion will keep fresh for months. Every woman knows that lemon juice is used to bleach and remove such blemishes as freckles, sallowness and tan and is the ideal skin softener, whitener and beautifier.

Just try it! Get three ounces of orchard white at any drug store and two lemons from the grocer and make up a quarter pint of this sweetly fragrant lemon lotion and massage it daily into the face, neck, arms and hands.

Air-Raid Raiment

Whether the Hun airmen pay us a visit or not this moon, the enterprising salesman is never behindhand with his wares, says a London newspaper. At any big London store one can now purchase suitable raiment for air-raid evenings; and the most picturesque garb awaits the night when the moon is at her loveliest.

There is nothing really new about the idea, however, for a peep into the historic annals of old London show that during the great year of English earthquakes—1750—there was a stampede out of London to avoid destruction. "Earthquake gowns of the most fashionable cut" were largely advertised and sold. "Earthquake cloaks for sitting out of doors all night" were in great demand, while the cook took advantage of the scare to advertise earthquake drops and pills.

Minard's Liniment for sale everywhere.

Longevity of Trees.

Regarding the longevity of European trees recent information gathered by the German Forestry Commission assigns to the pine five hundred and seven hundred years as a maximum, four hundred and twenty-five years to the silver fir, two hundred and seventy-five years to the larch, two hundred and forty-five years to the red beech, two hundred years to the birch, one hundred and seventy years to the ash, and one hundred and thirty years to the elm. The heart of the oak begins to rot at the age of three hundred years. A sequoia gigantea, felled in Calaveras county, California, had attained the age of three thousand years. It was three hundred and eighty-seven feet in height, and measured fifteen feet in diameter, one hundred and twenty-five feet above the earth. The Bradburn yew, in Kent county, England, had attained the same great age.

MONEY ORDERS.

Remit by Dominion Express Money Order. If lost or stolen you get your money back.

Concerning Rhubarb.

The pieplant has a recorded history of over four centuries. It was first cultivated in the white walled gardens of Morocco and Algiers, amid fruits and flowers and fountains, and was brought thence by the Moors to Spain.

Not until 300 years later did rhubarb really become known to English gardens, whence in due time it was brought to those of America to be employed first as a tincture, then as a sauce, and to attain a final apotheosis in pie.

Rhubarb, apart from its usefulness, has values for its beauty. The giant Chinese variety, with its enormous leaves, is often employed by landscape gardeners to produce bold sub-tropical effects; nor do they always disdain the charms of the more modest pieplant itself, of which the tall, graceful spikes of white flowers and large leaves, deeply veined and stained, are as certainly handsome as the succulent stalks are palatable.

That logged-off and burned-off areas in the lower Fraser Valley (B.C.) should be seeded down by the Provincial Government, and thus provide pasture land and prevent bush or farms from growing and adding to the fire menace, was a suggestion made by Mr. C. B. Hope of Langley to the New Westminster Board of Trade.

Minard's Liniment Relieves Neuralgia.

Sugar Certificates Necessary

Proprietors of public eating places throughout Canada have been notified that they must obtain a sugar certificate from the Canada Food Board by September 1st. A sworn statement must be filed with applications for certificates, stating amount of sugar used between January 31st, 1917, and December 31st, 1917. After September 1st it will be both illegal and impossible for public eating houses to obtain sugar without a certificate.

Minard's Liniment Cures Dandruff.

Constables Pledge Assistance

At the annual meeting of the Chief Constables Association, the following resolution was passed:—"Moved by Chief Cuddy and seconded by Supt. Rogers, that the members of this association give every assistance in their power to the Canada Food Board."

St. Isidore, P. Q., Aug. 18, 1894.
Minard's Liniment Co., Limited.
Gentlemen,—I have frequently used MINARD'S LINIMENT and also prescribe it for my patients always with the most gratifying results, and I consider it the best all-round Liniment extant.
Yours truly,
DR. JOS. AUG. SIROIS.

Dr. Charles E. Saunders of the Dominion Experimental Farm, Ottawa, in an interview at Saskatoon, said he had seen one or two wheat fields in the West that would yield forty-five bushels to the acre, and others that are too poor to even furnish grazing for cattle.

Minard's Liniment Cures Burns, Etc.

Chickens generally make the greatest gain when about three to four months old and the average birds make the most economical gains during the first two weeks of special feeding.

GLAMIS

—Paisley Fair, Sept. 24th and 25th.

Mr. Coll McLean is visiting his mother, Mrs. Kate McLean, on the boundary.

Mrs. Colborne and daughter, of Buffalo, are visiting at Mr. Angus Campbell's and at Mr. Murdoch McKay's.

Mr. McCauley spent a few days last week with his mother in Tara.

Mr. Wm. Webb has bought the tinsmithing outfit of the late R. J. Nesbitt and will set up business in the lower part of the Oddfellows' hall. We welcome another addition to our village population.

Mr. and Mrs. Webb, of Wingham, were visitors in our burg on Sunday.

Rev. J. E. McCauley tendered his resignation to the congregation of the Baptist church on Sunday morning, to take effect a week from next Sunday.

Mr. and Mrs. Kirkton have returned from Markdale, where they were visiting their daughter.

Mr. Roy Kennedy is in Toronto at present undergoing treatment for his throat.

Mr. and Mrs. McClung took a trip to Walkerton on Monday.

Mr. and Mrs. Dan McLean went to London this week to attend the Fair.

We are sorry to report that Bessie Nesbitt has been laid up with a sore limb, but hope she will soon be around again.

Word came a few weeks ago of the wounding of Lieut. W. L. Oliver, who is well known around here, having lived here when a boy with his grandparents, the late J. C. Macintyre and Mrs. Macintyre, and visited here four years ago. Later word came that his wounds are not serious, just a flesh gunshot wound in his arm. He expects to be out of the hospital soon.

Mr. and Mrs. Jos. Stanley heard from their boy Will, who was also wounded. He is doing well and considers himself very lucky in escaping so well.

EBENEZER

—Paisley Fair, Sept. 24th and 25th

Mr. and Mrs. Geo. Munson and Miss Eva Potts, of Tara, spent Sunday at Mr. John Grant's.

Mr. Sam Fleming has returned from a week's visit with friends in Mount Forest.

Mr. and Mrs. J. D. Potts and family motored to Chesley on Sunday.

Geo. Matheson and his mother, Mrs. Jas. Matheson, of 12th of Bruce, visited one day last week at Mr. Geo. Grant's.

Mr. and Mrs. H. T. Potts, of Tara, are spending a couple of weeks at their old home here.

A number from here attended Mr. W. L. Clark's meetings on social service work at Arkwright last week, and report a very profitable time.

Some of our Ebenezer sports took in the baseball tournament in Tara on Sept. 2nd.

Mr. Wm. Martin received word last week from his son, Pte. Wilbert Martin, saying that he was leaving Seaford Camp for France. Mr. Martin has three other sons in France, so he certainly is doing his "bit" to win the war.

The company threshing machine has commenced work in this neighborhood. Under the capable supervision of Mr. R. I. McKelvey we expect to get our threshing done without any trouble.

SIXTH CON. BRUCE

—Paisley Fair, Sept. 24th and 25th.

Miss Isabel Cameron was visiting her friend, Miss Emma Snowdon for a few days.

Mr. Andrew Russell is visiting friends in Brussels.

Miss Gladys George is at present at Mr. Murdoch Leitch's.

Miss Curry, from Toronto, was visiting at Mr. T. R. Currie's.

Mr. John McGillivray is at present laid up with sciatica.

We welcome our teacher, Miss Keyes, to our midst.

(Intended for last week)

Mr. and Mrs. Robt. McKay spent a few days in Port Elgin and Wiarton.

Quite a number from here took in the picnic at Baie-de-dore.

Mr. Irvine Rourke attended the convention in Hanover.

Mr. John A. McKay went west for the harvest.

Mr. and Mrs. Geo. Snowdon are visiting in Huron.

PINKERTON

—Paisley Fair, Sept. 24th and 25th.

Messrs. Harvey, Cecil and Stanley Garland, Herbert Butler and Melville Reid motored to Toronto and spent a few days in the city.

School re-opened on Tuesday with Miss McRae, of Port Elgin in charge. We wish her every success.

Rev. Jas. Gale occupied the pulpit in Walkerton on Sunday. He returns this week to his charge of Hyde Park.

Misses Gladys Gale and Alberta Pinkerton are attending Walkerton high school.

Clara and Arthur Donnelly go to Toronto this week to resume their studies at St. Michael's College.

Mrs. N. Garland has returned from a visit to Parkhead and Chesley.

We are sorry to report the sickness of Mr. Geo. Chick, and hope for a speedy recovery.

WILLOW CREEK

—Paisley Fair, Sept. 24th and 25th.

Mr. and Mrs. Solomon Schwandt and family, of Brant, spent Sunday at the home of Mr. Chas. Helwig and F. Schnittker.

Mr. and Mrs. Henry Geiss were at Toronto Fair.

Mr. Milton Dahmer spent the week end at New Hamburg.

Mr. and Mrs. Wm. Schnittker were down to London Fair last week.

Miss Lavina Schwass is engaged with Mrs. Wm. Gottschalk for the summer months.

The Y. P. A. of the Evangelical church have chosen sides for a programme competition, to be opened at the regular meeting next Sunday evening. Everybody welcome. No collection.

ELDERSLIE COUNCIL

Gillies Hill, Sept. 2nd, 1918

Council met on above date as a Court of Revision re Elderslie swamp drain. Members all present except Mr. Fraser. Messrs. J. A. Bradshaw, John Bradshaw and John Robinson appealed against this assessment as being too high. In all three cases the engineer's assessment was sustained, and on motion of Messrs. Clement and Oswald the Court adjourned.

Council met for regular business. Minutes of last meeting read and adopted.

Allen—Oswald—That Calvin Crawford be appointed tax collector for the current year.—Carried.

Allen—Clement—That orders be issued for the following accounts.—Carried.

D. McArthur, postage for clerk's office, $2.50; Jas. Thomson, 74 yds. gravel per J. L. Doherty, pathmaster, $7.40; J. Palmer, 90 yds. per Jas. Dudgeon, $9; A. Slumskie, 18 yds. per Jas. Dudgeon, $1.80; A. Slumskie, 80 yds. per Neil McKay, $8; R. McCurdy, 30 yds. per E. H. Foster, $3; Henry Yeager, 40 yds. per Fred Lowe, $4; A. Anderson, 25 yds. per Fred Lowe, $2.50; Geo. Alexander, 70 yds. per John Black, $7; John Ickler, 93 yds. per R. Hastie, $9.30; R. Hastie, performing arrears of statute labor, $21.25; Jas. Fenton, performing arrears of statute labor, $4.50; Jas. Thomson, 103 yds. gravel per J. Fenton, $10.30; Jas. Dudgeon, gravelling con. 12, $32; Jas. Dudgeon, drawing tile and building culvert, con. 12, $9; Irwin Robinson, sheep killed by dogs, $20; Jake Lemkie, 42 yds. gravel per Jas. Spencer, $4.20; E. J. Cobean, rings for soldiers, $16.50.

Oswald—Clement—That this board do now adjourn to meet again the first Monday in October at 1 o'clock p.m. for general business.—Carried.

R. C. Pearce, Clerk

THE FRENCH FARMERS SAVED THE DAY

The saving farmer is a national asset. Canadian progress to-day in all lines attests magnificently to the splendid qualities of thrift that have marked the farmers in all the provinces. The total returns from field crops and animal produce, have been only possible because of the disposition to make use in an economical way of all the wonderful gifts of Providence in this good land of ours.

The same was abundantly true after 1870 in France when the frugal, thrifty farmers of that fair land made it possible for the Republic to pay off that hated German war indemnity of two billion francs levied against them. The same spirit of national thrift built up France for the extreme test now—a test that is being tried by fire.

Thanks be, French heroism is proving true. The line is holding. The blood of the farmers is flowing equally as well through the veins of France's daughters of the soil and so the national strength bends but does not break.

Canada is reaping her harvests of increased returns and money is being made as never before. Our farmers are earning the gratitude of all in their splendid efforts at production. That they will carry into their savings an equal foresight in conserving their savings against the future days of darkness and lower prices will be equally praiseworthy. He is well advised who saves his extra dollar until he sees which way the winds of to-morrow will blow. Already blows a chill blast where there is no dollar in the savings.

FARMERS MUST TELL ALL ABOUT THEIR BUSINESS

Farmers throughout the country are being asked by the Finance Department to fill in forms which will give an accounting of their operations in 1917 for the purposes of the Income War Tax Act. The farmers are requested to state the quantity of their products in that year, the price at which those products were sold, the quantity consumed at home or exchanged for goods at shops, income from other sources, the cost of feed, labor, machinery, and an estimate of depreciation. Farmers are liable to taxation under the Income War Tax Act. Inasmuch, however, as many do not keep books, it has been difficult to ascertain the amount of their incomes. From the information disclosed by the forms now being sent out the Finance Department will determine what individuals are liable to taxation and the amount of their taxes.

PUT BICYCLE ON RUNNERS

Francis Frank, a young machinist employed in the Knechtel factory at Walkerton, has invented a clever device which will enable the owners of bikes to keep right on riding them when summer turns to winter and the snow appears. The invention is called the "bicycle sled," and is adapted from the ordinary wheel and replacing it by a small runner and interchanging the rear wheel with a runner attachment and a small wheel with cogs around its outer surface. The invention has been patented in the United States and patent in Canada has been applied for. Mr. Frank has already received one good offer for the sale of the patent and it looks as if his invention may bring him good returns.

TWO MEN WITHOUT A COUNTRY

Wouldn't Buy Liberty Bonds, so Business Men Refused to Deal with Them

The Denver Post tells an interesting story of two men who refused to subscribe to the Liberty Loan.

The American people were making the supreme effort in subscribing the third Liberty Loan, and all of the neighbors in that township had done their best except two, who steadfastly refused to subscribe. These two men had come from our enemy despotic country some years ago. They had escaped from that country to avoid the hard ways forced upon the people there, and had chosen America because they recognized it as a land of freedom and opportunity.

But when it came to the place where assistance was demanded of them, they balked. They fled their native land to escape its rigors. They chose to enjoy all the rights and blessings of a free land, but selfishly refused to carry any of its burdens. So, loyalty to their native country which they have left, and disloyalty to their adopted country rendered them "Two Men Without a Country," as you will see.

One morning, when as usual they drove up to the cheese factory with their milk the cheesemaker noticed them out of the line and motioned the next farmer to drive up. After several succeeding farmers had unloaded their milk and no more attention was paid these two, they indignantly sought the reason and were informed that they were undesirable citizens and that their milk would no longer be taken. There upon, in great anger, they drove away to a neighboring factory, where they were met with the same refusal. After calling at a third factory and receiving the same rebuff they went to their homes with their milk.

It so happens in America it is no uncommon thing for common men to own great herds of dairy cattle, and milk becomes their main product. It was so with these men. All the years in which they had grown prosperous they had failed to recognize the great value of the market which the laws of the land has made for their milk. Needing some supplies, they drove to their usual trading point to trade. The merchants turned them away, saying they were not selling goods to undesirable citizens any more.

Here they were, now unable to sell their crops or to buy their necessities. They were dependent on their own resources to enjoy just the kind of country they wished to make. But they did not wish to endure the hardships which it takes to build a country such as would fit their special likings. So they determined to compel their neighbors to submit to their ways, to make their fellow-citizens continue to furnish all of the blessings of a free country without their assisting; while on the other hand they continued to aid and abet the kaiser's cause. They sought the country judge at the county seat. While they did not care for their adopted land its courts were good enough to appeal to, to make the people accord them their undeserved rights.

Having heard their complaints and having questioned them upon the reasons for their troubles, the judge concluded that their failure to subscribe for bonds and show a friendly interest in their adopted country were the causes of their difficulty and advised them to buy Liberty Bonds.

They went to the bank and each subscribed for a $50 Liberty Bond, the very least subscription they could make. Truly, these were "Two Men Without a Country." Then they repaired to the office of the County Council of Defence and requested the assistance of the county council in readjusting their relations with their neighbors. They were promptly informed that their neighborhood troubles were brought upon themselves by themselves, and that the county sent would not afford whitewashing assistance, that a $50 Liberty Bond covered no debt of ownership obligation on their part, that they would have to settle with their own community committees, and that the allied country, for they would be failed there. No neutral country wanted citizens who were as useless as they were, and if they returned to the land which they stood up for, they would probably be shot for treason.

At last the true situation dawned upon them. Their ungracious act had made them "Two Men Without a Country." They broke down and wept bitterly.

As I passed one of the farms I saw the man near his gate with his wife and children, sole friends now, and sharing the penalty for his traitorous and reprehensible acts. What the end will be no one can forecast, but how awful to be cast out by one's countrymen!

All along the way through that lovely and splendid country I saw on every hand evidences of loyalty and appreciation of country, and the little flags with their one, two an dthree stars which told of the supreme sacrifices which those farm homes were making, and I could but compare thrice happy the lot of those who do and die for their country with the ignominious existence of the selfish and disloyal lives of such as the "Two Men Without a Country."—Pro Patria in "Hoard's Dairyman."

A negro who had an injured head entered a doctor's office.

"Hello, Sam! Got cut again, I see."

"Yes, sah! I done got carved up with a razor, doc."

"Why don't you keep out of bad company?" asked the physician after he had dressed the wound.

"Deed I'd like to, doc, but I ain't got 'nuff money to get a divorce."

SELF DEFENSE

DEFEAT BACKACHE AND KIDNEY TROUBLE WITH ANURIC.

Many people in Canada have suffered from rheumatism and kidney trouble and have found Anuric to be the most successful remedy to overcome these painful and dangerous ailments.

The lucky people are those who have heeded Nature's warning signal in time to correct their trouble with that new discovery of Dr. Pierce's called "Anuric." You should promptly heed these warnings, some of which are dizzy spells, backache, irregularity of the urine or the painful twinges of rheumatism, sciatica or lumbago. To delay may make possible the dangerous forms of kidney disease, such as diabetes or stone in the bladder.

To overcome these distressing conditions you should take plenty of exercise in the open air, avoid a heavy meat diet, drink freely of water and at each meal take Dr. Pierce's Anuric Tablets (double strength). You will, in a short time, find that you are one of the firm indorsers of Anuric, as are many of your county neighbors.

Send Dr. V. M. Pierce, Buffalo, N. Y., or Bridgeburg, Ont., 10c. for trial pkg.

St. Catharines, Ont.—For several years I suffered with gravel and with uric acid, causing rheumatic pains. Nothing ever helped me until I commenced to take 'Anuric,' and the first thing I noticed was that the gravel had disappeared and has never made a reappearance. My general health has improved and I have a better nerve condition and my eyesight seems better, too. I used to have such dizzy spells at times I thought I would faint, but these no longer trouble me. My only regret is that I did not know of Anuric before."—Mrs. H. Marjoram, 124 Albert St.

Fall Term from Sept. 3rd

Central Business College Stratford, Ont.

The call for trained help is greater now than ever before in the history of Canada. Our graduates are securing splendid positions. We have Commercial, Shorthand and Telegraphy Departments. WEEKLY STORE NEWS

OUR old friend, Mr. Time, has been moving slowly but surely this season, and possibly you have come to realize that your wearing apparel is not sufficient for the season we are entering. With this fact in view, and for your benefit, we are showing:

The Very Latest in Ladies' Coats

Creations of comfort enveloping each wearer in a garment that is proper for special occasions and yet suitable for every day wear. These are shown in **Velour Cloth, Broadcloth and Diagonal Stripes.** The latest in style—we have it. The best you can get it. And as for your neck and hands—we protect them with the choice of our

Furs

These are attractive and are necessary as accessories to your outing dress. If touring in your car you require them. If driving you need them. If on the street they are necessary. Let us show you what we have in sets or individual pieces. We are pleased to show the goods. It delights you as well as us when we sell.

Remember our Grocery Department

8-13,166

Is never forgotten. It is yours to choose from. It is ours to keep replenished. We do so, often. Remember our **Fruit Jars** for preserving. They are cheap—Imp. Pints at 95c, Imp. Quarts at $1.10, Crown Half Gals. at $1.20

Millinery Openings

Tuesday and Wednesday
Sept. 17 and 18

Have been a splendid success. You are invited to call and see our stock at any time.

We appreciate your patronage. We want it. Highest Prices for Produce.

Two Official Messages to One Home on the Same Day

The blood of Bruce county's best young men is being freely shed on the fields of France during this greatest advance of the Allies against the Hun lines. During the past two weeks there have been more casualties among our boys than at any other time since the war opened, and it may be that the total losses of the whole previous period would not exceed those that have occurred since Aug. 8th among the men from Bruce.

Mrs. Rolston, of Paisley, received the sad news on Monday that her son, Pte. John Rolston, had been killed in action on Sept. 3rd. The deceased was 34 years of age, and was born in Paisley. For a few years he was in the west, where he proved up a homestead, then returned home, and later sold the property. In January, 1916, he enlisted with the 160th. He had been in the fighting line since March last. He was a young man of industrious habits, and well liked by all who knew him. His youngest brother, Carl, is in France.

MEMORIAL SERVICE

A union memorial service will be held in Knox church on Sunday evening.

One of the saddest homes from which boys have gone forth with our county battalion is that of Mr. and Mrs. Thos. White of 10th con. Bruce, where two of the official messages were received on Saturday, conveying the sad news that their son, Pte. Wm. James White, infantry, has been missing since Aug. 30th, and another son, Pte. Robt. M. White, infantry, was admitted to No. 7 Canadian General Hospital on Sept. 2nd, having received a gunshot wound in the back. Pte. Wm. J. White had been No. 1 man on a Lewis gun, according to a letter received from him by Mr. Rich. Christie. In the letter it was also stated that Pte. Wm. Cunningham, of Paisley, had been wounded in the hand, and the latter would likely be sent to England, not to return to the front again. Pte. Robt. M. White was a signaller while in the 160th.

Pte. Wm. A. Bluhm, son of Mr. and Mrs. Wm. Bluhm, of Ellengowan, is another 160th man who is knocked out in this offensive. The parents were advised by wire on Monday that their son had been admitted to No. 12 General Hospital at Rouen, on Sept. 6th. His injury is a gunshot wound in the face.

Mr. and Mrs. Howard McFadden, of Arran, received an official message this week telling them that their son, Pte. Russell McFadden, had been gassed. He was admitted to the 22nd Stationery Hospital at Wimereux on Sept. 9th. Pte. McFadden enlisted and trained with the 160th, and went to France with a draft from England about April 1st.

Corp. Chas. A. McGillivray, one of three sons of Mrs. D. McGillivray, of Inkermen St., who are serving overseas, is in the 3rd Canadian General Hospital, Boulogne, suffering from a gunshot wound in the right hip. He was admitted to hospital on Sept. 4th. Corp. McGillivray is in the engineers corps, and has been in France two years.

Pte. Malcolm A. McPhee, son of Mr. Angus McPhee, Elora road north, and brother of Mrs. Watson McKinnon, is among the wounded. He was admitted to No. 53 General Hospital, Boulogne, on Sept. 6th, suffering from gunshot wound in the back. Pte. McPhee had been in the U.S. for a number of years, but joined the colors at Hamilton last March, having crossed the border to go with the Union Jack.

Albert Groves, the twenty-year-old son of Mr. and Mrs. John Groves, of Glamis, was killed in action on Aug. 30th. He enlisted with the 160th in February, 1916, and had been in France since February of this year. Two letters written by deceased were received by the sorrowing parents after the message of his death had reached them. In one of the letters he told of having been in the big battle of Aug. 8th, and was going into another.

—Marriage licenses issued and money to loan. T. H. Clarke.

—For Sale—One wire wheel, auto seat buggy, cushioned tire, 1918 model, nearly new. J. A. McArthur.

Notice—All twine, repairs, and machines must be settled for with our agents on or before October 1st, 1918. Deering & Co.

—E. Stevenson's quick healing salve is the best made. We have a choice line of tobaccos and cigars, stationery and school supplies. Agents for daily papers and magazines. Give us a call.

—Notice—The undersigned is obliged to give up the blacksmithing business owing to ill health, and is leaving town. All parties indebted to me are notified to settle their accounts by Sept. 20th. After that date accounts will be placed in the Royal Bank for collection. M. Andrews.

Auction Sale of Automobiles

The undersigned will offer for sale by public auction, at Avery's Garage, Kincardine, on Thursday, Sept. 26th, the following: Six second-hand Ford touring cars, all in good shape, two new Maxwell touring cars. If you want to buy, don't miss this sale. Terms—Six months' credit on approved joint notes, bearing 6 per cent interest. Will Avery, prop.

—There will be elected Wishing in the town hall for the fair concert...

—For Sale—Thirty-one little pigs 4 weeks old. Lot 8, con. 7, Elderslie. M. Maurer.

—Miss Glenn, of Glenn-Charles, Toronto, Canada's Hair Fashion Store, will be in Paisley, Friday, Sept. 27th, at Belmoral Hotel, with a full line of Ladies' and Gentlemen's Hair Goods. If you are not satisfied with the appearance of your hair consult Miss Glenn, who is an authority on hair goods and individual hair styles. Free demonstration.

—Miss Cunningham, of Walkerton, was a visitor at the home of her cousin, Mrs. J. Smart, for a few days.

—Mr. and Mrs. Geo. Fullerton arrived home a few days ago from their trip to the West. They were as far as Banff.

—Miss Teresa Hyde and her nephew, Jackie, Irving, of Toronto, are visitors at the home of her sister, Mrs. G. B. Irwin.

—Mr. W. W. Ellis, Inspector of Division Courts, made an official visit to Paisley this week. Mr. Ellis is a brother of Mrs. A. Sinclair.

—Mr. and Mrs. J. Jolliffe and Mr. and Mrs. Roy Gould, of Rockwood, were on visiting Mr. Jolliffe's sister, Mrs. Thos. Kerr, and other friends.

A NICE LETTER FROM THE WEST

Many Sons of Bruce Old Boys Enlisted

General Sir Arthur Currie Was a Reader of The Advocate

Victoria, B. C., Sept. 7th, 1918

D. McKenzie, Esq., Paisley

Dear Sir—Enclosed you will find $1.50 for renewal of my subscription to the home paper.

At no time has your paper been more appreciated than during the war period. How glad we are to learn through its columns that our boys have heard and nobly responded to the call of king and country. Already many families have been plunged into mourning, for not a few of the boys from Bruce have made the supreme sacrifice. With bowed head we pay our tribute of respect to the brave lads who have left with us proud memories which nothing can take away, and which time will only intensify.

Not only have many Paisley boys gone to do their bit, but many sons of former Paisleyites have gone from the west, some never to return. Three of our boys—John Fair, Fred McNeill and Roy Clement—have their graves in France adorned with that grand epitaph, "Killed in action." Among the wounded are Rae McNeill, Howard McNeill, Clifford Willisecroft, Ross McCannell and Dr. Neil McNeill. My own boy went overseas a year and a half ago, spent his 17th birthday in the training camps in England, and his 18th birthday behind a machine gun "somewhere in France." Among those who have gone from here whose parents are known to readers of the Advocate are Archie Watson, James Smith, James McNeill, Dan McNeill, E. Lumsden, Neil Cameron, D. Cameron, Harold Cline, Bruce McEwen, Gordon Agnew, Victor Westcott, Lorne Morlock, G. Sherwood and many others.

While these have gone from this vicinity, how many more must there be who have gone from other parts of this western country.

General Currie is often referred to in the press as hailing from Bruce County, but to Middlesex belongs the honor, for he was born in the village of Napperton, and educated at the Strathroy Collegiate Institute. Two of the most pleasant years of my early life in B. C. were spent keeping "bachelor's hall" in a country district with a fellow school teacher—now Sir Arthur Currie, K.C.M.G.—and I think I could still find the marks on a tree back of our shanty where we practised rifle shooting together. Little did I dream that my partner would ever rise to the supreme command of the fighting forces of the Dominion, and hold the proud record of never having lost a treach. Sir Arthur was not born in Bruce, but I must say that for at least two years he was an enthusiastic reader of The Advocate.

Hoping that peace may come to our land before my next renewal.

I am,
Yours truly,
Angus Galbraith

608 Harbinger Ave.,
Victoria, B. C.

—The number of students attending Paisley Continuation School this year is 66—the same as last year.

—Witty imitations, laughable songs, original nonsense, duets, trios, sketches, and other entertaining items at the Fair night concert. Hear the Knox-Wilson Co. Plan at McArthur's Bookstore.

—Rev. J. E. McCauley, student pastor of Glamis Baptist church, who was recently ordained to the ministry, has received and accepted a call from Goderich congregation, and entered upon his duties there last Sunday.

—Mr. Robt. Fullerton has disposed of his famous black show horse, which became widely known throughout Bruce and neighboring counties as a wonderful prize-winner. This horse will be very much missed at the fairs in this locality this season.

—There were very few motor cars running here on Sunday. The combination of loyalty and very w weather made a good mixture for t day. With the same reduction Sunday motoring for the balance the season, a creditable saving gas would result.

—Pte. Jos. Tindale, merchant of Tara, has volunteered and been accepted as one of the Canadian expeditionary force to Siberia. He will proceed to St. John, N.B., in a few days to entrain for Vancouver, where he will be in training all winter.—Leader.

No Gasoline on Sunday

Paisley garage men give notice that they will not sell gasoline on Sunday while there is need for saving of that power-developing commodity.

Patriotic Quilts for the Sailors

Ladies are reminded that there are cut patterns, ready for sewing, given out at the Library on Saturday afternoon and evening. Those who cannot do any of the work may help by donating lining, batting and thread.

No Jubilation in Paisley

Neighboring towns noisily celebrated when the best news of the war came on Friday evening. Not having a bulletin service here, the message became known to only a few, who made no noise about it. Next morning many of our citizens felt that they had missed the first opportunity to jubilate a la South African war days.

Soils and Crops

By Agronomist.

This Department is for the use of our farm readers who want the advice of an expert on any question regarding soil, seed, crops, etc. If your question is of sufficient general interest, it will be answered through this column. If stamped and addressed envelope is enclosed with your letter, a complete answer will be mailed to you. Address Agronomist, care of Wilson Publishing Co., Ltd., 73 Adelaide St. W., Toronto.

SPRING VS. FALL FRESHENED COWS.

Many farmers take it for granted that to have the cows freshen in the spring, it will make a greater profit come from them than if they came in in the fall. One farmer who thought that way, told me his reason:

"The principal thing that appeals to me," he explained, "is because what I get from the cows in the summer, is practically all profit. I do not have to give them much grain. They take care of themselves excepting around milking times, when I then have to get them into the barn, and out the first thing in the morning. I figure the profit that I get in the summer is worth enough to pay for the rest of the year."

We all know that cows, naturally, are apt to do their best in the summer time. Therefore to get the greatest profit from them, in the winter, conditions should be made as near like summer as possible. In the summer they get all of the nice fresh water with no ice in it to make it too cold. How many farms are there that have facilities so that the cows can get the same in the winter? Cows enjoy the nice warm days in the summer, too. Barns therefore should be kept warm and comfortable for them in the winter time. Too cold barns require more feeding of grain, which is expensive; as much of the feed has to go to keep the cattle warm. And they do not give as much either, under such conditions. Light is another important thing to consider. Plenty of windows to let as much of the sunlight into the lie-up is important if we are trying to imitate summer. Dark, damp stables make cows uneasy and discontented, and also help to breed germs of different diseases.

When the cows are at pasture in the summer, they get juicy, green, succulent feed. Such a ration may be given in a way by means of a silo. If the silage is put in before the frosts kill it green and succulent feed is assured, for the winter time. All farmers who have fed silage can testify as to the great fondness which cows have for it.

So, to get the best results from winter-kept cows, it can be seen that by making conditions as near as possible as the cows get in the summer, the greatest profits are obtained.

While it is true that the expense of grain and feed is much less for cows at pasture in the summer, perhaps I feel that on the long run, cows that freshen in the fall, pay the best. Unless the pasture is extremely good, along the last part of the summer it begins to get short and the grass dries up and without getting feed in the barn the cows drop off. How many farmers are there that consider it, and fall to feed their cows? And by the time the cows are taken in, in fall, they have dropped off in their milk flow and cannot be gotten back again to where they should be. Consequently they are carried along without paying the profit that they might, until they freshen again.

Cows that have their calves in the fall, can be taken particular care of, and can be made to do their best. To get the greatest profit from stallage it should be given to cows that are giving their largest flow of milk. To feed valuable ensilage to cows that are only giving their half flow of milk, is a waste of good feed. Such great results are obtained when given to cows that are fresh, so fall cows bring in the greatest profits from silage.

As a rule the price of milk is more in the fall and winter, too; and to get more milk (from fresh cows) makes more profit also. Cows that are taken care of properly, will give more during their lactation period beginning in the fall, than those that come in in the spring.

And winter-kept cows will go to pasture when it is at its best, in the spring. There will be no drop-off, which is the case with spring-freshened cows that go through the dry-pasture period.

Cows that are kept during the winter have to be fed grain. The extra amount of grain which should be given to fresh cows, is more than paid for as the extra amount of milk given is more in proportion.

Also, the work needed to take care of a certain number of cows, is nearly the same whether they give a large amount or little milk.

Then, again, calves that are born in the fall, grow better, and are larger and stronger and are ready for pasture sooner than spring-born calves. Calves raised in the summer are bothered with flies and the hot summer is bad for them and the feeding pails, etc., are easily contaminated if not washed very promptly and carefully; scours are more easily gotten therefore. Also, calves wintered in a nice warm barn do not have these risks to bother.

So it is seen that if the cows are taken care of properly, after freshening in the fall, they will return more profits in proportion for any extra care and feed given them, and by the time they are nearly ready to dry off, the dried-up pasture is not doing the harm that it would to a cow that is giving a large flow.

Of course, even under the best of conditions, farmers cannot always have their cows come in at the time that they want them to. And also, with a large herd of cows, it would not be well to have all have calves in the fall, or at the same time. But, by realizing that the fall-freshened cows bring the most profits, if taken care of as they should be, farmers can, by planning ahead, make the most money from their cows in the end.

WANTED POULTRY, EGGS AND FEATHERS. Highest Prices Paid. Prompt Returns. Correspondence Solicited. P. POULIN & CO. St. Boniface Manitoba

Horse Sense

Bright oat straw is wholesome winter roughage for idle horses. Many good feeders figure that every ton of good oat straw which the horses will eat saves half a ton or more of valuable hay. Some of the very best pure-bred draft mares in the country are fed good oat straw as their exclusive roughage during the winter months. The only other feed they receive is about three or four pounds of grain a day to each mare, as may seem necessary to keep the digestive system working properly.

The fact that straw is a heat-producing feed is of importance because the best feed for producing warmth to idle horses is also the cheapest. Idle work horses require only sufficient grain to maintain them in good flesh condition; all the rest of their feed may well consist of cheap roughage, provided it is clean, bright and free from injurious substances. By feeding more bright straw and just enough grain to keep their digestive systems in good order the work horses can be wintered so cheaply as to greatly reduce the cost of maintenance, and this means considerable reduction in the cost of operating a large farm where several work teams are kept during the year.

What Causes Stunting?

Stunting of young animals is a serious matter. Steps to prevent stubting really should begin before the animal is born. To that end it is necessary and profitable to feed the pregnant animal well, so that she may properly nourish her young and have plenty of milk for it when it is born.

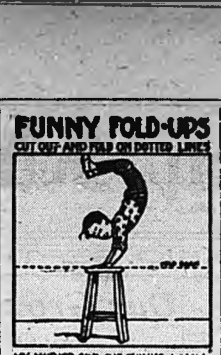
Calves are stunted by feeding milk in large quantities twice a day. The natural way to feed calves is to allow a little milk often, and certainly not less than three times a day. The milk should be warm, the milk pail clean and the calf should be made to drink slowly.

Lambs fail to grow fast because the ewes have been wintered on coarse, dry, bulky roughage. Colts are stunted for the same reason, and also because the mares are made to work too soon and too hard after foaling and allowed to suckle their young when hot, sweaty and tired.

Worms are the most common and certain cause of stunting. They are certain to infest and injure every animal that grazes short grass on an old pasture long used by animals. Each kind of animal taints the pasture with the parasite peculiar to it.

Pigs afflicted with piles or prolapse of the rectum have been stunted and often prove a total loss. Lack of exercise, constipation and feeding of some irritant, such as unscreened ground oats, containing hulls, are common causes. Prolonged heavy feeding of boiled potatoes is another cause. Stuffing young pigs on corn and confining them to a pen also causes stunting, as well as rickets or paralysis.

After the Grain Harvest.



Points worth remembering, they mean money to you. The tender clover and timothy plants require all growth possible as a winter protection, therefore keep all livestock off the newly-seeded meadows, because if pastured after harvest, the young plants are so weakened that winter-killing is the usual result. While, on the other hand, if a strong growth is left for protection, winter-killing is avoided and usually big crops of hay are harvested the following season.

Deserved Decoration.

"Have you a wife?" inquired a British Tommy of a boche he had captured.

"Nein," replied the German.

"Then," gasped the Britisher in amazement. "Lumme, where's your iron cross, mate?"

Poultry

The fowls and eggs from a pure-bred flock of hens will bring more money on account of their uniformity.

One of our most conservative poultrymen says that if all farmers would keep pure-bred poultry, the business would be doubled in a few years and that we would still be getting good prices for our products.

Many people are getting tired of eating pork and old dairy cows, and are becoming eaters of chickens, mutton and veal, thus increasing the possibilities of the sheep-and-poultry business.

When poultry can eat and thrive on all kinds of foods and produce good results, it is very good evidence that they are constitutionally strong.

The Silo, The Lighthouse of the Farm.

During the last few years stock-raisers have floundered around quite a bit and occasionally one has hit a rock and gone down. Fortunately, every stock-raiser can have a light-house that will keep him, as well as an occasional neighbor, off the rocks and guide the way to better farming and bigger profits. That lighthouse is the silo.

There is no longer any doubt that silos point the way to safe farming. Thousands of satisfied users have killed all the doubt.

In more ways than one a well-filled silo keeps stock-raisers off the rocks. The use of silage cheapens beef, milk, mutton and wool by cutting down the amount of grain needed. Silage is valuable for lambs in the feed lot, and for wintering the breeding ewes.

Silos are the greatest food savers known to stock-raisers. An acre of corn fodder put into a silo has more food value than an acre of corn. There are several reasons for this. One is that when corn is put into the silo none of it is wasted. The whole plant except the root goes in; when it comes out it is so palatable that the cattle, horses and sheep eat it with a relish. Another economy is that the corn is stored at a time when it contains the greatest amount of nutrients.

Every person with a dozen cows should have a silo. The diameter should be determined by the number of animals. For twelve cows, make silo ten feet wide and thirty feet high; fifteen cows, twelve feet wide and twenty-six feet high; twenty cows, twelve feet wide and thirty-two feet high; twenty-five cows, twelve feet wide and thirty-eight feet high; thirty cows, fourteen feet wide and thirty-four feet high.

Two years ago a farmer known to the writer, built a silo which cost $50. He began to keep account to see whether it returned him any profit. His cream checks for one month amounted to $29.11 more than the same month the year before. He was milking the same cows and they had been milked about the same length of time after freshening. The feed was the same except that the corn was from the silo instead of from a feed bin. At that rate the silo paid for itself in two months.

The filling season, when kernels are dented, is close at hand. Every stock-raiser should build a silo, for the stock farm without a silo is only half a farm. The silo is the one place where $1.50 corn realizes $3 a bushel when fed.

On the Upper Branches.

The choicest fruit grows on the upper branches. When we want to see the finest products of the farm we must look high up, among the limbs that are nearest to the pure air and the sunshine.

It is the man who thinks big thoughts, plans great enterprises, and carries them out who makes the real success in his chosen line. Never until a man's heart is filled with love for his work can he be truly happy and reach life's finest prizes. Working hard will not do it; investing a great deal of money will not do it; nothing but the investment of self will win. Top-branch farming is a thing of the best possible study, the deepest possible thought, the most careful planning, backed up by good workmanship.

Millions of men have gone across the stage of life and left not a single mark to show they ever lived. Their names are forgotten. They plowed, they sowed, they gathered into barns; but where are they? What have they left to make the world any better or to prove that they were worthy the place they occupied? Not a single thing. Their lives were pale fruit, growing down out of sight, under a burden of leaves and branches.

This need not be so. The call of to-day is for the very best there is in us—not here and there a man, but all. The world need for big men on the farm is urgent. It will never be fully met until all men everywhere appreciate in the full the dignity of good farming, and put all there is in them of mind, soul, body, and heart into everything they do, from hoeing a hill of corn to directing a great farm operation.

How to Prevent Cabbage Heads From Splitting.

If cabbages are grown on a rich, loamy soil, the growth is often so rapid that the heads split late in the summer. It is especially the case with early cabbages or with late varieties that are started early. On that account many gardeners delay setting out cabbage plants until late in the season.

It often happens that a fine patch of early cabbages cannot readily be disposed of at once. Usually they are ruined by splitting. The trouble can be prevented without much effort. Take hold of the cabbage below the head with both hands and give it a slight jerk sufficient to loosen part of the feeding roots, but not strong enough to pull the plant away from its hole in the soil. In that way the flow of food materials to the plant can be almost stopped, although sufficient moisture to keep it solid, fresh and green will continue to rise. Then the heads may be left in the garden until they are needed. If you cut off the heads of early cabbages instead of pulling them up by the roots, the stems will throw out new leaves that you can use for salads or give to the hens.

PIGS, PORK AND PATRIOTISM

By A. M. Porter.

If we are to continue to provide meat for foreign people as well as our own, every farmer must put forth his best effort to produce more hogs. A glance at the prices of pork on the leading markets in this country and you can plainly see that we are slaughtering, consuming at home, and exporting more pork than we are producing. Some will say that the feed is too high to feed to the hogs, but the price has more than doubled in the past few years and the farmer can make many of the waste feeds on the farm profitable by raising hogs. You will find many communities in this province where the number of hogs have decreased during the past year. What has this caused? Look at the market prices of pork and the question is answered. These prices are high because we need more pork and now rather than any other time the farmer should be able to raise hogs profitably.

We can increase the amount of pork fats much more easily than we can increase the amount of vegetable or dairy fats. The people can not get along without fats as a food and because of this need, the farmer should endeavor to produce more fats by the quickest method. This method is by the increased hog production. Nearly all the farmers have a few dairy cows at least, and they are in an excellent position to raise pigs because of the skim-milk, buttermilk and other dairy products which can be used by them in the making of valuable meat foods.

Pork always finds ready sale on all the markets because the packers have found many ways of placing it on the market in attractive forms with excellent keeping qualities. I doubt if you can find any other meat from which so many products are manufactured. A large percentage of all the meat and meat products manufactured in Canada is derived from the hogs. All buyers are very anxious to get hogs because their firm badly needs them in order to keep the markets supplied with their manufactured meat products.

The quickest and easiest way of augmenting the meat supply next to the raising of poultry is by raising hogs. The hog is the most important animal for the farmer to raise for meat and money. He requires less labor, less equipment, less capital, makes greater gains per one hundred pounds of food and reproduces himself faster and in greater numbers than any other domestic animal. As a consumer of by-products on the farm the hog has no rival. No other animal on the farm equals the hog in its fat-storing tendency. The most satisfactory meat for shipping on trains or wagons for long distances is pork. I think in many ways the farmer will find that the hog is one of his most profitable domestic animals that he is raising for the market on the farm.

GOOD HEALTH QUESTION BOX

By Andrew F. Currier, M.D.

Letters pertaining to Health. If your question is of general interest it will be answered through these columns unless desired. Dr. Currier will not prescribe for individual cases or make diagnosis. Address Dr. Andrew F. Currier, care of Wilson Publishing Co., 73 Adelaide St. West, Toronto.

Medicines for Kidney Diseases.

If one has disease in the stomach or intestines he generally knows it and can localize it, but if he has disease in his kidneys, aside from aching and pains in the loins which are by no means sure indicators of kidney disease, there is nothing which can tell him, if he is without special information on such subjects, that these organs are diseased.

To be sure the urine is an important indication but it says little to the uninitiated.

Its appearance has comparatively little significance, in fact when it is as clear as spring water and irreproachable to the ordinary judgment it may have come from hopelessly diseased kidneys, while that which is bad smelling and suspicious to the uninformed may have come from kidneys that are normal.

Many of the physical changes in the urine take place in the bladder hence if you are influenced by the appearance of the urine as to your choice of medicine you may be taking what may be harmful to the kidneys and be of no use to the bladder.

Albumen and casts are the most important things found in the urine but they cannot be seen or found except by chemical and microscopical examination.

Blood and pus may often be seen in the urine but how can you tell whether they came from the bladder or kidney, as they may come from either.

Gallons of urine are sometimes passed daily, how are you going to tell that it indicates diabetes with sugar or diabetes without sugar, or cold, or disease of the nervous system, and how are you going to decide what remedy you should take?

When newspapers advertise Smith's Kidney Cure, Jones Safe Remedy and Brown's Kidney Pills, they are offering you something that is harmless and worthless and a fraud, or something which may be good if you know how to use it, but upon which you are not able to decide by your unaided judgment.

There are many societies for the prevention of mischief and wrong doing, there should be one to prevent people from using kidney medicines they know nothing about.

It is possible to influence the kidneys by medicines for all the blood in the body passes through them every few minutes and it is the blood that carries medicinal substances taken by mouth and eliminated by the kidneys.

Two kidneys are usually provided for this purpose though many are able to get along with one while it remains in good condition.

Medicines will not replace a kidney which has been destroyed or removed, nor will they destroy kidney tissue which have been so injured they cannot filter out water and waste matters from the blood.

Medicines can sometimes spur up inactive kidneys, check those which are doing too much, and coax along those which are diseased and imperfect but not too much so.

If this cannot be done, the wastes and poisons which the kidneys should eliminate, are retained and life is destroyed by them.

Water is one of the best kidney medicines, especially when combined with sodium, potassium, lithium or other minerals.

Mineral water is constantly used with advantage by those who have kidney disease.

Cold will stimulate the kidneys, so will blistering and cupping. Alcohol and digitalis, acting through the heart increases the blood flow through the kidneys and so increase the flow of urine.

Buchu, bear berry, parsley, broom, juniper and many other drugs will influence the kidneys and are often present in patent medicines.

In general it is unsafe for an individual to decide for himself whether his kidneys are diseased, and how they are diseased, still less therefore is it safe or prudent to decide upon the kind of medicine which would suit your case.

QUESTIONS AND ANSWERS.

Mrs. J. M. T.—Will bananas cause increase of weight? I wish to put on flesh.

Answer—Bananas, when fresh and ripe, form one of the most healthful and useful articles of food. They also have a greater food value than any other fruit because of the very large element of starch which they contain.

England's Day

O swift to act when honor bade,
Though circled by thy guardian sea,
England, all generous hearts are glad
Tribute to pay to thee!

Strong in the armour of thy name,
So long the hope of lands oppressed,
Quick to avenge a deed of shame,
The offspring of thy breast.

Spoke as became their mother's sons
They blenched not for the terror nigh,
But to the thunder of thy guns,
Glarly went forth to die.

Year after year they paid their toll
To freedom in their freemen's blood;
Unshaken, thy heroic soul
The hosts of hell withstood.

Year after year thy great ships keep
Through wind and storm, through mist and murk,
Secure the bastions of the deep,
Where sullen murderers lurk,

England, our Mother of old days,
Our Sister of the days to be,
Take from their grateful lips this praise
Our strong sons give to thee!

Taming the Lightning Stroke

If there was ever a time when it is important to protect buildings from lightning, that time is now.

High prices for grain, live stock and all other farm products make protection imperative, to say nothing about the patriotic impulse that should prompt us all to save foodstuffs that are so badly needed by our Country and our Allies.

Another important reason for protection is that it will cost less this year than it has ever before, if you consider the increase in the value of the building to be protected.

Buildings made of wood, stone or brick should always be protected by lightning-rods, for those building materials are not good carriers of electricity; they offer resistance to electricity. The lightning stroke always occurs where the electricity has been obstructed; when it breaks through, that is the stroke. If you equip your building with proper carriers, and therefore prevent the electricity from becoming obstructed, you need never fear lightning.

However, it is not only necessary to have a lightning-rod of high quality carefully made, but it is highly important that it be properly applied by a man who understands the principles of lightning control.

Even if one is expert at the mechanical work involved, and the job apparently is simple, it is best to secure the services of a professional. What you want is protection from lightning, not lightning-rods. There is no use having rods put upon your building unless they are the right kind and are properly put on; and you want to know that they are put on right. Then you can forget all about lightning dangers and read your paper while the storm rages outside.

Keeping Biennial Vegetables for Seed.

By the term "biennial" vegetables is meant one which takes two seasons to produce seed, writes the Dominion Horticulturist in a leaflet giving advice on the "Selection and Wintering of Biennial Vegetables for Seed," which can be had free from the Publications Branch, Department of Agriculture, Ottawa. The vegetables must be stored over the first winter and replanted for seed production the following spring. Some well-known vegetables of this class are beets, cabbage, carrots, celery, parsnips, salsify and turnips. Seed from these can easily be grown in Canada if the vegetables to be so used are kept in good condition over the Winter. Unless a rigid selection is made, each year, of specimens which are true to type, it will not be long before a larger proportion of the crop will not be true to type; hence great care should be taken to select well-shaped, medium-sized roots, typical of the variety of beets, carrots, parsnips, salsify and turnips, firm-headed cabbage true to type, firm stalked and disease-resistant plants of celery, and firm, shapely onion bulbs. If this is done and varieties are kept far enough from others so that they will not cross—the crop, Canadian grown seed should compare favorably with imported seed in regard to purity, as it does in other characteristics.

The methods of wintering vegetables for seed will vary in different parts of Canada, but in most places it will be necessary to give them some protection. When possible, it is best to store them in a frost-proof cellar. But, if necessary, the vegetables may be stored outside, both in small and in large quantities, except in the case of onions, which must be kept dry, and stored in a cool place where there is little or no frost.

Moonlight

Moonlight can never be the same,
Shadow and shine in mystic dream!
In that soft glow, with bomb and flame
They wrecked the wards of gentleness.

Home on the evening's healing breath,
With silver dabbled wings they came—
Tears beyond tears, death beyond death;
Moonlight can never be the same.

Rhubarb should not be pulled when the stalks become few and thin. Give the plants a mulching of manure, which will improve the supply for next year.

MEN FROM SEVEN SEAS WIN GLORY

GROUND REGAINED BY ALLIES RECALLS THEIR VALOR.

Over the Glorious Battleground of 1916 Again Sweep the Victorious Armies of the British Empire.

One of the strangest things in all this fighting is the way it thrills one's memories of 1916.

We again have come into possession and made temporary use of prisoners' cages which used to be crowded with Germans in this same month two years ago, says a war correspondent on August 26. When we recovered them grass grew rank inside wire inclosures, but already it is being trodden down. Soldier it is, there were lurked some of our recent dead in an old graveyard beside their comrades in the first Somme fighting. Much of the agricultural machinery and similar things we left behind in our retreat of March this year became ours again. Tanks were recaptured in one of their familiar tankodromes (in one of which I saw the tanks before they went into action for the first time in September before last).

This Is Now a Welsh Custom.

What memories come thronging in the sentence of the communique, which tells us: "Welsh troops have captured Mametz Wood!" Capturing Mametz Wood will become a habit with the Welshmen if this goes on.

In the first scene of our offensive on August 8, the actors were chiefly troops from overseas. Men from the British Isles had only a small part in the attack north of the Somme to protect the left of the Australians south of the river. It was a thankless difficult part. You already know how well the Londoners behaved in the first advance at the Gressaires Wood, at the Chipilly spur. Later a few Americans were used here, the only occasions on which they were called in these operations; and the Australians spread north of the river so as to have a liaison with themselves across the stream.

Valor of Overseas Troops.

Below here on the main battlefront, the honor of the first advance was shared by the Australians and Canadians. It was chiefly a Canadian battle; their advance was the core of the operation, and on their progress the advance both of the Australians' left depended and that of the successive French armies' right, each of which was thrown in only as the advance above prospered.

The Canadians are of right claiming the fighting of the first two days was the biggest thing Canada has done in the war, not excepting the capture of Vimy Ridge. Certainly nothing could have been better.

Apart from them the chief burden fell upon the Australians. They had incidental co-operation, some of the time with English units, both in the region not much below the Somme and their extreme right, in the latter of which two areas, especially, there was very hard fighting.

What the "Anzacs" Did.

In spite of this, however, the battle in its later phases was the Australians' battle. When it is remembered how long and brilliantly they have been fighting before this offensive began in the Morlancourt area up to Merlu and the magnificent way in which they swept across Santerre plateau, and how since then they have borne the brunt of the struggle on a wide front and shown themselves in the last two days able to make splendid advances on both sides of the Somme in the region of Bray and Chuignolles and beyond, one finds it hard to get words to do justice to their fighting qualities, whether it be dash or tenacity. Poziores itself was not more glorious.

Gallant Men From "Down Under."

Later in the successive movements of the offensive, including the great sweep toward Bapaume, they have, except in one particular, been at work with troops of the British Isles, Englishmen chiefly, but in co-operation with both the Scots and the Welsh. The exception has been the share borne by the New Zealanders, to whose performance in the Miraumont area I paid tribute in an earlier message and whose later great advance, ending in the capture of Louvart wood, was mentioned in the official communique. The New Zealanders never failed to do extremely well whenever they had been in action since the beginning of the war.

I believe there is no commanding officer in our army who would not at any time be rejoiced to know they were fighting on his left or right in any operation. Their fighting in the last few days has only been in harmony with their whole record.

Then the Guards!

So with the Guards. It is absurd to praise them again. Besides those first dreadful days in 1914 and 1915 one remembers especially their achievements in September, 1916, when troops on their right being held up in quadrilateral, they swept on for two thrusts of 1,800 yards into the blue with a totally exposed flank.

One remembers them in every great battle of 1917, ending with their punctual advance to whatever objective was set for them over the morasses and streams of Flanders. One remembers how they stemmed and broke the advancing German tide of March last in the stubborn fighting at Beiry and how in April, further north, one brigade bore the weight of the oncoming German masses until the Australians could come up and detrail behind them. In these last days they have shown the same old qualities. The Guards are the Guards still.

Finally, among the rest of the stout English troops the Londoners have been named more than once, with especial mention of the Royal Fusiliers. If only for the sake of those who have gone and to comfort those who grieve for them, one would like to mention each battalion and each company by name and number. Local pride is much, but much more important it is that England, the empire and the world should have a vision of these armies in the mass, including men from all parts of the empire and every walk of life— townsmen, countrymen, men from the mill, the farm, the factory, the shop, the office and moor—all fighting side by side and each proud of his comrade and all worthy of the cause.

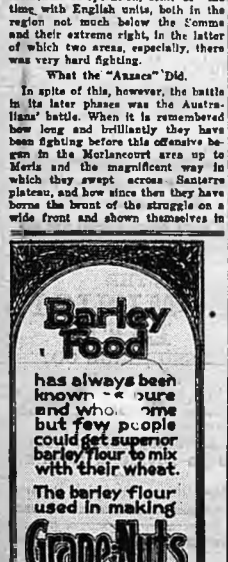
So it is that our men fought this month.

FISHING FOR EGGS.

How the North Sea is Kept Clear by Mine-Sweepers.

The landsman who has never had the joy of exploiting a "Fritz-special No. 1" after a six hours' trawl has a very incomplete idea of life aboard one of the mosquito craft engaged in minesweeping in the North Sea.

For four years—winter and summer—the motley fleet of tugs, steam packets, yachts, and even fishing trawlers, which collectively form the minesweeping flotilla attached to the Grand Fleet, have been fishing for the devil's eggs sown by the undersea pirates and keeping clean the footpaths of the seas. In blinding snows and sweltering heat they are there; pacing up and down the thousands of watery acres which stretch from Dover to Denmark—braving submarines, mines and weather.



And of the three, I think any old hand will agree with me it's the last we fear most.

It was just this combination of weather and sea which gave me my first "shake-up" before I had been egg-hunting a month. We were looking for them in the midst of a typical North Sea swell when the mate yelled that we'd hooked something, and sure enough up popped a beautiful egg on our left. The usual way to dispose of the mine is to fire on the "horns" with a rifle, but the high seas made a hit impossible, and we decided to tow it inshore. Midway to land, a huge comrush of water caught the mine and literally pitched it right into us. It exploded amidships with a terrific report, and we had about three minutes to abandon the ship before she sank. Fortunately, no one got more than a wetting.

At one time the Germans sent out submarines to raid the minesweepers at their work, and some valient little battles were fought before the U-boats decided to leave us alone. The next Hun move against us came from the air. Seaplanes would sweep out of the clouds and engage us with machine-gun fire, until they learnt that an "Archie" on a tug can be as deadly as its brothers on the Grand Fleet.

However, hardships are repaid with interest when a rescuending comes somewhere close at hand tells of one more pest cleared from the ocean track.

An apple tree that nuts all its biggest apples on top ought to be ashamed of itself!

HUN STARVATION STORY IS DENIED

FOOD IS SCANTY BUT LIMIT OF ENDURANCE NOT REACHED.

Berlin Is Worst Off—Railroad Service Reduced But Punctual, Says Tourist.

Germany is still far from starvation or from the limit of its endurance, so far as the civilian population is concerned.

This is the substance of a report made to the Associated Press by a Swedish journalist who has just returned from an extended stay in Germany and at Marienbad, Bohemia. He is an intelligent observer and corroborated reports from other travelers in the last month.

In North Germany, particularly in Berlin, there is a marked scarcity of foodstuffs. Nevertheless there is enough for existence, and the restaurants of the better class still serve ample portions of meat without a meat card. The farmers generally still have plenty, even in North Germany.

Conditions improve, the Swedish journalist says, as one goes southward. Some 6,000 guests at Marienbad hotels were served with unlimited quantities of white bread, butter, milk and creams. Hungarians who made up a minority of the guests brought such a variety of foodstuffs with them that they displayed "an almost ostentatious luxury."

Conditions in Austria Bad.

Conditions in Austria are very bad, except for those who receive extra food because they are doing war work. This class is earning very high wages and is satisfied with conditions, but the rest of the population is longing for peace at almost any price.

The Swedish journalist doubted the possibility of any successful uprising in Austria because of the lack of organizing ability among the lower classes. He said:

"It sounds paradoxical, but it is this very lack of organising ability that keeps the dual monarchy from falling to pieces."

The railroad service in Germany, he declared, although greatly reduced, appears to be as punctual as in times of peace. The rolling stock has been repaired and repainted and appears to be in good condition. The traveler had the following meal in a dining car on a meatless day: Soup, fish with potatoes and butter, macaroni with tomato sauce, a jelly tart and tea. The meal cost five marks, or about eighty-five cents at the present rate of exchange.

Talk Little About War.

Asked what the civilian population thought about the war, the journalist said:

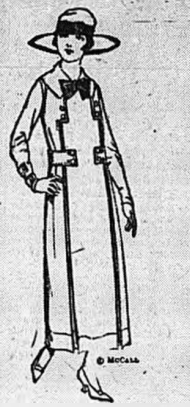
"They have stopped talking about it. They talk about food, sports and theatricals. Berlin theatres are filled nightly and the hotels, by the way, are being redecorated and repainted. I asked the reason for this and was told they were getting ready for the coming of peace. Max Reinhardt is even building a new theatre.

"I asked many people what they thought about the recent German reverses. Their replies were almost stereotyped: 'Hindenburg knows what he is doing. If he goes backward it is because he has an object, and not because he has to.' I think this fairly represents the majority opinion."

The Little Brother

In his new Scout attire he felt a man.
The hat, its leather strap beneath a chin
Where still some dimples flickered out and in,
Placed on a haughty head; his face all tan.

And pompous looks; his steady legs apart.
We laughed to see him strut, but now—but now
We cannot laugh; we half forgotten how,
And his trim brown equipment wrings the heart.



He is so like his brother, and his coat
This pygmy brown one, is a copy true
Of what his brother marched in, striding through
The cheering streets with dancing flags afloat.

The ship that bore that brother overseas
Above the hidden death that menaced him,
To that red shore with smoke and trouble dim—
Took all our calm of mind and pleasant ease.

The Boy Scout's grave now. What peace he made
With that big brother, he has never told;
But they were comrades those last days, would hold
Low talk, the strong hand on the small one laid.

If any bitter news should leap the spaces,
Saying he fell—this brother young and slim
Will take the big, big part assigned to him:
Grow worthy of a son's, a soldier's, place.

Two Charming Designs

Youth needs no frills or trimmings to set it off, in fact it is enhanced when set in relief with simple, even severe, lines as in this charming new design. McCall Pattern No. 8442, Misses' Dress. In 4 sizes, 14 to 20 years. Price, 20 cents.

Panels are still the supreme favorite. This new design also shows the peg-top effect. McCall Pattern No. 8510, Ladies' Dress. In 6 sizes, 34 to 44 bust. Price, 20 cents.

These patterns may be obtained from your local McCall dealer, or from the McCall Co., 70 Bond St., Toronto, Dept. W.

WOMEN! IT IS MAGIC! LIFT OUT ANY CORN

Apply a few drops then lift corns or callouses off with fingers—no pain.

Just think! You can lift off any corn or callus without pain or soreness.

A Cincinnati man discovered this ether compound and named it freezone. Any druggist will sell a tiny bottle of freezone, like here shown, for very little cost. You apply a few drops directly upon a tender corn or callus. Instantly the soreness disappears, then shortly you will find the corn or callus so loose that you can lift it right off.

Freezone is wonderful. It dries instantly. It doesn't eat away the corn or callus, but shrivels it up without even irritating the surrounding skin.

Hard, soft or corns between the toes, as well as painful calluses, lift right off. There is no pain before or afterwards. If your druggist hasn't freezone, tell him to order a small bottle for you from his wholesale drug house.

"He Ne Passerent Pas"
(They shall not pass!)

They shall not pass! A wall of steel
prevents them!
The line may bend, but it can never break.
For outstretched unseen hands shall thrust against them.
The impious Hunnish hordes in terror quake
Because they know their efforts are in vain!
They cannot pass! God will the victory gain.

Minard's Liniment Relieves Neuralgia.

The British Ministry of Pensions has 1,145,000 cases on its books, and they increase by 18,000 weekly.

The Lieutenant Awakens in Hospital

I know my own mind, doctor! Let me go!
Let go my waist. We must retake the farm!
They bite like redhot beetles in my ears,
They crush, they never stop. No, no, no, no!
Oh, not my leg! Oh, doctor, not my leg!
Damn you, sir, let me up. I want to walk.
The Captain fell, I tell you—through the head.
Already dawn is creeping past the church
And down the pasture lane. They come too late.
I hear machine guns coughing in the mist.
Write this report: the color of pain is red
And black on hills of gray. He died a man.
Grenades at fifteen yards! Now, boys, once more!
I charge, with all my heart, with all my soul!

LEMONS WHITEN AND BEAUTIFY THE SKIN

Make this beauty lotion cheaply for your face, neck, arms and hands.

At the cost of a small jar of ordinary cold cream one can prepare a full quarter pint of the most wonderful lemon skin softener and complexion beautifier, by squeezing the juice of two fresh lemons into a bottle containing three ounces of orchard white. Care should be taken to strain the juice through a fine cloth so no lemon pulp gets in, then this lotion will keep fresh for months. Every woman knows that lemon juice is used to bleach and remove such blemishes as freckles, sallowness and tan and is the ideal skin softener, whitener and beautifier.

Just try it! Get three ounces of orchard white at any drug store and two lemons from the grocer and make up a quarter pint of this sweetly fragrant lemon lotion and massage it daily into the face, neck, arms and hands. It is marvelous to smoothen rough, red hands.

Conqueror's Oak Falls

A correspondent of London, Eng., says Canadian Foresters have felled the famous tree which stood in front of Windsor Castle, known as William the Conqueror's oak. The tree was reputed to be a favorite of the Norman Duke, who protected it from deer. Old manuscripts show the oak tree existed in the year 900. Latterly the tree became unsightly and was very rotten. After ineffectual attempts to have it reinforced with cement, the King ordered its removal.

The timber is very fine grain and color. One slab is used for a mantelpiece in the small replica of a Canadian log cabin built by the Canadians in Windsor Park as a tearoom for the King. A number of souvenirs have been made of the wood. One is a carved plaque of Windsor Castle background and Indian's head.

Minard's Liniment Cures Diphtheria.

Where He Was Dense.

At a dinner in Edinburgh, Baron Kickuchi, principal of Tokio University, was a guest. An Englishman present told the story of a Scotchman who went to his dentist with an aching tooth and was asked if he would have gas; he replied that he would, but should like to count his money first. Everybody laughed but the baron. A Scotchman attempted to explain the joke as to the alleged foibles of his race; the baron remained impassive. Others tried, but the baron said, "I do not understand." Finally he stopped the explanations. "Gentlemen," he said, "you do not understand what I do not understand." His listeners gave rapt attention. "What I do not understand," he went on, "is not why the Scotchman said what he did, but how any Scotchman should not know, at any time, without having to count it, how much money he has in his pockets." The laugh was on the hosts of the "dense" Oriental.

MONEY ORDERS.

Pay your out-of-town accounts by Dominion Express Money Orders. Five Dollars costs three cents.

His Revenge.

A busy housewife came into the sitting room with a determined look in her eyes.

"I really shall have to punish those children," she began.

"What have the little beggars been up to now?" asked father, looking up from his newspaper.

"Why, they've made a mess of my sewing room," explained his wife. "Needles, reels of cotton, scissors—everything has been hidden away in the most unexpected places. It is really exasperating."

Her husband laid down his paper, and smiled benignly.

"I did that," he said calmly. Then, in answer to a questioning look, he went on: "You tidied up my desk so beautifully the other day that I thought it only fair to return the compliment. So I tidied up your sewing room."

Try Apples This Way.

I have found that apples boiled with the skins on, just as potatoes are boiled "in their jackets," are much more delicious than baked apples.

Minard's Liniment Cures Burns, Etc.

Suddenly One Day

Suddenly one day
The last ill shall fall away.
The last little beastliness that is in our blood
Shall drop from us as the sheath drops from the bud,
And the great spirit of man shall struggle through
And spread huge branches underneath the blue.
In any mirror, be it bright or dim,
Man will see God, staring back at him.

Minard's Liniment for sale everywhere.

The Clergyman's Come-back.

The clergyman was preaching a long sermon from the text, "Thou art weighed in the balance and found wanting." After an hour the congregation became impatient, and one by one began to leave, much to the annoyance of the preacher. At length, as another was about to leave, he stopped his sermon, remarking: "That's right, gentlemen, as fast as you are weighed pass out."

Minard's Liniment Co., Limited.

Dear Sirs,—I had a bleeding Tumor on my face for a long time and tried a number of remedies without any good results. I was advised to try MINARD'S LINIMENT, and after using several bottles it made a complete cure, and it healed all up and disappeared altogether.

DAVID HENDERSON.

Hellsiate Station, King's Co., N.B.,
Sept. 17, 1904.

Fleur d'Or

Life is a flower
Fatalled with gold,
And, as each hour
In the bells is tolled,

And shadows crawl
From the setting sun,
The petals fall
One by one.

Heals like Magic—Burns, cuts, chafed feet, blisters, piles, old sores, sunburn, boils, bruises, and other inflammation. At dealers, or write to HIRST REMEDY COMPANY, Hamilton, Canada

The Paisley Advocate

PAISLEY, SEPT. 12th, 1918

—The speculator fills no really useful place in the business of any country. His services are not at all essential to the maintenance of the business system, yet he plays a very important and influential part by the way he fixes or fluctuates the market prices of commodities, and particularly in the food markets. The government should, by fixing prices, put everything beyond the market operations of the speculator, and give the consumer every chance to obtain the essentials of life at a reasonable cost, also give the producer a chance to obtain the genuine market price for what he produces.

—The door to door canvass for patriotic and war funds of all kinds will soon be entirely dispensed with, if we are to judge by the way Bruce county is doing this. It was decided by the county council to make a grant to the overseas Y.M.C.A. work, and now a big majority of the reeves have pledged themselves to support the making of a grant of three-quarters of a mill for the Navy League, instead of having the county canvassed by committees. The latter method entails quite an item of extra expense as well as a loss of time to those who take the work in hand, and all this is saved by making it a matter of county taxation.

POWER AS WELL AS PROFITS

A fact that great business organizations like the packers do not recognize is that resentment and apprehension are created not only by their profits but by their power. The popular feeling is not one of mere envy of the rich, their luxury and ostentation, but of uneasiness over the growth of a form of irresponsible government.

The Federal Trade Commission of the United States, for instance, tells us that five great American corporations planned to seize the whole marketable supply of animal food, and then began to reach out for control of vegetables and other foods, so that there should be no escape from their power. We are told that the Armours handled nearly a quarter of the wheat sold in Chicago, and also made themselves the greatest rice dealers in the world. They control a large part of the trade in poultry, eggs and cheese; they control the export of meat from Latin America, and are reaching out for control in Canada and Australasia.

These activities can have but one object: the establishment of a complete monopoly in food. The consumer who wants to economize finds it useless to cut down the consumption of meat, for the moment he turns to vegetables, cereals, fish, or any other substitute, the great packers are in the field, cutting off his escape. The New Republic says:

"The Kaiser once vowed that no important international transaction should reach consummation anywhere in the world without acknowledging the interests of Germany. The packers, apparently, have vowed that there shall be no transaction in the import and export of food that do not recognize the packers' interests and pay tribute to them."

It is difficult for the most charitable to believe that this policy is due to benevolent regard for the consumer, and that the packers are satisfied with the very smallest remuneration for their exertions. In the one business of slaughtering food animals and using all the by-products without waste they have no doubt shown great efficiency. But they are not satisfied with that. They reach out after control of other foods. They seek to establish a monopoly in food. They say in effect to the consumer, "You shall eat only on our terms."

The plain man naturally concludes that the aim of monopoly is profit. But no juggling with the figures as to profits will make him rest satisfied with a kind of irresponsible government, a tyranny more far-reaching and striking more deeply at the very roots of life than any political despotism. If this kind of power is to be exercised it must be by a government responsible to the people. The proposal to place the business under public control is the natural and logical result of the packers' thirst for power as well as profits.—Daily Star.

PREDICTIONS GONE AWRY

The deputation that went to Ottawa a few months ago to oppose the military policy of the government represented that if any more men were taken off the farms a good deal of this year's crop would go to waste for lack of help to take it off. They claimed that they were induced to put in an extra large crop by the pressing of increased production, and they regarded it as an injustice and ill faith to deprive them of men to harvest it.

One may travel all over Ontario to-day and see not a wheat stook to waste, and the farmers themselves will tell you they had good crops with little or no extra work or trouble.

We shall probably hear the same laments next year from the same people. They do not represent the farmers as a whole. Certainly they do not represent the farmers who have come at the front. There were two reasons for those complaints. One was to make capital against the government. The other was to save their sons from the draft.—Kincardine Review.

BORN

Miller—In Saugeen, on Sept. 13th, to Mr. and Mrs. W. A. Miller, a daughter—Frances Elizabeth.

Westman—In Bruce Tp., on Sept. 16th, to Mr. and Mrs. Everett Westman, a son.

Pilkie—At Mount Forest, on Sept. 19th, to Mr. and Mrs. A. Pilkie (nee Lucile Fraser), a son—Ian Stewart.

ONLY MEDICINE MADE FROM FRUIT

Extraordinary Success which "Fruit-a-tives" Has Achieved

One reason why "Fruit-a-tives" is so extraordinarily successful in giving relief to those suffering with *Constipation, Torpid Liver, Indigestion, Chronic Headaches, Neuralgia, Kidney and Bladder Troubles, Rheumatism, Pain in the Back, Eczema* and other Skin Affections, is, because it is the only medicine in the world made from fruit juices.

It is composed of the medicinal principles found in apples, oranges, figs and prunes, together with the nerve tonics and antiseptics of proven repute.

50c. a box, 6 for $2.50, trial size 25c. At all dealers or sent postpaid by Fruit-a-tives Limited, Ottawa.

LOCAL AND DISTRICT NEWS

"The Cows Are in the Clover"

'Tis now the mild-eyed cow takes to her marauding instincts and invades war gardens, ravenously devouring everything in sight. What the war gardeners threaten in the way of reprisals wouldn't all look well in print. The owners of the cows will be wise to keep them tied up or within bounds at night. If not it will be the pound for them.

Even in War Time

"All work and no play" wouldn't keep the people at home in good fettle. After the hard summer licks have been put in—when the balmy harvest days are drawing so near—what is there more pleasant than a day or two devoted to rest and pleasure. Don't you deserve it? You bet you do. The Fair—your Fair—will soon be here—that's your chance. Better think it over. The Paisley Fair, Sept. 24 and 25.

No Meat Restrictions for Threshers

The farmers in the neighborhood of St. Thomas in response to a telegram sent the chairman of the Food Board for instructions, have been advised that the regulations governing public eating houses are not intended to apply to threshing gangs. The farmers desired to be informed if they might serve meat to the threshing gangs on Wednesdays and Fridays under the same conditions as other days. The gangs comprise some fifteen men, and their work being long hours and strenuous, they felt the need of meat.

Heavy Rains Help this Section

Last week's wet weather just about suited this row country exactly, as pastures will be benefitted to an incalculable extent. Harvest was practically all in, and we have not heard of anything that was damaged by the rain, although threshing was delayed in some cases. Fall wheat that was in early has got a great start, and now that the land is in good plowing condition the acreage will likely be much increased before the season closes. Late potatoes and all other roots will be immensely improved by the moisture, and make a great growth before pulling time.

A Fatal Day for Horses

Two casualties occurred in the local horse brigade last week, under unusual circumstances. Mr. George Munro, Elora Road south, drove out to Bruce Tp. and made a deal to sell the horse he had in the buggy, delivery to be made to the buyer next day. As he was coming home his steed suddenly went groggy in the shafts. Mr. Munro requisitioned the use of the nearest telephone to summon a vet., but the equine was soon beyond the restoring influence of dope, and the causes that cut short its last earthly trip could not be designated. Mr. D. Parliament lost his driver the same day in a more tragic way. He had tied the animal to a post after unhitching it from the buggy. A sudden noise frightened the horse and it broke away. After galloping around the field it ran into the wire fence, made a bad attempt at leaping over and in doing so fell and broke its back. It was a good driver, and will be quite a loss to Mr. Parliament.

What About Fuel?

There is no more cool in sight at present, and the cold weather is coming on to bring us the realization that the fuel question is becoming urgent. We may have a larger supply of wood to draw upon this fall or early winter, but then what? And then what? A mighty cool time of it through the winter for a lot of our householders, a sure thing. A few have a fair quantity of coal on hand, and a few have wood, but many have none of either. This condition alone demands the appointment of an officer to supervise delivery of coal, and see to the distribution of something like being equitable. The shortage may be so great that it will become necessary to take coal from some full cellars for those who cannot get any from the dealers. The allotment for our village is fair, and would keep us from suffering, but when do we get it all? There is plenty of standing timber within reach of Paisley to supply the town, but the difficulty is to get men to convert it into wood. Possibly townspeople may be livened up to grappling with the problem when the winter blasts begin to blow. Until then, let us take our chances, seems to be the general attitude. Another shipment of furnace coal received by Mr. D. A. Lyon is being delivered, and helps to fill the winter needs.

—Why be content to do as much as some other men? Measure your strides with the man ahead of you.

FALL FAIRS PAY WELL

Prepare Now to Harvest and Store Root Crops.

Best Mixtures and Methods of Making Bread With Flour of Various Cereal Grains.

(Contributed by Ontario Department of Agriculture, Toronto.)

TO the general farmer who grows good grain for seed, to the specialist in garden and truck crops, and particularly to the live stock man the Fall Fair offers an opportunity. It pays to advertise and the Fair is the place where the people see the goods produced, and seeing is believing. Moreover, the papers report the winnings and through these the exhibitor gets a large amount of advertising free which would otherwise cost him a considerable amount of money. Winning in close competitions under a competent judge adds dollars to the value of stock shown and increases the market price of any commodity as well as giving the exhibitor a standing not only in his own community but over a section of country corresponding to the size and influence of the show at which prizes are won. The Fair is a good place to make sales. Prospective buyers see the good exhibits made and enquire about the breeding stock at home. Stockmen show at Fairs largely to make sales rather than to win prizes although the latter is a factor in the sales and they are not disappointed as evidenced by the growing interest in the Fall Fair. Showing at the Fair, coupled with a judicious newspaper advertising policy, which should never be neglected, is good business. The two go together and work hand in hand. It pays to let others know of your good stock. Use printers' ink and show at the Fall Fair.—Prof. Wade Toole, O. A. College, Guelph.

Hints on Harvesting Root Crops.

Root crops should be taken up before the weather becomes cool or wet and disagreeable in the fall if in any quantity. It is slow work at any time and becomes much more so under cold damp conditions. Lift the roots with a digging fork and twist off the tops, pulling them in piles and covering with the tops. If a large area is to be lifted, and one is expert with a sharp hoe, he can very quickly remove the tops, but they will not keep quite as well. The roots should be ploughed out, throwing them as much as possible on the top. Bins with slatted sides and bottom should be used for storage where possible, as this gives the roots a chance to sweat. If the storage room temperature is above 40F. cover them with sand. Carrots should not be deeper than two feet in a bin, others may be four feet. Where cellar storage is not available use pits. These should be three feet wide, two or three feet high and of any length. Run the pits north and south where possible and have them on well-drained ground. Put a layer of straw on the ground and cover first with straw 6 inches deep then 5 inches earth, and as the frost gets harder cover with fresh strawy manure. Have ventilators every 16 or 16 feet, as all roots sweat in storage. These may be filled with straw during cold periods.

All roots should be as free from dirt as possible when put in storage. It is often advisable to leave a few days in small piles so that at the second lifting any adhering will be removed.—A. H. MacLennan, B.S.A., Ontario Vegetable Specialist.

Cereal Grains for Bread-making.

On this continent and in Europe we use wheat in much larger quantities than any other grain. This is because the flour made from wheat contains the constituents necessary to form gluten. Rye contains a similar substance to a lesser extent, while the other grains do not have any of this material. Gluten is a tough, elastic, tenacious substance, capable of considerable expansion. Consequently, when the gas liberated through the action of yeast seeks to make its way out of wheat flour dough the gluten expands, retaining the gas and causes the dough to rise. When the bread is baked the gluten is "set" or coagulated, and this accounts for the light porous structure of wheat bread. When surrounded by a proper crust the moisture is retained and the bread may be kept for several days and still be an attractive article of food. Rice, oats, corn and barley cannot be used alone to prepare bread of this type. They cannot be expanded by means of yeast for their is no cohesion in the mass. They may be used in making biscuits and cakes or quick breads, which breaks easily, dries out readily, cannot be safely transported, and must be consumed within a few hours after being prepared.

On the other hand, there is comparatively little difference in the composition of the various cereal grains and, consequently, one will furnish about as much digestible nutrients as another. If, then, in a time of wheat shortage like the present, we substitute some of the flour of corn, oats, barley, buckwheat, etc., for wheat flour in making bread, we do not decrease its nutritive value. We do dilute the gluten and thus limit the power of expansion of the dough and we make the bread darker, but we have retained the desirable features of bread. Silkiness of texture and whiteness of crumb were counted points of excellence in the bread of the old high patent flour, but under the present conditions of longer extraction of the wheat grain and the introduction of substitutes, it is wrong for the consumer to place a high valuation on these points.—Prof. R. Harcourt, O. A. College, Guelph.

The Late Pte. Christie

The Times makes the following reference to the deceased soldier son of Reeve Christie of Saugeen: Pte. Christie was teaching at Sundridge when the call of duty came to him, and he came back to his old home in Saugeen and joined with the 160th in the spring of 1916. He trained with the battalion until this present spring, when it was disbanded, and the boys went to France with other units. Oliver was a splendid type of young man, and his death is regretted. He was educated in Port Elgin high school and was making good progress in his teaching. He was greatly interested in the young people's work of his church. Even when in the grim task of preparing for war, he never forgot his "little white church in the country," and laid aside his contributions regularly for the carrying on of the work of the Master in Dunblane church. Two letters had been received by his parents here last week, which showed him to be in good spirits and in the best of health. Oliver was 22 years of age in July. During his two years' training in England he took opportunity to attend a soldiers' university during his spare hours. He had decided that if he returned to Canada he would take a university course.

—Many a man is like a coconut. His outer shell is hard and rough, but he is full of milk of human kindness.

E. TOZER, R.S.

when he said—

"Either the civilian population must go short of many things to which it is accustomed in times of peace or our armies must go short of munitions and other things indispensable to them."

NOW the only way we can possibly live up to that obligation is by going without in order that our soldiers may have. For the money we waste is not money at all—it is equipment, clothing, shot and shell that are urgently needed in France.

By denying ourselves, therefore, we enable Canada to procure to the fullest extent the materials and labor which she and our Allies need for the successful prosecution of the war.

What happens when we fail to save?

A pullon labor by the Government in one direction and a pull on labor by the people in the opposite direction.

Hundreds of millions of dollars are of no use to the country if goods and services can be secured only to the extent of eighty millions of dollars. So we must do everything in our power to release both goods and labor for the purposes for which Canada needs them.

WHETHER it be food, coal, wool, steel, leather, labor or transportation, the result in all cases is the same. Whoever competes with the nation by freely satisfying his own desires, selfishly appropriates to his own use that which is so urgently required for our fighting men in France.

For the sake of your country and the boys "over there," spend cautiously. Think of what Lord Kitchener has said, and ask yourself first, "Is this something I really need or can I do without it?"

Letters from the Soldiers

From Stanley Martin

Corp. Stanley Martin wrote on Aug. 13th to his parents, Mr. and Mrs. Wm. Martin, Arran: "Just a line to let you know I got a bit of a scratch and am at present in convalescent camp. I was hit by a bullet from one of our aeroplanes, just a stray shot. It came across my front and grazed my left breast. So I had to go back of the lines to get inoculated. I have been travelling since the 8th and have stayed at a different place every night. But I guess I'll be settled now for a week or two. We advanced about 7 or 8 miles and reached our objective about 6.30 p.m. I got hit about an hour later and then went out. The barrage opened at 4.20 a.m. and we started an hour later from a place about two miles behind the lines. We had no fighting to do, as we were the last of our division to go over, and the cavalry got Heine on the run in the afternoon and drove him a short distance beyond our objective. But the next forenoon the boys went over and they ran op against a lot of machine gun fire and a good many were wounded. Still, they made their objective. The tanks did good work the first day. It sure was a great sight to see so many infantry, cavalry, tanks and artillery all moving forward at the same time. There wasn't so much shell fire, as Heine was moving back. Plenty of aeroplanes overhead all the time also.

VAL COTTRILL DESCRIBES FIGHT

Val Cottrill, son of Mr. and Mrs. J. B. Cottrill, of Port Elgin, gives a splendid description of the fighting going on in France. On August 12th he was slightly wounded. The following letter was written on the 16th from the hospital:

Dear mother and all—

I sent you a post card on my way out of the line, letting you know I was wounded but only slightly. It is in the left arm near the shoulder and only a flesh wound, so it will only be a matter of a couple of weeks or a month before I will be back to the battalion, but it will not be the same bunch, as we suffered quite a few casualties. A lot were wounds, but quite a few killed.

It was a great show, the largest the Canadians have been in, and very successful, and something I shall not forget, I can tell you, in fact one wonders how he came through it all.

The first day or early the first morning after a stiff artillery barrage, "over the top" we went, the tanks leading, and once we got up and out of the trench we advanced very fast, and everywhere you could see groups of prisoners going back holding up their hands, but we take very little notice of them except you make them hand out a few souvenirs, but that soon wore off and it was go ahead, the cavalry and the tanks disorganizing them ahead of us, and towards evening we stopped, having gone by our objective over ten miles. I might say here we had very few casualties.

The second day we met more resistance from Fritz and advanced a few miles, but the third day capped things right. Our company was to take a rather difficult wooded hill, nested with machine guns. So starting in with 136 men and 5 officers over the top we go, with the best of luck, but we no more than advanced a hundred yards when we realized we were up against something pretty stiff. Fritz opened up machine guns on us and the fellows were beginning to drop on all sides. The bullets whistled by our ears and picking up the dirt around made one feel rather uncomfortable, but on we went taking advantage of cover when possible till we struck a ditch. Here what was left sorted themselves out, then we tried to outflank Fritz and finally after all day we shifted him out, taking a few prisoners, but now they are fighting to the last, and on collecting us together we found that we had 43 men and 1 officer.

The next morning Fritz counter-attacked and I got it in the arm along with others, and finally worked our way back to the dressing station as Fritz was swiping with machine guns, and you could not show yourself a target, so you had to be careful, but by night I was quite a piece behind the lines in a clearing station.

I see, though, that they are still shoving him back a little every day, but he certainly got a knock the first couple of days.

Still send my mail to the battalion and they will forward it from there. The hospital I am in is No. 6 General Hospital, Rouen.

This morning I was out strolling around and thought I saw a familiar face, and on asking him his name who should it be but a Russell lad from the 6th of Bruce. He knew me after I spoke. Outside of him I am a perfect stranger among English, Scotch, Americans and Australians, in fact all the different Allies.

Hope you are all well. I will close for now.

Your loving son,
Val.

A BRUCE BOY IN MESOPOTAMIA

Mr. Hugh McLean, Underwood, has received the following letter from his son, Capt. John McLean, after a silence of several months. Capt. McLean is now in Mesopotamia:

May 19th, 1918

My Dear Father—This is my birthday, and as I have just finished marching a distance of about 500 miles since April 16th, I guess I better give a celebration and write to you. It is the first time I have had an opportunity to post a letter in that time and I hope you will therefore pardon my long silence. Please do not worry when you do not hear from me for more or less longer time, because up here there's no mail service. It's only when someone goes out to civilization that we get a letter away, and when someone comes in we get any mail. Have had two letters from my wife, one of Feb. 2nd and one of Feb. 1st, since I left London on Jan. 29th, so you can understand how much in touch I am with affairs of the world. Am not at all sorry, however, that I am here, not now be penning these lines to because I have heard rumors of the scrapping in France this spring, and reckon that had I been there I might not now be penning these lines to you. Where I am there is no scrapping and my work is more or less political in character, and unless some of these natives have got a fancied grudge against me I am more liable to live a long time. Just now I am the proud possessor of two servants, a horse and a dog, and live in a palace which at one time was the property of a people who are now our enemies. The place where I am is about 6,000 feet above sea level so that the air is simply great—the water is fine and good and the sun is hotter right now than it is at home in July and August. I am as brown and freckled as ever, but am feeling fine.

Now as the mail closes in about ten minutes and it's only every so often there is one, I guess I'd better ring off. Bye-bye for now. Love to you all.

Your loving son,
John

Capt. J. H. McLean,
(3rd Canadian Inf'y Batt.)
Dunsterforce,
Mesopotamia Exp. Force.

HELP THE BOYS "OVER THERE" BY SAVING GASOLINE

The Allies need gasoline. Waste none of it on Sunday motoring for pleasure. He who uses it for this purpose stints those who are fighting our battles. It is the duty of all motor car owners to comply with the Fuel Controller's request to save "gas."

The safety of the State being the supreme law, personal enjoyment must give place to national necessity during war time. To save gasoline is to save money. It will also ensure a more adequate supply of "gas" for the needs of our war machine, which must back no essential. To comply with the Fuel Controller's request will save $15,000 on a single Sunday. In gasoline it will also save hundreds of thousands of gallons. A word to the wise motor car owner is sufficient!

The Lungs of Your Range

There is no fine system just like that of the Pandora Range. Before you buy a range learn about the Pandora method of heat distribution—it is the secret of good baking and of every kind of good work a good range should do. It is the lung system of the range.

WAR-TIME CARE OF HOUSEHOLD LINEN.

The careful housewife looks well after her linens at all times, but in periods like the present when they can scarcely be replaced for love or money it certainly behooves us all to redouble our vigilance in this direction.

First let us see how certain conditions shorten the usefulness of such things as sheets, pillowslips, table cloths, napkins and towels. Much wear comes from laundering when by friction the dirt is rubbed out. Vigorous rubbing, such as is necessary when linen is badly soiled, wears it out much faster than when only partially soiled. Hence it is economy to wash it before the first named condition is reached. A gentle rubbing preserves the fabric longer than a vigorous one. Strong washing fluids cause disintegration of the threads and should be avoided even though they facilitate cleansing.

The careful housewife understands, too, how the wind can injure articles while hanging on the line to dry. An hour in a stiff wind will shorten the period of usefulness more than a month's wear. The rays of the sun and a gentle breeze are harmless, but avoid allowing the clothes to flap in the wind. This not only whips out hems, but actually breaks threads and does much damage to any fabric.

Hemstitching should be mended as soon as the first thread gives way. It is then easily repaired so the break will scarcely be noticed. Neglected it means a bad place.

Each week the pieces should be gone over carefully and the tiniest break mended. Turn linen pieces back and forth with ravellings or threads drawn from the best parts of old linen. This becomes invisible after laundering. Don't leave it until a patch is required. A patch is unsightly while a darn is not.

A well darned table cloth, towel or napkin will wear twice as long as a neglected one and look none the worse for the stitches. Fold linen pieces differently from time to time to avoid wear in the same places.

Turn pillow slips before slits come in them. Rip the bottom ends and resew, with the corners as first made half way along the sides. This brings the wear in a fresh place. Single-width sheets must have a seam in the middle if turned, but neatly folded in a flat seam this will not look badly, or the centre may be over-handed. The sides will have to be narrowly hemmed but that is a trifling matter in war time.

So far nothing has been said of underwear, but care will result in a saving here also. As suggested, washing before a garment becomes badly soiled saves wear, even though it means more pieces. Watch for breaks and mend them before they become large. Dry all colored clothes in the shade to prevent fading.

Sometimes an ugly tear can be mended so it does not show. To do this follow a thread in cutting out the part to be removed, mitre the corners and use tiny stitches and thread of the color of the goods. A plain material can be so mended as to almost defy detection. If new goods must be used to repair that which has been worn, the new may be placed in the strong sunshine for a few hours, or more if necessary, to bring it to the same shade as the garment. This method will do away with the difference in appearance and renders the patch less conspicuous.

As patriotic citizens we will each endeavor to save every bit of cotton and wool goods by using carefully what we have on hand, thus helping to conserve the amounts needed for war purposes. A search of attics and store rooms would probably bring to light a good many articles still usable. Fortunate indeed is the housewife who has a stock of household linens to last until the close of the war. I know of no more discouraging task than an attempt to buy new at the present time.

What Not To Can.

Our canning problem needs to be reduced to a very sound common-sense basis this year and only those products canned which cannot be better kept in some other way.

During the furious canning campaigns of the past few days, I have found parsnips, carrots, onions, cabbage, sweet potatoes and even Irish potatoes canned—all of which is sheer nonsense as each of these could have been kept as effectively in a much simpler way.

Stone jars of small size with stone covers or with paper or cloth covers pasted on, can be used for preserves in which the sugar acts as a preservative or for any type of pickle in which vinegar and spices act as preservative agents. These containers are out of the question for fruit or vegetables which are not preserved or pickled.

It is wasteful to put into large containers any sort of preserve or relish that is used in small quantities only, since there is sure to be waste when the product stands long unsealed and is used frequently.

Glazed earthenware jars are good for putting down eggs in water glass. They should be furnished with tight covers to prevent the solution from becoming dense through evaporation.

Every housewife should study the ways and means for the storage of root crops, such as trenches for cabbage and turnips, which are kept from freezing by alternate layers of straw and earth. Sweet potatoes can be stored in baskets in a warm attic. Navy beans and lima beans and other legumes it would be wiser to store dry than to attempt to can.

CONCERNING PASCAL.

Famous French Mathematician Invented Many Modern Conveniences.

When Blaise Pascal, the famous French mathematician, was sixteen years old, he wrote a treatise on conic sections. His sister, Jacqueline, at twelve years of age, was the author of a book of poems. In the French Ideal, Mme. Duclaux tells of the further triumphs of those wonderful children of the seventeenth century.

Etienne Pascal, their father, being compromised in a rising against the Chancellor Seguier, fled from Paris in 1638, leaving his children in the charge of a faithful housekeeper. But the children were already paragnages. Jacqueline, about twelve years of age, meeting Cardinal de Richelieu one day, asked her father's pardon so prettily in verse that Richelieu not only recalled him to Paris but soon afterwards gave him the important post of adjutant to the intendant of Normandy and sent him to Rouen in 1639.

Impressed into the business of his father's office at Rouen, young Pascal, at sixteen years of age, conceived the idea of a mechanical ready reckoner, independent of the will and energetically gave himself to the invention, which occupied him for more than two years. He devised fifty different models, and personally managed the work of the artisans who were making the machines. Some one has happily termed him "the knight-errant of economy, wandering hither and thither in search of questions worthy of his steel."

The calculating machine of Pascal is the ancestor of all our modern multiplicators, the little boxes that hand out change on the counters of shops, the mechanical computators of tax-rolls and the mathematical machines used in scientific laboratories. Later, Pascal designed or perfected the barometer, the hydraulic press, the wheelbarrow, the omnibus and the dray.

Canada's Cold Storage Stocks

Canada's cold storage stocks of provisions, though large when measured in pounds, comprise but a very small fraction of the amounts required overseas, Canadian Companies reporting to the Cost of Living Branch of the Department of Labor, held on June 1st, the following stocks in storage:— Butter, 1,689,100 pounds; cheese, 2,190,098 pounds; beef, fresh and pickled, 17,303,933 pounds; pork, fresh and pickled, 29,454,901 pounds; bacon, hams and smoked meats, 13,118,987 pounds. How shall these stocks compare with the British requirements may be understood by noting how long they would last as the source of total supply in Great Britain. The amounts mentioned would supply Britain's requirements as follows:—Butter, 21 hours; cheese, 2½ days; beef, 2 1-6 days; pork, 14½ days; bacon, ham and smoked meats, 5 3-4 days.

"Who spanks sows—who hates vows."—Persian Proverb.

CORISANDE'S GARDEN

She Was an Exasperating Girl. Kelly Made a Strenuous Effort to Dislike Her—but Kelly Failed.

By F. Roney Weir

PART III.

Galusha came striding down the slope toward them.

"Why didn't he come?" he called out. "Why didn't he come when we needed him? He came to the top of the hill and then he dodged back. I seen him!"

"You managed without him, I hear," responded Corisande cuttingly. "He did not go on to the road because I called him back. After all, it is my work which he is hired to do not some strange motorist's."

Kelly's heart leaped at the golden lie. She did care a little, then. She was not all stone and steel.

Galusha went muttering back to his henhouse building. Kelly, on his knees, continued to dibble in asters and said never a word. Corisande glowered above him silently until Galusha's brown hat disappeared over the slope, then, "Kelly," she said almost pleadingly and Kelly stood up. "You must tell me everything. You must clear yourself!"

"But suppose I can't clear myself?"

"I have known all the time that you were not the man who trimmed Higby's trees."

"I may be a scoundrel but I was not guilty of that crime," admitted Kelly.

"What was your motive for passing yourself off for something you are not?"

"You—rather took possession of me there at the forks of the road, you remember. You stood up before me like a sprite and said, 'Square?' I had never heard that word before so how was I to know it was the name of your farm? You said Galusha had sent you to bring me and so I followed you as I would gladly follow you now across the world if you would let me—"

"You must not talk to me like that."

"Forgive me but I have already told you that I loved you; at least, that was my intention—" She caught her breath sharply.

"You love me yet not enough to confess to me why you are skulking about the country!"

"No, not enough for that."

"You would better go," she said bitterly and went away into the house. Kelly returned to his planting with something like triumph in his face.

Corisande did not appear at dinner and when the meal was finished and Henrietta was noisily clearing away the dishes, Kelly went up to his room and packed the bag which he had bought since coming to Squam. There was a biking ache at his heart. After all these sweet days together in the garden she was going to let him slip away without even a good-by!

"Are you going?" cried Galusha as Kelly set his bag down in the lower hall. There was no attempt on Galusha's part to keep the delight out of his voice.

"Yes, Galusha, I have been discharged. If you will come down the slope with me, I should like to tell you what to do with those two roses by the gate and those plants which hang over the water on the river bank."

"I guess you needn't worry over the river bank," triumphed Galusha. "I guess when you are out of it, the river bank will git back to being a river bank as it was intended by the Lord to be—covered with grass and thistles! And the potato field will have potatoes in it, come next summer, Lord willin', an' Galusha Perkins livin'! This here landscapin' has been a crazy performance from first to last!"

Then Corisande came slowly down the stairs and even Kelly was startled at her appearance. He had never seen her beautiful hair in disorder before; he had never seen her calm, assured features all stained with tears as they were now.

"Galusha," she called out sharply, "go finish your henhouse! Kelly will have to explain to me what is to be done in the garden." Then she went out of the door and down the little path and through the gate to the river, Kelly following.

"And, after all, you will never see the little boat here among the rushes and me in it under a red umbrella; and the ducks quack-quacking and snapping their pink bills—and you don't care! You are going away and you will never see all that, after you planned and promised it all—and you don't care!"

"I do care," he denied. "It's killing me!"

"It is breaking my heart!" she cried out. "It's breaking my heart because I love you, Kelly, Kelly, you vagabond! You tramp—unworthy—untrue—yet I love you and I can't stay on here without you! Because I love you, I hate you!" How dared you come here with your talk of Lombardy poplars, your lilies, your white picket fence and little boat and ducks quack-quacking and snapping their pink bills, with your handsome eyes and your cruel strong fingers, and make me love you so much that I throw myself at you—I—who have always had things my own way and ruled wherever I went!"

She was wildly and he gathered her in his arms, laughing and sobbing a little himself.

"That was my brother, Comstock, out there with our machine to-day. I am Kelly Howe, James Howe's son. You never heard of my father, perhaps, because you came from the East not long ago. But Galusha knows about Nathad and so does Henrietta. Father has sent Comstock out every day this summer I dare say to hunt for me. I began dodging just for a lark—to see how long I could keep away from Comstock. They had invited a girl to spend the summer at the house—a girl Aunt Alice had made up her mind I was to marry. Aunt Alice is like you, Corisande; she's always had her own way in everything and always expects to have it. I didn't want the girl she had picked out for me so I left word I was going to Father's ranch, you know and beat it. I confess that I am just an ordinary blub of a runaway and not a mysterious and romantic criminal. May I stay and finish the garden?"

"Up!" called out Galusha, his white head and beady black eyes appearing just above the gatepost as if they had been disconnected from his body and set up as in olden times. "Hey! Ain't you goin' after all?"

"No indeed!" cried Corisande happily. "He is going to marry me and stay here forever."

"Good-bye potatoes!" groaned Galusha.

(The end.)

The Fattening of Chickens

The profits obtained from marketing lean, poorly fleshed, unfinished chickens are so small as to be frequently discouraging. Many of the packing houses and larger produce dealers find it necessary to go to considerable expense to provide the necessary premises and equipment to properly finish such poultry. The best place to feed poultry is on the farm, and, if it pays the packing houses to take the trouble, it obviously would be good business to do the work on the farm.

Proper feeding and finishing will not only greatly increase the weight of the birds, but will also enhance the value of every ounce of flesh on the carcass, and greatly reduce the proportion of offal in relation to the amount of edible meat.

There is generally a difference of from three to seven cents per pound in the price paid for well-fleshed birds as compared with lean unfinished stock just off the range.

There is always a market for prime quality poultry, while the poorer quality has to be sold at whatever price can be obtained, depending on the market and the amount of effort put forth on the part of the seller.

Birds generally make the greatest gain when about three to four months of age, and the average birds make the most economical gains during the first two weeks of special feeding.

Chickens can be readily taught to feed by lamplight; this is a great convenience, as it is desirable that the time of feeding be spaced as nearly as possible twelve hours apart.

The crate system of feeding is much more economical and efficient. In practicing this method, one is able to carefully note the progress being made by each bird and the feeding period of the more thrifty can often be shortened or lengthened as desired. Also the flesh of the crate-fed birds is invariably softer than that of pen fed birds.

For amplification of the forgoing information apply to the Publications Branch, Department of Agriculture, Ottawa, for Bulletin No. 88 of the Division of Poultry of the Experimental Farms entitled, "Preparing Poultry Produce for Market."

NEW TEST OF PROOF OF DEATH.

French Academy of Medicine Will Use a New Experiment.

Uncertainty as to whether a person be alive or dead is especially great on the battlefield and prompt decision in such cases is far more important than in civil life. Dr. A. Tarson has just recommended to the French Academy of Medicine a new test, the ... ready known having proved insuffic... The best of these latter has been the injection of fluorescein, as devised by Icard. But even this is uncertain, for in some cases men who are still alive do not show the green coloration of the whites of their eyes following injection, which the test is supposed to produce.

Dr. Tarson recommends placing in the eye a minute quantity of 2½ per cent. solution of dionin (ethyl-morphine), glycerine. If death has already taken place, nothing happens, but if the man has the slightest trace of life still in him the white of his eye will immediately turn purplish-red and swell, but this inflammation will disappear rapidly and leave no ill effect.

Stuffed Calf's Heart.

As the price of roast beef and veal is high try stuffed calf's heart with vegetables. Wash the heart, remove the veins, arteries and any clotted blood, and stuff with dressing, consisting of ½ cup of flaked hominy, ¼ cup bread crumbs, 2 level teaspoons of melted fat, 1-3 teaspoonful of salt, cayenne pepper and a few drops of onion juice mixed with ¼ cup of hot water or stock. Skewer or sew, dredge with flour and fry slightly in fat, adding to the fat one stalk of celery, 4 slices of carrot, 2 slices of turnip, 1 bit of bay leaf, 2 cloves, ½ teaspoon of pepper corn. Turn occasionally until well browned. Put a bit of fat on the top, add 1½ cups of hot stock or water and cook in the oven slowly for two hours. Serve with carrots and turnips.

Cold mashed potato mixed with cream cheese, onion juice and a little mayonnaise makes a good sandwich filling.

Maximillian Harden is editor of Die Zukunft (The Future), a radical and liberal German periodical noted for frank criticism of the Government.

Food Control Corner

The Canada Food Board, makes the following statement:

"Recent announcements that the food situation overseas has been relieved by the special efforts of Canada and the United States are being interpreted in some quarters as indicating that special food production and conservation efforts no longer are necessary.

"All optimistic reports relative to the easing of our Allies' food position are based on the assumption that the utmost effort to maintain and to increase production, and also to conserve food, will be continued on this continent as well as overseas.

"Fortunately, there has been an unusually large grain crop in the United States, leaving a surplus over present consumption which, with the available surplus from Canada, and with continued conservation in both countries, should meet our Allies' import requirements from North America this year. The large supply of food for live stock, which also seems assured in the United States, will be reflected in increased production of pork and, to a lesser extent, of beef also.

"Hopeful though recent developments in the food situation have been, it will not be safe until enormous wheat reserves have been accumulated on both sides of the Atlantic, and such reserves are not yet in sight. A comparative crop failure on this continent next year would, in the absence of hold-over reserves, make our Allies' position almost as desperate as it was last winter.

"Canadians cannot afford to relax in food production or food conservation because all that can be grown or saved will be needed. Nothing could be more dangerous than to assume that our position is yet safe. The Food Board wishes to emphasize especially the necessity for the utmost effort to save this year's harvest from waste or loss. The responsibility resting upon city and town men to see that the farmers have sufficient help to bring in the crops is still pressing, and must not be ignored."

As an additional sugar conservation measure, the Food Board has ordered that, until further notice, manufacturers of canned fruits for sale must not use more than an average of twenty-five pounds of sugar to one hundred pounds of prepared fruit. The Order is now effective. It does not apply to jams, jellies, or marmalade.

Insects as Aeronauts.

According to Lieut. Depret Bisio, of the French Army, who is a naturalist as well as a flying man, many insects follow captive balloons in their ascent. He has seen flies go as high as 2,970 feet, after which they die. Grasshoppers cling to the basket of the balloon until the air becomes too rarefied for them, when they let go and fall. He says the swallows have a glorious time catching these insects.

A Song of the Air.

This is the song of the Plane—
The creaking shrieking plane,
The throbbing, sobbing plane,
And the moaning, groaning wires—
The engine—ensuing again!
One cylinder never fires!
Hey,ho! for the Plane!

This is the song of the Man—
The driving, striving man,
The chosen, frozen man—
The pilot, the man at the wheel,
Whose limit is all that he can,
And beyond, if the need if yeadl
Hey, ho! for the Man!

This is the song of the Gun—
The muttering, stuttering gun,
The maddening gladdening gun—
That chuckles with evil glee
At the last, long drive of the Hun,
With its end in eternity!
Hey, ho! for the Gun!

This is the song of the Air—
The lifting, drifting air,
The eddying, steadying air,
The wine of its limitless space—
May it nerve us at last to dare
Even death with undaunted face!
Hey, ho! for the Air!
—"Observer," Royal Flying Corps

Young Men on the Farm

Who Cannot Go to War

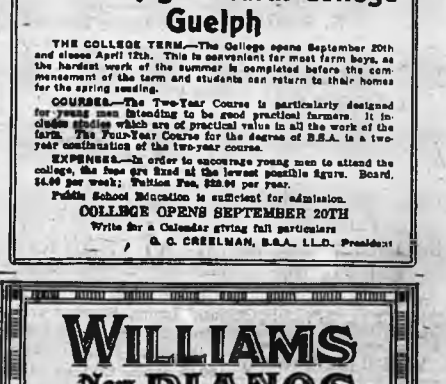
CANADA Must Have Greater Agricultural Production.
CANADA Needs Men Trained in the Best Agricultural Practices.

YOU will be of greater value to your country and to yourself if you acquire all available information regarding your business as a farmer. You can obtain this information during the Fall and Winter months at the

Ontario Agricultural College Guelph

THE COLLEGE TERM—The College opens September 20th and closes April 12th. This is convenient for most farm boys, as the hardest work of the summer is completed before the commencement of the term and students can return to their homes for the spring seeding.

COURSES—The Two-Year Course is particularly designed for young men intending to be good practical farmers. It includes studies which are of practical value in all the work of the farm. The Four-Year Course for the degree of B.S.A. is a two-year continuation of the two-year course.



EXPENSES—In order to encourage young men to attend the college, the fees are fixed at the lowest possible figure. Board, $4.00 per week; Tuition Fee, $20.00 per year.

Public School Education is sufficient for admission.

COLLEGE OPENS SEPTEMBER 20TH

THE outward beauty that distinguishes a Williams New Scale Piano is an index of its intrinsic worth. Ideals are built into every one of these famous instruments—ideals of craftsmanship that make for the most enduring quality.

Bungalow Model, $450.00

THE WILLIAMS PIANO CO., LIMITED, OSHAWA, ONT.

Canada's Oldest and Largest Piano Makers

For the BOYS & GIRLS

The Green Wigwam.

Nat and Hazel Barry and their little sister, Bunch, looked up at the long black camp on the hillside. It was black because it was covered with tarred paper; but it was a fine play camp, and most of the boys and girls and two of the teachers were up there now for a whole day of fun.

"If we pick the rest of Mrs. Hale's corn," said Hazel slowly, "we can't go up to the Black Shanty at all. Dick Swan says there are four whole rows and parts of two more rows still to be picked."

"If we don't pick it," retorted Nat, "a lot of people will miss hot corn stews this winter. The corn will be too hard for the canning factory if it's left till Mr. Hale gets back from Toronto."

"I can pick as much as you can," said Hazel. "Where are the baskets?"

"In the barn," said Bunch. "I'll get them while you lock the doors."

Mother and father and Grandpa Berry were away for all day, and the children had expected to be up at the Black Shanty; but Dick Swan, who worked for Mr. Hale, had told them about that corn, which would go to waste if it were not picked at once. Dick was coming with his horses to haul the corn, but he would not have time to pick it and haul it, too.

"If we work hard, we can have a load picked when he gets here with the wagon," said Nat as he led the way down into the big corn piece.

They began on the long outside row. It was harder than it looked to break off the ears, carry them out in baskets and pile them in heaps on the grass ready to be loaded into the cart. It was past noon when they finished the four whole rows; that left only two half rows.

"They'll be all through the camp dinner by the time we get them picked," said Hazel. "But we shall have to finish before Dick comes back." Dick and the cart had just started off with a big load of plump ears.

"O my, I'm hungry!" said Bunch; but she seized her empty basket and reached up to break off an ear of corn.

"I'll pick one of these half rows if you and Bunch can handle the other," Nat said to Hazel. "Then we shall all get through at the same time."

It was like following a path through thick woods to go down those rows of corn. Round them they could see only the green stalks standing much higher than their heads, and above them a glimpse of blue sky.

"If I should get lost in here, Tops would have to find me," they heard Bunch say to herself. "Only I don't know where he is; do you, Nat?"

Tops was their little dog. He and the old black cat had followed at the children's heels all day, but now they had suddenly vanished.

"Gone up to the Black Shanty to get something to eat, like enough!" grumbled Nat. "Wish we could." And then he stopped and peered through the corn.

The two half rows ended suddenly right in the midst of the corn forest. The children came out into a cosy little clearing where Mr. Hale had been cutting the green stalks and carrying them off for the cows. Those he had not had time to carry off he had made into bundles, and to keep the bundles from being spoiled by dampness he had placed them in a half circle, with the tops of all of them leaning together.

"Just like a little green wigwam," cried Bunch, "and away in here where you would think no one could ever find it! But there's Tops and the cat waiting for us at the door."

Sure enough, there were the two strays, looking as if they lived in the green wigwam. They seemed to be standing guard over something.

"It's a little oil stove and some matches and tin plate and a bottle of cocoa and some biscuits and a note from Dick Swan," reported Hazel as she bent to look.

The note read: "I left this where you'd find it when you got through picking. I know your folks had gone off, so I thought you'd want to have a corn roast all by yourselves. I told your dog to keep an eye on things till you got here."

"There'll be a lot left for the hungry people next winter if we roast as many of these big ears as we want!" said Nat.

"Who would want to have dinner at a Black Shanty," cried Bunch, "when we've got a dear little green wigwam of our own!"

THE MARK OF THE HUN IN FRANCE

DEVASTATION THAT PASSES POWERS OF DESCRIPTION.

This Farmer's Experiences is Typical of That of Thousands of French Peasants.

Sometime before I arrived in France I wondered if the war were not all a hideous nightmare—wondered if the stories of its grimness, its suffering, its misery, its glorious heroism were not imaginative or at least greatly exaggerated, says an American journalist. Having just completed a journey which took me over practically the entire region between the Marne and the Vesle, between Soissons and Rheims, just behind the advancing armies, I feel that I am in a position to say that all the stories of the war have been understated rather than magnified.

France is horrified and sad at the destruction of her villages and cities, but with an heroic patience and philosophy which has distinguished her during the four years of war, she grimly bears it. The peasants say:

"It is too bad. Our homes are all we have. Maybe the government will pay us something to start again, but (with a shrug of shoulders) how can the government pay everybody? It is too much. It is all right now for Germany is retreating and will be defeated. That is compensation enough."

Optimism such as that, falling from the lips of an aged peasant who stands amidst the gaping ruins of his home, is surely deserving of rich reward of some kind.

A Farmer's Experience.

Some of the fiercest fighting in which the Americans engaged took place in the region a few kilometres southeast of Fere-en-Tardenois. Here the Germans had constructed and dug hundreds of machine gun nests. North of the small village of Clerge—population before the war about 250—lived a stalwart French farmer, Charles Publier, and his wife. They had 300 acres of land, which is a good sized farm for the average French peasant. Their buildings formed a hollow square about fifty feet across. The Germans had been in Clerge for several weeks without molesting the aged couple, but early in July they brusquely took possession of the farm, known as Bellevue, and the old folks went away.

Thereupon the Germans dug trenches around the property, excavated pits about five feet deep all about the fields, transformed a quarry close to the house into a veritable pit of machine guns and automatic rifles, and waited. The Americans advanced into Clerge. The Germans had meantime filled the place with poisonous gas and retired to the hills to the north and to Bellevue Farm. Fighting here lasted all one day and night, and when it was over the Americans were in possession and the Germans were retreating well to the north—that is, such of the Germans as escaped.

None of the Germans who had taken position on and around Bellevue Farm retreated. Most of them were still unburied when I was there two days after the fighting. I will not attempt to give a picture of the scene. The details are too ghastly. Suffice it to say that within a stone's throw of the Publier home were more than two hundred German dead.

Like a Twelfth Century Ruin.

I happened to be at Bellevue Farm when the Publiers returned. A more rugged couple could not be found, he sixty-two, she fifty-eight, both pictures of brawn and courage. They approached haltingly. The scene that met their eyes would have appalled the stoutest heart. The walls of their home were standing, but were filled with great holes where shells had struck. From a distance one might have imagined the group of shattered structures to be a twelfth century ruin. The old couple were silent. She moved on ahead, staring at the wreckage. Neither even so much as glanced at the bodies of Germans who lay in their path. The returning pilgrims arrived within a few yards of the ruin and gazed at it in blank despair.

They went to their stable. The cattle were gone. The hens were gone also. Nothing remained but death and ruin. I asked the farmer what he would do with his home. In French he said:

"Rebuild it."

"Will you get paid by the government?" I asked.

"Maybe my grandchildren will get something, but for me and my wife it is necessary that we patch up our home and go on as well as we can. It is a bad wreck. The Germans are barbarians and some day they will see their homes destroyed."

Then, while his wife stumbled among the wreckage searching for things she needed for immediate use, Publier took a scythe from the wall outside and began sharpening it for the harvest of the morrow. The scythe had remained untouched through all the turmoil and carnage. The peasant said something in French which I had difficulty in understanding, but which I learned was:

"God did not forget us, for He left this, without which we could not get along."

One of Thousands.

The incident of the Publiers is but one of thousands similar. Many of the wrecked homes cannot be restored. Thousands will undoubtedly be torn down and replaced with new ones. More than ten churches—all very old and some of particular architectural interest or beauty—have been practically ruined. Twenty or more cemeteries have been gouged and lacerated by shell fire. Homes which were the pride of many of the villages have been ripped and torn by high explosives.

GETTING "THE HOOK"

The First Step in Promotion in the Royal British Navy

Before an A.B. in the Royal Navy can gain promotion, he must qualify for the rating of leading seaman, a procedure known to the lower deck as "Passing for the Hook."

This consists of a general all-round test of efficiency. It may be very formidable or fairly easy according to the formula adopted by the executive, and, of course, to the intelligence and adaptability of the candidate himself.

His initial effort is with the bo'sun, who usually gives him a wire-splicing job, such as fitting a "strop" to a "block," "reeving" new derrick "topping-lifts" and "eye-splicing" same, or one of the many jobs "Tommy Pipes" has up his sleeve for prospective P.O's.

Having "tucked" his "strand" successfully, our A.B. is subjected to a severe questioning on seamanship in general and "top" management in particular, until "Tommy," having exhausted his by no means small list of queries, expresses himself as satisfied, and duly makes his report.

Our candidate is next put through his paces by the navigating officer. This is usually a theory test appertaining to navigation lights, compass, deep-sea leads, etc., on completion of which the tested one finds himself before the first lieutenant, or possibly the commander.

This is, perhaps, the most dreaded ordeal. How to manage boats of all kinds in a seaway or tideway, how to take advantage of bearings ashore, when to reef a sail, the management and laying out of anchors, are a few of the subjects dealt with.

With a further practical test in the handling of boats, the examination proper terminates. Now follows a period of probation, during which the future petty officer is expected to show his mettle. Afloat, as may be expected, there is no lack of opportunity to do this, especially in these stirring times.

Thus, one fine morning some few weeks later our candidate finds himself standing before the captain. The senior officer sits at a table on the quarter-deck, with a litnus of officers about him, and batches of papers, books, etc., to his hand. In a few well-chosen words he declares A.B. James Ducke duly promoted to the rating of leading seaman.

Rejoining his messmates forward, the newly-made "leading hand" is congratulated, amidst subtle hints as to the possible "wetting" of the event.

Thus is begun the upward climb which may lead, who knows, to very dizzy heights!

SUNDAY AT THE FRONT

AS DESCRIBED BY A BRITISH OFFICER.

Except in the Fighting Line Sunday in France Retains Many Characteristics of the Day of Rest.

It has always been an odd fancy of mine that Sunday has an atmosphere of its own. The fact of the matter is, probably, that the seventh day has been the day of rest for so many centuries that practically everywhere in the civilized world you will find local customs distinguishing it from other days.

Now, war is no respecter of customs. Though the Rhine towns appealed for and were granted a truce on a Church holy day, that did not prevent the Hun bombarding squadrons from attacking the British Red Cross hospitals at the Front on the Feast of Corpus Christi. On Sundays, as on weekdays, the business of warfare goes on. In the front line the sentries man the parapets, just as for in the rear the labor gangs unload shins.

But save actually in the fighting line, Sunday at the Front still preserves some of the particular characteristics of the Day of Rest. It is in any way possible, the padres of the different religious persuasions arrange services. I say advisedly "if it is in any way possible," for in these days of long-range gun shelling, and bomb squadrons raiding the back areas of the army in the field, it is often expedient for large bodies of men to assemble together in the open.

But where it is feasible, the altars are set up in the open if the weather permits, or in some large hall or barn if the weather is unfavorable, and thither come marching the different units of the brigade or division behind their bands.

The Religion of France.

In the villages and towns the church bells are ringing the people to Mass. Stolid old peasants, wrinkled of visage, gnarled and bony, attired in rusty black, plod churchwards, hugging great prayer-books, or drive in those old-fashioned hooded carts which seem to be the universal vehicle of the Continental peasantry.

There is a pleasant Sunday quiet about the village street. High in the air, maybe, the dull drone of aeroplanes winging their way out over the enemy lines resounds. Perhaps from the Front reverberates spasmodically the muffled clang of gunfire. But presently, above these noises of war, there rises the harmony of voices singing the old English hymns, accompanied by the divisional band. Ever and again the caprice of the wind wafts the sounds away, or they are drowned by the thunderous rumble of a train of ammunition lorries passing up the street.

Then, when the service is at an end, the squeal of fifes and the crash of drums are heard, and the troops come swinging back from church, back to their Sunday dinners and to the repose of a quiet afternoon (if the military situation permits it), with sports, or a football match, or a concert by the divisional band as a recreation.

Sunday afternoon is a great day in France for "shows"—(in the strictly peaceful meaning of the word). I have been to aquatic sports, football matches, horse shows, boxing competitions, and athletic sports behind the lines in France. The Indian cavalry used to give famous "Tamashas," as they were called, or sports which included the most marvelous displays of trick-riding that it has ever been my privilege to see. The French Army, which takes such a delight in good horsemanship, used to be inordinately interested in the sports of the Indian cavalry, and each "Tamasha" attracted a large attendance of French staff and cavalry officers, who came long distances in order to be present.

Many of the towns in the war zone boast a bandstand in the "Place," or public square, which is the nerve-centre of these places. Here divisional bands often give concerts on Sunday afternoons. You may then witness the entente cordiale in its most eloquent and realistic expression. The belles of the town, with marvellously frizzed hair and highly starched dresses, all appear to have provided themselves with escorts in the shape of sun-burnt and delighted British soldiers. The Army complains that the men are less stationary service, like the A.S.C. or the Postal services, have all the luck with the girls, because they remain for long periods in the same place.

Tommy Atkins, Gentleman.

Officers throng the terraces of the little cafes which surround the 'Place' and sip thin French beer, or innocuous "siropa" (syrups), or vermouth-and-soda whilst the band conjures up distant memories of the Piccadilly grill or the Alhambra.

The outstanding feature of these open-air concerts at the Front is, in my opinion the exemplary behavior of the men. You must remember that the vast majority of the audience at these concerts have only recently turned their backs upon conditions of unimaginable discomfort and privation. The natural tendency on coming out of the line is toward uproarious high spirits, in the same way that the 'Varsity crews on Boat Race night used to celebrate their release from the rigours of training by putting out the lights at Earl's Court Exhibition and ducking policemen in the lake.

But the behavior of the men at these concerts was always uniformly good, and when the history of the great war is written the historian will have to dwell on the part played by the natural tact and courtesy of the British private soldier in welding the entente cordiale.

When Nobody's Boss.

There is an hour when the day's work is over and the supper dishes are cleared away, when nobody's boss. Dad isn't a general any more; he became a private when he left the supper table. To-morrow he may be the court of last resort, but now he is one of the boys. The youngsters down him if they can, and the dog barks at the excitement of a free-for-all.

The fatigue of the hot summer day passes. The breeze is a little cooler. Mother and the girls sit on the steps and porch, while the boys are comfortable most anywhere. If they disagreed during the day it is all forgotten now. A tolerant mood prevails. Out in the northwest a bank of blue clouds comes over the horizon, and now and then there are little lightning flashes, almost too faint and quick to be seen. The family prophet ventures an opinion about the immediate weather. Weather prophets are never disputed; they are quoted.

The children tell their troubles, and the grown and growing-ups chatter and gossip and plan. The neighbor woman was over; a brood of turkeys are missing; kings and colts, dynasties and break-pins, the ends of the earth are brought together in those after-supper talks.

"I'm going to bed," announces the head of the house. A growing conviction is crystallized. The boys give their last attention to the horses for the night. In ten minutes there isn't a soul in sight or awake.

Water Wisdom

What an important element water is, yet how little the average person knows about it! Can you yourself tell good drinking-water from bad? What considerations would guide you?

Some of the healthiest water has an unpleasant taste. People drink it like medicine. Will you judge, then, by colour? Water may have a very distinct tint, yet be quite wholesome. The water preferred in certain parts of South America is of a coffee-brown hue or greenish-black.

The smell, then? An objectionable colour will warn you off. The odour, however, may not indicate that the water is going to hurt you. It may arise from the death and decay of tiny organisms and algae growths. You may imbibe algae growths dead and suffer no harm.

Thin out strawberry plants when they become matted. Crowded plants will produce only a poor crop next year.

THE WEEKLY SERMON

Then shall we know, if we follow on to know the Lord: his going forth is prepared as the morning; and he shall come unto us as the rain, as the latter and former rain unto the earth.—Hosea, vi., 3.

There is no royal road to knowledge. We cannot learn by any quick or easy method, but only as we follow on "to know." The course will lead us through some hard places, through the rough as well as the smooth, through war's alarm as well as through the pleasant ways of prosperity and peace.

Thus in the present strife we are learning more not only concerning the art of war, concerning history, geography, biography and psychology, but we are learning more about God, whom to know aright, as the Scriptures say, "is life everlasting."

How, then, are we getting this knowledge and how may we increase it? First, let us suggest the method in a Bible phrase:—"Be still and know that I am God."

This war is making more people meditate. The soldiers on the field, the parents in the home, men and women everywhere are thinking bigger thoughts, reading deeper books, having higher ideals before them than ever before. They are brought face to face with the issues of life and of death every day and they cannot help meditating upon profounder things. Because of this they are driven necessarily to God's word, and there they naturally learn more of Him.

Read the Word of God

"These are they which testify of me." Read your Bible more if you would know more about God. The soldiers are doing it. Are you? Every soldier that goes out to the front carries with him a pocket Testament. And from my knowledge of the boys in the camps, gained by repeated tours, I know that the boys are using their Testaments. And they are finding God and knowing Him better through the process.

Read "Private Peat," "Carry On," "A Student in Arms" and other war books written by the soldiers in the field and you will find how they are knowing God through war.

Another way we may know God is through service. The man you know best is the man you work with day after day. "I know him like a book," you say. Well, the Bible urges us to be "laborers together with God," and if we do this we cannot help knowing Him better. That is what these boys and men are doing at the front. They are laboring together with God, for this is God's war, as it is a war for righteousness, humanity and civilization. And by working with Him our boys are getting to know Him better, as these books just mentioned show.

Some of you people at home would get to know God a little more intimately if you did a little more work for Him and got rid of some of your laziness.

Make the Cause Your Own

Then a third way to know God better is to suffer with Him in a common cause. That is the reason for those close personal friendships among soldiers. They are suffering together, meeting a common danger, fighting in a common cause. And that is the reason for their closer friendship with God. It brings them into an intimacy, a fellowship, a relationship that otherwise would not be possible. "We are heirs of God and joint heirs with Christ; if so be that we suffer with Him, that we may be also glorified together."

Read "The Glory of the Trenches," "The Cross at the Front," and Donald Hankey's impassioned cry just before his death in Flanders and you will find how true this is. "I have seen with the eyes of God," he exclaims; "I have seen the vanity of the temporal and the glory of the eternal; I have despised comfort and honored pain. I have understood the victory of the cross, O death, where is thy sting!" "Nunc dimittis Domine." And God, hearing his prayer, made him His heir and took him into that blessed intimate relationship where he now knows even as he is known.

That is the relationship and that is the knowledge which you may have in common with these soldiers if you will only be willing to suffer, deny and sacrifice yourself here at home, even as they do there—that righteousness may triumph and the victory be won.—Rev. William Carter.

"IF YOU PLEASE, CAPTAIN"

SCENE ON BOARD ONE OF HIS MAJESTY'S SHIPS.

A Graphic Little Pen Picture of "Request" Time on a Battleship of the British Navy.

Two ranks of men extend along the battleship's quarterdeck, faced by a third rank of petty officers and leading hands. Here is an artificer in a boiler suit grimed with the black grease of a turret's roller-path; there stands a stoker who is up to be rated leading stoker. Further down the line are half a dozen boys who have reached the age of eighteen, and are now to be rated men. At the extreme end of the line stand the Marines.

Quite a Formal Affair.

Entrenched behind a pile of service certificates, official communications, King's Regulations, and Admiralty Instructions, Weekly Orders, and other sources of obscure info mation, stands the captain's clerk. The master-at-arms is hovering about with the request-books, despatching ship's corporals right and left to unearth officers out of turrets and transmitting-rooms and torpedo-flats to speak to the captain in favor or otherwise of the men for whom they are responsible. At length everyone is assembled, and the commander disappears down a hatch to report to the captain.

"Request 'tachun!" As the captain steps on deck, and walks up to the table between the group of saluting officers, the line of waiting men stiffens to rigidity.

"James Pudner, stoker, 1st Class—to be restored first good conduct badge," calls the M.A.A.

The captain glances at Pudner's record in the ponderous tome which a ship's corporal holds up for his inspection, while the aspirant for a badge successfully achieves a smug expression. For he has been six months clear of any offence whatsoever.

"Restored—and keep it this time, Pudner," says the captain, looking very hard at the man. "Remember that a gay young spark becomes in time a silly old fool if he doesn't mend his ways."

A Word in Private.

"William Wellard, ordinary seaman, to be charged the sum of two shillings and elevenpence."

It is somewhat ironical that Wellard, who had the misfortune to lose his railway ticket on returning from leave, and had, naturally, no money to pay for another, should have to "request" to be charged the sum of two-and-elevenpence for which the railway company is dunning.

The next case takes longer:

"Herbert Patient, cook's mate, 3rd Class—to stop allotment."

The captain fixes the cook's mate with his eyes.

"Sure you're doing the right thing?" he asks, unwilling to pry into the man's private affairs uninvited.

Patient mutters something and looks uneasily at the officers and men standing near. The captain leaves his hand, and the officers move out of earshot, while the lines of men, in obedience to the M.A.A.'s order, shuffle some paces forward.

Next, Please!

For five minutes the captain and cook's mate stand in conversation across the table. What they say no man knows; but the result is evidently satisfactory to Patient, for his face no he doubles away, expresses relief.

Officers and men close up once more and the next case is called.

Why He Emigrated.

Sir Douglas Haig, the Scottish commander-in-chief of the British armies, once said at a London dinner party:

"A Scot bored his English friends by boasting about what a fine country Scotland was.

"'Why did you leave Scotland,' a Londoner asked, 'since you liked the place so much?'

"The Scot heuckled.

"'It was like this,' he said. 'In Scotland everybody was as clever as myself, and I could make no progress; but here'—and he chuckled again—'here I'm gettin' along verra well.'"

Armenian Slaves

"You cannot enter a house in Diarbekir without finding from one to five Armenian maidservants, even the humblest shop-keepers having one, who probably in the lifetime of her parents would not have condescended to speak a word to the master whom she now has to serve to save her life," says the author of "Martyred Armenia," recently published in London. "It is stated that the number of such women and girls in the city is over 5,000, mostly from Erzerum, Kharput and other vilayets."

There are 420,000 men in the British Navy.

Every grown person should drink three pints of water a day.

Pot up bulbs of freesias as early as possible. This is a South African bulb which responds to gentle forcing and gives pretty and sweetly fragrant flowers.

CLAMIS

—Paisley Fair, Sept. 24th and 25th.

The Red Cross Society sent away on Sept. 12th the following shipment: 60 towels, 12 suits pyjamas, 6 wash cloths, 48 pillow covers, 6 sheets, 2 woolen blankets, 30 pairs socks.

Mr. and Mrs. Neil McFarlane returned from Toronto, where they spent two weeks with their son, Mr. John McFarlane.

Miss Mary Deehan, who is attending Kincardine high school, spent the week end at her home.

Miss Jessie McLean, of Tiverton, spent a few days with her friend, Miss Pearl Kirktown.

Mr. McCauley will preach his farewell sermon next Sunday night.

Mr. Duncan Guest, of Hervie, spent a few days with his uncle last week.

The MacIntyres have closed their cottage at Inverhuron for the season. Mrs. D. MacIntyre and two children and Miss Helen Oliver are spending some time at Mrs. J. C. MacIntyre's before returning to their homes—the former to Toronto and the latter to New York.

That dreaded message, "Killed in action," came over the wires again on Saturday morning. This time the sad news came to Mr. and Mrs. Groves and family informing them that their son Albert had made the supreme sacrifice. Albert was a fine, manly boy, and his many friends were indeed sorry to hear of his sad fate. He left here with the 160th, and had been some time in France. Much sympathy is felt for his parents in their time of sorrow. Memorial services will be held in the Baptist church on Sunday morning, Sept. 22nd.

CARGILL

Mrs. Ed Angleman, of Sarnia, visited friends here last week.

Th bowlers are holding a tournament here this Thursday in aid of the Red Cross.

Mrs. Erkson and babe, of Chatham, are visiting at Mr. W. Grainger's.

Rev. Cosens, of Walkerton, is to preach anniversary services in the Methodist church next Sunday morning and evening. A union rally of the Presbyterian and Methodist Sunday schools is to be held in the Methodist church that Sunday also.

Miss Jean Hood, of Walkerton, spent Sunday at her home here.

Mrs. Himmer, of Mildmay, visited at Mr. P. Hunstein's last week.

Mr. and Mrs. Baisdon and babe were in London last week.

Mr. Art Wesley, of the Bruce Herald and Times, Walkerton, gave us a call last week.

Very successful harvest home services were held in Holy Trinity church last Sunday, when Rev. A. Shore, a former rector, preached two able sermons to goodly sized congregations. The church was very prettily decorated with fruits and grain. A social was held on Monday evening at which a good programme was given.

GRESHAM

Rev. Mr. Robinson, of Tiverton, preached here and in Underwood last Sabbath. He and family spent their holidays in the west, at Elgin, Man., where Mr. Robinson was offered a charge, which he has declined, at a salary of $1400, manse and a month's vacation.

Mr. McKenzie, of Lucknow, was in this neighborhood calling this week.

Word was received by Mr. Andrew McArthur last week that his son Harvey was killed in action about the 10th of August. Very much sympathy is felt for the family and for all others who have received sad news from the front.

We are sorry to learn that Pte. Ambrose Hill was wounded in the big drive. He is an old Gresham boy.

Mr. and Mrs. Shipley and daughter Ruth motored to London last week.

Jas. A. McKinnon has purchased a new Overland car. Mr. McKinnon has completed his large cement contract at Southampton, where he has made an A1 job. He is now building a concrete opening down the 4th of Bruce.

Mr. Ernie Rose visited friends over at Aberdour last week.

Mr. John Pace disposed of his driver lately.

WILLOW CREEK

On Friday night last Pte. Rube Wittig was made the recipient of a purse of money from his friends, the presentation taking place at the home of his parents, Mr. and Mrs. David Wittig, and a very pleasant social time was spent by all present. A good program was given and lunch served. F. Schnittker and Irvine Reptke were masters of ceremony, and had Geo. E. Baker appointed as chairman. Songs were given by McLean Young and Archie McKay, recitations by Irvine Helwig, speeches by Joe Hyde, H. Giess, F. Schnittker and J. Wrightson, mouthorgan music by Harold Urquhart and Irvine Reptke, with organ accompaniment by Miss Tena Wittig. An address was read to Pte. Wittig, to which he made a fitting reply. Some hours were spent by the company in the enjoyment of games, singing and social amusements.

PINKERTON

Mrs. Adam Reid and Miss Janet Russell are visiting friends in Toronto.

On Thursday evening of last week a number of the friends of Pte. Walter Birrell, who went overseas with the Flying Corps some time ago, met at the home of his parents and on his behalf presented them with a sum of money. On Tuesday evening of this week a similar presentation was held at the home of Pte. Elmer Reid, who returns to London on Thursday to resume his training.

Mr. Wm. Trotter, of Toronto, renewed acquaintances here last week.

Mrs. (Rev.) Richardson and children, of Arthur, are visiting her parents at the manse.

Mr. Wm. Trotter lost one of his valuable horses last week.

WALKERTON

Owing to the financial stringency the resignation of Mr. Elliott, Inspector of the Children's Aid Society, was accepted with great regret by the board of the Society at a meeting held here on Tuesday last.

While driving to Walkerton with her husband on Monday of last week Mrs. John C. Richardson was suddenly seized with a severe pain in the back of her head and lapsing into unconsciousness, was hurriedly driven to the home of her sisters, the Misses Thompson here, where a doctor was hastily summoned. Although somewhat improved, her condition continued so serious that Dr. Groves, of Fergus, was summoned here yesterday and held a consultation with the local physician over her case, which, it seems, is of a rather peculiar and rare type.

James Weatherhead, of Wiarton, aged 70, was brought to the House of Refuge here last week to spend the remainder of his days as a ward of the county. Tall, and possessing what must have been at one time a most powerful physique, and claiming to have followed Canada's staple industry, farming, didn't save the sturdy northerner from hitting the trail to the Refuge at the three score year and ten mark, which, according to scripture, is man's allotted period of usefulness. So the fact that a youth may be stalwart, strong and a farmer and still fetch up at the Refuge demonstrates that there's no known combination that is entirely proof against adversity in age, and that fortune is about as fickle as a young school girl's flirtations.

Mrs. Wm. White, of Cargill, had five youths of that section up before Magistrate Tolton in Walkerton last week for disorderly conduct around her premises. It seems that Mrs. White's daughter and a young soldier friend came up from Guelph on a visit to her home, and a story having been circulated that the young couple had been married and were there on their honeymoon, the youths started in to give them an old time chivaree. After gathering around the house and shouting like Appache Indians, they bombarded the premises with old tin cans and otherwise gave a modern imitation of Dante's Inferno. As the bunch are said to have cried aloud for money when asked to desist, there appeared to be be a spirit of graft in their madness that didn't exactly harmonize with a senseless midnight frolic. On appearing before the Magi in Walkerton the youths pleaded guilty to a charge of disturbing the peace and using grossly insulting language, and were fined $1.00 and costs or a total of about $25.00 for the offence.

Hearing that the Dominion Police had the names of 270 aliens in Hanover who had failed to comply with the Alien Enemies' Act passed in Sept., 1916, and that they were about to be rushed over to Walkerton, where fines of $200 were being levied for this offence, the Hanover town council undertook to save the scalps of the threatened home talent by despatching Constable Beamish and Town Clerk John Taylor to Ottawa on Saturday to take up the matter with the Dominion authorities. The result of the pilgrimage was that the deputation were furnished with forms for the delinquents to sign and register on, and they came back on the jump Monday with the papers, and the rush to register is said to have been the liveliest ever witnessed in that burg. The aliens there appear to have been under a misapprehension of the Act, which required them to register and report once a month to the police, and it was only after several of their compatriots had been stung that the seriousness of the matter presented itself, and the run, hop, step and jump began. Chief Ferguson of Walkerton has also been furnished with the necessary forms, and the affected aliens, or in other words, those born in enemy countries who haven't taken the oath of allegiance to Canada are now coming in at a smart clip to register.

Dominion Policeman Stanley Russel of Toronto, a South African war veteran, and son of ex-reeve Robt. Russell here, has been doing some smooth detective work among the aliens in this section, with the result that many who hadn't conformed with the requirements of the law under the Alien Enemies' Registration Act were hailed before the courts and assessed handsomely for their neglect. As the fines go into the municipal treasury where the convictions are made, Stan's act in piloting the offenders to Walkerton was a windfall for the local exchequer, no less than $1131 going into the town coffers through these fines. Herman Milz and Otto Bluhm, members of the Hanover band, were the first couple to be brought in. On being ushered Wednesday before Magistrate Tolton, they admitted that they hadn't registered under the Alien Enemies' Act, and were fined $200 each for this neglect, and another $50 each for being unable to show their registration papers to Dominion Policeman Russell when asked to do so. They whacked up the $500 and departed older and wiser men. On Thursday Rev. Ernest Denef, Lutheran minister of Brant, and Wm. Huenomoder, farmer of that township, were arraigned before Magistrate Tolton on the same charges, with the result that the preacher was fined $250 and the farmer $300, making a total contribution of $550 from the pair. On Friday night Henry Osthoff of Hanover, was arrested by Russell and after being fined $50 by Magistrate Telford in Hanover for failure to show his registration papers, was escorted to Walkerton and assessed $200 by an alien who recently removed to Hanover from Kitchener, was also Magistrate Tolton for neglecting to register under the Act. Wm. Plantz, apprehended by Russell for not reporting his removal to the authorities, and was assessed $15 by Magistrate Telford for this discrepancy. All told, Russell's pilgrimage into this section has resulted in fines of $1366.00 being gathered, and it is said the end is not yet.—Herald and Times.

Paisley Fair dates. Don't miss it.

SELL COCKERELS NOW

How Fall Fairs Can be Made a Great Success.

Attend Your Local Fair to Improve Education and to Have a Good Time.

(Contributed by Ontario Department of Agriculture, Toronto.)

THE marketing of thin chickens is not conserving our meat supply nor is it the most profitable method to the producers. Present prices of market poultry admits of the liberal use of feeds and the marketing of well-fleshed birds.

The best birds to flesh or fatten are those of the heavier breeds, such as Wyandottes, Reds, and Rocks. The light breeds, such as Leghorns, seldom pay to fatten unless they are very thin in flesh.

The birds intended for fattening should be confined to a small pen or slatted coop. The process is not difficult if you will but pay attention to a few points that are essential.

Do not feed the birds for the first day they are shut up. You should give them something to drink, but it is best to give no feed. After the first day feed very lightly for two or three days and then gradually increase the ration, being very careful not to overfeed. We usually start chickens on very finely ground grains at the rate of three-quarters of an ounce of grain per feed to each bird, feeding twice daily. This can be increased gradually to two or three times this amount. Generally the most profitable gains are made during the first fourteen to sixteen days feeding. Such birds will not be excessively fat, but should be fat enough to cook and eat well. Some markets demand a fatter bird.

The most profitable gains are made on birds weighing from three and one-half to four and one-half pounds when put up to fatten.

The grains fed should be finely ground and, if at all possible, should be mixed with sour milk. Mix the feed to a consistency of a pancake batter. The more milk the chicken will take the better bird you will have in the end. Milk appears to have no good substitute for fattening chickens. If you cannot get milk then add ten to fifteen per cent. of meat meal to the ration and mix with water. The addition of a little green food daily will help matters. Many people get better results by feeding a little salt. About one-half pound to one hundred pounds of dry grain is sufficient. This mixes best by being dissolved in water and adding a little at each feed. Be careful not to use too much.

The best grains available now are a mixture of ground barley, cornmeal, finely ground buckwheat, and shorts. Oats are good if part of the hull is sifted out, as are also ground brewers' grains. We have used with good results a mixture of two parts of ground barley, two parts cornmeal, and two parts shorts, mixed with twice the amount of sour milk. In general feed about one-third shorts and then whatever finally ground grains you may have about the farm.

If at all possible mix the ground grains with sour milk.—Prof. W. R. Graham, O. A. College, Guelph.

Importance of Attending Exhibition.

Fall exhibitions are a permanent feature in the life of Ontario, and are of particular interest and import to the farmer and his family. True, many of the smaller shows might be greatly improved by the introduction of more new educative features, and some of the larger exhibitions have been criticized in the past for tardiness in placing agriculture in its due place, but at the present time, with things agricultural to the fore-front as they are, exhibition managements realise the value of a strong agricultural and live-stock department and are making this a leading feature of their work. In fact, no fall fair, large or small, could exist let alone prosper, without the products of the farm well represented.

Bearing this in mind, it is important that all attend their local fall fair and their nearest large exhibition. A well-managed fair is an education. The best live stock of the various types and breeds, the highest quality grain, roots and vegetables, the newest devices to aid the farmer and his wife in their work, and the most up-to-date special attractions are all there and each has its value to those who attend with the purpose of improving their knowledge. It is worth while to watch the judging being done to get an idea of approved type and to have one's interest stimulated that he may go home and do better work in breeding live stock or in the production of farm crops. Study the work of the judges. It helps to fix in the mind the proper type of live stock of the various breeds and the requirements of all farm crops. The boys and girls should be taken to the exhibition and encouraged to study and learn as well as to enjoy themselves.

Exhibitions also have their place in the social welfare of the people. It is profitable to get away from work for a few days and mingle with others, there to discuss matters of interest to all, and to see what progress is being made in industry other than that from which the fair-goer gets his or her living. It makes for bigger men and women with a wider viewpoint. A little clean, wholesome amusement is necessary in order to get the most out of life.

Go to the exhibition with the idea of improving your education and at the same time to have a real good time. It is profitable to get away from work occasionally and the exhibition offers not only an opportunity for pleasure but also for profit.—Prof. Wade Toole, O. A. College, Guelph.

STONE & WELLINGTON

Established 1837

TORONTO - ONT.

There was never a time when the sacrifices and the help of women were more appreciated than at the present time. Women should learn war-nursing and nursing at home. There is no better way than to study the new edition of the "Common Sense Medical Adviser"—with chapters on First Aid, Bandaging, Anatomy, Hygiene, care of the Sick, Diseases of Women, Mother and Babe, Marriage—to be had at some drug-stores or send 50c. to Dr. Pierce, Courtwright St., Bridgeburg, Ontario.

If a woman suffers from weak back, nervousness or dizziness—if pains afflict her, the best tonic and corrective is one made up of native herbs, and made without alcohol, which makes weak women strong and sick women well. It is the prescription of Doctor Pierce, used by him in active practice many years and now sold by almost every druggist in the land, in liquid or in tablets. Send Dr. Pierce, Buffalo, N. Y., 10c. for trial pkg. Dr. Pierce's Pleasant Pellets are also best for liver and bowel trouble.

Stratford, Ont.—"Dr. Pierce's Favorite Prescription was a great help to me. During an expectant period I became all run-down, weak and nervous and could not [illegible] I also suffered with backaches. I was a complete wreck and was down sick in bed [illegible] taking 'Favorite Prescription' [illegible] strength. I could do all my work and felt fine. I had practically no suffering and my baby was strong and healthy.—Mrs. Thomas B[illegible], 366 Erie St.

Central Business College Stratford, Ont.

Lady graduates are now earning as high as [illegible] while young men are earning even better salaries. We can not meet the demand for trained help. Write us at once for particulars regarding our Commercial, Shorthand or Telegraphy Department. Students may enter at any time.

SECOND CON. ELDERSLIE

Messrs. Sam Patterson and Smith Thompson visited Gillies Hill friends on Sunday week.

Mr. John and Miss Sarah Bell, of Sauble Falls, visited relatives here recently.

The farmers in this community are wearing broad smiles. The grain is turning out a bumper crop.

T. A. Patterson, who has been confined to the house for the last few weeks with an attack of mumps, is able to be out again.

Mrs. Geo. Addison has been at Owen Sound for the last few weeks for medical treatment.

Mrs. Alex McGregor, sr., is visiting at the home of his son Alex on this con.

Andrew Young is erecting a roomy driving shed this fall

The 2nd con. S. S. has re-opened for the winter months.

Harold Snaith has been engaged for the last few weeks with the Scott threshing outfit.

A. Dawson has completed some cement repairs to the mill dam.

Mr. Lamont, of Toronto, visited recently at the home of his daughter, Mrs. Geo. Addison.

While endeavoring to catch a heifer Andrew Young had the misfortune to be crushed at the fence, with the result that he has a broken rib.

Mr. and Mrs. W. E. Lubbock, of Mimico, are spending a week at the home of their cousins, Mr. and Mrs. J. B. Allen.

Pte. Barnes Bowie's many friends in this section will be sorry to learn that he has been wounded in France. It is to be hoped that the wound is not serious. Barnes was a member of the 160th Batt.

ELORA ROAD NORTH

Miss Rose Bryce, of Paisley, is visiting at Mr. Dave Bryce's.

Pte. Angus McDougall left for Petawawa last Saturday after a month's leave.

We are sorry to report that Mrs. Geo. Daniels is ill, having taken a paralytic stroke on Thursday last.

Miss Beulah Rudolph is teaching school near Kingsville.

Mr. Frank Pearce is attending all the fairs as usual. We hope he will get his share of the prize money.

Mr. Harry Rudolph shipped a car load of cattle and sheep to Toronto.

TURNER'S

Sincerest sympathy of neighbors and friends is extended to Reeve and Mrs. Christie and family in the loss of their noble son, the late Pte. Oliver Christie.

Wm. Karcher has bought Wm. Atkinson's 100 acres, also Herb Pollock's farm for grass farms.

Adam Munro purchased a touring car while in Toronto.

Mr. and Mrs. Robt. McKechnie spent a few days at Toronto Fair.

Our Growing List of Fallen Heroes

THE BODY OF HARRY JACK WAS FOUND

Many More Bruce County Soldiers In the Long Lists of Casualties this Week

PTE. BERT MEWHINNEY
Killed in Action

Mr. and Mrs. Robert Mewhinney, of Paisley, received the sad message on Friday last that their son, Pte. Bert Mewhinney, had been killed in action. Bert was born in the old family home at Lorne, in November, 1889, and grew up to be one of the well known and most popular young men of that section. He enlisted with the 160th, and went with a draft to France this spring. The date of his death is given as Aug. 8th, but that is evidently an error in transmission, and should probably be stated as Sept. 8th.

BODY OF PTE. HARRY JACK WAS FOUND

All doubt as to the fate of Pte. Harry Jack has been settled by a letter received last week by his parents, Mr. and Mrs. Alex Jack, from their other son, Bandmaster Wm. Jack, written from France on Aug. 20th, which tells that "the 13th Batt. found his body when they went in the line, and brought back his pay book and discs. I have been enquiring everywhere, but as I am in a different division, it was hard to find out anything different. He had been on outpost duty, and a Heine patrol had surprised them. Harry and one of the old 160th sergeants were together, and put up a hard fight, but they were outnumbered, and so they were all killed or badly wounded. Harry must have been badly hit, and must have crawled away somewhere, as his own battalion search-party could not find him. I will find out where he was buried, if I can. I expect it will be in what was "no man's land," but which, of course, is now far back of our lines."

WM. J. WHITE SUCCUMBS TO HIS WOUNDS

Pte. Wm. Jas. White, son of Mr. and Mrs. Thos. White, of 10th Bruce, who was last week reported missing, is now officially reported as killed in action on Aug. 30th. The bereaved parents received this word on Sunday.

PTE. JOHN DOBSON LOST A LEG

Mrs. Thos. Dobson, of Paisley, received on Friday last a letter from her son, Pte. John Dobson, from No. 7 Stationary Hospital, Boulogne. He has been badly wounded, he says, and has lost a leg. While such a loss is very much of a misfortune, Pte. Dobson appears to be extracting a good deal of satisfaction from the fact that it will put him out of the war for good, and he hopes to get home to Canada before a great while. He also says that his brother Pte. Robert Dobson had got a little German gas lately. Four of the Dobson brothers joined the 160th. John is a married man, his wife living in Dundas at present.

Wounded

Pte. Alex McDonald, son of Mr. Chas. McDonald, 10th Bruce, is reported seriously ill, having been admitted to No. 1 South African General Hospital at Abbeville, on Sept. 6th, suffering from a gunshot in the thigh. Pte. McDonald was in the west nine years before enlisting there in June, 1916. He had been in France since March, 1917. His brother Jas. is now in hospital at Brighton, England, having been seriously wounded in March last, and the wounds had to be re-opened lately. He is now reported to be improving.

Sergt. Wallace Leask, an old Paisley boy with a machine gun section, was wounded just below the thigh on Aug. 8th, when he had just got his men placed for action. He was taken to the base hospital, where he was operated on and then sent to the Princess Christian Hospital at Wey-

PTE. DAN DESMOND
Killed in Action

Eldest son of Mr and Mrs. Thos. Desmond, of Eden Grove. The deceased was 27 years of age, and had been on the Kitchener police force for two years before enlisting with the 118th battalion in March, 1916. He was made a sergeant, but reverted to private again after becoming tired waiting for his battalion to go to France. He had been in the trenches a year and five months when he met a hero's death on the battlefield.

month, England. Over a year ago Wallace was slightly gassed, but this is his first "blighty." His three brothers are also in khaki.

MEMORIAL SERVICE

The soldiers' memorial service, announced for last Sunday evening, was postponed until next Sunday evening on account of the electric lights being off. Union service in Knox church at 7 p.m.

—Flour, Feed, Seeds, Grain—We keep a full stock of Five Roses and Stark's high grade flours, bran, shorts, Royal Purple calf meal, poultry foods and tonics. Always in the market for coarse grains. Morning delivery only. W. Stark.

—Our fall shoes are coming in infinite variety. Let us show them to you. S. F. Ballachey.

Notice—All twine, repairs, and machines must be settled for with our agents on or before October 1st, 1918. Doering & Co.

—Miss Mary Beaton, of Toronto, was up last week on a visit to her father, Mr. Jas. Beaton, and other friends.

—Miss Katie McCrimmon, of Edmonton, has been visiting at the home of her aunt, Mrs. Campbell, Sangster. Dr. and Mrs. McCrimmon, of Kincardine, were also visitors there one day last week.

Patriotic Quilting

The patriotic quilting bee will be held in the town hall on Tuesday and Wednesday afternoons of next week. Ladies will meet at 1 o'clock p.m. Everybody invited to come and assist in the work. Bring your thimbles.

The Fair

Tuesday was the most beautiful day we have had for quite a spell, and although the weather probs say local showers on Wednesday, the prospect looks good for the big day of our Fair. There is an excellent exhibit in the building, and entries are numerous for the live stock classes. Should the weather man favor us with a 24-hour dry period there will be some crowd in our town this day.

County Council Should Purchase Bridge Material, etc.

In speaking of the expense of renewing bridge coverings nowadays, a practical minded said the other day that the County Council might save considerable on cost by purchasing planking, joists, as well as other material acquired for road and bridge work, at times when it is most advantageous to buy, instead of leaving it all until it is required, and it becomes necessary to pay the price asked, no matter what that may be. The suggestion is a good one from a business standpoint, and should be considered.

Sunday Was Not Gasless

While some motor owners denied themselves the usual Sunday spin, and some motored only where there was need to go, numerous others were chug-chugging around in all directions with no other object than taking pleasure. It's a mighty good thing for this world that all are not so totally indifferent to the interests of others as a few who could be mentioned. Some of these chaps might as well put their attitude in words—"I'm going to have a good time, anyway. Let the other fellows in France look out for themselves;" or "What care we for the war? It's in Europe. We don't have to fight, or care, or help, and we won't."

Pte. Archie McNeill Was Here

Relatives of this returned veteran were glad to receive a short visit from him last week. Pte. McNeill enlisted in August, 1914, with 31st Toronto Highland Corps, and still wears the kiltie uniform. He only awaits the receipt of his papers to be given an honorable discharge after a season of campaigning and hard fighting that very few have lived to come through. His scars and disabilities are sufficient to give him total exemption from further service, yet he says that if again needed he will be ready to go at the Huns again as soon as he gets a period of rest and recuperation. Pte. McNeill is a grandson of Mrs. W. McBeath, Inkerman St.

Military Medal Received

The military medal awarded to Pte. L. R. Putnam, of Paisley, was mailed direct from the British mint to his parents, Mr. and Mrs. H. B. Putnam, and was received by them on Saturday last. Pte. Putnam is serving on the stretcher bearer corps, who, though not combatants, are exposed to danger from fire as any of the fighting men, and must be brave and cool through it all. There is what a writer in a British daily says: "As an infantryman I have yet to meet the soldier who does not readily agree that the most heroic lads in the battalion are the stretcher-bearers. I never yet met a stretcher-bearer who didn't do his job faithfully and well, and doing that means that he has won decoration after decoration—even if he is not wearing them. For there is excitement in fighting: there is quick pulsing of blood, there is "devil" but there is none of these in kneeling in a shell-swept zone beside a shattered lad, binding his hurt. One's life depends a good deal, as an infantryman, on one's company "Bs"—about four in number—for in ten to one it will be one of these who will bandage one's wounds in the first place. Stretcher-bearers are selected from the ranks of each battalion, and they become "specialists," like Lewis gunners or bombers. They work under and are trained by the battalion medical officer, and receive lectures and demonstrations at his hands. Actual carrying is perhaps their least important job. Wearing no distinguishing mark except a narrow white band—more often khaki-colored with mud—with the letters in red, "S. B." worn round the sleeve above the elbow, having with them probably no weapons of defence because they are generally too busy to carry or use them, theirs is a Christ-like task—to bear everything and not hit back. They work in the very midst of battle, where there is little time or opportunity to discriminate—even if the enemy wished to do so—between tenders of wounded and fighters. They seldom get promotion because they are but a tiny band (sometimes the most senior of them all is a lance-corporal, and they don't get all the medals they win. Their ordinary, every-day, every-night job is tending wounded under fire. I have never yet known an "S. B." hesitate to run into the middle of shell fire to help a hurt man; I have never seen an "S. B." with the "wind-up."

Economy the Watchword!

"SALADA" TEA

gives greatest tea-value for your money. Yields many more cups to the pound than does ordinary tea — and then you have that delicious flavour!

3-46

THE GARDEN'S MIRACLE

By Helen Pack

Part I.

From the hilltop garden with its low, vine-wreathed wall and rose-crowned gateway, came the welcome odor; the rush of mingled scents, pungent, sweet, heady, which swept from its heart; the shafts of sunshine; hum of bee and long low call of birds. They were Dame Nature's favorite setting for a love story.

They made more grim by contrast a drama that was tragedy to the man whose conventionary speech Huldah Makepeace demanded.

"Well?" she questioned. "Haven't you a word to say to me? I've told you first."

"That's good of you, Huldah. I—It's kind of hard for me to say much of anything. You see—I've really given up—"

"O David! You told me truly, you would be just good friends. How can you spoil my news? Everybody must be glad I'm happy."

"I am glad little girl. Of course I have to be glad of anything that makes you happy. Is—is it to be soon?"

"Yes, David. Lester has to go West on a long trip and I—am going too. There isn't time for much of a wedding. Lester is coming to-morrow and Doctor Sydney is going to marry us at five o'clock. That will give up just time to catch the express at Sutherland station. There'll be only Mother and Aunt Rhoda Smith and Emily and—you'll come, David? You are my very oldest friend besides being next door."

"Yes, Huldah. Of course I'll come. I've got to be sure you're going to be happy. Aren't any of Hawkins' folks coming?"

"He hasn't any. He's all by himself in a boarding house, poor thing. Wont' he appreciate a real home when we get back?"

"He—he sure ought to," agreed the man. He watched her tilting on her toes as though the exuberance of her spirit would lift her body too, straight up into the wine of that hilltop air. He swallowed hard. She did not hear the growl which finished his sentence, "If he doesn't—"

"Ever since I first met him at the hotel dance, he's been telling me how lonely his life is and how he needs somebody to take care of him. So now, David, that's going to be my job."

"He's a lucky dog, Huldah, and I'm not going to climb into the manger and growl. All I've wanted has been to see you happy. It can't be the way I'd choose. So it'll just have to be yours."

"There! That's David! I knew you'd help me like that. But David—there's another thing. You'll like after Mother while I'm away? When we settle in Toronto, it won't be so bad. I can run up often. But British Columbia seems far away. I don't know as I could make myself go at all if you weren't here."

"You needn't have asked that, Huldah. That'll be my job."

"That wipes away the very last bit of worry. I can just look forward to my wonderful journey without a qualm. Now I must go and pack. I want to be free to-morrow. I must spend every minute of it with Mother. Dear soul, she'll follow me around so wistfully! But I have to go, David. I just have to!"

She left him with a back-flung wave of her hand and ran lightly through the sunset glow to the farmhouse whose windows blazed with reflected glory.

The next time he saw her, she stood by the side of another man—a man who glanced to her with greedy eyes—pledging to him the womanly faith for which David himself had begged in vain.

Huldah's lovely, smiling face bade them good-by from the motor as she began the journey whose first stage was Sunderland station. That was the picture which stayed before the eyes of their minds. They saw her so in all the places from which her messages returned to them, telling of new scenes and new delights. They followed her so from city to city. And, when with the suddenness of a cataclysm, the messages ceased, they still clung to the smiling vision.

The last happy little card had come from Toronto. It said, "Hunting for a flat. Anxious to be really home. Will write soon."

The letter never came. From the vaguely distant city roar, there sounded not one whisper to give that straining ears news of her. She dropped from their ken like a pebble into the ocean.

Her frail mother gripped mightily upon the faith of her fathers but grew more frail, more ghostly white as an endless winter wore on. David's face settled into grim, deep-carved lines as he went back and forth, back and forth between the two farms and the city where he searched in vain. The last little hurried message had borne no address at all.

It was Doctor Sydney who found her at last and brought her home.

As they jolted away from the last station and drew nearer their destination, they could see the house crowning a distant hilltop. Light blazed from every window. Streamers of radiance beckoned them on, telling of welcome and thanksgiving.

Huldah, shrinking back in a corner of the carriage, seemed scarcely to notice the message.

"Doctor—Sydney—"

A choking gasp was all her struggle brought forth.

"Here we are, Huldah. I will just go to the door with you."

"Doctor Sydney. I must—"

"Hush, child. I understand. Just one thing I want to say, Huldah. It is over. Let the past go. Now come to your mother, child."

The door opened as he spoke. A little old lady stood on the threshold, silhouetted against the blaze of lamplight; and she stood with outstretched arms.

The two women clung in an embrace which told on one side of need, desperate and immediate; on the other, of love, passionate, pretecting, eternal.

"I know you're tired, Huldah. But before supper just come up to Mother's room and wash and change. It'll rest you better than anything."

She led the trembling girl up the stairs to the room where the red glow of coals shone coally through the windows of a tall stove. The girl dropped into a chair and held out her hands to the ruddy warmth.

With body refreshed and reclothed in garments which had been left behind as unsuitable to the new life, Huldah Makepeace went downstairs to the supper table. She ate and drank bits of the food placed before her by loving hands, and a little color crept back to her livid lips. She took a checkered towel as they finished, and dried the few pieces of eggshell china used to grace the occasion.

"I think I will go right to bed if you don't mind, Mother."

The choking tightness of her throat had relaxed somewhat. Her voice sounded almost natural.

"I would, Daughter. A good long rest will set you right. Come. I will go up-stairs."

She passed the room where the tired body had been refreshed. The elder woman turned to enter one across the hall. The door stood open. A fire gleamed in the grate. A pink-shaded lamp threw a rosy glow over counterpane and curtains. A hanging shelf on the opposite wall held books with childish titles. Treasures of ornament, made by little fingers, topped it and dotted the mantel.

"No, Mother!"

The girl's hand clutched her mother's arm. The choke came again in the voice.

"I can't go in there again, ever. Shut the door quickly. I can't bear it. I'm going to sleep in the back chamber."

Mrs. Makepeace made no reply. Her quick hand drew the door upon its life-long associations. They went down the hall to another room whose breath burst icy against their faces. She made no comment upon her daughter's decision.

"Let Mother help you, dear. Now go right to sleep. You are all tucked in snug as can be. I will leave this door open and mine too. Good-night, little Daughter."

She bent to kiss the wasted face. Huldah's thin arms closed tightly around her neck and upon her mother's heart she sobbed out the tale of misery which had been her portion.

The comfort of long-delayed speech brought sleep at last to the girl's tortured soul but her mother, agonizing in spirit, lay wide-eyed till dawn.

The good people of the village came to bid a silent welcome to the girl. They brought the friendly gossip of the neighborhood in an effort to lighten the shadow upon her face below the soft hair which had grown whiter than her mother's. She received them quietly, speaking little and smiling seldom. She refused resolutely to go to church, replying to both her Mother's entreaties and those of Doctor Sydney. "I can't. Don't ask me, please."

(To be continued.)

Change the drinking water two or three times a day and keep the drinking vessels clean.

If the ground is hard, file the edge of the hoe with a large flat file until the hoe edge is sharp. This will make the work comparatively easy.

Ingram's Velvecla Souveraine Face Powder

When warm days or hard work cause you to perspire, your nose and forehead become oily and shiny. A light application of Ingram's Velvecla Souveraine Face Powder will remove the shine and give your complexion smooth attractiveness. It hides blemishes and tiny wrinkles. Yet so fine of texture is it you can scarcely detect it. And best of all it blends perfectly with the complexion and stays on. (10c.)

To give your complexion the fresh breath of youth use Ingram's Milkweed Cream daily. It is gently curative and remedial. It is cleansing and softening. Rubbed into the hands it keeps them soft and white. Two sizes, 50c. and $1.00. A full line of Ingram's toilet products, including Zodenta for the teeth (25c.), is at your druggists.

A Picture With Each Purchase

Each time you buy a package of Ingram's Toilet aids or Perfume your druggist will give you, without charge, a large portrait of a world-famous motion picture actress. Each time you get a different portrait so you make a collection for your home. Ask your druggist.

THE FAMILY PICKLE JAR.

From now until late in the fall, catsup, sauces and condiments can be made for the home. The housewife knows that these delicacies for the table will give zest to the plainest meal.

The prudent woman will conserve for future use during the winter and early spring the foods of summer, knowing that when wintry days come she can then successfully reap the results of her labors and please the family palate.

Do not use any coloring agent, alum or other chemicals; they are very dangerous. The food laws prohibit the sale of foods containing them. And many serious troubles can be traced directly to their use.

Use the best materials for successful results. It is vitally necessary to use all-glass jars when canning pickles, catsup, sauces, and so forth. The vinegar content of the food crashes on action between the zinc covering of the top of the lid and its porcelain lining. The noticeable difference between imported catsup, sauces and condiments and those made at home is due to the use of malt vinegars, which are always used in Europe.

Do not cook pickles, sauces, catsups, and so forth in aluminum, copper or tinware. The porcelain-lined kettle is the proper kind.

The secret of keeping home-made catsup a pleasing red color is to tie the spices in a piece of cheesecloth. Long boiling is not necessary. Do you remember how the whole day long catsup boiled and boiled until it was sufficiently thick? Ah, I see you do, and how hot it was to stand over the kettle and stir and stir to prevent scorching. Now try my method.

To Can Tomatoes for Soup

Wash one basket of tomatoes and then cut in pieces and cook until very soft. Rub through a colander to remove the cores and skins. Return to kettle and boil for twenty minutes. Fill into sterilized pint jars and adjust the rubbers and lids, partially tightening. Process forty minutes in hot-water bath. Seal securely, then test for leaks and store in a cool, dry place.

Canned Tomatoes

Select basket of firm tomatoes and plunge into boiling water and then into cold water to remove the skins. Peel and core and then pack into sterilized jars. Fill jars to overflowing with tomato pulp. Adjust the rubbers and lids and process in hot-water bath forty-five minutes. Remove from bath, fasten lids securely and test for leaks. Cool, then store in a cool, dry place.

Drain the tomato pulp by turning the tomato mixture into a sieve and rubbing through sieve. This method of removing the water eliminates long boiling. This is a saving of fuel. The water drained from the tomatoes may be used for making vinegar.

Chili Sauce

Wash one basket of tomatoes, cut in pieces. Place in preserving kettle and add:—3 quarts of onions, peeled and cut in slices, 1 clove of garlic, peeled and cut in bits, 10 large, green peppers, washed, seeds removed and peppers chopped fine. Cook mixture until very soft and then rub through a very coarse sieve or colander. Drain fifteen minutes through jelly bag. Return to kettle and add:—1 pound brown sugar, 1 cup of salt, 1 quart strong cider vinegar, and the following spices tied in a cloth:—1 ounce celery seed, 1 ounce mustard, 3 tablespoons mustard, 5 tablespoons ground cloves, 6 tablespoons ground allspice, 3 tablespoons mace, ½ cup of salad oil. Cook until mixture is very thick. Fill into sterilized pint jars, adjust the rubbers and lids and place in hot-water bath for thirty minutes. Fasten lids securely, test for leaks and store in cool, dry place.

If these directions are followed carefully these will be delicious products for the winter without the loss of a single jar. Chili sauce may be placed in jars and sealed without processing if desired.

Pickled Onions

Use the small onions. Scald in boiling water for ten minutes to loosen the skins, and then plunge into cold water. Remove the skins, and then soak for twenty-four hours in brine that will float an egg. Then rinse in plenty of cold water. Place in a preserving kettle and cover with: 1 part skim milk, 2 parts water. Bring to a boil and cook gently for fifteen minutes. Drain, wash in plenty of cold water. Fill into bottles and cover with hot, spiced white wine vinegar. Seal in the usual manner for pickles and catsup.

Gherkins

Pick small cucumbers or gherkins. Wash, place in a strong brine that will float an egg. Weigh down to keep them under the brine. Let stand for six days. Take from brine and rinse well. Place in a preserving kettle and cover with spiced cider vinegar. Cook slowly for ten minutes and fill into all-glass jars. Fasten securely and store in a cool place.

Sweet Pickles

Take the cucumbers or gherkins, as prepared in the foregoing recipe, from the brine and place in a preserving kettle. Cover with cider vinegar, and then to each quart of vinegar add:—1 cup brown sugar, 1 ounce mixed spices, 4 blades mace, 1 lemon cut in paper-thin slices and parboiled until tender, 1 clove of garlic. Cook slowly for fifteen minutes and then fill into all-glass jars. Seal and store in a cool place.

Sour Pickles

Wash fifty cucumbers and then place in a brine that will float an egg, for one week. Wash, place in a preserving kettle, and cover with cold water. Bring to a boil, cook for five minutes and then rinse. Place in a crock, packing tightly, and adding: 4 cloves of garlic, 1 dozen bay leaves, 1 ounce of mixed spices. Cover with boiling vinegar and cover the crock with a cloth and then with heavy brown paper. Tie with string and store in a cool, dry place.

Mixed Pickles

4 quarts of cucumbers, pealed and cut in 1½ inch blocks, 1 quart of small onions, 1 quart of cauliflower, 1 dozen red pepper pods, 1 lemon cut in thin slices and parboiled until tender. Remove the skins from onions and break the cauliflower into small flowerets. Parboil until tender. Place all together in preserving kettle and cover with: 1 part water, 2 parts cider vinegar. Adding:—1 cup of brown sugar to each quart of cider vinegar used. Now mix and add: 6 bay leaves, 2 cloves of garlic, 2 tablespoons whole cloves, 2 tablespoons of whole allspice, 1 tablespoon of mustard seed, 1 tablespoon of celery seed, 1 stick of cinnamon, 2 blades of mace. Bring to a boil and cook for fifteen minutes. Fill into all-glass jars and seal.

TANKS UPROOTED VILLAGE

Silenced German Guns by Levelling Every House in Town

British tanks uprooted a whole French village to stop the fire of German machine guns from the houses in the latest allied offensive, says a London despatch of Aug. 28th.

The French troops had been seriously hampered by the German machine guns in or on the tops of the houses. Tanks were in the vicinity, and a message was sent to them for assistance. These compiled, but the German machine guns were too well protected to be knocked out by the fire from the tanks' guns. Accordingly the tank commanders conferred at the far end of the village and decided, in a hurried impromptu war council, to destroy the village by sheer weight of metal.

The tanks accordingly rammed house after house, bringing down the machine guns, extricating themselves from the ruins of one house, then proceeding to the next. In this way the village was captured without a single British casualty, and at once occupied by the French.

In another attack a tank was set on fire, the officer in command was killed and the first driver severely wounded, all within the German lines. The second driver extinguished the fire, assumed command, and later in the day, drove back single-handed, preceded by about 50 Germans, whom he captured unaided.

Another tank, temporarily knocked out, constituted itself a strong point inside the German lines, and held out for five hours until the infantry arrived.

Food Control Corner

For ignoring the regulation which calls for a reckoning for bad eggs purchased from producers or country dealers, over and above an allowance of one per cent., the William Davies Company and the Matthews-Blackwell Company, both of Montreal, have been forbidden to buy, sell or otherwise deal in eggs for 30 days. According to the regulations in force since June 1st last, every dealer placing eggs in cold storage is required to furnish to the operator of the warehouse, a statement in writing certifying that such eggs have been candled and that bad or unsound eggs have been removed. No license of the Canada Food Board is permitted to pay, or demand payment for bad eggs in excess of an allowed margin of one percent. of the total amount of the transaction. The object of the Canada Food Board was to make the handling of such eggs unprofitable for the dealer, who is now obliged to charge them back against those from whom they are originally purchased. In the case of the two companies under suspension, it was found that no attempt had been made to charge back for unsound eggs in this way, although the candling records showed percentages running as high as fourteen. A firm in Charlottetown has been disciplined in the same way for a similar offence.

It was manifestly nothing but fair that the public should not be called upon to pay for bad eggs. If a dealer purchases bad eggs and pays for them the least trouble for him would be to say nothing about it after finding the fact out by candling, but pass the eggs on into the channels of trade, where the consumer would eventually pay for the loss. Everybody else who handled the eggs, from the producer to the retail storekeeper would thus have charged their profits and expenses just the same. By the order of the Canada Food Board it is provided that bad eggs be reported and charged back to their source of origin so that the loss is borne by the parties responsible for their delay in reaching the market fresh. In these times of high prices for eggs and every other food commodity, the consumer is doubly entitled to fresh eggs bought in good faith in the regular way. Producers should be careful of the stock they sell and dealers should be watchful of the stock they buy.

H. Tom, proprietor of the Paris Cafe, 95 Notre Dame Street, Quebec City, has been ordered to close his restaurant for a period of seven days, commencing August 31st for manufacturing and retailing iced cakes contrary to the Order of the Canada Food Board.

The Canada Food Board has ordered Henry Wong, proprietor of the Boston Cafe, Three Rivers, Quebec, to close his restaurant, and his license has been suspended for a period of seven days, during which time he may not serve any meals or purchase any foodstuffs. Investigation by the Board's Inspectors showed that this restaurant had been serving beefsteak at all hours and bread in excess of the proportions permitted by the food regulations.

For violation of the Canada Food Board's Order regarding the sale of substitutes for wheat flour in a proportion of one to four, and for operating without a license, M. Kennedy & Company, Breadalbane, P.E.I. has been ordered to close his business commencing midnight, August 31st, and to remain closed until he receive a license from the Canada Food Board. During the period of suspension he must not purchase or sell or otherwise deal in food or food products.

Substitute economy for waste. Use only such foods as contain the greatest amount of nourishment, with the least possible waste. No food meets these requirements more perfectly than

Soils and Crops

By Agronomist.

This Department is for the use of our farm readers who want the advice of an expert on any question regarding soil, seed, crops, etc. If your question is of sufficient general interest, it will be answered through this column. If stamped and addressed envelope is enclosed with your letter, a complete answer will be mailed to you. *Address* Agronomist, care of Wilson Publishing Co., Ltd., 73 Adelaide St. W., Toronto.

Can The Race Live Without The Cow?

Certain scientists have maintained that milk and butter were not absolutely necessary foods. They say the time when cheaper substitutes will take the place of milk and butter-fat. The oleomargarine people have had this vision for some time and the scientists of Germany have claimed they could produce a substitute for milk from soy beans which could not be detected from actual cows' milk except by careful analysis. Vegetable oils and the cheaper animal fats can be produced much cheaper than butter-fats, so also this milk substitute from soy beans can be produced much cheaper than cow's milk, consequently, the time is coming when economic conditions will cause substitution of these cheaper products for the milk and butter-fat of the cow.

But another scientist, working along different lines, has proved that a certain element of butter-fat is absolutely necessary for the growth of children and health maintenance of adults. This man is Dr. McCollum, of Johns Hopkins University. By careful experiments covering the period from 1907 to 1917, Dr. McCollum proved there are two what he calls "protective foods." Without a certain amount of these protective foods in the diet children cannot develop, neither can adults maintain vigorous health. It used to be thought that a diet of tubers, grains, roots and meat could be made a perfect diet but the experiment of Dr. McCollum in feeding various foods to young animals for these ten years proved that they cannot develop unless these protective foods are used.

And these two "protective foods" are obtained so far as known at the present time from only two sources—the leaves of plants and the butter-fat of milk. If people could consume enough of the leaves of plants they could get along without butter-fat, but this is not possible and consequently to have vigorous health butter-fat must be a part of the ration. Dr. McCollum has called this protective element the "Fat Soluble A."

Many people to-day are hailing Dr. McCollum as the saviour of the dairy industry because he has proved to the world that the dairy cow is necessary to the maintenance of human life in a vigorous condition. The only argument against oleo up until now was that butter-fat was, more easily digested than the animal and vegetable fats used in oleo; it would melt at a lower temperature. Observing people had noticed that young children did much better when a part of food contained butter-fat and attributed it to the fact that butter-fat was more easily-digested and assimilated. But Dr. McCollum's experiments indicate the reason was because butter-fat contains this vital element, fat soluble A) which is not found only in the leaves of plants, consequently it is the best argument against the substitution of oleo.

The medical profession, public school teachers, colleges, universities and the reading public now understand this idea and are spreading the gospel of truth so it will only be a short time before intelligent citizens understand this idea and when they do they will hesitate before they substitute oleo for butter, even though it is much cheaper.

The dairy cow will not be put aside because we can imitate her products. She is necessary to civilization and no matter what comes, is destined to endure. When the people understand the importance of butter-fat in a diet, especially children's, they will be willing to pay a sufficient price for whole milk and butter-fat, so that the dairy industry cannot be driven to the wall by cheap substitutes.

Horse Sense

Prices of horses have been advancing steadily. War interfered with horse-breeding operations in France and Great Britain and drew heavily on their existing supply. It is reported that in Great Britain heavy drafts weights are bringing from 1,000 to $1,000 each. Tractors are being used in hauling munitions and drawing artillery because enough horses cannot be secured for that work. There will be large shipments of horses abroad after the war, which will take some of our heaviest and best animals.

For that reason, it is essential to take good care of every colt. The most critical time is at weaning. Large numbers of stunted colts get their first set-back when taken from the mares in the fall. Teach the colt to eat grain, if it has not already learned, and when once taken from the mare, do not let it return. Letting it get back to the mare after starting to wean may ruin the mare, and it will make the colt mean. Milk out the mare's udder for a week or so, and if it becomes caked apply lard.

The Dairy

No single piece of farm machinery has increased more in use in the last two years than the mechanical milker. In this country, where the labor shortage became critical early in the war as a result of the enlistment of farm laborers, the milking machine is the one thing that has averted a disastrous drop in dairy production.

On hundreds of Canadian farms women, with the aid of this machine, do the milking. As the war progresses, many more dairy farmers will be compelled to adopt the milking machine, or curtail operations, or go out of business. The dairyman who thinks the initial investment is too great or the cost of upkeep too high makes a mistake.

In the United States a leading western dairyman who has 100 cows has operated a milking machine of six units for four years. To-day the original parts, all but the rubber portions, are still in use. The rubber parts were renewed nine months ago. On another farm where forty cows are milked, upkeep cost has amounted to $10 in four years. Still another dairyman, who has used a milker three years for a herd of thirty cows, spent $3 this year in placing the machine in first-class order.

Potted strawberry plants set out now will produce fruit next season the same as field grown plants set out last spring.

WANTED POULTRY, EGGS and FEATHERS

Highest Prices Paid

Prompt Returns—No Commission

P. POULIN & CO.

St Paul corner Market - Montreal

Poultry

Shorter days and cooler nights seem to put new life into both the poultryman and his stock. Plans should be laid for the winter campaign, and when it is thought best to introduce new blood into the flock, the order should be placed right to-day. There can be no better selection.

Dispose of all stock that has not been profitable. There is no better time for culling than now, just before this surplus stock starts into moult.

The moulting season has arrived, and it is important that the birds have special care. It is a good plan to keep pieces of rusty iron in the drinking vessels so as to give the water a tonic effect.

Young turkeys that have reached September in good condition have passed the critical stage, and during this month will make wonderful strides in growth and development.

March-hatched pullets are showing every indication of early laying, if they have not already started. If properly grown they will not only be steady fall layers, but reliable winter layers as well.

Remove the male birds from the flock and keep them separated until the first of the year.

Clean up all rubbish piles about the houses this month. Rubbish harbors rats and other enemies of the poultry yard.

Sheep Notes

Returns from sheep are quick and profitable. It is not necessary to keep a ewe lamb a year before it returns a profit. A lamb weighing seventy-five pounds and coating twenty cents a pound, will clip five pounds of wool next spring. At seventy cents a pound the wool would be worth $3.50, or twenty per cent. of the original investment. At the end of that time the owner will have a ewe worth more for breeding purposes than the average ewe that he could go out and buy. It is true this ewe lamb consumes a certain amount of feed which possibly should be charged against her, but since there is pasture and forage going to waste on every farm each year, it is hardly necessary to exact a heavy feed bill.

Many people find it possible to keep one sheep for each head of cattle their pastures will carry, at no additional expense. If they could all be convinced of the actual need for a greatly increased supply of wool next year, many of them might adopt such a practice very much to their own profit and to the assistance of the Government. When sheep are properly handled they are mortgage lifters and bring thrift.

Candy Makers On Half Rations.

Candy manufacturers in Canada have used, in the past, eleven per cent. of all the sugar consumed in Canada. This has been reduced to a maximum of 5½ per cent. by the Canada Food Board, owing to the sugar situation.

FUNNY FOLD-UPS

CUT OUT AND FOLD ON DOTTED LINES

Topics in Season.

Madonna lily bulbs may be planted this month. Most other bulbs should not be put into the ground until October.

Before frost, make cuttings of the heliotrope, verbenas and other tender plants which you will want for setting out early next spring.

The Italians have manufactured a substitute for sugar. It is derived from grapes by evaporating the juice. It is said to be particularly valuable in the preservation of fruits.

The French Department of Agriculture reckons that a toad is worth $3; a lizard, $2; a swallow, $20; a titmouse, $8; a robin, $4; a bat, $30; an owl, $12.

All the refuse of crops that are through fruiting should be burned as soon as dry enough. Cabbage stumps, cucumbers, melons, tomatoes and the like should not be left to decay.

The strawberry bed still needs cultivating. Keep busy until the ground freezes. Light frosts do not count.

September is housecleaning month in the garden, and a good cleaning up there is just as necessary as in the house. The most important thing is to prevent weeds going to seed.

To control white grubs, plow the infested soil deeply before October 1, and while plowing turn the poultry or hogs into the field to destroy the grubs.

Lay aside the apples that fall off when you are picking and do not put them in with the first-grade fruit. The slightest bruise will shorten the keeping qualities.

Did you forget to cut out and burn the blackberry and raspberry canes that have fruited? Better now than never!

A recent Swiss decree provides for compulsory crop production by all land-owners, with the 1914 acreage as a minimum. All grain growers who fail to deliver the required amount into the hands of the authorities must pay four-fold the maximum price as indemnity for their deficiency.

Ripen late tomatoes by pulling the vines and letting them lie with the fruit on in a cool shed or in the basement. Many of the fruits will ripen. Cover the vines in the garden with blankets when frost threatens and you may be able to save them for a week or two.

When frost has touched the tuberose, elephant's-ear and Madeira vine, take up the bulbs and store them. When dahlias and cannas are frost-bitten, cut off the tops, leaving about six inches of the stems. Remove the roots in a clump with dirt attached. Spread roots out in the sun to dry, then store in a dry, well-ventilated cellar, on the floor or on shelves. Keep the varieties labelled.

Weevils may be killed in beans and peas by the use of carbon bisulphide. To treat these put them in a jar, tub or other vessel which can be covered tightly. Put into a glass about one tablespoonful of carbon bisulphide for each ten gallons of space in the enclosure, and place the glass in with the beans. Allow them to remain in the fumes of the carbon bisulphide over night, then take them out and place in dry storage quarters. Do not take lamps or lighted matches near the material, and do not breathe the fumes.

Save The Seeds.

It is not difficult to save the seeds of annual vegetables for next year's gardens. They must be thoroughly dried before they are put away for the winter. Spread the seeds thinly in a dry, airy place, out of the sun, on a sheet of paper until they are dry; do not use heat. When dry store where there is little variation of temperature. If moist when stored or allowed to collect moisture they will become mouldy or start to germinate. Flower seeds may be saved in the same manner.

To renovate velvet with salt—Rub it briskly with damp salt and then brush with stiff brush. Works well with velvet hats.

The Farmhand's Wager.

The farmhand comes in for considerable discussion nowadays, but he is much better off than most people think. The Council of Defence of the State of Ohio has been making a survey of labor conditions, and reports that a married man working on the farm for $30 a month is as well off as if he were to receive $105 in a city; that a $35 a month farm job equals a $110 city job; that a $40 farm job equals a $115 city job, and so on. "Not taking into consideration," the report adds, "the possibility of raising some stock or produce on shares, which is usually customary."

Nor has the married man on the farm job a monopoly of advantages, for the report further finds that an unmarried farmhand receiving $25 is as well off as if he were receiving $80 in the city; that a $30 job for the bachelor farmhand equals a $90 city job; and that a $40 job on the farm is as good as a $95 job in the city, and so on. The difference in aggregate returns is brought about by house rent, groceries, meat, milk, light, fuel, unnecessary expenses, and luxuries.

A few reports like this regarding conditions in Canada would have good effect in turning the tide back toward the land once the war is over. For the last three or four years it has been running cityward strongly. As city labor was taken for the army, for the shipyards, or in the natural course of advancement, farm labor has been called upon to make up the deficiency. Wages are advancing as a natural result, so that the farmhand who received $25 or $30 a few years ago is now drawing down his $40 every month—as good, the Ohio investigators say, as $95 or $115 in the city, depending on whether the man is married or not.

Some day Canada is going to take the steps necessary to enable the farmhand and the farm tenant to secure farms of their own. The help may come in the way of advance loans on land, stock or machinery purchased, or in grants to soldiers returning from war service. It is inevitable that it is coming. When that time comes the farmhand will loom larger on the industrial and economic horizon than ever before, and he is no inconspicuous figure even now.

In the meantime the duty devolves upon him of giving good service and saving every penny for the opportunity which will undoubtedly be his in the near future.

Raspberry Rust.

Spraying with potassium sulphide arrests the spread of the disease, which will appear every season. The best plan is to pull up and burn the plants and all diseased leaves that have fallen. Set out new healthy plants in a different part of the garden. Spray the new plants several times each season with weak Bordeaux mixture; if used full strength the foliage will be scorched.

System in canning saves more than the product.

GOOD HEALTH QUESTION BOX

By Andrew F. Currier, M.D.

Dr. Currier will answer all signed letters pertaining to Health. If your question is of general interest it will be answered through these columns; if not, it will be answered personally if stamped, addressed envelope is enclosed. Dr. Currier will not prescribe for individual cases or make diagnosis. *Address* Dr. Andrew F. Currier, care of Wilson Publishing Co., 73 Adelaide St. W., Toronto.

Physical Changes Which Take Place After Middle Life.

By middle life the tissues of the body have reached the culmination of their development and from this time forth the period of degeneration has its turn. That which is most to be dreaded from this point onward is malignant disease. Organs which have been overworked or abused, the stomach, lip, tongue, intestine, and in women the breast and uterus, now may become cancerous, and other organs or portions of the body which may be subjected to more or less persistent irritation are in danger from the same merciless enemy. The arteries of the body are susceptible to degenerative changes from middle life onward, either undergoing softening or becoming harder by the formation of new tissue or the deposit of lime salts within their walls in the latter case becoming brittle like pipe stems. In any case the arteries become perilously weak and the degenerative changes take place so gradually that they are usually quite inappreciable to the patient. Should the heart of a patient who is thus diseased become suddenly or unusually active the extra force which it happens to exert would be likely to produce a break in one or more of the weakened arteries. The arteries in the brain are particularly weak and that is why so many people who have passed middle life have apoplexy.

This is also the period of rheumatisms, and neuralgias and gouts and of obesity which makes people clumsy and awkward and ills adapted to endure pain and stiffness of joints, muscles, and nerves.

In this period also are the diseases of the bladder and prostate gland accompanied not only with the annoyance of frequent calls to evacuate the bladder but with pain, haemorrhage and other disagreeable symptoms. Sometimes these things can be prevented and sometimes not. Perhaps they are penalties for past sins which may not be escaped and the best you can do is to watch them and try and make the symptoms as mild as possible. Malignant disease may sometimes be forestalled by removing elements of irritation, curing indigestion, omitting unsuitable food, keeping the teeth in good condition, forswearing pipes, cigars and cigarettes. Sleep must be encouraged at all cost it is more important than food, and if there is worriment it must be unconditionally dismissed. Exposure to cold and wet and even changes in the weather are sure to bring on rheumatic troubles, hence the clothing must be adapted to the season and suitable medical treatment afforded. Increase in the blood pressure means change in the arteries, hence tests must be made from time to time and suitable exercise, diet and mechanical and physical treatment prescribed. Diseases of the bladder and prostate gland are amenable to relief in their early stages hence the first appearance of trouble is a danger signal. Frequently one who has any of these diseases or tendencies must change the entire current of his life, give up his occupation, change his residence, or be separated from his family and friends. These hardships are often justified, however, in the relief they afford to bad symptoms and the months or years they add to life with corresponding increase in happiness, usefulness and power of influence.

Questions and Answers.

X. Y. Z.—1—Does indigestion affect the nerves?

2—Which solid foods are best for indigestion?

3—Does butter affect indigestion?

4—What part of dandelion is used for medicinal purposes, and how?

5—Am forty, weigh 165 pounds and am five feet and six inches in height. How could I reduce my weight?

Answer—1—It very often does.

2—The question is too general. Indigestion is relieved in one person by omitting one kind of food, and in another by something else.

3—If you mean by your indigestion "Does butter cause indigestion?" my reply would be that good butter seldom does.

4—The root of the plant is useful, and also an extract is made from the leaf, which is often used as a mild kind of vegetable tonic.

5—I would not advise you to attempt to reduce your weight. There is nothing out of proportion.

Canada's Answer.

"The Canadians have made for themselves an imperishable name in the history of arms; they have been associated with many of the most glorious passages in the record of the war, and there is no force fighting for the Alliance which has a richer share of honor," says the London Telegraph "Four years ago Canada had an army of barely 3,000 men. Since that 400,000 men have crossed the sea to fight in the ranks of the Canadian corps, and to-day it is over its strength. That fact is announced by the Duke of Connaught."

The Plain Truth about Shoe Prices

LEATHER is scarce and is growing scarcer. A large part of the available supply must be used for soldiers' boots. Importations have practically ceased and we are forced to depend upon the limited quantity of materials produced in Canada.

The cost of everything which goes into a pair of shoes is high, and is going higher. Workmen by the thousands have joined the colors, and labor is increasingly hard to get. It is not merely a matter of high prices; but of producing enough good quality shoes to go around.

These conditions are beyond the control of any man, or any group of men. They fall on all alike. No one is exempt—neither the manufacturer, the dealer, nor the consumer.

You must pay more today for shoes of the same quality than you did a year ago. Next Spring, prices will be higher still.

These are hard facts. They will not yield to argument. They cannot be glossed over. We cannot change them, much as we would wish to do so.

But you, as a wearer of shoes, can help to relieve them if you will exercise prudence and good judgment in purchasing. See that you get *real value* for your money. Spend enough to get it, but spend nothing for "frills."

See that the manufacturer's trade-mark is stamped upon the shoes you buy. High prices are a temptation to reduce the quality in order to make the price seem low. But no manufacturer will stamp his trade-mark upon a product which he is ashamed to acknowledge. Remember this, and look for the trade-mark. It is your best assurance of real value for your money.

The Paisley Advocate

PAISLEY, SEPT. 25th, 1918

OUR NATIONAL RAILWAYS

The retirement of the Canadian Northern directors, headed by Sir William Mackenzie and Sir Donald Mann, clears the way for a re-organization that will bring that great transcontinental railway system under government ownership and operation. The country thus acquires nearly ten thousand miles of railway, stretching from the tidal waters of the Atlantic to the Pacific coast, together with a fleet of vessels on the Great Lakes, great elevators and terminal facilities, and telegraph and express utilities that span and serve the continent.

The new board of directors of the Canadian Northern to be appointed within the next few days by the government will unify and operate as one national system the Canadian Northern, the Intercolonial, the Prince Edward Island Railway, the National Transcontinental and the new road to the new north that will carry the grain of the west to the shores of Hudson Bay. This gives the government system a mileage of more than fourteen thousand miles in Canada. The Canadian Pacific, as a proprietor of Canadian railway mileage, falls into second place, and the Grand Trunk lines combined make a poor third.

Mere mileage does not make a railway system great, and the national system has to its credit strategic position, well-chosen country, low grades and splendid terminals. It engrosses practically all the traffic of the maritime provinces, with splendid ports and terminals at Sydney, Halifax and St. John, N.B. From Moncton, N.B., to Winnipeg it has two complete lines, which serve widely separated districts west of Quebec. The Canadian Northern touches Montreal, Toronto and the thickly settled portions of central Canada, while the National Transcontinental rolls the map of Canada back five hundred miles northward by opening to settlement the hinterlands of Quebec and the great clay belt of Ontario. Both lines are strongly entrenched at the head of the lakes and can move grain the year round to the seaboard by roads almost physically perfect. West from Winnipeg the newly acquired Canadian Northern gridirons the prairie provinces and crosses the mountains at a ruling grade of one-half of one per cent.

The National System will cost us in round numbers one billion dollars, but we acquire the C.N.R. mileage of ten thousand miles for what it cost us to build the remaining four thousand. The new board of directors will have committed to them a heavy responsibility and a most important trust. May they live up to the hopes and expectations of their fellow-countrymen.

Of Sir William Mackenzie and Sir Donald Mann and their life work this is not the time to speak. We can no more forecast their place in history than could men thirty years ago foresee how Donald Smith, Geo. Stephens and the Canadian Pacific would be regarded. We can at least pay tribute to their vision, their courage, their pluck and their persistence. They transformed what was almost desert into what is now the best part of the prosperous and populous Canadian west. Their work speaks for itself and will speak for them after they are silent.

Events march faster than men. Ten years ago the man who favored nationalizing railways on a big scale was considered erratic, and the man who would have prophesied that we would have a state-owned railway system of fifteen thousand miles in the year 1918 would have been regarded as a dreamer of worse than idle dreams. But railway nationalization has come and the merest child can see that corporation ownership and management of railways will soon be a thing of the past on this continent. The Grand Trunk will soon have to come into the national system. The Canadian Pacific may profit by her example.—Toronto World.

LOCAL AND DISTRICT NEWS

To the Ladies

All donations of batting, etc., for patriotic quilting are to be left with Mrs. D. McArthur at the bookstore. All patches should be returned not later than Saturday.

A Big Crop of Grain

A Waechter, of Brant, harvested one hundred loads of barley, besides an almost equal amount of fall wheat and other grains, and it is estimated with an average yield Mr. Waechter may thresh 7,000 bushels of grain this fall.

Only 20 Mills Tax Rate

Mildmay council has struck the tax rate for the year, amounting to 20 mills on the dollar. It is made up as follows: County rate 8 mills, village rate 2 mills, fire department ½ mill, street lighting 1½ mills, school rate 8 mills. Over and above this, there will be the statute labor at $1.25 per day.—Gazette.

Green Cross for Doctor's Cars

The executive of the Ontario Medical Association announces that a distinguishing badge for motorists on Sundays, in the form of a green cross to be displayed on the windshield, will be supplied to practitioners of the Province of Ontario upon receipt of a self-addressed stamped envelope, by the secretary of the Ontario Medical Association, 149 Close Ave., Toronto.

Wiarton Tackles the Wood Business

It will be remembered that the town has bought a bush lot, something which is being reported all over Ontario—and many towns will envy Wiarton the possibility of wood this year at $3.50 per cord. His Worship has been instructed to get out 1500 to 2000 cords and place the same at the disposal of the consumers, and the Mayor is going to roll up his sleeves and go at his job.—Wiarton Canadian Echo.

FRIENDS THOUGHT HE WOULD DIE

"FRUIT-A-TIVES" Conquered Dyspepsia and Restored His Health.

MR. ROBERT NEWTON.

Little Bras d'Or, C. B.

"I was a terrible sufferer from *Dyspepsia and Constipation* for years. I had pain after eating, belching gas, constant headaches, and did not sleep well at night. I lost so much weight—going from 185 pounds to 148 pounds—that I became alarmed and saw several doctors who, however, did me no good. Finally, a friend told me to try '*Fruit-a-tives*'.

In a week, there was improvement. The constipation was corrected; and soon I was free of pain, headaches and that miserable feeling that accompanies Dyspepsia. I continued to take this splendid fruit medicine and now I am well, strong and vigorous". ROBERT NEWTON.

50c. a box, 6 for $2.50, trial size 25c. At all dealers or sent postpaid on receipt of price by Fruit-a-tives Limited, Ottawa.

LETTER FROM A NURSE IN FRANCE

The following is a letter written by Miss Ida Anstead, daughter of Mr. and Mrs. W. C. Anstead, Elora Road north, to her sister, Mrs. Bert Warder, of Wiarton. Miss Anstead is with the American Nursing Corps and has been in France over a year:

Base Hospital No. 9,
Chateauroux, France.
Aug. 4, 1918

Dear Little Sister—Your letter received when I was enjoying a few days in the infirmary with the much heralded influenza, otherwise known as trench fever, Spanish grippe, and various and sundry other names equally fancy. It has been sweeping the country and the armies, and it just swoops down upon one without the slightest warning. I am on duty again, though not quite my normal self.

With your letter came one from mother. It was the first American mail received in over a month, and oh, dear! how I welcomed my bundle, consisting of ten, hardly enough.

The last Sunday I wrote you I was painting chairs, to-day it is the family wash. However, were I to tell you of the things I do before I attend to my own very minor needs, it would require many pages. I have been waiting for the opportunity to write you for long enough, but of late have been so busy it has been impossible.

I suppose you are quite as excited as we are over the Allies' gains. Although we are far from the front the wonderful English and American sanitary trains bring the freshly wounded to us, and they also bring the latest bits of news. Lately the wounded have been coming in hundreds every day or so. Sometimes when I've written "On active service" at the top of my envelope, I've felt something of a bluffer, but I can tell you it's been enough active there days. The doctors here have so much to do that a great deal of the work they used to do falls to the lot of the nurses.

I have a friend, the sweetest little French girl. She teaches me French and I try to give her a little English in exchange. I go to her home often. They are lovely people.

Yes, I get green garden things, sometimes at the table, and often by purchasing them at the market. The French excel in gardening and Chateauroux has a central market, which is most interesting. I wish you could see the little old women in black dresses and white caps. They always wear black, seems to be the custom, but then, most of France is in deep mourning these times, and how they love crepe! They literally wrap themselves in it, young girls with flowing veils of heavy crepe from the brim of their hats to the ground. I've never priced it, but surely it's cheap, else they could not afford it. They go into mourning too for the most distant relative.

Well, my dear, it seems I've said very little. I'm well and not missing a meal nor a day's work, pretty good record, don't you think? Hope you are all well.

A STARTLING PREDICTION

In a letter to the Montreal Family Herald a gentleman in Los Angeles relates a startling prophecy given to him over thirty years ago, and which appears to be in a fair way to fulfilment. The writer says:

In the summer of 1885, in the course of a long conversation about the Franco-German war of 1870, with the then Bishop of St. Cloud, Minn., Dr. Rupert Seidenbusch, a Benedictine monk—he said to me (if not textually, most certainly in equivalent terms): "According to a very cumplatic tradition, with which I have long been familiar, the German Empire shall come to an end in the bloodiest war the world has ever seen. Its last ruler will be a cripple. He will invade France, and wade knee-deep in human blood. At first he will be victorious, but he shall soon go down to rise up no more, for he shall be the last of his dynasty."

PACKED BUTTER KEEPS

Seed Corn Situation Is Critical—Select Own Seed Now.

Select Ears From Field for Height, Strength, Leanness and Earliness.

(Contributed by Ontario Department of Agriculture, Toronto.)

THE first point to observe in the packing of butter, in order to have it keep well for winter use is to have good butter. The best butter for packing is usually made in the months of June and September. It is preferably made from comparatively sweet cream which has been pasteurized. However, on the farm pasteurization is not commonly followed, hence the butter should be made when the weather is comparatively cool and the cream should be churned before it becomes very sour—in fact, the sweeter the cream the more likely it is to produce good keeping quality in the butter, so long as there is sufficient acid in the cream to give good churning results.

The cream should be churned in the usual way, except that the butter may be brushed once with brine, which is made by dissolving salt in water, instead of using water at both washings. Salt at the usual rate—but not over one ounce of salt per pound of butter, because salt does not preserve butter as is commonly supposed, except in a minor degree, for unpasteurized cream butter. It is a mistake, however, to add so much salt that the fine flavor of the butter is covered up.

Having worked the butter as usual, pack it firmly into crocks, tubs or boxes. If unparaffined wooden packages are used, these should be soaked several days in salt water to prevent "woody" flavor in the butter. A better plan is to coat the inside of the tub or box with hot wax, then line with heavy parchment paper, before packing the butter. Glazed crocks which are clean, need no lining.

When the package is full, preferably all from one churning, smooth the top of the butter, cover with parchment paper or a clean cotton cloth, then tie heavy brown paper over the top and place in a cool cellar or in cold storage. Sometimes a salt paste is put on top of the cloth or paper and this is kept moist by sprinkling on water from time to time. This excludes the air and helps to keep the butter.

We recommend packing the butter in solid form which is to be kept for some time, rather than holding the butter in prints, even though these may be submerged in brine.—Prof. H. H. Dean, O. A. College, Guelph.

Select Seed Corn Now.

Unless every precaution is taken this autumn the supply of good seed corn of the desirable varieties will be inadequate for the requirements of 1919. The autumn of 1917 saw the corn crop harrowed with an excess of moisture. Wet cold weather followed, during which time the corn did not cure, consequently, when the very cold weather of December set in the corn was frozen and germination was reduced to a very low percentage. This situation which caused the agricultural authorities of North America so much anxiety during the winter and spring of 1918, and which was described by them as "a national calamity," is not yet averted. The problem which that committee had to face was one of supplying North America with seed which would give a fair germination. To secure this seed was no easy task and recourse was made to districts in the United States hundreds of miles to the south of Ontario which produce large, late maturing varieties. In bringing this seed into the country there was little expectation that it would produce much grain, but it was hoped it would produce fodder. The situation in Ontario was so acute that an embargo was placed on seed grown in Kent and Essex counties prohibiting the exportation from those counties to other districts in Ontario. Some seed of fair germination was available but not sufficient to meet all local needs, and as those counties located in southern and western Ontario furnish the chief source of seed for the remainder of the province it was felt that such action was justified in order to conserve these varieties for seed purposes which had proven themselves adapted to Ontario conditions.

There was never a time in Ontario's history when it was more necessary to take every precaution in the selection of seed corn than at the present time. The most satisfactory method of seed selection is that of selecting in the field. The grower can go up and down his rows and select those ears which are early, well developed and possess all the varietal characteristics. When selecting in the field the grower has before him the standing plant. He can select from those plants which possess the height, strength, leanness and earliness desired. When once the desired type is established in the grower's mind good progress can be made in selecting the ears. This method offers many advantages over that of selecting from the shock or from the crib. The crib is the least desirable, in that it often only husked ears to select from. With the shock, when husking, the grower has the wilted or matured stalks, while the field selection has everything in its favor, the whole plant and its environment which may mean normal or abnormal conditions for development. — Dr. C. A. Zavitz, O. A. College, Guelph.

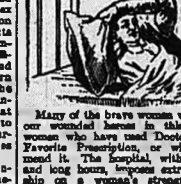
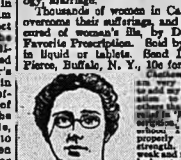
PAISLEY GARAGE



Ford and Maxwell Service Station

We carry a full line of Ford Parts and Repairs

We aim to give up-to-date service to all car owners. With our experience in city garages we are in a position to do work that we can guarantee as satisfactory. Motorists should call us up by either phone when they have trouble.



High Grade Oils, Gas and Accessories of all kinds.
Repairing at Reasonable Rates. All kinds of Vulcanizing done.
We are equipped to remove carbon by oxygen gas.

G. E. MILLER, Prop.

Many of the brave women who attend our wounded heroes in the war are women who have used Doctor Pierce's Favorite Prescription, or who recommend it. The hospital, with its work and long hours, imposes extreme hardship on a woman's strength. Every woman should make herself fit for war's call at home or abroad. She should obtain a book called the "Medical Adviser," either at her nearest drug store or by sending 50 one-cent stamps to Dr. Pierce, Courtwright St., Bridgeburg, Ont., for this book which tells about Nursing, Bandaging, Anatomy, Physiology, Marriage.

Thousands of women in Canada have overcome their sufferings, and have been cured of woman's ills, by Dr. Pierce's Favorite Prescription. Sold by druggists in liquid or tablets. Send Dr. V. M. Pierce, Buffalo, N. Y., 10c for trial pkg.

I kept up its use and was completely rid of my cough and it built me up in a good healthy state. Favorite Prescription is one of the best tonics for women."—Mrs. Geo. Hill, 210 Wellington St. E.

SCHOOL FAIR

The fourth annual rural school fair of Arran and North Elderslie Districts, under the direction of Mr. M. C. McKay, Agricultural Representative for Bruce County, was held at S. S. No. 4, Arran, on Thursday afternoon of last week. The fair was very successful in spite of inclement weather. A crowd of about 200 was in attendance. Following is a list of the prize winners:

Sheaf of Oats—1 John Cann, 6 Arran; 2 Watson Davis, 5 Arran; 3 Robt. Beach, 8 Elderslie; 4 Albert Wolfe, 4 Arran; 5 Stuart Robinson, 8 Elderslie.

Half Gallon Oats—1 John Cann, 6 Arran; 2 Albert Wolfe, 4 Arran; 3 Watson Davis, 5 Arran; 4 D. Harold Sparrow, 8 Elderslie.

Sheaf of Barley—1 Roy Palmer, 8 Elderslie; 2 Clifford Wolfe, 1 Arran; 3 Thomas Hayford, 7 Arran; 4 Geo. Scarrow, 9 Arran.

Half-Gallon Barley—1 Thos. Hayford, 7 Arran; 2 Roy Palmer, 8 Elderslie; 3 Clifford Wolfe, 1 Arran.

Sheaf of Wheat—1 John Wesley Hemstock, 4 Arran; 2 Robt. Cann, 6 Arran; 3 Elmer Cruickshank, 10 Eld. & Sull.; 4 Russell Speers, 8 Arran; 5 Geo. D. Wolfe, 1 Arran; 6 Geo. Jerome, 8 Elderslie; 7 Wallace Teasdale, 8 Elderslie; 8 Cecil Daley, 10 Eld. & Sull.

Half Gallon Wheat—1 Wallace Teasdale, 8 Elderslie; 2 Elmer Cruickshank, 10 Eld. & Sull.; 3 John Wesley Hemstock, 4 Arran; 4 Geo. Jerome, 8 Elderslie; 5 Geo. D. Wolfe, 6 Arran; 6 Russell Speers, 8 Arran; 7 J. C. McKelvey, 8 Elderslie; 8 Robt Cann, 6 Arran.

Green Mountains—1 Daisy Espley, 6 Arran; 2 J. W. Henderson, 10 Eld. & Sull.; 3 Bertie Walpole, 8 Elderslie; 4 Clara Crawford, 6 Arran; 5 Wilbert Langstaff, 6 Arran; 6 Thos. Hayford, 7 Arran; 7 Mack Galbraith, 9 Elderslie.

Irish Cobbler—1 Hazel M. Welsh, 1 Arran; 2 Vivian Tedford, 5 Arran; 3 Edward Daley, 10 Eld. & Sull.; 4 Jennie Palmer, 8 Elderslie; 5 Geo. Sparrow, 8 Elderslie; 6 Arthur Teasdale, 8 Elderslie; 7 Lily McCurdy, 5 Arran; 8 Jack Galbraith, 9 Elderslie; 9 John Vance, 6 Arran; 10 Lola Hemstock, 4 Arran.

Mangels—Effie Simpson, 8 Arran; 2 Howard Weston, 9 Arran; 3 Cameron Richards, 9 Arran; 4 John Wolfe, 8 Elderslie; 5 Beulah L. Gordon, 9 Elderslie.

Sweet Corn—1 Ross Richards, 9 Arran; 2 Alvin Graham, 4 Arran; 3 Gladys Brunton, 7 Arran; 4 Violet White, 4 Arran; 5 Clara Wolfe, 1 Arran; 6 Verrell Dudgeon, 8 Eld.; 7 Eva Richards, 9 Arran; 8 Cora Barclay, 8 Arran; 9 Mavis A. Espley, 6 Arran; 10 Eddie W. Legge, 5 Arran.

Carrots—1 Viola M. Sparrow, 8 Eld.; 2 Adela Hemstock, 4 Arran; 3 Ida Palmer, 8 Eld.; 4 Leona Vance, 6 Arran; 5 Essie Daley, 10 Eld. & Sull.; 6 Ella M. Gordon, 9 Eld.; 7 Wesley Trelford, 7 Arran; 8 Evelyn George, 8 Eld.; 9 Bert Brown, 5 Arran; 10 Agnes Langstaff, 6 Arran.

Onions—1 Harold Simpson, 8 Arran; 2 Clara Lind, 6 Arran; 3 Irene Myers, 6 Arran; 4 Mervin McCurdy, 5 Arran; 5 Ella Hemstock, 4 Arran; 6 Myrtle Brunton, 7 Arran; 7 Nellie George, 8 Eld.

Collection of Weeds—1 Howard Newton, 9 Arran; 2 Watson Davis, 5 Arran; 3 Iva Gordon, 9 Eld.; 4 Alvin Graham, 4 Arran.

Weed Seeds—1 Gladys Kingston, 10 Eld. & Sull.; 2 Ella M. Gordon, 9 Eld.

Collection of Insects—1 Watson Davis, 5 Arran; 2 Beulah L. Gordon, 9 Eld.; 3 Wesley Trelford, 7 Arran; 4 Annie Teasdale, 8 Eld.; 5 Mary E. McKelvey, 8 Eld.

POULTRY

Pen (1 Cockerel and 2 Pullets)—1 Erwin Vance, 6 Arran; 2 John Watson, 5 Arran; 3 Albert Richards, 9 Arran; 4 Edna Palmer, 8 Eld.; 5 Elda Palmer, 1 Arran.

Cockerel—1 John Watson, 5 Arran; 2 Edna Palmer, 8 Eld.; 3 Mabel Wagner, 1 Arran; 4 Albert Richards, 9 Arran; 5 Maurice Brown, 5 Arran.

Pullets—1 Maurice Brown, 5 Arran; 2 Erwin Vance, 6 Arran; 3 Albert Richards, 9 Arran.

Pair—1 Erwin Vance, 6 Arran; 2 Maurice Brown, 5 Arran; 3 Clifford Thompson, 6 Arran; 4 Edna Palmer, 8 Eld.; 5 Elda Palmer, 4 Arran.

Barred Rocks (Home Flock)—1 Eva Richards, 9 Arran; 2 Elmer Cruickshank, 10 Eld. & Sull.; 3 Earl McCurdy, 5 Arran; 4 Harold Wolfe, 8 Eld.; 5 Edward Wolfe, 8 Eld.

Manuel Training Box—1 Joseph Graham, 4 Arran; 2 Watson Davis, 5 Arran; 3 Wilbert Langstaff, 6 Arran.

Milking Stool—1 Melbourne White, 4 Arran; 2 Joseph Graham, 4 Arran; 3 Wilbert Langstaff, 6 Arran; 4 Edward Wolfe, 8 Eld.; 5 Watson Davis, 5 Arran.

Colt (Draft)—1 John Wesley Hemstock, 4 Arran; 2 Albert Wolfe, 4 Arran; 3 Melbourne White, 4 Arran.

Five Minute Address—1 Wesley Trelford, "What We Canadians Can Do." 7 Arran; 2 Watson Davis, "Gen. Currie," 5 Arran; 3 Alex Grant, "Our Flag."

School Parade—1, 10 Elderslie; 2 8 Elderslie; 3, 8 Arran.

GIRLS' CLASSES

Loaf of Bread (War Flour)—1 Wilbert Langstaff, 5 Arran; 2 Dorothy Graham, 4 Arran; 3 Violet White, 4 Arran; 4 Edna Davey, 10 Eld. & Sull.

Loaf of Graham Flour—1 Dorothy Graham, 4 Arran.

Six Bran Muffins—1 Viola Sparrow, 8 Eld.; 2 Hazel M. Welsh, 1 Arran; 3 Thelma Davis, Arran; 4 Reta Sinclair, 7 Arran; 5 Jennie Palmer, 8 Eld.

Plain Oatmeal Cookies—1 Daisy Espley, 6 Arran; 2 Thelma Davis, 5 Arran; 3 Edna Palmer, 8 Eld.; 4 Mavis Espley, 6 Arran; 5 Mabel Wagner, 1 Arran.

Apple Pie—1 Nellie Jones, 5 Arran; 2 May Underwood, 6 Arran; 3 Thelma Davis, 5 Arran; 4 Dorothy Graham, 4 Arran; 5 Evelyn George, 8 Elderslie.

OVERSEAS Y. M. C. A.

A bed, including bath, towel, soap and kit storage in London costs the Canadian Tommy 18c—that is if he goes to the new Y.M.C.A. "Beaver Hut" in the Strand. A meal costs him the same with the strains of an orchestra thrown in. Needless to relate, our boys overseas are "tickled to death" with their new metropolitan centre. Costing $100,000, and situated in the most famous thoroughfare in the Empire, the Beaver Hut is run primarily by Canadians for Canadians, although its hospitality is free to all the men of the Allied forces visiting London on leave. A voluntary staff of 200 ladies, superintended by Miss Helen Fitzgerald, of Fredericton, N.B., attend to the preparation and service of meals. Dormitories, with nearly 200 beds, are under the same efficient care, and the ladies work in four-hour shifts, maintaining a twenty-four hour service. No matter at what hour a tired and hungry Canadian soldier arrives in London he finds an open door, a smiling welcome and a hot meal at the Beaver Hut. After a warm bath, refreshing sleep, breakfast, haircut, shave and shoe-shine—all indulged in on the premises—Tommy feels like a new man. He has packed up his troubles in his old kit bag and placed the lot in safe keeping with the clerk at the kit storage. It only remains for him to look in at the information bureau on the second floor and select one of the many suggestions to be found there for the spending of his leave. He can then set off to enjoy the beauties and hospitality of the Old Country until his time is up and he must return, re-invigorated, to the trenches. Such an institution as the Beaver Hut cannot fail to render a great service to our Canadian boys over there. It provides a shelter from, and a counter-attraction to, the many undesirable elements that seek to prey on their loneliness.

PTE. HERB FENTON RETURNS FROM SHACKLETON

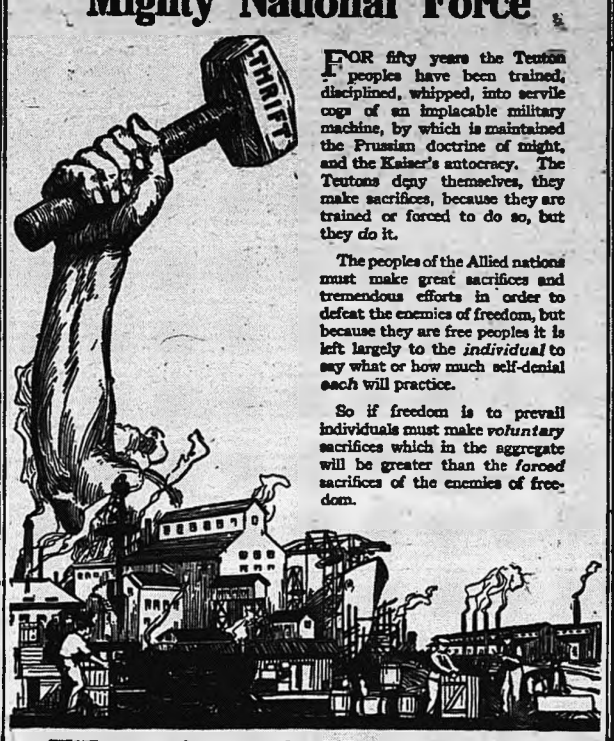
Herb Fenton, a veteran of the great war, was one of three soldiers appointed at a soldiers' meeting held in Walkerton at the government's expense to look over certain tracts of land which the Ontario government is willing to give to returned Bruce county soldiers.

The Times interviewed Mr. Fenton when he got back last week.

"I think the land is very good, and the timber also will be worth quite a bit. Any soldier who wishes to settle on a farm with little expense, I believe Shackleton would be alright," said Mr. Fenton.

Mr. Fenton is a first-class farmer himself, and operates a farm north of Port Elgin. Asked if he proposed going to the north, he thought he would hardly pull up from here, now that he had got fairly well settled.

"What do you think of the 'Community' scheme as advocated by Mr. Moffatt?" was asked of the veteran.



"Well, that's no good. I believe the land offered by the Ontario government is good enough for a man who wants a farm, but the pooling of the interests will not work out. I think the government has made a good offer, and from what I can understand from the Minister they want to get some good men in that country. I believe that any returned soldier who wants to get right down to business and farm would do well up there."—Port Elgin Times.

THE RURAL PHONE

The flagrant abuse of any privilege evolves its own remedy in time. This is about the only consolation one has over the misuse of party telephone lines. It is rather exasperating for a business man to call someone in the country to discuss a matter of business of interest to both, which would not occupy half a minute on the line; and after trying several times in the course of ten or fifteen minutes find that the parties who were using it had rung off, and still more trying on one's patience when one discovers that the parties who held the line so long were simply discussing the size of their respective washings or some economical wrinkle in making a pudding out of the porridge left over from breakfast which only requires a cupful of cream and an egg or two more than the ordinary kind, or that baby has another tooth, or the beginning to walk and is just as cute as he can be, all of which perhaps is very interesting to the two ladies but causes a lot of lost time or annoyance to those who have an equal right to the use of the phone. If trivial matters like these must be discussed over the phone would it not be better to pre-empt the line at about four in the morning, or at eight or nine o'clock in the evening, when business is practically over? The abuse of phone privileges is very difficult to handle, and as yet the phone companies have not succeeded in lessening the trouble. However, an effort is being made to do so by metering all phones, so that the more the phone is used the higher will be the cost to the owner, and that is really the fairest way to purchase phone service, the same as one does gas or electricity.

Build up the Mighty National Force

FOR fifty years the Teuton peoples have been trained, disciplined, whipped, into servile cogs of an implacable military machine, by which is maintained the Prussian doctrine of might, and the Kaiser's autocracy. The Teutons deny themselves, they make sacrifices, because they are trained or forced to do so, but they *do* it.

The peoples of the Allied nations must make great sacrifices and tremendous efforts in order to defeat the enemies of freedom, but because they are free peoples it is left largely to the *individual* to say what or how much self-denial *each* will practice.

So if freedom is to prevail individuals must make *voluntary* sacrifices which in the aggregate will be greater than the *forced* sacrifices of the enemies of freedom.

THE measure of your love of freedom is your willingness to deny yourself so that the strength of the nation for war effort will be increased.

This self-denial must take the form of *money-saving—thrift*. Each person knows in what way he or she may save.

The national need says you must save, but free Canada leaves it to *you* to say by what means and to what extent you *will* save.

NOW, it is for you, *each of us*, *everyone* of us to say how much patriotic endeavor, how much loyal sacrifice we will make by *saving our money*, by "doing without" so that each day will see a surplus to add to our own and the *nation's strength*. No matter how small the surplus it is important because each saving is an *effort made*, and many small individual efforts make the *mighty national force*.

Cash for Hides and Skins — Bruce and Bell 'Phone

—The world is not very large, says the Winston Canadian. Last week Dr. Hay was bowling in Toronto. The rink he and Mr. Lane were against was composed of two returned soldiers, one of whom had been wounded in the arm. "Where did you get that wound?" asked the doctor. The place was named. "Did I not dress the wound?" inquired the doctor. "I thought that you looked like the man," replied the soldier. The doctor was then in the service of the army at this station, and attended to this man along with hundreds of others, and after many months they met again in Toronto.

—The Methodist and Presbyterian congregations in town are combining their services for the months of October and November. During October morning services will be held in the Presbyterian church and in the Methodist in the evening, and in November vice versa. Rev. D. C. Soules is conducting services this month, and Rev. S. M. Roadhouse will have charge next month. Mr. Roadhouse is now away on his vacation—Southampton Beacon.

—The measure of your love of freedom is your willingness to deny yourself so that the strength of the nation for war effort will be increased.

For the BOYS & GIRLS

Guests.

If Three Bears came to my house to-night
I'd say Good Evening, and be polite
Or wee Miss Muffit or Marjorie Daw
Or little Bo-Peep whom I never saw
Or Humpty Dumpty or Jack and Jill—
They could rest awhile ere they climbed the hill.

I'd like to open the door and see
Nice Old King Cole and his fiddlers three;
Or Jack who climbed on a beanstalk high
And tumbled the giant out of the sky
Or good Jack Spratt and his hungry wife
Or the three mice safe from the butcher knife.

But if, though I offered my very best
Not a one of these will come out and rest.
I think I'll see that they take no flight
With Mother Goose on her broom to-night.
With horn and mittens and rope and crook
I'll shut them all in the picture book

Two Boys Conserve Fuel.

Girls can learn how to conserve wheat and meat and coal and sugar. They can help mother plan means and devise means of saving fuel. But just how the boy is to help in food and fuel conservation is a more difficult question. The boys I know solved it in the following way:

Even with the fireless cooker a little heat is necessary. To build a fire means the burning of a considerable amount of fuel, and wood is so high in price as to be almost prohibitive. The boys wanted to help and one morning after reading a newspaper article which suggested a plan, they started out bright and early and made the rounds of a dozen houses in the neighborhood, asking the housewife or maid if she would be willing to save her waste paper and give it to them if they would call for it every other day.

The boys then began collecting the papers. On the mornings when collections were made they borrowed their mother's washtub, partly filled it with water and after tearing up the pieces soaked them until they were reduced to a pulp. They then formed this pulp into balls about the size of a base ball, pressing them firmly in shape. The balls were then laid in the sun until thoroughly dry, after which they were packed away in the woodbox to be used as fuel.

Mother was at first skeptical but she found that the pulp balls held a fire longer than sticks of kindling, and that the two little laddies, the oldest but eight years of age, furnished her all the fuel she needed except on the one day a week when it was necessary to heat the oven for baking. Boys can surely help with the conservation problem if they try.

All Doubt Removed.

An English publication tells a story that illustrates the necessity of using the utmost care in giving instructions to the African natives who are in British employ. An enterprising company in the Sudan had decided to lay a railway into the wilds, and of course it employed many blacks in the construction work. One day the telegraph clerk at the nearest civilized spot received a telegram from the black foreman of the railway contractors:

"White boss dead. Shall I bury him?"

"Yes," wired back the clerk. "But first make sure that he is quite dead. Will send another white boss to-morrow.

A few hours later another telegram arrived from the foreman:

"Buried boss. Made sure he was quite dead. Hit him on the head with a large shoval."

The time he turns in has a lot to do with the way a young man turns out.

An ordinary window shade with spring roller is convenient to hang before shelves in kitchen or pantry that have no door. One jerk will draw the curtain up quickly and it keeps in place better than those made of cloth.

THE WEEKLY SERMON

He doeth according to his will in the army of Heaven, and among the inhabitants of the earth: and none can stay his hand, or say unto him, What doest thou?—Daniel, iv., 35.

The abnormal conditions in the midst of which we are now living stimulate many minds to ask what God is doing. There are those who think that there is no God to do anything, that the only God there is is represented by human authority or material force. They argue that brute animal strength directed by the supremest military skill will determine the final results of the present world conflict.

There are others who believe there is a God, but they do not think of Him as active; otherwise the war would end! It is as if they thought of Him as asleep, or taking a journey, having no interest in human affairs. A third class believe in God, and believe also that He is doing something all the time in connection with the war.

They get impatient sometimes for the visible manifestation of His judgment, but they are sure that the judgment will come, though long delayed, and be completely executed.

Three answers may be made to the question as to what God is doing in this war. The first is that He is giving His active sympathy to the side that is right. In a quarrel between two boys in a family a sensible father will always side with the boy that is right.

The boy that is wrong may be stronger, more talented, more generous, but the justice of the father's sympathy will not be affected thereby.

God is a thoroughly righteous Father. In a struggle between nations, as between individuals, He sides with those who are right. And nothing can alter His judgment—no camouflage, no falsehood, no bribery, whether of gifts or devotion. He decides every issue upon its merits, and He is no respecter of persons or dignities.

Divine Laws Are Wise and Just

In all thinking about this war it is a source of continuous strength and comfort to know that the infinite God is in active sympathy with justice and righteousness. And God's sympathy means in the end a victory for the side He supports.

A second answer to the question as to what God is doing in this war is that He is maintaining His laws of good and evil with all their attendant effects. God is neither foolish nor eccentric. He has a stable and consistent mind. He is not controlled by passion or selfishness or any unethical motives. The laws He makes are wise and just and they abide unchangeable.

It is the law of good to protect and to build up. It is the law of evil to break down and to destroy. It is the very nature of good to lead men aright. It is in the very nature of evil to lead men astray. Goodness makes for wisdom. Badness is continually exercising poor judgment.

Germany and Austria have made colossal mistakes in their war because of their colossal violations of truth and justice. In brutally wronging Serbia, they lost the friendship and support of Italy. In perpetrating the monstrous crime against Belgium they brought against them the whole might of the British Empire. In breaking international law with their reckless submarine warfare they caused the United States to enter the war on the side of the Allies.

Victory of Righteousness

Great wrongs have inevitably driven the Teutonic Powers into blunders that must surely destroy them. God is just as powerfully behind the law of evil that brings destruction as He is behind the law of good that brings salvation. When the tree begins to rot, no matter how fine it looks or how strong it may be, it must be destroyed. God Almighty decrees it. Nations so dishonorable, so false, so savagely cruel as Germany and Austria must be overthrown. Their defeat is a part of the determined order of the universe.

A third answer as to what God is doing is that He is directing the course of events to the realization of His own beneficent purpose for humanity. "There's a divinity that shapes our ends, rough hew them how we will," said the greatest of poets. Before him St. Paul said:—"We know that all things work together for good to them that love God, to them who are called according to his purpose."

The allied armies now have a generalissimo, and millions of men, though they have never seen him, are being directed by his genius to a single goal. Above General Foch are the great leaders of the allied nations, governed by their purposes of right.

Above the leaders are the people with their composite conscience and resolution. Over the people, over all, is God, invisible, following every move on the great stage and shaping all things to His great ends. Under His masterly direction the conflict is sure to end right. Out of the deep agony of the day will come liberty and peace. God will see to it that the final terms open the way to a higher and more ethical and spiritual civilization. The final victory will be God's victory, the victory of His purpose of love and righteousness.—Rev. Anthony H. Evans.

THE "CREEPING BARRAGE"

IS AUTOMATIC, PRECISE AND CRUEL.

It is Solely and Purely An Invention of the Present Struggle on The Western Front.

"Creeping barrage" is a phrase that has become commonplace if war reports—are common, we are inclined to forget that it is a development of tactics now less than two years old. To it, however, we may attribute the success of nine out of ten operations of a local character. In a sentence, it is the perfect co-ordination of infantry and artillery action.

While artillery fire always has been used to some extent to prepare the way for infantry advances the importance of synchronizing this fire and the charge of the foot soldiers and the methods by which it could be accomplished were slow to dawn on the men in command of the armies. In the early stages of this war the artillery played what at best was a secondary part. The real work was the infantry's, but as the front became stabilized and intricate defensive systems were constructed and much of the life in the line was lived in underground shelters, new methods of attack and defence became necessary. Shrapnel, then used almost exclusively by the Allies, was useless against an enemy who safeguarded himself thirty feet beneath the surface.

Like Clock Work

Absolutely nothing is left to individual discretion in the organization of an attack which calls for the aid of the artillery. Co-ordination as close as that of the wheels in a clock is the first requirement. Every battery commander is told the hour and the minute on which he must open fire and his target is given to him. The work of his guns is prescribed for him for every minute to the end of the attack. Stripped of its military terminology his orders might read like this:—

12.30 A. M., Rapid fire; range, 6,000 yards.

2.00 A. M. Increase range to 6,050 yards.

2.15 A. M., Range, 6,125 yards.

2.43 A. M., Range, 6,225 yards.

Unless specifically ordered, he would continue rapid fire—which means as rapidly as his guns can be loaded and discharged—in all the intervening time and until he gets his stop order or sees a signal flare from the front to "cease firing."

Before the attack the watches of all officers who will have a share in it—infantry and artillery—are set to agree with a master watch.

In the case of the routine outlined above, the "zero hour," or hour for the infantry to leave their shelter, might be 1.55 a.m. On the second they get out of their trenches, pass through their own entanglements and halt in No Man's Land until all men are clear of the wire and in their proper positions. They may be 100 yards from the enemy trench along—which, at the 6,000-yard range, high explosive, shrapnel or gas shells are bursting in numbers that may permit an explosion every ten or fifteen feet of front every three seconds. This density of fire makes certain that the explosive area of each shell will widely overlap that of the shell on each side.

In position, the attacking party moves slowly forward. By one minute of two it has come to within forty or fifty yards of this blinding, deafening wall. Suddenly, without the slightest warning, without the slightest hesitation, the line of explosions is moved fifty yards further away and the infantry leaps into the smoking pits it has just finished digging—into what had been the enemy's first line trench.

Must be Cool and Quick Witted

The increased range is calculated to place the barrage on the enemy second line or first reserve trench, not only to demolish it but to prevent the garrison from going forward to reinforce their comrades in the first line or to prevent the organization of a counter attack.

On our schedule fifteen minutes are allowed to the attacking battalion to take possession of the first line and for the second wave of the attack to come up to it, pass over and come to within striking distance of the second line. The progress of this wave may have been more rapid than the schedule contemplated. If so, the officer in command halts his men fifty yards, or even less, in front of the barrage where they take shelter in shell-holes or behind ground cover, for it must not be overlooked that the enemy also has artillery and that while our guns are putting down their barrage the enemy is not idle.

At the first sign of an attack the officer commanding in the forward trench sends back warning and asks for a protective bombardment. His artillery promptly undertakes what is known as counter battery work, in which it seeks to put out of action or silence our artillery. At the same time it lays down a counter barrage on our first line and later, when signals tell it the forward trench system is lost, the guns are trained between the forward and support positions. The purpose is, first, to stop any attack or prevent more than the first wave going into action, and, second, to prevent our advance beyond the enemy first line.

A situation arises now where the men who are attacking are between two fires. In front of them, less than fifty yards, is their own barrage. Behind them, and frequently among them, is the enemy's curtain of fire. The officer in command must be cool, careful and quick witted to keep his men marshalled in such order that they are out of danger of a chance shot from their own guns and at the same time do not suffer too much from the first fire of the enemy.

The capture of the second line and the advance to the third are a repetition of the tactics used in the attack on the first line.

During the battle, however, there has been much incidental, although extremely important, artillery activity.

The "Box Barrage"

For anything less than a general attack on a wide front where the advantage to be gained is more than local, it is customary to put down a "box barrage" as well as a "creeping barrage."

The "box barrage" is just what its name implies. It takes in the four sides of the territory against which the attack is directed with the object of preventing communication of any kind with the positions to be seized.

Other guns are trained on two lines at right angles with the front and shells are dropped at regular intervals on these lines to the depth decided on —perhaps half a mile, or perhaps a mile and a half. Another row of explosions connects these right angle lines at their extremity in enemy territory. The effect is a fence of fire through which no enemy reinforcements can come to the front involved and through which it is impossible to retreat.

For the usual barrage every kind of ordnance is brought into use. Machine guns, rifle grenades, trench mortars and even hand grenades have their place in the scheme, as well as the heaviest pieces from the 3-inch to the 9.2.

SINK 75 U-BOATS IN YEAR

British Empire Has Contributed 8,000,000 Men.

Seventy-five German U-boats were sunk by British vessels in the year ending August, 1918, it was announced recently in a statement dealing with the latest figures of Great Britain's efforts in the present war. This record achievement in combating enemy submarines equals the total sunk by the British in the first three years of the war.

The tonnage of the British navy has reached the enormous proportions of 8,000,000 tons, and there are 1,500,000 men serving in the navy and mercantile marine.

The total contribution of man power to the Allied forces by the British Empire up to August, 1918, is 8,500,000. Six and a quarter million of these were supplied by Great Britain; one million by the Dominions and 1,210,000 by India.

British ships have made new records in transporting troops to France. In one period of fourteen days 268,000 soldiers were taken across the channel from England. In one month 285,000 men were successfully landed after a similar voyage.

Sixty per cent. of the first million American soldiers in France crossed the Atlantic in British vessels. Two hundred thousand of these were transported in July, 1918.

AN ALLY OF GERMANY

Powerful Enemy Causing Destruction Throughout Canada.

Germany has a powerful ally working within the boundaries of Canada. Its operations are very effective. It enters munition plants and causes explosions. It cripples hundreds of factories which are laboring to produce war-time necessities. It waits until the grain in the fields is ripe for harvest, and then destroys it over thousands of acres, or else it bides its time until the harvest crops have been stored in elevators and obliterates them by hundreds of thousands of bushels. It operates in every city and town and in the country districts. It is unceasing in its activities, working by night as well as by day, and for every hour of the twenty-four. It enters countless homes, bringing devastation and sorrow; and last, but not least, is causes heavy loss of life.

This foe is not an "alien enemy," but comes of good Canadian stock. It is encouraged by millions of people who believe themselves to be patriotic. Without their help, it would soon be overcome. The name of this great enemy is Preventable Fire, and its principal cause is Canadian carelessness.

What He Wanted.

It was his last day on leave and the young thing who had been receiving long but somewhat unsatisfactory visits from this very shy young man decided to give him an opening. He came, with a beautiful rose in his buttonhole.

"I'll give you a kiss for that rose," she promised, blushingly.

The exchange was duly, not to say happily made. The young man started hurriedly toward the door.

"Why, where are you going?" asked his girl in surprise.

"To the florist's for more roses," he replied.

A rubber door mat before a sink is restful to the feet and saves stains on floor.

AN EDITOR TALKS

"We have never tried to save any money yet," said a married woman in town, and her hair is almost white. The saving citizen is a national asset. Canadian progress to-day in all lines of activity attests magnificently to the splendid qualities of thrift that have marked the progressive people in all the provinces. The total returns from field crops and animal produce have been only possible because of the disposition to make use in an economical way of all the wonderful gifts of Providence in this good land of ours by the farmers of Canada especially. Now, when money is circulating freely, in the time when everybody, old and young, should practice economy and save the dollars for the period of depression that is sure to follow this terrible war.

* * * *

An experience covering our sixty years on the farm and mingling freely among farmers prompts us to state that never in that period of years have we known farmers to have reaped as great a harvest as this year of 1918, and they are making money as never before through their splendid efforts for increased production. That they will carry into their savings an equal, foresight in conserving their surpluses against the future days of darkness and lower prices to come will be equally praiseworthy. He is well advised who saves his extra dollar until he sees which way the winds of to-morrow will blow. Adversity blows a chill blast where there is no dollar in the savings.

* * * *

Hon. Dr. H. J. Cody, the new Minister of Education, has already initiated some valuable changes in school regulations and systems, mainly for the benefit of rural schools and for public schools generally. The placing again of history on the entrance examination to high schools and collegiate institutes is one proper step. We have often wondered why Canadian history has in past years received so little attention in the public schools of this country. Across the line the school children are all made familiar with United States history. In a similar way Canadians should know the history of Canada in a general way and of the province in which they live, and even of their own county in particular. A writer recently said that every boy and girl should know the story of their own home county and district. By it they would gain knowledge of the beginning of Canada, the days of pioneering and the days of the laying of the foundations upon which the Canadian people of to-day are building for the generations to come.

* * * *

Some of the most interesting books we have read have been the early history of localities more or less familiar to us. One of the first books of this character we read was "Roughing It in the Bush," by Mrs. Traill, who gives thrilling experiences of pioneer days in Peterboro County. There have been a lot of interesting history made by the public men of Canada in the last 50 to 75 years to make a fair sized school history. It would be well for the boys and girls in our schools to become familiar with those who were leaders in the various walks of Canadian life. They would know something of the builders of the Dominion, the men and women who have stood out in the constructive years of the past.

* * * *

We would not teach ancient history nor even British history to only a limited extent in the public schools. Leave these to the higher educational institutions, but local history could be studied with interest and decisive profit. Already much of the history of the province is on the printed page, but were its study encouraged more undoubtedly would be added. A new interest would be aroused and the tone of all things Canadian would become intensified. Our hope is, says the Collingwood Bulletin, that the Minister of Education may go the necessary step forward and have local history included in the list of studies.

* * * *

Only a few people are familiar with the good work being done by the Canadian Department of Soldiers' Civil Re-establishment. The Government Bulletin for September tells us that industrial re-education was established as a means of saving disabled men from being a dead loss both to themselves and to the country. It is intended for disabled men who are so handicapped by their disabilities that they cannot return to their former occupation, and the Department of Soldiers' Civil Re-establishment has built up an organization which is efficiently doing that work. Be it said to the credit of young Canada that of nearly five thousand men who have been found in need of industrial re-education to enable them to maintain themselves and their families as independent self-supporting citizens, only about three hundred have refused the opportunity offered them.

* * * *

The September "Bulletin" gives these interesting vocational statistics, which show how this good work is progressing and appreciated by returned soldiers:

On August 1st there were 5,045 courses in industrial re-education granted to date. In the curative workshops where the men do such work as is suited to them during convalescence, there were 1,991 men, while there are at present 1,990 men taking courses in industrial re-education. Of these latter, all but 18 who were taking these courses during convalescence and while still under military authority, are granted the usual pay and allowances. The number of men attending the occupational therapy classes during convalescence has increased by 248 on the previous month. During July 314 men completed their courses and were ready for employment bringing the total number of graduates up to 1,081.

"LONG LIVE THE CANADIANS!"

Message of Gratitude From Freed French Citizens.

"Vive les Canadiens; Vive les Canadiens."

With these words did the lorry loads of repatriated French citizens greet a Canadian officer. These 40 persons, for four years held in slavery by the Hun in their village of Ecourt St. Quentin, have been freed by the Canadian corps. Their village, so far behind the Boche lines had escaped the ravages of war. An spiteful rage he is now levelling it to the ground by long-range bombardment, exactly as he still directs his fire upon Arras. They were delivered at last, but it was with saddened hearts that they drove through the desolation of No Man's Land, where they had been wont to visit the fairs and feast days of neighboring smiling villages. They pass beyond into Virgin Picardy, and in passing they send a message of gratitude to the Canadian nation. Their deliverance was actually effected by a Canadian artillery officer. A young girl, a slender brunette, embraced him, kissing him on either cheek. "In me," she cried, "the French salute our saviours."

Allies Share Our Sugar.

Before the war, the allied nations in Europe drew virtually no sugar from the sources of supply for this continent. Now about one-third of the sugar from these sources is going to the allies.

Meat pies may be made of any tender leftover meat.

FEEDING POULTRY FOR MARKET

By S. K. Burdin.

Many people imagine they can fatten chickens profitably any time, but it can not be done. If fattening is attempted before the birds have attained their growth, they simply convert the bulk of what is intended as a "fattening ration" into a "growing ration" and grow like weeds. Birds must have a good large frame to take on flesh and fat satisfactorily. Therefore it is best to feed first for frame, and then for fat; and the two feeding periods should be so blended into each other that the birds will never know where one stops and the other begins.

Sudden changes in feeding methods are bad because the system can not quickly adjust itself to new conditions. Keep the birds keen when meal-time comes. If they seem indifferent, skip a feed and slightly lessen the amount of feed in the future. They must not be overfed. Be particular about fountains and water; place the fountains in the shade.

For feeding reasons the capons and roasters should be kept separate and fed differently when possible. Cockerels and pullets intended for breeders should be given plenty of hard grains to develop the muscles of the gizzard, which gives them greater grinding and assimilating capacity, while those intended for killing may be fed soft ground feeds, which make faster growth.

Green succulent feeds, such as rape, alfalfa, clovers, cow-peas, chard, cabbage, sorghum, young rye, oats, wheat, Jerusalem artichokes or grasses should be cut fine (one-sixteenth to one-eighth inch) in a cutting box daily, as required.

A good feeding mixture is made as follows: Mix ten pounds each of middlings, ground oats, cornmeal and ground barley with one pound of fine charcoal and a half pound of fine salt. If the ground barley is hard to secure, double the amount of cornmeal; if cornmeal is scarce, use twice as much barley. Either will do, but both are preferable. If sour milk or buttermilk is not to be had, add ten pounds of fine beef-scrap or beefmeal to above grain mixture. Moisten with water ten pounds of greens (cut fresh daily), add three pints of sour milk, buttermilk or water, and mix well in tight tub, pail or box. To this add five pounds of the ground grains, mixing all together thoroughly.

Mix the day's requirements fresh each morning. Keep tubs and pails scraped clean and covered when not in use, on account of flies. All leavings and excess should be given to older birds. Let none of this feed stand before birds, old or young. Good health questions

"ON TO THE RHINE," OUR BATTLE CRY

CANADIANS PASS THROUGH NO MAN'S LAND.

Capture Territory Where Enemy Had Settled Down for Winter, With War Material.

Some idea of the task performed by Ontario infantry in their advance on the north of the Cambrai road and between the Sensee River when, with Imperial divisions, they stormed the QuesntDrocourt line on the morning of Monday, Sept. 2, can be gathered from a trip along this road up to the villages bordering on the Canal du Nord, says a Canadian Press correspondent.

Vis-en-Artois, a ruin of rubble, was then in our hands. Thence the ground climbs gently upwards east to the sunken road connecting Hendecourt and Dury. Through here, there are no less than five enemy trench systems, with wire everywhere. The sunken road was held in great force and one Central Ontario battalion was somewhat cut up before it captured the 14 machine-gun posts in front of it. This was the same battalion that in the Amiens show captured Le Quesnal in the face of very strong enemy defence, including whizz-bang batteries and machine-gun nests. That success was accomplished by a brilliant turning movement and the result was the capture of a complete divisional headquarters and vast stores, which gave all ranks in the battalion a change of underwear and new boots.

Nothing of the kind was possible here, but the battalion went grimly forward till it carried the crest by assault and turned in a large number of prisoners. This battalion belongs to the brigade that captured and has since consolidated the apex of the Sensee River and the Canal du Nord triangle.

Excellent Work of Various Units.

A Quebec battalion fought through the marshy ground along the river. This area is dissected by ditches and was filled with machine-gun posts. Some British Columbia troops also had very stiff fighting before this hornet's nest was cleaned out and we had established ourselves solidly between the river and the canal.

Novel and brilliant reconnaissance work for this attack was done by a brigadier, who advanced 5,000 yards in front of his line in a whipped tank.

"He's always trotting about the front line," said a member of his staff, explaining his absence. "He is a regular daredevil, who isn't happy if he isn't in the thick of it."

Contributory to this success was the excellent work of our artillery, and in particular a Manitoba battery did useful service at a critical moment by laying down a smoke screen across the Cambrai road under cover of which the infantry pushed their attack.

Down the Cambrai road, through Vis-en-Artois, past Drury on the left, and Villers-les-Cagnicourt on the right, all is desolate. It is a typical No Man's Land landscape. The countryside is pitted with shell holes and scarred by trenches. The avenues of trees along the road remain blasted stumps. There is not a green thing. Everywhere is the debris of war, the litter and the ruin. Broken lorries, shattered remnants of an armored car, the twisted rails of a light railway, scrap iron of all descriptions—these things cumber the roadside. Everywhere are horses in various stages of corruption. Here and there are rows of our dead, awaiting the burial parties. Over all is a brooding stench of decay and stale gas. Gangs of our engineers are at work mending the roadbed, relaying the steel, digging out the ditches. The battlefield of yesterday becomes the humming workshop of to-day. Pass over it again next week and there will be an ordered highway.

A Smiling Country Beyond.

But a mile or so beyond, and what a transformation is here. We have passed through No Man's Land to a smiling country beyond, a part of France held for four years in bondage. Away to the right are three villages. They are Sandemont, Remaucourt and Ecourt St. Quentin. From a distance it looks as if a pocket handkerchief might carry them. They stand intact, the beurhens rising above the red-tiled roofs. The whole nestling amid groves of green foliage. The sight of these villages and green fields is more eloquent than anything that has gone before of the success of the battle, for here, as in former years, the Boche had settled down for the Winter. He had filled them with his material of war. Now all of it is in our hands.

Remaucourt, particularly, was a great artillery dump. The enemy had large supplies of ordnance and material. Here, too, was a complete hospital train. In Acourt we captured a vast quantity of supplies of all kinds. Tucked away behind the supposedly impregnable Quesnt-Drocourt line he had made of these three villages a great depot. They were beyond the area we shelled. Not a tile was out of place on Monday. But no soon er had he got his wind after his hasty exit than he turned with wrath on these villages. Intact though they seem from a distance, on entering there is evidence at every hand of the process of ruin. Windows are shattered and walls gape. A beautiful spire is that of the Church of Ecourt St. Quentin, but even as one looks a shell bits it fair and squares and it disappears in a cloud of dust.

Nevertheless the fields are still green. Our soldiers gather pumpkins in the village gardens. Cattle wade in the lush pastures. Except for the destruction of his heavy guns the enemy could not have wreaked this desolation. Beyond are fairer fields and villages.

A Hopeful Outlook.

It is the business of the Canadian Corps to do its share in reclaiming these villages to France. It has come from shell-torn Arras. It has fought its way step by step over fifteen miles of blasted wilderness, where even the weeds wither and die and the handiwork of man through the centuries is blotted out. The retreating enemy has left behind him only concrete and barbed wire.

Such is No Man's Land. It is the despair we leave behind us, the despair of the weary years, the bitter Winters of trench warfare. All that is past. With each sunrise hope shines from the west.

"On to the Rhine," cries that gallant gentleman, the Canadian soldier.

The Song of the Happy Warrior.

The song of the boy who was brave and fair,
Hee was young and his eyes were grey,
He was swift to run and strong to strive
And ready for any play.
He climbed to the top of the apple tree
When nobody else would dare;
He couldn't get down and he feared he'd fall
As the branch swayed in the air.
O! the ground seemed such a way below,
But he smiled a doubtful smile-a,
And he grit his teeth and sang "Cheer-o!"
Though the drop to the ground seemed a mile-a.

The song of the man in the khaki coat
As h stands in the wet and snow,
A smoking rifle in his hands
And his feet in the mud below.
The tale of the charge and the man that fell,
Of the tunic dyed with red,
The tight-clenched teeth and the clammy brow
And the stain where the wound had bled.
O! he groaned as he jolted to and fro
And wan, wan was his smile-a,
And he grit his teeth and he hummed "Cheer-o!"
And he died at the end of a mile-a.
—S. Donald Cox, Rifleman, C. I. R., London Rifle Brigade.

THE UNNECESSARY CAT.

A Menace to Birds, Which Are Our Best Food Conservators.

Nature has provided in the form of bird life a means to counteract the action of agents destructive to plant life. While artificial means may, to a limited extent, hold the multiplication of insect life in check, no human agency can accomplish the results which are secured by the birds.

Man, by his own action or inaction, is responsible for the causes which restrict the increase in the number of our birds. Slaughter and the robbing of nests by men and boys and the treacherous family cat have made such inroads on their numbers that the balance provided by nature has been destroyed.

By the recently consummated Migratory Bird Treaty, the protection of migratory birds from destruction by men has been provided for. No attempt has been made, however, to remove the menace of the unnecessary cat. The elimination of it must, perforce, be left to the good sense and the public spirit of the individual citizen. The number of these prowling destroyers, and their predilection for birds as their prey, cause the loss to Canada of vast numbers of our best food conservators every year.

HINTS ON STORING COAL.

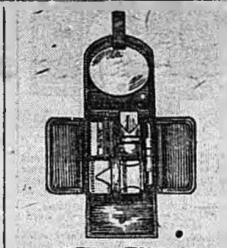
Precautions To Prevent Loss Through Spontaneous Combustion.

During the present year, consumers are storing coal as long in advance of winter as possible. It is important, therefore, that they should take precautions in the storage loss through spontaneous combustion is to be prevented. There are certain simple methods of handling coal that experience has taught are necessary to obviate such a misfortune, especially where considerable quantities are to be stored. Thus, coal should be so piled that air can circulate through it freely to carry off the heat, or so closely piled that air cannot enter the pile. Low piles are preferable, if space permits, and alleyways should be provided to facilitate moving the coal quickly. Occasional ventilation pipes are ill-advised, but the practice of placing such pipes close together has been tried in Canada with effective results. Different kinds of coal should not be mixed in storage.

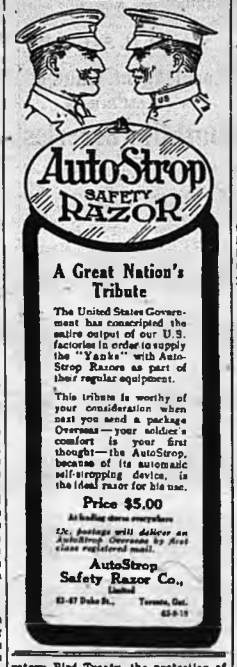
In quenching fire in a pile, water should only be used if there is an ample supply; a small amount is ineffective and very dangerous.

Where available, under-water storage is recommended as it entirely eliminates spontaneous combustion. The preparation of a suitable pit for this method of storage is sometimes costly, but old quarries, clay pits and even prairie sloughs have been used. Deterioration of coal stored under water is negligible and it absorbs very little extra moisture.

Good Reports of B.O.S. Boys.



Ontario Headquarters has reported as follows: "Ontario farmers everywhere are enthusiastic about the boys' services. The boys are making good. We estimate that 9,000 boys from the cities and towns and as many more farm boys are working as Soldiers of the Soil in Ontario."



Buenos Aires and Rio de Janeiro are the largest cities of South America.

Waiter (to guest who has been waiting a very long time)—"Did you ring the bell, sir?" Gent—"No, I was telling it. I thought you were dead."

Nothing is more annoying than to have your wife's relatives borrow money from you and then piously remark, "The Lord will provide."

A very good plan before laying oilcloth is to cover the floor thinly with sawdust. This helps the oilcloth to wear longer and deadens the sound.

A Great Nation's Tribute

The United States Government has conscripted the entire output of our U.S. factories in order to supply the "Yanks" with AutoStrop Razors as part of their regular equipment.

This tribute is worthy of your consideration when next you send a package Overseas—your soldier's comfort is your first thought—the AutoStrop, because of its automatic self-stropping device, is the ideal razor for his use.

Price $5.00

At leading stores everywhere

Or, postage will deliver an AutoStrop Overseas by first class registered mail.

AutoStrop Safety Razor Co., Limited

83-87 Duke St., Toronto, Ont. 63-9-18

Combination of Materials

A clever little design for combination of materials. The front panel is applied and stitched as far as the belt. McCall Pattern No. 8486, Girl's Dress. In 6 sizes, 4 to 14 years. Price, 15 cents.

An excellent design for combination of materials. Can be worn with or without overdress. McCall Pattern No. 8505, Ladies' Dress. In 6 sizes, 34 to 44 bust. Price 25 cents.

These patterns may be obtained from your local McCall dealer, or from the McCall Co., 70 Bond St., Toronto, Dept. W.

LIFT YOUR CORNS OFF WITH FINGERS

How to loosen a tender corn or callus so it lifts out without pain.

Let folks step on your feet hereafter; wear shoes a size smaller if you like, for corns will never again send electric sparks of pain through you, according to this Cincinnati authority.

He says that a few drops of a drug called freezone, applied directly upon a tender, aching corn, instantly relieves soreness, and soon the entire corn, root and all, lifts right out.

This drug dries at once and simply shrivels up the corn or callus without even irritating the surrounding tissue.

A small bottle of freezone obtained at any drug store will cost very little but will positively remove every hard or soft corn or callus from one's foot.

If your druggist hasn't stocked this new drug yet, tell him to get a small bottle of freezone for you from his wholesale drug house.

Experiments and Tests.

The annual report of the Dominion Experimental Farms for the year ending March 31st, 1917, is a comprehensive document of some 150 pages, containing matter well worth studying by progressive farmers. It describes briefly and concisely the experiments and tests which have taken place at every farm and station, which practically means all over the country, seeing that every province is represented. Just as there is not a branch of agriculture undealt with, so there is not a district the capabilities and possibilities of which have not been tried in the matter of better production by improved methods. In former years the report has been given in two and three volumes and contained accounts of scientific experiments that have been made during the year, or that were still in progress, written by professional experts of the experimental farm system, but henceforth these are to be given in bulletin form and the Report confined to statements of the year's doings at the score and more farms and stations at different parts of the country. The Report, which, as has been said, will well repay study, can be had free on application to the Publication Branch, Department of Agriculture, Ottawa.

Minard's Liniment for sale everywhere.

A NEWSPAPER PROCESS.

For the Making of Newsprint From Ground Wood Pulp.

The Taggarts Paper Co., of Grant Bend, N.Y., has developed a process for the making of newsprint from all ground-wood Pulp, omitting entirely any proportion of sulphite pulp. Mr. George C. Sherman, president of the company, in an interview given to the Paper Trade Journal, said:

"It required two cords of wood for a ton of sulphite pulp, while one cord of wood will make more than a ton of ground-wood pulp. It takes 20 per cent. more timber to make paper out of 20 per cent. sulphite than it does out of all ground wood. One-fifth more acreage of timber is required for the sulphite method."

If this process should prove generally feasible it will do much to conserve Canada's forests. It would also effect a considerable saving in the cost of manufacturing newsprint and in the consumption of sulphur, which is in demand for the making of munitions.

LEMON JUICE IS FRECKLE REMOVER

Girls! Make this cheap beauty lotion to clear and whiten your skin.

Squeeze the juice of two lemons into a bottle containing three ounces of orchard white, shake well and you have a quarter pint of the best freckle and tan lotion, and complexion beautifier, at very, very small cost.

Your grocer has the lemons and any drug store or toilet counter will supply three ounces of orchard white for a few cents. Massage this sweetly fragrant lotion into the face neck, arms and hands each day and see how freckles and blemishes disappear and how clear, soft and white the skin becomes. Yes! It is harmless.

The Change.

I want you here little lad on my knee,
For my lips to touch and my eyes to see;
I want your hand in my own to-day,
But instead, you scampered outside to play.
And the house is still as I sit alone
In the silence mothers alone have known.

I want you here little lad to tell
You over and over I love you well.
I want the touch of your soft brown hair
But you're off for a game that I cannot share
While I wait and lonely and longing bide
Till the night shall bring you back to my side.

I want you here little lad on my knee
But I'm glad you're sturdy and strong and free.
I want your hand little lad to hold
But I'm glad you're fearless of storm and cold
And I'm glad that 'tis Nature's and Heaven's plan
That I've given the world a some-day man.

St. Joseph, Levis, July 14, 1902.
Minard's Liniment Co., Limited.

Gentlemen,—I was badly kicked by my horse last May, and after using several preparations on my leg nothing would do. My leg was black as jet. I was laid up in bed for a fortnight and could not walk. After using three bottles of your MINARD'S LINIMENT I was perfectly cured, so that I could start on the road.

JOE DUBES.
Commercial Traveller.

Improving Bridge Floors.

I was down in a part of the country recently where a little creek winds its way through the farms, where the roads were numerous and there were many small bridges. One feature I noted particularly about the bridge was that the floors were smooth and the wooden planks did not rattle as they so often do after a new floor has been in service for a few months. Loose floor boards are annoying and the looser they become the more dangerous they are to traffic, especially horses.

Each of the bridges I saw had two fourteen or sixteen inch planks bolted to the floor, so that they provided a smooth track across the floor for all vehicles, having been spaced far enough apart so that the wheels ran over them in the centre. As few vehicles ever meet on these small bridges there is little difficult to the plan, and it helps wonderfully in preserving all the bridgework.

The incessant rattling or vibrating of a bridge tends to weaken its whole structure. When our car slid over these planks it was like riding on a pavement and the bridges did not rattle out their complaint of loose floor boards.

A single wide two-inch plank is better than two planks laid side by side. Where two narrower planks are used they are likely to spread some time and catch a wheel between them. The ends may be bevelled to make a smooth approach. If the planks are bolted to the floor in several places they will be secure.

Minard's Liniment Cures Burns, Etc.

Poultry yards at this season are likely to be dirty and barren of green foods. Stir the soil by spading up, sow wheat, oats or other grain and keep green food constantly available.

Potato Speculators Warned.

Dealers and others who may be ambitious in regard to this year's crop of potatoes and apples have been warned by the Canada Food Board against speculation. "In negotiations for the purchase or sale of apples, potatoes, or other roots, due consideration should be given to the possibility of some action being taken by this Board," declares their recent statement.

Minard's Liniment Cures Dandruff.

Exploring Africa.

The first organized attempt to explore the interior of Africa was made by Mungo Park, who set sail on his initial voyage to the Dark Continent 123 years ago. He returned two years and seven months later after having explored a considerable section of Africa never before visited by a white man, although he failed in his main purpose, which was to trace the source of the River Niger.

MONEY ORDERS

It is always safe to send a Dominion Express Money Order. Five Dollars costs three cents.

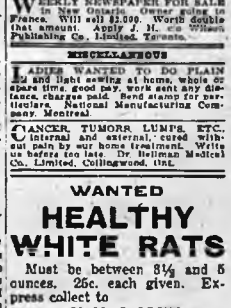
Flowers are more fragrant when the sun is not shining on them, it is contended by a French scientist, because the oils which produce the perfumes are forced out by the water pressure in the plant cells and this is diminished by sunlight.

Minard's Liniment Relieves Neuralgia.

Potatoes baked in layers with onions and tomatoes is an excellent main dish for supper.

FOR SALE

WELL EQUIPPED NEWSPAPER and job printing plant in Eastern Ontario. Insurance carried $1,500. Will go for $1,200 on quick sale. Box 69, Wilson Publishing Co., Ltd., Toronto.



WEEKLY NEWSPAPER FOR SALE in New Ontario. Owner going to France. Will sell $2,000. Worth double that amount. Apply J. H. c/o Wilson Publishing Co., Limited, Toronto.

ISSUE No. 38—'18

CARGILL

Mrs. Jas. Hamilton, of Fort Arthur, is visiting friends here.

Mrs J. Loughleed, sr., received a letter from her son, Sergt. Loughleed, last week, written since he was wounded. He says his wound, which he received on Aug. 26th at about 5.30 a.m., is only slight, and he is feeling "jake." He is now in an hospital at Bristol, Eng., and his condition is satisfactory, according to a cable received on Saturday.

The flag was at half mast last Friday in honor of one of our fallen heroes, Pte. Fred Kirvan, who died fighting for his king and country. Before enlisting in the 160th Fred was teller in the Royal Bank here. He was a fine fellow and an obliging official, and we are sorry to hear that he has fallen. He has done his bit, and we are proud of him.

Mr. Fred Grice was in Toronto this week on business.

Mr. Zeigler left on Monday for Wiarton, where he has secured employment in a flour mill. He expects to move his family there shortly.

Very successful anniversary services were held in the Methodist church last Sunday, when Rev. Mr. Cosens, of Walkerton, preached two very able sermons to goodly sized congregations. The choir, assisted by Messrs. Napper Bros., W. J. Loughleed and E. A. Fowlie, rendered a couple of anthems, and the above gentlemen two quartettes in a most acceptable manner. Rev. Mr. Cosens also gave a very appropriate address to the union Sunday School of the Presbyterians and Methodists in the afternoon. A free will offering was asked for, which was responded to liberally.

The bowlers held a most successful tourney in aid of the Red Cross on Thursday last, when the tidy sum of $115 was raised. Owing to the rain they were unable to finish all the games. These were pulled off on Monday night.

Mr. Jas. Alexander, of Bruce Mines, Ont., is home on a visit.

Miss Edna Pearson, of Toronto, who has been visiting friends here, left for the city on Tuesday morning.

Mr. F. Mewhinney was notified last Saturday of the death of his brother, Pte. Bert Mewhinney, of the 160th, who was killed in action recently. The names of a great many 160th boys are appearing in the lists these days, showing they are in the thick of the fray. We know they are doing their duty, and trust they will not lose too many more members.

—One of the features at Culross Tp. school fair, held at Teeswater on Monday was a four-months-old colt which was harnessed and broken in by a school boy (F. Harper). The lad drove his pet around the track and made it answer the reins by turning and backing.

GRESHAM

Rev. Mr. Wallace, of Caledon, occupied the pulpits here and in Underwood on Sunday last very acceptably.

Mr. Wm. McDuff and gang are turning out well.

McLean Young lost one of his valuable young horses last week through an accident. While running in the pasture something penetrated one of its hoofs.

We were sorry to learn of the death of Mr. Frank Curry, of Moosejaw, Sask. Mr. Curry was one of our Gresham boys who went West years ago. He was a bright, clean young man, who had a wide circle of friends, and his early demise will be deeply regretted by all. To Mrs. Curry, and his sisters and brother we express our sincere sympathy.

Mr. D. McNaughton, ex-M.P.P., received word that his only son, Daniel, was killed in action. The sympathy of the community goes out to the bereaved father and sisters.

Mr. and Mrs. John McKinnon, of the 6th, arrived home last week after enjoying a three months' holiday with their sons in Alberta and other relatives in Saskatchewan, also a son and daughter in Algoma and neices in Toronto.

Mr. Robt. Parker lost a valuable young horse lately.

We are sorry to lose Mr. Earnie Stoddart as mail carrier here. After the 1st of October we will have some one else in charge, and as the names on the mail boxes are very badly blotted out by the weather, it takes time for a new man to know them correctly.

CASTORIA.

Bears the Signature of *Chas. H. Fletcher*

The Kind You Have Always Bought

GLAMIS

There was no preaching in St. Paul's church on Sunday, owing to the memorial service in the Baptist church in memory of Albert Groves who was killed in action. A large crowd attended both morning and evening, the evening service being Mr. McCauley's farewell.

Mrs. D. MacIntyre and two children and Miss Helen Oliver left on Monday for Toronto.

Mrs. Arnott, of Paisley, spent a week with Mrs. J. C. MacIntyre.

Mrs. Jackson, of Kincardine, Sundayed at Mrs. MacIntyre's.

Mr. and Mrs. Allen McKinnon, of North Bruce, attended the evening service in Glamis on Sunday night.

Mrs. McCall, of Winnipeg, is visiting her sister, Mrs. Peter McLean, on the 2nd of Bruce.

Mr. and Mrs. Bell, Mr. and Mrs. Marshall, of Williscroft, and Mrs. McCauley of Tara, motored over for Sunday evening service.

Mr. and Mrs. Alex McKenzie and Mr. McClung motored to Howick on Saturday.

The names of Neil McDermid and Douglass McKay were among the wounded in the casualty list recently. Both boys are well known here, having lived here for years.

Mr. Cameron, of Tiverton, Sundayed at Mr. Kirktown's.

Mrs. Buller, of Maidstone, is visiting her brother, Mr. John Deehan.

Mr. McCauley takes the service in Goderich next Sunday.

—There are many people who praise God from whom all blessings flow and then proceed to waste them.

WALKERTON

Mrs. Louis Rankin of town underwent a serious abdominal operation in the Bruce Co. hospital by Dr. Hall on Saturday morning. At last reports she was progressing favorably.

Sergt. Wm. S. Gould, an old Walkerton boy and formerly county clerk of Bruce, has returned to his home in Saskatoon after fighting gallantly at the front. His elder son George, is convalescing in England from a serious wound in the foot, while his only other remaining son, Rowland, is on his way overseas to the big scrap. In a wire to his mother, Mrs. Geo. Gould, of Walkerton, Bill stated that he was glad to get his feet back on Canadian soil again after an absence of over two years.

At a temperance convention held in the town hall here on Monday last, Demon Rum and old King Alcohol got a scoring from the clever pencil of J. W. Bengough, the cartoonist, which showed it to be the running mate of the Kaiser in the destruction of human life and the wrecking of homes. Mr. F. Raney, L.L.D., solicitor for the Dominion Alliance, declared that the law throughout the province was being pretty well enforced, but cautioned the temperance forces to keep their organization intact in readiness for the next vote which will probably be taken on the question after the war. The election of officers resulted as follows: President, L. C. Beston; 1st Vice-Pres., Mrs. Stauffer; 2nd Vice-Pres., Rev. G. C. Rocks; Secretaries, Rev. Mr. Gale, of Pinkerton. A resolution was passed commending License Inspector White and Chief Constable Ferguson on the way they were enforcing the booze law in this district.

It looks as if the $1135 which came into the municipal coffers in Walkerton via the local police court where Magistrate Tolton was fining alleged aliens handsomely for neglecting to register, and which had the town council was already seriously considering expending in the erection of a monument here to the heroes of this vicinity who had fallen in the war, may have to be handed back to the contributors, as they are all appealing against their fines on the ground that they were illegally gathered in the number. Henry Cathoff of Hanover, who is appealing from a $200 fine in Walkerton to the Hanover Division Court, claims, among other things, that being a resident of Grey county that they had no jurisdiction to bring him over to Bruce and fine him. Herman Miltz and Otto Bluhm of Hanover, who were relieved of $250 each, are protesting on the same grounds. Rev. Ernest Deneff, Lutheran minister of Brant, who was fined $250 in Walkerton, and Wm. Huenmerder, a Brant farmer who was mulcted for $300, are both appealing to the next Division Court here to have the conviction quashed on the grounds that they were permanent residents of the town ship, and were not aliens within the meaning of the Act, and that they were not liable for non-registering under any act in force. Robertson & McNab, barristers, are handling the appeals, and if the contention of the appellants is correct, Walkerton's dream of a hero's monument out of this coin promises to vanish. It is said that the military police were a little previous in their crusade against the supposed aliens of this vicinity, and that had they been deferred the pilgrimage until after Friday last, when it is claimed the twenty days of grace would be up under the recent Order-in-Council compelling aliens to register, that they might have made quite a haul of legitimate coin, as the aliens were seemingly napping when the men with brass badges blew in and stampeded them by pulling off what is alleged to have been some highly illegal arrests in their midst. The scurry for papers then set in with such a vengeance that no less than 250 are said to have registered in Hanover and vicinity within a few days, while about 40 have to-day struck the trail to the town hall in Walkerton for the same purpose. —Herald and Times.

TWELFTH CON. BRUCE

Miss Stella Cumming has gone to Guelph for the winter.

On account of the new culvert going in on North St., it is very inconvenient for getting to town. The council should look after and get such jobs done early in the season. It will affect the show as well as business in Paisley. The people are going west to Port Elgin and Underwood to get their necessaries.

Mr. Eli Barnes, Lizzie and Mrs. Tom Barnes and two boys motored to Hepworth on Monday to visit friends there.

As the new school building is not ready yet, our teacher, Miss McGillivray, has begun the term's work with her pupils in Mr. John Greaves' house.

Mrs. Peter McLeod is very poorly just now.

Mr. Hector McGillivray and family visited at Hepworth last week.

His old friends herd hope that Corp. Chas. McGillivray, who was recently wounded, may soon be himself again.

PINKERTON

Miss Alma Reid, of Toronto, is visiting at her home here.

Mr. R. L. Garland, of Palmerston, spent Sunday at his home here.

Pte. Russell Birrell, of the Army Medical Corps in Toronto, spent a few days' leave at his home here.

Only a small crowd attended the annual exhibition on Friday last owing to the disagreeable weather. The exhibits were larger than usual, especially in the live stock classes, and keen competition resulted. The concerts in the evening was under the auspices of the Red Cross, and a crowded house listened to an excellent entertainment by Harry Bennett. Miss Cunningham, of Walkerton, gave two excellent recitations and the Misses Pinkerton gave several piano duets.

Mrs. Wm. McFadden, of Grand Rapids, Mich., is renewing acquaintances in this vicinity.

—What a man is depends largely upon what he does when he has nothing to do.

MANUFACTURE OF CIDER

Winter Rhubarb Can be Produced Cheaply and Conveniently.

Turnips Grown on Dairy Farm Best Fed to Dry Cows, Young Stock and Pigs.

(Contributed by Ontario Department of Agriculture, Toronto.)

SWEET cider is unfermented apple juice, and hard cider is fermented apple juice. To get the juice the apples are either crushed or ground in a cider mill and the juice expressed from the pulp.

The fermentation of apple juice, or any other fruit juice, is brought about by the development in it of yeast. Yeast cells are microscopic plants invisible to the naked eye and are always present on the surface of fruit. When the fruit is crushed to get the juice many of these yeast cells get into the juice and if these are not destroyed they will induce fermentation.

Consequently, in the manufacture of sweet cider we must destroy the yeast cells that are present and prevent others from getting in. The surest way of doing this is to pasteurize the juice immediately after it is obtained from the fruit and store away in well-sealed containers. In the case of cider the pasteurization process means heating the juice to 170F. for ten minutes and then filling into containers that have been scalded and can be tightly corked. Care should be taken not to let the temperature get above 170F. during pasteurization or the character of the juice will be injured. The juice is then stored away at a low temperature to allow it to clear.

Hard cider is produced by allowing the fresh apple juice to ferment in the cask. The fermentation is naturally induced by the activities of the yeast cells that get into the juice from the surface of the apples. As, however, there are various kinds of yeast cells, and also many mold spores liable to be on the fruit which may injure the quality of the cider, spoiling the davor, it is a good plan to control the fermentation either by first pasteurizing the juice and then adding a good yeast to the raw juice as soon as obtained from the apples. —Prof. D. H. Jones, O. A. College, Guelph.

How Winter Rhubarb is Produced.

The production of rhubarb in winter has become of considerable value among gardeners. It is easy to do if certain methods are followed. If one is making a permanent business of rhubarb forcing, it is necessary, each year, to set out a new bed as plants once forced are of no further value. In the spring large roots should be dug, split in one bud sections and replaced in rich moist ground. During the growing season they are kept cultivated and free from weeds. In the fall they are covered with manure. Next spring a second bed is planted as before. That fall a large part of the first bed is taken up leaving sufficient to replant another bed the next spring. The roots are taken up the last thing in the fall before the hard, freezing weather comes and are placed in piles in a shed where they can easily be got at during the winter, but will remain frozen. About Dec. 1st take in a sufficient number of roots, place these bud side up on the floor of a warm cellar—about 48 to 50 degrees—and cover with an inch of sand. Be sure to fill in all interspaces. Keep this sand moist. About a week later the buds will begin to swell, and in from four to six weeks, depending upon the heat of the room, the cooler the slower growth starts — you should have rhubarb ready for market. After these roots are exhausted throw them away and put in more. If a constant supply is required make a new bed every two or three weeks during the winter. Be sure to keep all lights dimmed. Put burlap or brown paper over the windows to get the pink color so much desired.—A. H. MacLennan, B.S.A., Ontario Vegetable Specialist.

Should Cows Be Fed Turnips?

This is an old question about which considerable difference of opinion exists. If my reader is Scotch, he or she will likely answer the question by saying, "Yes," as Scotchmen, turnips, and good farming are three things usually found together on farms in Ontario.

There was a time when butter buyers were not so particular about the flavor of butter as they are at present. It is common to hear women purchasers on city markets, day to farm butter-makers, "Your butter is turnipy," which is sufficient to cause a loss of the sale. Creamerymen object very strongly to "turnipy cream." While it is doubtless true that some careful feeders are able to feed quite large quantities of turnips to cows giving milk, without causing any serious trouble, there is always danger, which can best be avoided by not feeding these to milking cows. If they are grown on the dairy farm they are best fed to dry cows, fattening cattle, young stock, pigs, etc. However, if they are fed in the stable where cows are milking, and more especially where the root house opens into the stable and where the turnips are pulped in the stable or in a feed-room adjoining, the odor of the turnips fills the air, which is carried into the milk pail at the time of milking and thus the milk, cream, and butter become tainted from the stable air, even though the milk cows may not be fed any of the turnips.

The safest plan is not to grow turnips on a dairy farm. Grow mangold, or sugar beets, and corn for silage. These crops will give as good returns as turnips, are no more expensive to grow, and are much safer. "Safety first" is a good motto on a dairy farm.—Prof. H. H. Dean, Ontario Agricultural College, Guelph.

TERMS—All sums of $5 and under cash; on sums over that amount 12 months' credit will be given on furnishing approved joint notes, bearing 6 per cent. interest. Grain to be cash. No reserve, as the proprietor has sold his farm and is giving up farming.

R. C. PEARCE, Auct.

FOR SALE BY TENDER

SEALED TENDERS will be received by the undersigned up to Saturday, Oct. 12, 1918, for the purchase of the old Presbyterian manse and grounds at Underwood. Tenders will be received for the buildings and ground separately or for both together. The highest or any tender not necessarily accepted. J. B. Struthers, Sec. Committee, Tiverton R. R. No. 3.

PRESENTATION TO SOLDIERS IN SAUGEEN

A very pleasant time was spent at the home of Mr. and Mrs. D. J. Porter on Friday evening last, when a number of friends and neighbors gathered to present Ptes. Ernest and Ross Porter with a safety razor and a purse of money each, before they left for London training camp. Mr. Andrew Miller acted as chairman. Miss Alice Rankin read the accompanying address and the presentation was made by Miss Christina McAngus and Miss Lauretta Cumming. Although taken by surprise the boys made a suitable reply, after which a short programme was enjoyed by everybody. The ladies served lunch and the remainder of the evening was spent in social intercourse.

SIXTH CON. BRUCE

Threshing is the order of the day.

Our teacher, Miss Keyes, took in the Kincardine fair.

Pte. Lawrence McWhinney has had his leave extended for some time.

Mrs. Wm. Woods, of Tiverton, was visiting at the home of her mother, Mrs. A. Colwell, for a few days.

Mr. James Johnston had the ditching machine working on his farm for a few days.

LIEUT. FRED A. BALLACHEY
Died at Camp Dix, New Jersey, of pneumonia. Son of Mr. S. Ballachey, Paisley

Mr. S. Ballachey received the sad news on Friday that his son, Dr. Fred A. Ballachey, of Buffalo, had died at Fort Dix military camp in New Jersey, on that day. The deceased was over here in June last visiting his father and friends. He had volunteered for service in the army, a. soon as the U. S. had declared for war, and when he arrived home from this trip to Canada he received his notice to report for duty. Being a dentist by profession he was called upon to serve in that capacity, and he left a large and lucrative practice in the city of Buffalo to do his bit in keeping U. S. army men fit to meet the Huns in mortal combat. He went into training camp at Buffalo on July 1st and was there until transferred to Camp Dix about three weeks ago. Pneumonia was the cause of his death, and the first that friends here learned of his illness was on Tuesday last. The deceased was born here 41 years ago, received his public school education here, took a high school course at Walkerton and then entered upon the study of dentistry. He graduated from the Royal College of Dental Surgeons, Toronto. For a time he was in Dr. Allen's office, also at Petrolea before going to establish his practise in Buffalo. He is survived by his wife (nee Miss Park, of Brantford), and one little daughter about two years old. The remains were brought to Brantford for burial. His father, Mr. S. Ballachey, and Mrs. Ballachey, and his brother, Mr. S. F. Ballachey, went to attend the funeral.

The following is from the Buffalo Courier: Funeral services for Lieut. Frederick A. Ballachey, dental corps, medical department, U.S.A., who died at Camp Dix Thursday, were held yesterday afternoon at St. Paul's church, of which he was a member. The Rev. Dr. C. A. Jessup officiated, assisted by Chaplain M. H. Knox of the Eleventh Battalion at Camp Dix. The last post was sounded by a bugler from Fort Porter. Honorary pallbearers headed the funeral procession from an undertaker's parlors to the church, escorted by about forty dentists. Soldiers from Fort Porter bore the flag-draped casket up the aisle of the church. Dr. Ballachey was prominent in dentistry circles of western New York. Once he was president of the Buffalo Dental Society and for years and at the time of his death was treasurer of the Eighth District Dental Society. He was also prominent in St. Paul's church, was president of the laymen's missionary league of the Episcopal churches of Buffalo, serving his second term, and a leader in the Brotherhood of St. Andrew of St. Paul's church. He served five years with Troop I.

Pte. Robt. M. White, who was wounded on Sept. 2nd, wrote his parents two days after from the hospital. He said his wounds were not at all serious, and he considered himself the most lucky boy on earth when he got hit, as it was the hottest place he had ever seen in his life. He was hit by a piece of shrapnel, just below the ribs, but there were no bones broken. He knew that his brother William had been reported missing, but had not learned of his death.

MEMORIAL SERVICE

Knox church was again filled almost to its capacity on Sunday evening, when a service was held in memory of Ptes. J. Rolston and Bert Mewhinney. All the ministers took part in the service, the sermons being preached by Revs. Neilson and Walker. Pte. Mewhinney having been a member of Ahiram Lodge, I.O. O.F., the brethren attended in a body.

—The Kincardine Reporter has the following reference to Pte. D. McNaughton, son of Mr. D. McNaughton, ex-M.P.P., of Underwood, who was killed in action on Sept 15th: "Dave" McNaughton was 28 years of age last June. He was the only son, and the future looked promising. When recruiting was at its height for the 160th he laid all prospects aside and joined up. Having done after a calm deliberation of the situation, and he felt it to be his duty. Few will forget the night in Underwood hall when Dave McNaughton was brave enough to stand up for the farmers. Capt. McNally had been speaking, and his remarks were of a character that cast reflection on the farmers. It was then this young hero pointed out to the speaker the position the farmers stood in. He cited farm after farm with only one man on 200 acres. The Government had called for production. The recruiter was calling for men, and the farmer was unfairly blamed because he did not enlist. It was a tense situation for a few moments, but was relieved when Hugh Dave McNaughton finished, saying, "I am not speaking for myself but but for my fellow farmers, for I am going to enlist." All knew that he was needed at home with his father if they were going to produce, but he made the decision that he would be one to hear his part in the big game. No doubt this stand had much to do with influencing others, as he was well liked by his companions and highly esteemed by the entire community. He was a young man of exemplary character and an adherent of the Underwood Presbyterian church. In the 160th he was a good soldier, and one who would stand by you in a tight place. He has gone "over the top" for the last time, and his name will be honored in the community. To the father, his mother having passed away several years ago, the heartfelt sympathy of a wide circle of friends is extended, also to the three sisters—Mrs. Wm. Brown, boundary, and Misses Jessie and Bessie who reside at home.

—Miss Agnes Gibson is home from Guelph for a few days.

—Mrs. Chalmers, of Port Elgin, was here last week for the fair and visiting friends.

—The W.C.T.U. will meet in Putnam's hall on Friday at 3 p.m. Full attendance necessary.

—Mr. and Mrs. G. E. McInnes, of Chatsworth, were over on Fair day, guests at Dr. Allen's.

—Messrs. H. Crowe and J. J. George, of Port Elgin, were among the visitors to our Fair.

—Miss Kate McLeod, trained nurse, has been home on a visit to her parents, Mr. and Mrs. R. McLeod, Elderslie.

—Mrs. McLean and Miss McLean, of Ripley, mother and sister of Mrs. I. Stanley, are visitors at the Central Hotel.

—West Bruce Teachers Association meet for their annual convention at Southampton on Oct. 10th and 11th.

—Mr. and Mrs. John McDonald and children, of Ethel, motored up last week to call on their friends and take in the Fair.

—Miss Sarah McDougall, of Port Arthur, is down on a visit to her old friends at Gillies Hill, and is a guest at the McAllister home.

—Mr. and Mrs. Long, sr., Mr. and Mrs. L. Long, Mrs. Wm. Winters and Mr. Lint, of Walkerton, were visitors at Mr. Geo. Welsford's last week.

—Miss Pansy Switzer has returned to resume her course in training at Grace hospital, Toronto, after a months' holidays at her home in Saugeen.

—Miss Kathleen Sparrow, of Calgary, arrived home on Monday to visit her parents, Mr. and Mrs. M. S. Sparrow, Elora Road north. Miss Edna Sparrow is also home from Owen Sound.

—Mrs. E. G. Eckel and children were up from St. Catherines for a couple of weeks visiting at the home of her parents, Mr. and Mrs. J. J. Bradley, 4th Elderslie. Mr. Eckel was also up for a few days last week.

—Mr. J. P. Fisher, of Paisley, has bought the 50 acres on lot 33, con. 9, Bruce Tp., which was owned by Mr. A. McGillivray, of Murillo. There is 10 acres of good hardwood bush on the place, which will be cut into lumber and wood.

—Mr. John Scott, of Dunblane, sold one of his Scotch Shorthorns last week for $300. This is a respectable figure for a bull of eight months old. It is a fine specimen of the thoroughbred Durhams. Mr. Alfred Gibson, of Kincardine Tp., is the purchaser.

—Mr. And. Munro, of Sidney, B.C., is visiting his father and friends in Saugeen. He has been in the west for about thirty years and is as favorably impressed with the appearance of old Bruce county that he feels like remaining here for the future.

—Messrs. John A. Bradshaw, John Bradshaw, jr., and John Robinson appealed against their assessment re Elderslie drain levy. The appeal was heard by Judge Klein in Paisley council chamber on Friday, but reserved his decision and adjourned the court to Oct. 11th.

—Mr. Wm. J. Scott, of Toronto, was up for the Fair, having accompanied his young daughters, Reta and Dorothy, who were filling an engagement in the musical section during the afternoon, and also appeared at the evening concert in behalf of the W.P.L. music sale. Paisley people were pleased to hear these two bright young people who are winning a name for themselves in the Toronto musical world.

—Mr. Matt Andrews, blacksmith, after several months of intermittent illness, found that he must give up business for a time, at least, on account of his health. Since help became difficult to obtain, Matt has been endeavoring to man the shop single-handed, with the result that his strength became overtaxed. I hopes that with a few months' re he may be able to resume work his trade. The people of Paisley a surrounding country regret ve. much to see him quit business her and will be glad to have him return to town. In the meantime there is a first-class opening for a blacksmith who will rent this old stand. Mr. and Mrs. Andrews left this week for Elmvale, where they will live on a farm for a while.

—For Sale—A number of Leicester ewe lambs and two rams or sale. J. H. Turner, Paisley, R. R. No. 3.

—Sterling silver enamelled service brooches, 50c each, postpaid. If you have a relative on active service show it by wearing one. H. Crles, Cargill, Ont.

—Flour, Feed, Seeds, Grain—We keep a full stock of Five Roses and Stark's high grade flours, bran, shorts, Royal Purple calf meal, poultry foods and tonics. Always in the market for coarse grains. Morning delivery only. W. Stark.

—Notice—Dr. Allen intends to be absent from Paisley for some time, but his office will be kept open in the meantime for repairs and for the receiving money on account. He will have a man in the office as soon as possible to take up the work. All who owe him are requested to settle up promptly.

"SALADA" TEA

None other is so economical in use or so delicious in flavour. 6441

THE GARDEN'S MIRACLE

By Helen Peck

Part II.

Occasionally she walked along the lanes and highways as the spring drew near but usually preferred to sit by the window with book or needlework.

It was the hint of budding green which finally called her outdoors.

"I think I should like to work in the garden, Mother," she said one day when the newborn warmth in the sunshine cried aloud of life-giving power.

Everyday thereafter the few passers-by saw the bending figure of a girl at work with rake and trowel near the farmhouse on the hill.

With tender fingers she drew the protecting layers from about the shoots of gray and green and dull red that told their silent tale of Resurrection miracles. The slender spikes pushing up into the sun whispered of hope and aspiration and life. As she worked, she called before the eyes of her mind the picture of the garden as it had looked to her last backward glance so long ago.

Then the color had been a riot, a running flame that, leaping from point to point, birthed to a rainbow radiance of flashing tint. As she delved patiently in the moist, sweet-smelling earth she could see them again as they were the day she had bidden them good-by. The hollyhocks had reared proud, painted faces. The Canterbury bells had rung their fairy chime. The snapdragons had pushed towering spikes of vivid hue up toward the sun. Masses of phlox had glowed in corners, blending their pink and white with sharper tones of foxglove and zinnia. From the asters in the centre to the nasturtiums pouring their floods of orange over the wall, from the modest clove pink to the brazen dahlia, the garden had stretched out arms of tint and fragrance to hold her near. She had laughed and waved it a gay good-by.

She had crept back to find it cold and lifeless; as seemingly dead as her own heart. But here, under the snow, under the mold and sodden leaves, life had but slept. It was waxing again. The gold and crimson, the orange and the green, all the colors of the spectrum were on their way back to the waiting world.

One glorious day, a step upon the gravel roused the busy worker. She straightened herself with a start, face to face with David. She looked a silent question into the strong, homely face above her.

"Your mother said you were setting out a border, Huldah, so I thought I'd bring you over this bunch from our perennials. They're awfully pretty. Lilies, Madonnas, I believe they call 'em."

The girl dropped her tools and put hands to her face.

"Lilies?" she grasped. "Madonna lilies in my garden!"

His cheek burned and a sudden dimness stung his eyeballs. He set his bundle on the ground and took the shielding hands into a tight grip.

"Huldah," he whispered, "I must ask it again, dear. I know how many times you've said 'no' but I feel as if I just couldn't help asking it again. Won't you marry me, Huldah?"

She looked at him with frightened eyes.

"Marry?" she whispered at last. "Me? Why, David! I thought everybody knew——"

"Stop, I say!" The man's voice rang out in sudden wrath. "Why do you talk like that? Nobody on God's earth knows anything to make you feel like that."

The girl looked wonderingly as his face blazed with the crimson of sheer fury.

Then an emotion held him still silent, her speech gained force from its long restraint. Borrowed before its flood, and the pent-up wail burst forth.

"David! When you know how I am smirched—soiled!"

"You're not!" he cried. "You're white as God's own angels!"

"White!" she said bitterly. "When I've lived with another woman's husband for months and months?"

"Was it your fault? Did you know that lying rascal was just playing with your innocence?"

"When I think of it—when I think of how you looked when you went away and then see your poor pale face now, my hands itch to do murder. I've ached to say this to you for a long time. I can't stand it to have you feel this way. It isn't right, I——"

"How can I help it?" interrupted the girl. "Could I help just crawling off into a hole when I found it out? When that woman with her painted face walked in and said, 'So you're back, are you? Hope you've had a pleasant trip,' and—and" laughed. When they both looked at me and laughed! Is it any wonder something died in me? I just wanted to run, anywhere, and hide. And that's what I did till Doctor Sydney made me come back. I couldn't even think of home. I felt disgraced forever."

"No!" he cried again. "No, Huldah. Listen to me."

He looked about vaguely, searching for help, groping for words to soothe and cleanse. His eyes fell upon the dull brown of the lily bulb, the slowly starting shoots of her garden, and the inspiration came.

With a breath that was a prayer, he went on. "That lily's whiteness doesn't show just now. Time there like a bit of snow last year but it seemed to die. It's brown now and there are scraps of dirt sticking to it. But it's white yet, Huldah, at the heart. Nothing can stop its showing white and pure again, Jance it's planted back in its own soil and tended a bit. It'll take a long time but it'll come, Huldah. You'll see. And the dahlias and the larkspur and—and all the flowers. They're coming back, too. They looked dead. But they're alive at the hearts of 'em, Huldah. The outsides don't matter. Don't you see?" Can't you feel it?" he begged. "It's the heart of 'em that counts. So, darling, you're just like my lily to me. If I could just plant you in my own garden and tend you and make you bloom again——"

His voice broke and stopped short.

With wide eyes the girl listened to his eager speech and as she watched his face, the expression of her own changed slowly to surprise.

"Oh!" she cried. "You can say that to me? Why, you are good, David, good! I thought there was no goodness left in the world."

She burst into wild weeping and turning from him, ran to a bench under a overhanging lilac. She threw herself upon it and sobbed while he stood quietly by her side.

She grew calmer at last and he drew her to her feet.

"Couldn't you come to me, Huldah?" he whispered. "Couldn't you love me just a little?"

"Oh, no! I couldn't. I wouldn't marry you, David. But, oh, I could worship at your feet! Do you know what you've done for me? You've given me back my life. You've given me courage to go on living. And you've given me back my faith. I bless you for it—"

Her voice trembled and stopped as he covered his face with his hands. She stood dumb, awed by the labored agony of a man's sob. When he stretched out a groping, beseeching hand, she laid her own within it like a child.

"Come to me, darling," he begged, "and be comforted."

He opened tender, sheltering arms and she went to the haven they offered.

He left her with the kiss of peace on her lips, in the midst of the new springing life of her garden. The lily had found a new home and to her dream garden was added the tall, spotless bloom of purity.

Mrs. Makepeace looked up astonished at the ring in her daughter's voice as she entered the tidy kitchen.

"Mother," she said, and sang as she spoke, "there is church to-night isn't there? I will go with you."

Then before the older woman could catch her breath, Huldah Makepeace with shining face passed swiftly up stairs into her girlhood's chamber and closed the door.

(The end.)

SOLDIERS IN HIDING SLAIN.

Germans Killed Eleven British and the Man Who Sheltered Them.

Authentic details of a peculiarly infamous case of German brutality have been received by the London Daily Express. Eleven British soldiers, finding themselves behind evade capture for several weks by hiding themselves in fields and subsequently taking shelter in a house.

The woman in whose house they found shelter says she and her husband, knowing the soldiers were hiding in a field, took them in and lodged them in an attic. Unfortunately some outsiders knew they were there and a neighbor denounced them to the German commandant at Guise. He sent troops to arrest the soldiers, who gave themselves up immediately without making resistance.

Three days later they were tried. The eleven soldiers and the husband of the woman who had sheltered them were sentenced to death and were executed on the same day. The woman was sentenced to four years at forced labor, her daughter to two years and her son to three years, while a woman who had given the soldiers some food was sentenced to ten years at forced labor and her daughter to one year.

About the House

Don't Overwork the Children.

In the country and on the farm children are often required to work in the field and gardens too long at a time, or to carry water and other weights too heavy for their strength and often to work under a blazing sun. Such early work interferes with growth and development, which is the one great business of childhood. Many men and women, whose physical strength is impaired, might trace their ills to sickness, underfeeding or overwork during the formative years of early childhood.

The tasks children are given to do should be suited to their years, and varied by frequent opportunity to rest and to play. At the same time food should be good and plentiful and there should be long hours of sleep. The harm which heavy work can cause little children can be ill afforded at any time, and least of all now. For the children must be kept well and strong to meet the demands which will confront them when they come to maturity and face the tasks of reconstruction in the critical years to come—work which will demand physical well-being as well as efficiency and character.

Threshing Dinners.

With threshing days come threshing dinners. Now, a threshing dinner does not mean the same to everybody—not even to every farm-woman. Some feel and worry over the preparation of the meal, while others apparently enter upon the work with as much pleasure as if the task were that of preparing a picnic lunch. The viewpoint, the ability to manage, and the cooking and refrigerating facilities have much to do with these differences. Then there is the item of help.

System comes first whenever any unusual task is to be looked after, and this is especially true of preparing the threshing dinner. One woman has chickens killed and dressed in advance, if chickens are to be served as a part of the meal, while another waits until the last moment.

Nor is the latter woman necessarily to blame. Probably she would have prepared much of the dinner in advance had it been practicable. Perhaps she had no ice to keep fresh meat and other highly perishable foods. With ice, half the dinner may be started or made ready the day before. Even where ice is not used regularly it will pay to have it at threshing time.

As to the dinner, it should be plain but good and served in an appetizing manner. Men who handle pitchforks or do other heavy work all day want something more substantial than "fancy fixings." This does not not imply, though, that boiled cabbage, fat meat, and other heavy foods, important as they may be, are all that is required. There should be a variety. In such seasons as this, when vegetables are plentiful, threshing crews often get practically the same things day after day until their stomachs rebel. Under these circumstances it is a wise woman who provides at least a few dishes that are different.

Of course there must be as the basis of every threshing-day dinner plenty of good meat, preferably two kinds, and an abundance of bread. If one of the meats can be such as is not commonly served in the country it will be all the better. Something sweet in the way of preserves or jelly is a good addition to the meal, appealing as it will to the delicate eater or to the man who is "too tired to eat." Desserts need not be heavy, but a carefully prepared dessert is desirable.

Promptness and cleanliness are important in serving the threshing dinner. The man must not be kept waiting, nor should they, while eating, have to fight flies. If it is necessary to set the tables out of doors instead of in a screened dining-room, everything should be covered so far as possible and fly brushes should be kept going.

Training Children.

Study your children. Develop in them emotional control, unselfishness, an alert interest in the world around them. Keep them from becoming morbidly self-centred. Do not let them become too dependent on you, but at an early age foster in them the spirit of initiative.

Remember always the old saying that an ounce of prevention is worth a pound of cure.

An Outdoor Bed Built In.

The delight of sleeping out of doors, and of sniffing the fresh, clear air during the night, is denied many people because no sleeping porch is practicable in their home. To build such a porch is often both inconvenient and expensive.

A way to combine an indoor and an outdoor bed has been devised by a large school for boys and is so simple and feasible that it might well be adopted in private homes, as it is possible to build it into any room.

The bunk is built into a corner of the room, below a wide window. A similar window separates the bed from the room. Both windows may be raised or lowered by means of pulley ropes at the head of the bunk. The youngster gets out of his daytime clothes and into his snug sleeping suit in the warm room. When he is ready to turn in, he lifts the window between the room and his bed, slips into the bunk and lowers the inner window again. He then reaches up and pulls the rope which raises the outer window. He is outdoors, yet protected by the warm walls of the bunk.

During the day an attractive couch cover transforms the sleeping bunk into an inviting window seat.

Accuracy First.

Accuracy is one of the first essentials of successful canning. Do not look for short cuts for there are none. Always follow a reliable guide and remember that in canning there is one best method, which will ensure uniform success year after year.

The thermometer and clock are indispensable to canning operations. For full information as to the time and temperature required in the preparation of fruit and vegetables write to the Canada Food Board or any of its provincial committees for booklet entitled "The canning, drying and storing of Fruit and Vegetables." Enclose five cents for same.

Little Things.

It was only a little camp fire, but it
Blackened that beautiful spot;
It was but a little match that burned
the farmer's lot;
It was only a cigarette, as the tourists say;
It was only a little spark, but you and
I had to pay.
PUT IT OUT—PUT IT OUT.

Crowded strawberry plants mean a poor crop next June. Thin 'em out!

"Where was the Magna Charta signed?" asked a school inspector who was conducting an examination in history. "At the bottom, sir!" answered one of the boys.

"It's best to keep a-smilin',
For a smile's a kind of net
That catches by beguilin'
Just the things it wants to get.
So keep your smile a-spreadin'
Crack a jolly joke or two,
And you'll find that things come
headin'
Straight for smilin' folk like you."

WHAT "DOUGHBOY" MEANS.

Old Term Dating Back to the Mexican War.

The term "doughboy" as a nickname for the American infantryman is a very old one, dating back to the Mexican War of 1846.

In that year the United States regular soldiers first made acquaintance with the houses of mud-colored, sun-dried bricks that are seen everywhere, even to-day, in New Mexico, Arizona and the southern part of California.

These bricks are called by the Mexican natives (pronounced "dobies") a term also applied to the small, squat, flatroofed houses built with them.

When the American invaders entered what was then Mexican territory, the infanteymen found these dwellings—mostly deserted by their panic-stricken inhabitants—handy as billets, and promptly occupied them as such. But the cavalrymen, who had to be near their picketed horses out on the open prairie, were unable to avail themselves of similar accommodation.

Partly in envy, and partly in good-natured chaff, these christened their more fortunate comrades "dobie-lodgers," afterwards shortened to "dobies," a good, round-sounding nickname that was bound to stick and which in course of time became corrupted into "doughboys."

Scotland has a mill making 200 tons of paper weekly from sawdust.

A FEARLESS HERO.

Canadian Chaplain Brought in Five Wounded Men Under Heavy Fire.

The following despatch from Fred James, official correspondent with the Canadian forces in the field, has been received:

The men coming out from the battleline in front of Arras are telling stories of individual heroism and self-sacrifice. To-day I heard of a Chaplain, or padre, to use the more affectionate name, of a Quebec unit, who made five trips into No Man's Land in broad daylight under a hail of fire from the enemy's machine guns and artillery, and brought back thence to our lines five helpless wounded men who had been struck down while they were reconnoitring ahead of the main forces of their units.

This padre saw the men fall, and unhesitatingly advanced cautiously to where they lay. The first one he half carried, half dragged, back to our line, and placed him in good hands. Back he went again, ignoring danger and death that literally rained all about him, and soon returned with another. Three times more he made his perilous return trip. Only Providence can explain how he or the wounded men escaped death. When he had delivered the last of the five to the stretcher-bearers, to whom and to no one else did he intimate what he had done, he quietly turned his attention to helping in whatever way he could, ronalstent with his calling, the troops in action along the main line of the attack.

FARM BOOKKEEPING.

Tribunal Judge Urges Farmers to Keep Books.

Bookkeeping by farmers to show just what their farms are producing and if they are materially increasing their outputs, was advocated recently by Mr. Justice Masten in addressing his exemption tribunal at Toronto. He pointed out that the keeping of such records would be of great value to the farmers if, on the expiration of their exemptions, they appeared again before a tribunal to seek further extensions of time.

The Commission of Conservation has designed a simple but complete Farmers' Account Book which will be sent free to bona-fide farmers who express their intention of keeping records of their farm work. Many farmers do not know whether they are making or losing money till it is too late to avoid financial failure.

California irrigates 39,352 farms, covering 2,664,104 acres.

WILLIAMS
New Scale PIANOS

THE outward beauty that distinguishes a Williams New Scale Piano is an index of its intrinsic worth. Ideals are built into every one of these famous instruments—ideals of craftsmanship that make for the most enduring quality.

Bungalow Model, $450.00
THE WILLIAMS PIANO CO., LIMITED, OSHAWA, ONT.
Canada's Oldest and Largest Piano Makers

A Picture with Each Purchase
Each time you buy a package of Ingram's Toilet aids or Perfume your druggist will give you, without charge, a large portrait of a world-famed motion picture actress. Each time you get a different portrait so you make a collection for your home. Ask your druggist.

Ingram's Velvola Souveraine Face Powder

No matter how clear and colorful your complexion may be a few minutes' work or an hour in a hot kitchen will bring forth the perspiration and make the skin oily and shiny. To avoid this use Ingram's Velvola Souveraine Face Powder. Just a light touch will stay on until washed off. And it overcomes the shine and hides any imperfections. 50c.

Ingram's Milkweed Cream is a dainty preparation that is cleansing, softening and soothing to the delicate skin tissues. It also has an exhilarating therapeutic quality that "tones up" the skin and keeps it in a healthful condition. Two sizes, 25c and $1. At your druggist's or you will find a complete line of Ingram's toilet articles, including Zodenta for the teeth, 25c.

F. F. Ingram, Windsor, Ontario (17)

This Is the Season for Hare and Hounds.

Get ready for the grand old autumn game of paper chase. City boy or country boy, after school or Saturdays, may best enjoy this when the air is bracing and the ground good for hard going during the hunting-fever days not at hand. When some of your fortunate elders are chasing the fox, then go chase yourselves, and I'll warrant you will have about as much, often more, sport than they.

Follow the old Scotch rules. Select with care, as a fair player, a good runner and a wise leader, one who will be the master of the hounds. He carries a horn and keeps his wits about him.

The hounds may be of almost any number above five or six, excellent and indifferent runners included, but the better the pack the better the run. The long-winded, tireless boy makes the best hound.

The hares are two in number, always running together, but sometimes, if he is sure to play fair, one boy may run alone and he is more apt to give the hounds a long, unsuccessful chase. A good hare is seldom caught. Two are better for companionship, and they divide the scent, which on a long run means something to carry. It consists of pieces of old newspaper cut about the size of a playing card, but ofter irregular. This is prepared ahead on a rainy day, on some back porch or boy's den, and compact bundles are tied up. A gunning coat is the best carrier, because of the big pockets, but a haversack or schoolbag will do.

The hounds gather in an inclosure, watching the clock. The hares start out, dropping no scent. When one minute has passed the master of the hounds goes to the door and blows a long blast on his horn as a signal to the hares to start dropping scent, which they do in as secluded a spot as they can find, then run on, dropping one piece of paper about every ten or a dozen steps. The hounds instantly start out to hunt the scent, and their delay in so doing contributes to the hares' getaway, this being a part of the game.

Running on sight may be adopted or not, as you choose. If adopted, when the hares are sighted by the master of the hounds he blows one short blast, whereupon they stop dropping the scent until again out of sight, and then the master of the hounds blows twice. Mere temporary or momentary disappearance does not count, but when the hares disappear where they can take a new course unseen, as over a hill or back of a woods, then the signal is given. But in all cases this may lead to misunderstanding, and is as well omitted.

The master of the hounds calls his pack together at times by blowing his horn on agreed signals. A lost scent may be found when the pack is scattered in the hunt or the hounds may overrun the scent.

The hares must drop scent pretty evenly and not seek to fool the hounds by unfair means. It is fair to backtrack, to turn in any old way, to run through the most difficult country, to wade in streams and drop the scent in water. The paper pieces should be thrown down about at one's feet.

If the hounds catch sight of the hares they can run directly for them, paying no attention to the scent. But the scent is their only clue when the hares are out of sight.

LLOYD GEORGE TAKES A HOLIDAY

WORKS HARD AT COUNTRY HOME IN BEAUTIFUL SURREY.

Britain's Premier, Says Secretary, Achieves More When Away From His Innumerable Callers.

Premier Lloyd George took a holiday recently, under doctor's orders, the first for three years.

The Premier went to his little house bordering the famous Walton Heath golf links. Here is the loveliest corner of the leafy Surrey lanes and smiling meadowlands; the house is one of a large group that tired city workers run up to as week-end refugees. There is nothing the least bit pretentious about this straggled colony. Little more than cottages, the dwellings are the acme of simplicity. And simplest of them all is the Lloyd George establishment.

There are no house parties—nor were there any before the war. Perhaps a Cabinet Minister or so, a few personal friends, a private secretary, Mrs. Lloyd George and Miss thirteen-year-old Megan, and the visitor's list is complete. Megan is virtually and by every right of wise womenhood the dictator of Britain—at least as far as Walton Heath is concerned. For she directs her father in those all important matters of fresh air walks, early to bed hours and necessary recreation. It is she who always accompanies him on his cross-country rambles. "L. G.'s" favorite recreation.

And if the destinies of empires are settled in those odd half hours she never says. The only other member of the party—Cymro, the wire-haired terrier—is equally reticent.

Never Escapes Work.

On this particular day an important bill lies before the House of Commons. His private secretary in London keeps the Premier constantly posted with the latest developments on the telephone, day or night. When he dines or lunches out from home his temporary address is immediately forwarded to London. He can never get away from that insistent voice, even if he wanted to. By the time breakfast is waiting for him, "L.G." will have read through all the morning papers, latest despatches and official documents that he brought down with him over night.

A special postman arrives with a great bag of mail; also a special messenger with a despatch box from Downing Street. Three similar boxes follow him at four-hour intervals during the day.

Between porridge and bacon and eggs the major points of the important bill will have been sketched out, by 10 every letter and official document will have received reply or acquiescence. Then "L. G." and Cymro—Megan has important duties somewhere in the house—will set out for a short stroll.

Cymro, by the way, covered himself with publicity a while back by taking an unofficial holiday for a few days. They look sadly at the deserted golf links, with memories of those almost unbelievable pre-war days, and, one at least bewailing that departed golf minus handicap, turn in for more work.

Luncheon is usually a family affair and hurriedly taken. By this time the second official despatch box will have arrived and the inevitable bell begun tinkling again. More work, more letters, visitors, important and otherwise, though the latter stand little chance these busy days; then, such is the luxury of the famed, comes the British Premier's one daily relaxation—he takes half an hour's doze.

Only a Brief Respite.

It isn't very long. For the official visitors begin to arrive at this hour; maybe Geddes from the Admiralty, Montagu from the India Office or Cecil, the Assistant Foreign Secretary; either of them with laden portfolio, requiring decisions and directions; and perhaps an Admiral or General or so.

Usually they stay to dinner with the Lloyd George family. But then for a few hours he goes to bed usually at 9.30—"L. G.'s" time is his own. Music and novel reading are his favorite light recreation. He loves to listen to the tunes of the Welsh hymns and old Welsh folk songs of his youth. As a reader he is voracious, getting through four pages to the average man's one, and is familiar with the work of most British and American contemporary authors.

No man is sacred or heroic in the eyes of his private secretary. But David "L. G." may claim to be the solitary exception.

"His day's work on holidays," says that functionary, "is, if anything, heavier than the usual routine day. He can then devote all his time to his work, without being bothered by innumerable callers."

What Our Sailors Mustn't Do.

No bluejacket, while on board a warship, is permitted to whistle the National Anthem or the Dead March in "Saul," unless it is being played by the band. This is but one of the many curious little thing that may not be done on warships.

If any young Jack attempts to cultivate a mustache, however frail and tender, he is promptly brought to book. He loses his mustache, besides a month's pay. It is an offence against etiquette for any officer, senior or junior, to unsheathe his sword in the mess, however accidental. The penalty is a drink for each of his fellow-officers present.

At dinner the commander does not sit at the head of the table, as would be supposed. That place is reserved for the president of the mess. Every officer must wear evening dress. The toast of the King is always drunk sitting.

When ever officers are leaving their ship for the shore, the junior must always step into the picket boat before his senior, though he leaves after him. So that the captain of a Dreadnought on entering a boat, yields the priority to his youngest "middie."

Winnipeg Saves Money.

Winnipeg citizens are saving money by daylight saving. The city light department's receipts were $12,384 less for May this year than last.

Have plenty of jam, jelly and marmalade for the children's lunches. Less candy and rather wholesome sweets will be better for the little folks.

CANADA AND THE GOLD SHORTAGE

BANK OF ENGLAND MAY DOUBLE PRICK OF GOLD

In Which Case Canada Will Pay Her War Debts Within the Present Generation.

Canada does not need to be told that a thing new to world history is happening in gold. British Columbia and Klondike gold miners have already drawn the attention of the Dominion Government to conditions; but unfortunately, gold mining in Canada is under provincial control, and it really requires federal action to take advantage of the conditions arising.

Briefly, labor and equipment are to-day so much higher in price than gold that, except in very high grade properties, gold miners cannot afford to operate their mines; but 80 per cent. of the gold produced in the world comes from low grade mines; so that the slump in gold production threatens to be from 25 to 35 per cent. for 1918. Some years ago the Bank of England set the price of simon pure gold at $20 plus a few cents an ounce; and this has really become the standard world price for gold, subject in America to the discount of cost of shipping and any slight impurities. This price has been fixed as the law of the Medes and Persians; but the price of equipment and the price of dynamite and chemicals has not been fixed. They have gone up in price from 100 to 400 per cent. and in the case of some chemicals to 1000 per cent. In high grade pockets, the gold miner can go on under present conditions and make a profit. In low grade properties he can't. He is shutting down. In Africa last year six millions of gold was sold at less than half the cost to produce. Those mines shut down; and many mines in Canada are in exactly the same position.

Canada Has Rich Mines.

Meantime the world war debts are all redeemable in gold. War loans are repayable in gold. The difference between what a nation buys from and sells to other nations must be settled in gold. Gold is the only international coin. If the gold mines shut down, where is the gold to come from?

Two propositions are up to remedy conditions. First, for the Bank of England to double the price of gold; second, for countries having gold mines, to pay a bonus to stimulate the production of gold. It needs only a second's thought to convince that the second course is the one for Canada, and that the gold crisis gives her a peculiar whip handle.

Before the war, say in the period between 1906 and 1913, Canada ranked fourth or fifth of the gold producing countries of the world. Of the $400 to $450 millions of gold produced by the world each year, Australia, South Africa and the United States ranked first, with $100 millions more or less to the credit of each. Then came Mexico, Canada, Russia, with totals varying from $16 to $20 millions each yearly. Mexico and Russia are to-day off the map, and will be till order is restored. South Africa is shutting down from 25 to 35 per cent. Australia is threatening to do the same. American gold miners are in like condition.

Now every geologist knows that not 10 per cent. of Canada's auriferous lands have been prospected or explored. From Athabasca to the headwater of the Yukon, from Athabasca to the Coppermine, from the headwaters of the Ottawa to James Bay, in Baffin's Land—are mineral signs that have never been followed up. Also every big operator knows another fact holds good of Canadian gold mines. Owing to lack of transportation for heavy machinery—say in Cariboo and Cassiar—many of the famous gold mines, which have been skimmed of pockets and alluvial deposits, have gone down into quartz and smelting propositions and are now lying undeveloped and unworked.

Now go back and look at the gold situation of the outside world! Owing to the lure of the war, prospecting for new camps has literally stopped. There are not any new camps. To keep the camps that already exist going it is pretty nearly a foregone guess that the price of gold will have to be increased as copper has been increased, and pig iron and coal. All these have almost doubled in price since 1912-13.

Suppose gold doubles in price, compute what it means to a nation having war debts and also having gold mines. Here is a $5 gold piece. It will be called back to the mint, reminted and go out—worth what? Worth $10 if the same thing happens to gold as has happened to 14 cent copper and $15 pig iron and $25 coal. Countries with $3 billion gold reserve in their banks—as the Federal Reserve Banks of the United States have by the scratch of a pen will have $6 billions of gold for the settlement of international accounts.

Now Canada before the war was good for from $16 millions to $24 millions of gold a year. Under readjustment of gold prices, she would be good for twice those totals; and Canada's gold mines are to-day not worked over 10 per cent. of their capacity. Add the gold coming to her from sale of wheat to the full possibilities of her gold mines, and her war debts are not a thing to daunt a nation. They could be wiped out within the lives of people living to-day; and of all the fighting nations, Canada and the United States are the only two of whom that can be said.

The thing is not chimerical and up in air. It is up before the consideration of the United States Treasury now. It is also up before the Bank of England.

TWO REMARKABLE ESCAPES

British Airman Shot Down 13,000 Feet, Fainting on the Way.

A British airman, while flying at a height of 16,000 feet, had the tail of his machine shot off by a direct hit from a shell. The machine turned upside down and the pilot was thrown from his seat, but he managed to clamber on the bottom of the fuselage, on which he remained astride.

Though the machine was out of control, he managed, by moving forward and backward to balance it and glide steadily downward. Under a strong anti-aircraft fire he crossed the German lines successfully a few hundred feet above the ground. His machine came down with a crash and he received some injuries, but will recover.

Another British airman was shot down out of control from an altitude of 13,000 feet. He fell fluttering and fainted on the way down. When he revived he found himself under the machine, which was upside down in a marsh, and was entirely uninjured.

THE WEEKLY SERMON

The kings of the earth set themselves, and the rulers take counsel together against the Lord, and against his anointed.—Psalms, 2, 2.

Day after day as we read the sad record of the dead and dying in the great war, two questions come before us for discussion. One of these has relation to the causes of the war, the other regards the remedy by which peace on a lasting basis is to be established.

As we are treating the subject in the light of Christian teaching we shall try to answer these questions merely from the viewpoint of Christianity.

Spiritual Treason

The causes of the present war are many, but they may be reduced to one. That one we shall call by the name of spiritual treason. The spirit of the earth in their mad pursuit after things material had drifted away from all religious moorings—they had forgotten God; they had lost their spiritual senses.

Men sitting in high places, puffed up with pride, mad with the power and money they possessed, jealous of the power and money possessed by others, have been anxious not only to extend their own earthly empires but, against the laws of God and man, have tried to erect newer and greater ones on the ruins and dust of others. Every means that human ingenuity could suggest was used for these vile ends. There was only one standard by which they would measure and that the low standard of material efficiency. The Gospel of Christ was supplanted by the Gospel of Krupp. This base policy, pursued to the bitter end, has brought the curse of heaven upon themselves and ruin upon their people. And so at present we are all doing heroic penance for their mad folly.

And now let us discuss the remedy for the evils that afflict us. What is it? Nor bread, nor blood, nor sword, nor steel, much as some trust in them, will ever restore peace with its blessings to a sorely oppressed world. Mere material forces will indeed help much, but we must go higher for help and have recourse to spiritual forces. Hence, as some distinguished ecclesiastics recently expressed it, while our brave boys fight like heroes abroad we who are at home must at the same time pray like saints. The nations have been guilty of spiritual treason and we must atone for it. Too long have they forgotten the true God and gone after the worship of false gods; too long have they bowed their knees before many a golden calf; too long have they sought the kingdom of Mammon instead of the kingdom of God. And yet it is written somewhere, and by the hand of God Himself—"The nation that forgets Thee shall perish."

What is the Remedy?

What then is the remedy we would suggest? It is a speedy return to the practice of Christianity and especially of those fundamental doctrines issued at once on the laws of charity and justice.

Christ has been too long banished from the councils of the rulers; His divine voice has been too long silenced; His divine doctrines too long disregarded.

Oh ye who rule nations and their destinies, hasten to welcome back to your councils the King of Kings and the Lord of Lords. Hasten to make His divine laws the basis of all your human laws. When that happy day comes then can a lasting peace be established, then, too, and only then, all international treaties be worth more than a mere scrap of paper.—Rev. Henry O'Carroll.

AN EDITOR TALKS

It is estimated that $150,000 will be saved by motorists not using their cars next Sunday. Who would not gladly and religiously refrain from the usual Sunday outing to help on the allies in their defeat of the German? A letter from New York city tells of how faithfully this request was observed in the city by even doctors, who were permitted to use their cars when visiting patients, for only one automobile was noticed on the streets for the day, by a busy doctor who made several calls on foot and by trolley cars. Canadians are equally loyal and should give the drivers of horses the exclusive use of the highways next Sunday.

* * * *

A leading merchant asked us one day recently why we wrote so much about education, schools, teachers, magazines and books. Because we place the school next in importance to the home, and the children are this country's greatest asset. The education of the children is the most important part of their life—physically, spiritually, morally, intellectually, industrially. No nobler or more important calling exists than that of teaching the young boys and girls of this land all these subjects, co-related into their school life. We take off our hat and pay the greatest possible reverence to the faithful, devoted teacher. What a pleasant sight it is, too, to see hundreds of lively boys and girls going gladly and joyfully, eager to drink of the fountain of knowledge in the public and high schools in town and city. Too much cannot be done for the benefit of the youth of this country.

* * * *

A public school teacher asks us to inform members of the noble profession what to do to have necessary repairs and improvements in the school buildings effected and to obtain proper sanitary conditions in the outbuildings. Of a truth there should be no necessity for such questions at this time of year, for if school trustees had performed their full duty they would have had all such things attended to during the holidays. Every school room in this Dominion should have been thoroughly renovated, floor, walls, ceiling and desks; closets cleaned out, scrubbed and disinfected; fences, walks and windows repaired, and the grass and weeds cut just before school opened. Outside and inside conditions of school premises should be kept just as neat, tidy and in as good condition in every way as the home from which the children come.

Parents and trustees; aye, and other people in the school section, leave the school altogether too much to the teacher. In one section we know, not a trustee visited the school in session during a whole year, and only when specially invited did any parents pay their respects to the teacher and scholars. It would be well if parents especially made it a regular custom to visit the school once or twice every term. Their presence need not interfere with the teacher. We found this splendid suggestive paragraph in a school journal recently, and we are sure all progressive teachers will thank us for publishing it:

The teacher in her schoolroom is often in the position of hostess to the visiting parents of her pupils. Her duties are much the same as if she received callers in her own home except that she need not interrupt the routine of school work to entertain. It is only necessary for her to give guests a quiet welcome, offer seats, and invite them to watch and listen to the conduct of regular classes. After school hours the teacher should give a few minutes to talk with the parent on the work of his child, offering and receiving suggestions for mutual help.

* * * *

At this particular time a further word for the school teacher in rural sections may not be amiss. Do the people in the country ever think of the peculiar circumstances in which the new teacher finds herself who goes from her town or city home to teach in a country school section. It may be that this new teacher is fresh from Normal school or college and soon after the excitement of the first day or two's experiences is over, begins to feel a terrible feeling of loneliness come over her. This experience is pictured nicely by "Wayfarer" in the Daily Ontario of Belleville:

The country teacher, isolated and far from those of her profession, has no one with whom to talk shop and to exchange ideas on methods and management. Those with whom she meets have apparently little interest in the work or progress of the school. The inspector's visit, though frequently dreaded, is a source of inspiration, for in him she finds one who is interested in her work. Not but what the parents are interested, but they fail to show it. How encouraged would the teacher be, by an occasional visit from an interested parent! And how cheering would a word of approbation be! So, if your children are making favorable progress under their teacher, don't be afraid to tell her so. It will not spoil her nor make her conceited, but will cause her to work with greater enthusiasm and renewed zeal.

FIRST BOMBING OF CIVILIANS

Hun Frightfulness in the Air Opened With Attack on Antwerp.

A little more than four years ago, on August 24, 1914, the Germans began their campaign of frightfulness in the air, killing noncombatants, by dropping bombs from airships. The first German air murder of civilians took place at Antwerp. It sent a shudder of horror through the whole world, but since then the world has travelled far on the path of horror.

The battle of Mons had opened. French and British forces were falling back rapidly. The Belgian King refused to surrender, although his capital had fallen and his army had been driven into Antwerp.

It was under these circumstances that a Zeppelin was sent to make a midnight raid on the city of Antwerp. The commander had special instructions to try for the Royal Palace, for King Albert was felt to be the soul of his people's resistance. Antwerp was a "fortified city," but the ring of forts was at an average ten miles away.

An American army officer who was in Antwerp at the time wrote: "No bomb actually struck the palace, but one narrowly missed the cathedral. One killed four women and two policemen. A second killed one man and wounded two others. Another fell in the courtyard of the Hospital of St. Elizabeth, smashed all the windows, but wounded no one, although the crucifix hanging over the bed of a sick child was smashed to pieces by a fragment of shrapnel. In all, ten people were killed and eight wounded."

MIDNIGHT TALKS IN BRITAIN

Lectures Are Delivered to Workers in Munition Plants.

Welfare work in munition factories has resulted in many interesting experiments. Among the latest is that of the midnight lecturer. The experiment is being made by the Y. M. C. A., which has arranged tabloid lectures in all the big canteens.

The lecturer stands on one of the tables and boils down into a few minutes his message, which may be on anything from the "Genius of William Morris" by one of his friends, to a dissolution on "Poetry in the Trenches." This improvement of the mind goes on amid many distractions—the service of food, the incessant tramp of workers pouring in and out, the ranching-gun rattle of knives and forks and possibly shrieks from a hooter.

At midnight there are two shifts for dinner, and even at that hour the lecturer takes his stand on the table and both the women and men munition workers enjoy the diversion.

COOKING AND CRIME.

Indigestion is the Root of Much of the World's Evil.

There are more wrongs wrought by indigestion than this world dreams of. A body that is well nourished is a healthy body, and a healthy body means a healthy mind. And criminologists are beginning to find it out.

In the United States, where most healthy suggestions are given a chance the effects of good, well-cooked food is being tried upon criminals. In a certain prison in Philadelphia the experiment has been tried—and why not successfully—of not only feeding prisoners well, but of teaching female offenders to cook. An expert cookery instructress is employed, and gives her pupils demonstrations of cooking simple foods, after which the women prisoners are allowed to cook their own meals. The result has been most satisfactory. The women are less surly, more tolerant, and more willing to do the work required of them.

The majority of female habitues and first offenders are of the ranks of the poor, and it is undeniable that the poor eat anything they can get, whether it is badly cooked or not. And it is not their fault entirely. Until model dwellings become the rule instead of the exception, they will eat food half-cooked or over-cooked, for the simple reason that they have neither the accommodation nor the means for cooking cleanly and well.

Overfeeding has been urged as a reason for Britain's degeneration before the war, but it is more than likely that underfeeding was quite as much to blame. At any rate, scores of our Tommies are enjoying to-day better food and more of it than ever they did in the past days of peace. And even the most carping critic has had to admit that they never expected our lads to do such wonderful things when put to the test. May not the good food have a good deal to do with it?

Undoubtedly good food makes good citizens. That is why the Communal Kitchens are such a godsend. If there were scores more Communal Kitchens in every big town it is safe to say that the crime statistics would dwindle till they were negligible.

A good green dye for woollen materials can be made from the juice of the stalk and leaves of nettles.

Guest (at Highland hotel)—"Your clock seems to have stopped." The Host—"Oo-ay. Ye see, Tammas, the 'boots,' went awa' to Palestine and took the key in his pocket."

The city of Cincinnati has passed an ordinance making citizens personally liable for damages done to neighbors by fire caused by their neglect or carelessness.

—The German-speaking Mennonites who are thronging over the border from the United States should not be allowed to remain on the soil of this dominion unless they are prepared to make an unconditional surrender to the terms of citizenship that should be imposed on all newcomers. To receive their education in the English language only, so far as the public school course is concerned, and be willing to abide by the military laws of our country are two conditions that must be imposed upon all who come to live with Canadians in Canada.

—Fire prevention work is one of the conserving movements that should have the hearty support and co-operation of every citizen of Canada. The Ontario Fire Prevention League, which was organized on Aug. 30th, 1918, is following the plan adopted in some other countries of having an annual fire prevention crusade day which takes the form of a "clean up" campaign, one day being devoted specially to an organized effort in each community. This year it will be observed on Wednesday, Oct. 9th, and the people of Paisley are urged to take the step towards prevention of waste and suffering by the ravages of fires that occur through carelessness and inattention to local conditions. The Provincial Fire Marshal speaks to citizens of Paisley through an advertisement to be found in another column of The Advocate, calling attention to the Lieut.-Governor's proclamation

Paisley Fair

Choice Weather, Large Crowd and Great Show

Nothing succeeds like success, and nothing contributes more to the success of a fall fair than favorable weather. Without that the efforts of man may go unrewarded. Paisley Agricultural Society were more favored than any other society in the district for 1918, their fair day having been hand-picked by the weather man and then polished up some.

In all classes of exhibits, inside and outside, there was merit and competition, so that there was interest attracted everywhere. Many times in the past there have been larger displays in perhaps every department, but no better balanced show, considering everything. The roots and vegetables in the building were of splendid quality and sample. In potatoes the entries were few, which may be an indication of the truth of the report that the crop is far from being a bountiful one in this section. Some very beautiful flowers were shown, but there was a shortage in this department too. The ladies' work, art and school sections were pretty well occupied, and as attractive as ever. Apples were the big feature in the fruit wing, the tender fruits being almost entirely absent. The ladies seem to have balked on placing their war flour cookery on exhibit, as entries were not at all numerous, compared with last year. This branch of the show is very sensitive to changes such as are called for by the use of substitutes for flour. Butter and grain shown were good samples.

The special exhibits of business men included a musical section by Mr. P. McKinnon, from which emenated a continuous programme of instrumental and vocal music during the afternoon. S. F. Ballachey had an attractive display of furs and other goods from the store. Hope & Carvill filled a half of the centre space with home furnishings, and W. H. Davison took up a large angle with hardware, stoves and water pressure outfit. J. H. Steele had a show of harness, Pfaff & Son an exhibit of boots and shoes.

The live stock department was right up to the mark, splendid animals competing in nearly every section. In the horse show ring there was the keenest of rivalry for the ribbons, and the circle of spectators was crowded all afternoon.

Next to the horses, the two farm tractors attracted most attention from many men on the grounds. These mechanical farm workers are being considered as something that will add to production of the land, and are bound to come into use on many farms in the near future.

Chesley band was on the ground, and gave a good programme of music.

The Women's Patriotic League gathered well onto a hundred dollars by the sale of tags and music during the day and evening.

The Kenney-Wilson Co. of entertainers gave a concert in the evening, at which there was one of the largest crowds yet seen in the hall, and nearly a hundred were turned away when standing room was all taken up.

PRIZE LIST

HORSES

Agricultural—Brood mare, J. A. McDermid, Dan Kingston, D. McIntyre; foal, J. A. McDermid, Jas. Hammond, Dan Kingston; gelding or filly 2 yrs. old, Geo. Munro, J. A. McDermid, Alex Vance; gelding or filly 1 yr. old, J. A. McDermid 1st and 2nd, John S. Campbell; span in harness, J. A. McDermid, D. McIntyre, McKay Bros.; general purpose team, A. McTavish, Alex Carr.

Heavy Draught—Brood mare, Lloyd Pinkerton, Wm. Howe, R. J. Meaney; foal, Wm. Howe, Lloyd Pinkerton, R. J. Meaney; gelding or filly 2 yrs. old, W. T. Hopper, J. A. McDermid, Dan Kingston; gelding or filly 1 yr. old, J. A. McDermid, Fred Swinton; span, J. A. McDermid, Lloyd Pinkerton, Wm. Howe.

Road—Brood mare, Dan Kingston, E. Clayton; foal, Dan Kingston, Wilfred R. Thompson; 2 yr. old, Paul Kingston, W. Mink; 1 yr. old, A. Yager; span, Arch. McLean, Pearce Bros., Chas. Fuller; driver, M. Thomson, Paul Kingston H. J. Thornburn; driver 3 yrs. old W. T. Hopper, Arch. McLean.

Carriage—Gelding or filly 1 yr. old, Dan Kingston 2nd; span, J. A. Cumming, R. C. Pearce; driver, Wilfred R. Thompson, D. Bryce, W. A. Miller; driver 3 yrs. old, Eldon McGillivray.

Specials—Best lady driver, M. Thomson, Paul Kingston; best turnout by gent, M. Thomson.

CATTLE

Durham—Bull over 2 yrs., W. H. Rudolph; bull under 2 yrs., Donald Darroch, Jas. Maxwell; bull calf, D. Darroch, W. T. Hopper 2nd and 3rd; cow 4 or over, W. T. Hopper 1st, 2nd and 3rd; cow under 4 yrs., J. H. Turner, W. T. Hopper 2nd and 3rd; heifer under 3 yrs., J. H. Turner, W. T. Hopper 2nd and 3rd; heifer under 2 yrs., Jas. Maxwell 1st and 2nd; heifer under 1 yr., Jas. Maxwell, W. T. Hopper, J. H. Turner.

Jersey—Cow 3 yrs. or over, W. Rowand; heifer under 1 yr, W. Rowand.

Grades—Cow 4 yrs. or over, A. McTavish, Pearce Bros., W. T. Hopper; cow 3 yrs. or over, Pearce Bros., W. G. Brown, W. T. Hopper; heifer 2 yrs., W. Howe, Pearce Bros. 2nd and 3rd; heifer 1 yr., Pearce Bros. 1st and 2nd; steer under 3 yrs., Pearce Bros. 1st and 2nd; steer under 2 yrs., Pearce Bros. 1st, 2nd and 3rd; steer under 1 yr., J. H. Turner, Pearce Bros. 2nd and 3rd; heifer under 1 yr., Harold Cormack, J. H. Turner, Harold Cormack.

Fat Cattle and Milch Cows—Fat ox or steer, Pearce Bros.; fat cow or heifer, John McLean.

Canadian Bankers' Competition—Isabel Rudolph, Nelson Howe, Gordon Hopper.

SHEEP

Leicester—Ram aged, McKay Bros; ram shearling, John Wright 1st and 2nd, J. W. Johnston; ram lamb, J. Wright, J. W. Johnston, J. Wright; ewe 2 shears or over, Wright, Johnston 2nd and 3rd; ewe shearling, Johnston, Wright 2nd and 3rd; ewe lamb, Wright 1st and 2nd, Johnston.

Shropshire—Ram lamb, Harold Cormack 1st and 2nd; ewe 2 shears or over, Cormack 1st and 2nd; ewe shearling, Cormack 1st and 2nd; ewe lamb, Cormack 1st and 2nd.

Oxford—Ram aged, Fred Horning; ram shearling, Wm. Emke, Pearce Bros., Wm. Emke; ram lamb, Emke 1st and 2nd, H. Brill & Sons; ewe 2 shears or over, Brill, Emke, Brill; ewe shearling, Emke, Brill, Horning; ewe lamb, Emke Brill, Emke.

Long Wool Grade—Ewe 2 shears or over, McKay Bros.; ewe shearling, McKay; ewe lamb, McKaying; ewe shearling, Horning, Pearce.

Short Wool Grade—Ewe 2 shears or over, Pearce Bros.; Fred Horn ewe lamb, Pearce 1st and 2nd.

PIGS

Berkshire—Boar 1 yr. or over, McKay Bros.; boar under 1 yr., W. H. Rudolph; brood sow 1 yr. or over, W. H. Rudolph, McKay Bros.; sow under 1 yr., Rudolph 1st and 2nd. Over, A. Thornburn; sow under 1 yr.,

Yorkshire—Boar 1 yr. or over, Alex Thornburn; boar under 1 yr., J. W. Johnston 2nd; brood sow 1 yr. or A. Thornburn.

Tamworth—Boar under 1 yr., J. W. Johnston; sow under 1 yr., Johnston.

Special—Litter, Alex Thornburn.

Bankers' Competition—G. Rudolph, John Thornburn.

POULTRY

Brown 1st and 2nd; white Rock, Brahmas, a. v., cock, Wm. Archer, A. L. McKinnon; hen, Frank Harmer; Dorkings, a. v., cock, Wm. Halliday; hen, Halliday 1st and 2nd; black Spanish, hen, Wm. Archer, A. L. McKinnon; Leghorn, a. v., cock, F. Harmer, Jas. Milne; hen, Harmer, Milne; silver Campine, cock, Halliday, A. L. McKinnon; hen, Halliday 1st and 2nd; a. s. Hamburg, cock, Alex Brown 1st and 2nd; hen, Alex Brown 1st and 2nd; white cock, cock, Geo. Last, F. Shoemaker; hen, Geo. Last, F. Shoemaker; barred Rock, cock, F. Harmer, Alex. Brown; hen, F. Harmer, Alex. Thornburn; Houdan cock, F. Harmer; hen, F. Harmer, 1st and 2nd; White Wyandotte, cock, Smith Bros., Wm. Archer; hen, Smith Bros., W. Archer; Wyandotte a.o.v., cock, F. Harmer, W. H. Baker; hen, F. Harmer, 1st and 2nd; Minorca, cock, hen, W. H. Baker, F. Harmer; Rhode Island Red, cock, Wm. Archer, F. Harmer; hen, W. H. Baker, 1st and 2nd; pair Bantams, E. E. Foster 1st and 2nd; pr. Turkeys, a. v., Mrs. S. Rae; pr. geese, a.v., Wm. Minto; pen heavy fowl, W. Archer; pen light fowl, Wm. Halliday, Alex Brown.

Chickens of 1918—Dorkings a. v., cockerel, Wm. Halliday, 1st and 2nd; pullet, Wm. Archer, Wm. Halliday; Black Spanish, pullet, F. Harmer, 1st and 2nd; White Leghorn a.c., cockerel, A. Thornburn, F. Harmer; a. Campine, cockerel, W. Halliday; pullet, W. Halliday; S. S. Hamburg, cockerel, Alex. Brown, 1st and 2nd; pullet, Alex. Brown 1st and 2nd; Plymouth Rock, white, cockerel, J. H. Turner, F. Shoemaker; pullet, J. H. Turner, F. Shoemaker; barred Rock, cockerel, F. Harmer, Alex. Brown; pullet, Alex Brown, Frank Harmer; White Wyandotte, cockerel, Smith Bros., W. Archer; pullet, W. Archer, Smith Bros.; Wyandotte, a. o. v., cockerel, F. Harmer, E. E Foster; pullet, F. Harmer; Minorca, cockerel, Geo. Grant, jr., 1st and 2nd; pullet, Geo. Grant, jr., 1st and 2nd; Rhode Island Red, cockerel, W. Archer D. McBeath; pullet, D. McBeath, W. Archer; Bantams, E. E. Foster.; turkeys, Smith Bros., 1st and 2nd; pen heavy chickens, W. Archer, W. Halliday; pen light chickens, Alex Brown, W. Halliday; best male bird, a. v., W. Archer; J. R. Laidlaw special, W. Archer.

The balance of Prize List will appear in our next issue.

COULD NOT STOP THE HEADACHES

Until She Tried "Fruit-a-tives" —Made From Fruit Juices

113 Cosens St., St. John, N.B.

"I feel I must tell you of the great benefit I have received from your wonderful medicine, 'Fruit-a-tives'. I have been a sufferer for many years from *Violent Headaches*, and could get no permanent relief.

A friend advised me to take 'Fruit-a-tives' and I did so with great success; and now I am entirely free of Headaches, thanks to your splendid medicine".

MRS. ALEXANDER SHAW.

50c. a box, 6 for $2.50, trial size 25c. At all dealers or sent on receipt of price, postpaid, by Fruit-a-tives Limited, Ottawa.

LOCAL AND DISTRICT NEWS

District School Fair

The school fair held at S. S. No. 9, Bruce Tp., on Monday afternoon was again a great success. Although the weather was cold, there was as large a crowd as last year, and the display was as complete as could be made. The prize list will appear in The Advocate when it is received.

We Celebrated

The surrender of Bulgaria was made the occasion for a big demonstration in town on Monday evening. By instruction of Reeve Steele the town bell and waterworks whistle were started to open the proceedings. A procession was organized with blaring brooms as part of the spectacle. A bonfire was kept burning at the town hall while speeches were delivered from the bandstand by Rev. Diehl, Little and Neilson, also by Mr. Hamilton, D.S.O., a returned soldier, and patriotic songs were sung.

Returned Soldier Here

Mr. Victor Smeaton, who has just received his discharge from the army after doing his bit in France, is spending a week in town, the guest of Mr. and Mrs. D. McKenzie. Victor's parents, Mr and Mrs. D. Smeaton, formerly of Paisley, now live at Abbotsford, Que., and he enlisted in Nov., 1915, at Montreal with the Princess Patricia reinforcement corps. He went into the trenches in June, 1916, and in August, 1917, was so severely shell shocked as to be incapacitated for further service. His old friends are pleased to know that he is recovering from the effects of his experience as a defender of world liberty, and hope he may soon be able to take up the less strenuous course of life as a civilian, also that he may meet with every success in his future career.

Presented with Gold Watches

The following address almost tells the story of a presentation which took place in the council chamber on Thursday evening last, at which, owing to circumstances, there were only a few citizens present. The address was read by Mr. A. Cormack and the presentation made by Mr. D. Forrester:

Dear Mr. Laidlaw—A number of your friends have gathered this evening for the purpose of extending to you our best wishes for your future welfare; it was felt by so many that we could not possibly see you leave our old town without conveying to you some tangible mark of appreciation. You have resided here so long, you have been so closely identified with local interests as to have been well tried out and found to be of the character which commands our esteem and highest opinion. You have served the public faithfully in business, in the post office, in church, musical and sporting circles so that your departure cannot be other than keenly felt. We are sorry to lose you, and in honoring you at this little gathering we know that we but feebly acknowledge what you have done for us. As a slight mark of our esteem and warm friendship we take the privilege of presenting you with this watch with the hope that it will ever remind you of your good friends in Paisley; at the same time we ask you to accept for your estimable daughters, Bessie and Mary, these wrist watches, with renewed assurance of our friendship and regard for both you and Mrs. Laidlaw May nothing but good luck and happiness be your lot in your new place of residence. Signed on behalf of the citizens of Paisley, Thos. Muir, A. Cormack, D. Forrester.

Mr. Laidlaw made a very appropriate reply, in which he referred reminiscently to his career of nearly thirty years in our town. Short speeches were made by those present, and regret expressed that time did not permit notifying many more who would have been there also.

CASTORIA

For Infants and Children

In Use For Over 30 Years

Always bears the signature of Chas. H. Fletcher

BORN

Shipley—In Bruce Tp., on Sept. 25th, to Mr. and Mrs. Alex Shipley, a daughter—Isabel Audrey.

MARRIED

Williscroft—Post—At the Parsonage, Ferndale, Eastnor Tp., on Sept. 19, by Rev. E. G. Etherington, Miss Mabel Post, of Albemarle, to Mr. George Williscroft, of Paisley.

S. F. BALLACHEY

Jeweler and Optician

PAISLEY GARAGE

Ford and Maxwell Service Station

We carry a full line of Ford Parts and Repairs

We aim to give up-to-date service to all car owners. With our experience in city garages we are in a position to do work that we can guarantee as satisfactory. Motorists should call us up by either phone when they have trouble.

High Grade Oils, Gas and Accessories of all kinds.

Repairing at Reasonable Rates. All kinds of Vulcanizing done.

We are equipped to remove carbon by oxygen gas.

G. E. MILLER, Prop.

RECEIVING WAR CROSS

The patriotic spirit and devotion with which Canadian women have so far performed war-service work and made sacrifices has never been equalled in the history of any country. Mothers, wives and sisters support this burden with strength and fortitude. But those who are already miserable from the complaints and weaknesses which are so common to women, should take the right temperance tonic for the womanly system.

If a woman is borne down by pain and sufferings, by nervousness or dizzy spells, by headache or backache, "Favorite Prescription" should be taken. It can now be had in tablet form as well as liquid at most drug stores. Send to Dr. Pierce's Branch at Bridgeburg, Ont., for a 10c trial pkg. of tablets.

For fifty years Dr. Pierce's Pleasant Pellets have been most satisfactory in liver and bowel troubles.

Windsor, Ont.—"Dr. Pierce's Favorite Prescription proved a wonderful tonic for me," writes Mrs. [illegible] "for about six years I suffered with women's troubles during which time I became very much run down, weak and nervous, would have nervous headaches, and pains in my side. I doctored with the doctor for but did not get cured of my ailments, and was so bad that I could hardly attend to my household duties. I was induced to try Dr. Pierce's Favorite Prescription, and when I began taking the 'Prescription' I was very weak and nervous, but after I had taken two bottles I was much improved and four bottles completely cured me and I have since enjoyed better health than I ever did before taking the 'Prescription.' It is a wonderful medicine for women."—Mrs. Martin Mollenhour, 6 Albert St.

BOOTS, SHOES AND RUBBERS

Men's, Women's and Children's Heavy Shoes in all styles of leather and all sizes. . . . . .

Shoes with quality and comfort.

MRS. FREDERICK SCHNITTKER

Susannah Bean, beloved wife of Mr. Fred Schnittker, departed this life on Tuesday morning, Sept. 24th, at her home, Bruce Tp. (5th con.), at the age of 61 years, 5 months and 26 days. The deceased was born in Blandford Tp., Oxford County, on the first of March, 1857, and was married to John Bean on the 20th of Feb., 1878. Shortly after, she with her husband removed to Mildmay, Bruce Co. After a brief period of happy wedded life she sustained the loss of her husband on May 2nd, 1888, being left with a family of four children of tender age. On Jan. 2, 1892, she entered the bonds of matrimony with Mr. Frederick Schnittker of Bruce Tp., since which time she has resided in this community, and become highly respected by such as had the pleasure of her acquaintance. Her ailment was of a lingering character. Disease had made such inroads on her constitution that she finally succumbed to a complication of ailments, quietly passing away surrounded by her family. She will be greatly missed in church circles, having been teacher in the Sunday school for many years. Her home was always open to the ministers of the gospel. Her retiring, unassuming disposition was manifested by her quiet department at all times. She in early youth became a member of the Evangelical church, active and interested in all the work thereof. The funeral took place on Thursday, Sept. 26th, service being conducted by the pastor, Rev. H. H. Leibold, of Port Elgin, in the church, after which interment was made in the Evangelical cemetery, the service at the grave being taken by her brother, Rev. E. H. Bean, of Milverton. The six sons acted as pallbearers. There remain to mourn her departure her husband, three sons and one daughter by the first marriage, three sons of the second marriage, two step-daughters and one son, four sisters, three brothers and many friends and relatives, who while they mourn, do not mourn as those who have no hope. Those present from a distance were: Norman Bean and family, Elton Bean and family, of Listowel; Mrs. A. C. Bender and Miss Lorena Bean, of Kitchener; Rev. E. H. Bean, of Milverton; Chas. Beiba, D.D.S., of Chesley; Mrs. N. Wagner, of Toronto; Mr. and Mrs. Sol Schwandt, Benjamin and Lucilla Schwandt, of Hanover; Mrs. Geo. Fink, Mr. and Mrs. Shoemaker and son, of Mildmay; besides many from Port Elgin.

BRANT COUNCIL

The municipal council of the township of Brant met on Monday, Sept. 16th. Members all present. Minutes of last meeting of council read and declared correct.

Findlay—Gregg—That this council, having been interviewed by a deputation of prominent ratepayers, urging the need of some aid being given to the dependents of the mercantile marine, hereby express their approval of the movement and would urge that the Bruce County Council at the December session pass a resolution giving a grant to this fund.

Rowand—Findlay—That the clerk be authorized to have a solicitor prepare a by-law to empower the corporation of Brant township to issue debentures to cover the cost (in excess of the commissioner's estimate) of the commissioner's estimate) of of installing hydro electric system in the village of Elmwood.—Carried.

Johnston—Gregg—That as no applications for the office of collector of rates has been received, the clerk is hereby instructed to advertise in the Walkerton Telescope for collector of rates for the current year, applicants to state salary, applications to be in the clerk's hands by 2 o'clock p.m. on Monday, the 30th day of September, on which date a special meeting of council will be held.—Carried.

Rowand — Johnston — That the reeve and clerk issue orders on the treasurer for all accounts passed at this meeting of council—Carried.

Accounts passed as follows: John Scanlon, lamb killed by dogs, $20; Geo. Sloss, valuating sheep killed by dogs, $1.70; Dan Ernst, sheep killed by dogs, $25; T. H. Wilson valuating sheep killed by dogs, $1.65; Melvin Goodby, 115 yds. gravel, $11.50; Alex Rae, 67 yds. gravel, $6.70; Fred Fortune, 70 yds. gravel, $7, shoveller one day, $2—$9; Frank Reanie, 12 yds. gravel, $1.20; Wm. Abel, 40 yds. gravel, $4; John Sidel, 118 yds. gravel, $11.80; S. Parker, 28 yds. gravel, $2.80; John Mills, repairing road grader, $28.80; Fred A. Edgar, services as engineer re Herman Widow ditch, $31; Canada Ingot Iron Co., iron and culvert, $63.90; John Lundy, drawing tile and dragging ditch, $27; Hugh Ferguson, going to Dunkeld for cement, $2.50; Joe Dieralam, cement tile, $43.40; John Monk, wall paper for township hall, $3.50; Jas. Rae, drawing frames for arch, $5; H. Brownscombe, 4-in. tile, $8.80; P. Heinz, dragging ditch on road allowance to H. Widow ditch, $15; Jas. Watson, hauling tile and placing same, $4; Tado Weichman, drawing material for road allowance re H. Widow ditch, $18.50; Jas. Dewar, cement tile, $7; Jos. Schutkofski, cement, $378.90; Walkerton Telescope, half year's contract printing, $85; M. A. McCallum, B.O.H. meeting, $2.40, postage, $3—$5.40; D. Willoughby, B.O.H. meeting, $2.80; Wm. Rowand, B.O.H meeting, $2.30; Dr. Bricker, B.O.H. meeting, $1; E. Bowman, caretaker, Henry Helberg re sickness, $7.75; Martin Monk, sanitary inspector, $10.80.

Gregg—Rowand—That this council do now adjourn to meet on Monday, the 30th day of Sept., at 2 o'clock p.m., for the purpose of appointing a collector and other business.—Carried.

M. A. McCallum, Clerk

GREENOCK COUNCIL

Knox's Hotel, Pinkerton
Sept. 23rd, 1918

Council met as per adjournment, all the members present, the reeve in the chair. Minutes of last meeting were read and adopted.

The following accounts were presented for payment: L. Caskenette, 284½ yds. gravel, $28.45; J. Vance, 9 yds., 90c; G. Anstett, 95 yds., $9.50; T. Thompson, 62 yds., $6.20; J. Zettler, 14 yds., $1.40; J. Rathwell, 149 yds., $14.90; F. Griffith, 2½ yds., 25c; D. McKenzie, adv. tenders wanted, $2.20; D. Cassidy cutting timber on s. l. 25, $67.50; D. Phelan, trip to Toronto as delegate, $5; T. Symon, trip to Toronto as delegate, $5; H. G. Clark, 2 lambs worried by dogs, $12; W. T. Stewart, inspecting H. G. Clark's lambs, $1.40; A. Kunkel, part contract on side line 15, con. 9, $50; L. A. Eedy, two ads. tenders wanted, $5.70; Municipal World, blank forms for clerk, $3.80; Sam Hodgins, drawing 2½ yds. gravel on con. 10 and s. l., $2.50; Wm. Trotter, drawing 2½ yds. gravel on s. l. 5, $2.50, gravel, 50c—$2.75; A. Hanmore, drawing iron from con 10 to Cargill, 2 trips, $6; A. E. Knox, room for meeting, $1.

Sawyer—Campbell—That the foregoing accounts be paid and that the reeve and treasurer be instructed to sign checks for same.—Carried.

Symon—Sawyer—That this council deem it necessary to have a wire fence erected on the 15th sideroad opposite lot 16, con. 2, and that this council grant 25c per rod for 100 rods.—Carried.

Gilchrist—Symon—That this council do now adjourn to meet at Riversdale on Monday, Oct. 21st, for general business.—Carried.

FIRE PREVENTION

Extracts from

PROCLAMATION

Issued by His Honour the Lieutenant-Governor of the Province of Ontario.

* * *

Whereas next to the care of those who are offering their lives on the front line of battle, the conservation of all our energies and substance is our most important problem;

And whereas the saving of human life only, and the prevention of loss of property through destruction by fire, is an aid which everyone should give willingly to the community at large;

And whereas the reckless and impoverishing fire waste that confronts the people of our Province is appalling;
* * *

Therefore, believing that the loss can be minimized only by awakening in the public mind a universal watchfulness against carelessness, accumulation of rubbish and unsanitary conditions;
* * * and

Because on this great need and in order to arouse a sense of watchfulness, carefulness and cleanliness, and to create a greater personal responsibility in reducing the number of preventable fires;

We have thought fit, by and with the advice of our Executive Council for Our Province of Ontario, to name, and do hereby name Wednesday, the

9th DAY OF OCTOBER, 1918
AS
FIRE PREVENTION DAY

And we do hereby urge that on this day, throughout our Province of Ontario, attention be called in schools and public places to the conditions that exist and to the need of immediate action and co-operation on the part of everyone; and special exercises, addresses and other means be employed to impress on the public mind lessons of Fire Prevention.

To insure the success of this great Clean-up Campaign it will be necessary to have the hearty and harmonious co-operation of all * * * who have for their objects civic, social and industrial
* * *
betterment.

The Proclamation should be read in all Schools and at Public Gatherings.

Office of the Fire Marshal of Ontario, Department of the Attorney-General, Toronto, Sept. 21st, 1918.

GEORGE F. LEWIS, Deputy Fire Marshal.

An Advertisement by Charles Dickens

CHARLES DICKENS is one of the world's great teachers. Here is what he has to say in one of his books:

"My other piece of advice, Copperfield," said Mr. Micawber, "you know. Annual income £20, annual expenditure £19. 19. 6—result, happiness. Annual income £20, annual expenditure £20. 0. 6—result, misery. The blossom is blighted, the leaf is withered, the God of Day goes down upon the dreary scene, and—and in short you are forever floored. As I am."

The saving of a part of one's income was always a good policy.

Prudent men and women have always maintained a margin of saving.

But to-day we must go farther in our efforts to save than ever before.

To-day it is a matter of the gravest importance that each Canadian seek ways and means to economize by cutting down expenditures for unnecessary things, saving the money he spends on things he could do without, so that when the Nation needs to borrow money he will be in a position to do his full duty.

There is war-shortening work waiting for every dollar that can be saved.

IF Charles Dickens were writing to Canadians to-day he would probably give us advice to this effect:

"My other piece of advice, Canadians, you know. No matter what percentage of your annual income you have previously saved, your efforts to-day should be to save more. The advantage of so doing is threefold: By the practice of economy you conserve the material and labor which must be devoted to the grim task before us; you cultivate the priceless habit of thrift; you gather more and more money to lend to the Nation for the prosecution of the war to a quick and certain Victory."

Soils and Crops

By Agronomist.

This Department is for the use of our farm readers who want the advice of an expert on any question regarding soil, seed, crops, etc. If your question is of sufficient general interest, it will be answered through these columns. If stamped and addressed envelope is enclosed your letter will be mailed to you. Address Agronomist, care of Wilson Publishing Co., Ltd., 73 Adelaide St. W., Toronto.

Harvesting and Storing Certain Vegetables.

While vegetables have been harvested continuously in many gardens in Canada since radishes and spinach were ready for use in early spring, the time has come when the bulk of the crop must be gathered to escape hard frosts.

As beans discolor and mould very readily, it is important to dry them as soon as possible, and to keep them dry. They should be spread out thinly under cover, and turned every two or three days until quite dry. If it is necessary to harvest the plants before they are thoroughly ripe they can be hung up outside until dry.

There will be many tomatoes which will not ripen before the plants are killed by the frost. If the fully-grown green specimens are picked before being frozen, and each specimen wrapped in paper and stored in closed boxes, they will be found, from tests made at the Experimental Farm, to ripen better than by exposing them to the sun. Even if put into closed boxes without wrapping each specimen, they ripen well.

Frequently cauliflowers are just beginning to head when it becomes necessary to harvest them owing to severe frosts. If the plants are pulled and replanted in boxes in the cellar, and kept watered, they will go on developing, and one can have cauliflower for some weeks. Brussels sprouts can also be replanted in this way. Both of those vegetables may, however, be left in the ground for some time yet.

If cabbage begin to split and it is not yet time to harvest them, the splitting will be prevented to some extent by twisting the plants so as to loosen them. This checks the flow of sap into the head. If the cellar is warm and dry, and the cabbage have to be harvested owing to the frost, they will keep well for a time outside if covered with leaves.

Where the accommodation is poor, celery may be kept outside in the soil well into the winter by opening a trench, preferably a narrow one fifteen or sixteen inches wide, and deep enough so that the tops of the celery will come about level with the surface of the ground. The celery plants are put close together in it, and before there are severe frosts, a thin layer of straw or leaves is put over the top. When the cold weather comes a heavier covering of leaves may be put over. If it is desirable to leave the celery longer, and then twelve to fifteen inches of soil over that. By putting sufficient leaves or straw over the soil again, frost may be kept out, and the celery dug out as required.

In harvesting potatoes, any which show signs of decay should be kept separate from the rest, and used first, thus helping to avoid the development of rot when stored. Potatoes should be dry when they are stored.

Keep onions dry, spread thinly. Squashes, pumpkins and citrons should be kept in a moderately warm, not a cool, place.

After-Harvest Cultivation.

Adequate cultivation is just as essential for the production of maximum crops as is the application of manures. In fact, many farmers assert that plenty of intelligent tillage is almost equal to a coat of manure. Such statements do not detract from the value of manures or other fertilisers, but they serve, in some measure, to bring into relief, the need for maintaining the soil in the best possible tilth. The proper time to commence tillage is immediately after the crop has been removed. If the soil is infested with weeds, shallow cultivation, either with a gang-plough or a disc-harrow immediately after harvest, will cause the germination of the weed seeds. Subsequent cultivation will kill those young plants and, if the ploughing has been done early enough, it may be possible to effect the germination of a second growth of weed seeds before the final "ridging-up" ploughing is done late in the fall. This is one of the most effective means of combatting such weeds as wild oats and mustard.

Where the land is comparatively free from weeds some advocates of after-harvest cultivation favor deeper ploughing, for the purpose of retaining more moisture from the autumn rains. This is a matter of experience and the individual farmer should experiment and decide for himself which method is most suitable to the needs of his soil.

The final ploughing in the autumn should leave the land ridged, so that frost action will pulverize it thoroughly. In this way a fine surface mulch is formed during the winter, which dries out quickly in the spring; at the same time it forms an excellent seed bed and protection for sub-surface moisture.

Scarcity of labor may make this process difficult, if not impossible, on many farms. But, where such handicaps do not exist, every effort should be made to practice after-harvest cultivation. It is a factor of prime importance in increasing production next year.

Sheep Notes

The best time to select breeding ewes for next year's crop of lambs is just about the time they are taken from their lambs this year. The ewe, like the dairy cow, should be judged largely upon her performance. The ewes that bring large, thrifty lambs and provide them with plenty of nourishment are the kind that pay for their keep and return a profit.

For the man who already has his land picked out, and is the possessor of suitable buildings for the purpose of wintering, early fall is the time for starting in sheep raising, and if the beginner has sufficient confidence in his own ability as a judge of sheep, he has no better opportunity to select his foundation stock than is provided at the Fall Fairs. Many of the showman at the big exhibitions will be found to have, in addition to their first prize-winners, plenty of desirable animals in their show string, especially in the case of young rams. Ewes also can be procured more readily at this season than at any other, and the purchaser will have the opportunity of providing his newly acquired flock with feed at small cost for some weeks to come on grassland that is intended for fall plowing, and on the stubble fields.

It is perhaps wiser for the new beginner with sheep to start with good grade ewes, than to endeavor to get into the pure-bred line immediately. Experience with the less valuable animals will fit him to produce fancy flock headers and exhibition stock later, and in the meanwhile his profits from disposal of wool and mutton will be satisfactory provided he proves a good shepherd. The disposing of any considerable number of top notch pure-breds, on the other hand, is somewhat of a business, in which a man requires, first a reputation for his stock and second a wide connection in the breeding fraternity. The use of only the best in the way of rams is necessary however, in any case, and it goes without saying that the ram must be a pure-bred.

When lambs are weaned keep them on the old pastures for a few days and remove the ewes to pastures as far away as possible. When accustomed to being by themselves, the lambs should be put on good fresh feed.

Poultry

Red, White and Blue Pullets.

Red for the six-month-old layers, white for those first laying at seven months, and blue for those laying at eight months are the leg-band colors used by some poultrymen to keep informed of the egg production of the new crop of pullets. Those facts, as well as others which are valuable in culling for the second year and in making up breeding pens, are obtained by noting when the banded pullets molt and begin to lay. Usually, but not invariably the red-banded birds molt last. Blue-banded pullets are always sent to market as yearlings; red-banded ones seldom are. The age at which a pullet starts laying and the date when she begins to molt determine whether it will be profitable to keep her another year. Birds without bands are to be culled.

The first bands in the case of heavy breeders are often put on at six and one-half or seven months. The above ages are for Leghorns.

The test is sometimes the trapnest, a band of one color being placed on pullets when coming into laying. Sometimes physical examination is used instead of trapnesting. In the latter case there are reliable signs to follow. The color of the vent and the condition of the "laying" bones change quickly when a pullet begins to lay. The yellow color leaves the vent. The laying bones become pliable and the flesh between them and the end of the breast-bone grows loose and flabby. With experience the poultry keeper acquires skill in reading these signs. A little later the combs of laying pullets will be red, plump and smooth and, in the case of Leghorns, the ear-lobes will be white. When pullets are examined, birds found malformed or very much undersized are culled, as well as those whose conformation indicates they will make poor layers.

In the long run it is short-sighted economy to kill productive cows. It is not only patriotic to keep every good milch cow, but it is the only way to maintain an industry which is essential during the war and after. For after the war European countries will knock at our door for animals for foundation herds. Be ready to open the door.

P. POULIN & CO.

The Dairy

What the Cow Would Say.

We need a period of rest after we have worked for you all the year, so that we may properly nourish our calves and build up our energies for another season's work.

Our food should be well balanced, but we hope that the time may come when you dairymen will not value a pound of protein from one source with a pound from another. Some of the protein feeds you give us are simply awful for us to eat and digest.

We sometimes feel as though we were all out of whack. We can only lay this feeling to the way in which our owners have interfered with nature's laws.

You have bred us so that it is our very nature to put our fat into the pail, and when we get short rations we put the flesh of our own bodies into your milk. The drain on our systems is awful.

It seems as though you thought of nothing except buying more protein, making more milk, and forcing us to our very limit. Do you wonder we get tuberculosis, garget, and that we play out under such care and treatment?

When you confine us to such narrow rations as many of you dairy farmers do, we cannot use our instinctive preferences in the choice of our foods and when you choose our food for us, you should do it wisely.

We need some succulent food to keep our bowels in condition and assist us in the digestion and assimilation of the heavy grain foods we are compelled to eat.

If you would feed us a little more of the good things that you grow here on the farm, and not so much of those boughten feeds, we should make better milk, and we should have better calves to take our places when we are sent to the shambles.

Machine Corn-Cutting.

One man with a corn knife by working hard can cut and shock an average of one and one-half acres a day. Two men with a platform harvester can harvest four or five acres in the same time; and three men with a corn-binder in a ten-hour day can cut and shock from seven to nine acres. This year when farm help is so scarce there is urgent need for the use of labor-saving machinery wherever possible. Cutting corn by hand is a hard, disagreeable task, and the time when it should be done is limited to a few days if the full feeding value of the corn is to be retained.

Fall plowing, seeding for winter wheat and digging potatoes must be done on many farms at about the same time. In such cases, the timeliness and ease of accomplishing the work are determining factors in deciding the advisability of using corn-cutting machinery. The corn-binder does the best work when all the corn is standing upright. Usually most satisfactory results are obtained with a three-horse team, and sometimes four horses are necessary when the corn is heavy or the ground hilly. In ordinary yields, one man operating the binder will keep two men busy gathering the bundles and shocking them. These three men cutting and shocking by hand would scarcely cover more than four acres in a day and it would be necessary to work much harder than when the corn-binder is used, thus the machine requiring less laborious work takes from one-half to two-thirds as long to cut a given acreage.

The boarder, the leaner, the slacker,
And other guest cows of that ilk,
Should be hurried away to the butcher—
They take all the profit from milk.

Have you won a ribbon at the county fair?

GOOD HEALTH QUESTION BOX

By Andrew F. Currier, M.D

Dr. Currier will answer all signed letters pertaining to Health. If your question is of general interest it will be answered through these columns. If not, it will be answered personally if stamped, addressed envelope is enclosed. Dr. Currier will not prescribe for individual cases or make diagnosis. Address Dr. Andrew F. Currier, care of Wilson Publishing Co., 73 Adelaide St. West, Toronto.

Suggestions Relating to Skin Diseases

The prevalence of skin diseases among Canadian people is astounding.

Some are simple, local, and easily remedied, many are the outward manifestations of internal disease and others are stubborn local diseases lasting months and years.

In all skin diseases it is safe to assume as a fundamental principle that the bowels must always be kept freely open for the skin is complementary to the intestines in eliminating poisons from the body.

Hence cathartic mineral waters, salts of various kinds and laxative oils are important in treating skin diseases.

Skin diseases are especially prevalent during youth and they often attack the face and neck, the most conspicuous parts of the body and about the beauty or ugliness of which young people are always most sensitive.

You cannot blame young persons for mortification or shame when the mirror reveals blotches and blackheads and sores and swellings which disfigure their countenance and wound their pride, and I always try to lend a sympathetic ear to their tales of woe when they are based upon such disfigurement and annoyance.

The griefs and discomforts of others must always be measured if possible from their standpoint.

The patent medicine venders find easy victims in those who suffer from acne, for they grasp at every straw which gives any prospect of relief.

But if there is a patent medicine which will cure acne, I have never seen it.

There are some which may help it, especially when joined with cathartics, massage, and other means for improving the circulation in the skin.

Possibly the new-fashioned method of treating acne with injections of serum may solve the difficulty.

Freckles are another source of annoyance to young people, these being deposits of pigment below the surface of the skin and destroyed only by acids and strong mineral substances.

Any of these substances which penetrates beyond the surface must necessarily leave a scar, hence there is danger of disfigurement from lotions advertised to remove freckles, moles, and liver spots, if they are powerful enough to do this.

The removal of parasites and vermin from the skin requires not only judgment in selecting medicines but skill in using it.

There are good sulphur soaps and ointments for the itch parasite and if they fail a sulphur bath will finish the job.

Mercurial ointments are necessary for the parasites which get at the roots of hair but they must be used cautiously for mercurial poisoning from such a source is not unusual, especially among children.

Caustic and corrosive ointments and salves are often advertised to treat cancer of the skin.

They are painful and destructive and should be used only by those who are familiar with their action and with the diseases for which they are appropriate.

Disease of the skin is often induced by substances used upon it.

This is especially true of cosmetics which clog the tubes of the sweat and sebaceous glands of the skin with materials which will not dissolve, which interfere with the circulation of the blood and the discharge of sweat and sebaceous matter and will make the skin dry and hard even if they do not produce eruptive disease.

Theatrical people and others whose taste or preference induces the use of rouges and cosmetics often find the results of such maltreatment of the skin sufficiently disastrous.

Ointments are usually preferable to liquids or lotions for application to the skin as they are more readily applied and more readily retained, and their bases are lard, vaseline, lanolin, cocoa butter, etc.

The lard in ointments often becomes rancid and irritating to the skin.

Ointments for itching eruptions contain tar, zinc, sulphur, etc., and one great advantage of these and other external applications is that they are upon the surface where their action can be watched from day to day.

FIELD SELECTION OF SEED EARS

Methods of Gathering, Curing and Storing Seed Corn Calculated to Develop Strains of High-Yielding Corn in Ontario.

Right now is the time to make plans for gathering and storing sufficient good ears for next spring's supply of seed. The very basis of success with next year's corn crop lies in the care and common sense with which the seed corn saved to produce this crop is gathered and cured this fall. To be sure, the importance of testing seed corn in the spring cannot be overestimated, but at best spring testing simply serves as a check or safeguard in determining the efficiency of the previous handling and curing which the corn has had.

The first step toward securing better seed ears for planting is that of selecting varieties that will mature during the normal growing season. To intensify early maturing tendencies and enable one to examine the character of the growing stock as well as the ear that is attached to it, it is preferable to select seed ears from the field about the middle of September. This gives seed corn that will make good silage and mature sound grain during a normal growing season. Only careful seed selection will enable Ontario farmers to gradually intensify the early maturing tendencies of their corn until it is possible to mature a maximum quantity of sound corn.

In selecting seed from the field one should not persist in selecting ears simply because they are big. The practicable limit to the size of the ears is as large as will mature on one's farm. In selecting ears that have reached a fair maturity before it is time to harvest the main crop they may have a deep grain, but never as large a cob as the seemingly large ears that mature later, or as those that are not mature after heavy frosts. The bigness, or circumference of the cob, should correspond with the length of the growing season. This point is important because it enables the grower to keep the size of the ear adapted to his soil and climate. After one has selected his variety and finds that it suits his soil, latitude and requirements, then he should aim to grow as big ears and no larger than will make a maximum crop of sound corn.

Only the inexperienced or the unobserving grower persists in selecting ears simply because they are big. Yet the charm of bigness is over many breeders of corn as well as farm animals. The fact that this idea of bigness of ear associates with the idea of bigness of crop is so universal that corn growers must devote special attention to studying the problem before they can succeed in developing strains of high-yielding corn adapted to their soil and climatic conditions. With the big paying crop ever before our minds, we may easily sacrifice bigness of ears for soundness, quality and maturity.

The successful corn grower who takes particular pride in developing a uniform strain of seed corn adapted to his farm finds it pays to strap a bag or basket over his shoulder and go through the field before the corn is cut and walk up and down the rows selecting the best seed ears from the standing stalks. In case he has no special seed plots, he may find it possible to make fairly good selections from the best portions of the field crops. At any rate he must have in mind the type and qualities of a good ear and stalk. He must appreciate the value of stout, vigorous, leafy stalks, that produce ears at a convenient height for harvesting and husking and with shanks just long enough to allow the ear to droop nicely. As a rule stalks of this type will bear good ears.

It is always better to have a surplus of seed stored away in the fall and to make final selections of seed ears before planting in the spring. It is also important that fairly mature ears be selected, as the immature ones are apt to cause mold, and at best are very difficult to cure. Such immature seed, even though it may possess high germinating qualities, has a tendency to produce weak-growing plants, unless weather and soil conditions are especially favorable. This serves to emphasize the importance of growing a variety of corn that will mature well and which, by careful seed selection, may prove adaptable to climatic conditions.

No amount of attention to scientific field selection will solve the problem of seed corn selection unless adequate plans are made to get the seed ears into storage promptly.

The method which will bring about the quickest drying of the ears is the most efficient. In general, any practical method of storage that will keep the ears separate so as to prevent actual contact of one ear with another and allow free circulation of the air round each ear will give the best results. One of the best and cheapest methods is that of having woven wire cut up into strands. The ears are easily attached to these strands and dry rapidly. Another good scheme is that of driving finishing nails into a cedar post far enough apart to hold each ear separately. Several manufacturers have put on the market devices for keeping the ears separate.

No place on the average farm is better adapted to curing seed corn for moderate plantings than the ordinary, well-ventilated garret with windows that may be opened to permit breezes to blow through freely. In such a place the ears will not be injured by frosts during the fall and at the same time be protected from the rain and storm. The room above the kitchen, where the stovepipe passes through, will furnish ideal conditions for curing the seed ears.

Nothing will give one a better idea of the value of providing ample curing facilities for corn than the tests for germination in the spring. Let the farmer who believes that proper curing of his seed ears during the fall does not pay, test out ears properly cured and those stored in the tool house or barn and the results will prove to his satisfaction that proper curing pays. But such a test does not fully determine the value of proper curing. Many kernels of corn that germinate readily do not produce a vigorous plant. It is only well cured seeds that produce strong vigorous plants. Life processes go on in the seed kernels at a very slow rate. Expose the seed ears to damp, freezing and thawing weather and the germinating powers are either destroyed or weakened to such an extent that it is difficult to secure a full stand. Proper curing and storing of the seed ears locks up the energy and vitality in the kernels and keeps it there until it is let free by the soil to produce a healthy, vigorous-growing plant.

Spreading Farm Manures.

It takes as long to load a manure spreader as it does a wagon box, but the spreader will unload and spread the manure in a third of the time. Hauling manure in a wagon box and spreading it on the field with a hand-fork is hard and disagreeable work. It can be done much easier with a spreader and the material is more evenly distributed. The spreader is a useful implement to have at any time when manure is to be spread, but particularly so now when labor is scarce and the need for increased crops demands that not a pound of fertility be wasted. Save time and avoid waste—buy a spreader. If the amount of hauling is not sufficient to justify the investment, it may be worth while to rent or borrow your neighbor's.

Leaves as Fertilizer.

Dead leaves, contrary to common belief, have practically no fertilizing value. Most of the elements of plant food pass into the body of the tree on the approach of winter. A ton of the best quality of autumn leaves contains six pounds of potash, less than three pounds of phosphoric acid, and 10 or 15 pounds of nitrogen.

Leaves are of practical value when in the proper state of decomposition. Leaf mold is used in all well-equipped florist establishments for mixing with sand and garden loam to make a good potting soil. Soil made in this manner is especially valuable for ferns, palms, and other woodland and tropical plants.

Composting leaves, manure, and rubbish is not uncommon. A low place is selected for the compost, which is allowed to stand for two years. It will be found advantageous to wet the pile during the dry season. The leaves keep the soil loose and prevent its packing together into a hard mass.

Table linen should be darned with threads from the raveling.

Be a Friend of the Farm.

The farm is your friend; be a friend of the farm. Some folks live on the farm but have no love for it. They take all they can out of it, and then kick it for what it has done for them. It pays to keep friends with the farm. Because the farm that is petted and made much of will give back more. Even bare ground feels the touch of the man with the true farmer-spirit in his heart. It leaps to do its best for him; it gives the very best there is in it. Sing and the farm responds; laugh and the farm smiles back at you and pours your lap full of good things.

Use Honey, Save Sugar.

About sixty pounds of sugar are consumed each year in Canada by every man, woman and child. With the increased price of sugar beekeepers should remember that honey can take the place of sugar both for sweetening and preserving.

Too many people have used honey only as a spread for bread and griddle-cakes, forgetting that it can be used in tea and coffee, in making cakes and preserving.

We hear much about the clean platter, and saving the waste so that our Allies on the other side of the sea can be fed; yet in the matter of securing honey there is a fearful amount going to waste every year simply because there are no bees in certain localities to gather the nectar so freely given by the flowers.

Community canning clubs have been formed in Victoria, B.C., and Brantford, Ont.

For cabbage-worms: Mix one part of air-slaked lime, and dust it on the plants at regular intervals.

Silage is the war ration for beef, milk, mutton and wool. A silo full for each farm is the allowance. It is both feed and succulence. It takes the place of grain and pasture.

MEN TORTURED IN GERMAN CAMPS

RUSSIAN TELLS OF PUNISHMENT TO PRISONERS.

Civilians, Including Women, Forced to Do All Sorts of Laborious Tasks.

For three and one-half years I was a prisoner in a German prison camp. At the end of that time I was fortunate enough to escape. Although I am a Russian, the peace of Brest-Litovsk did not give me my freedom. Like the enemy subjects who were in the same camp I had to wait my chance to make a dash for liberty.

Although much has already been written in the press of all countries about the treatment of war prisoners in Germany, I believe I have had experiences which are worth relating. The camp in which I was confined is Camp Holzminden on the Weers. At this place a great number of civilians who have in no way participated in the war are held captives. It is not a camp for military prisoners; it is a camp for enemycivilians.

The regime at Holzminden was fairly mild until the beginning of 1917. When General Hashnisch, a despot, was named general of the Tenth Army Corps, to which district Holzminden belongs, the camp conditions were utterly changed. In the place of the former commanding officer, General Pflugradt, who had treated the prisoners with decency and a certain amount of consideration, Colonel Gallus was appointed. He had years of experience as a prison director. With the help of a group of his underlings, more ruthless than himself, the Colonel succeeded in establishing a German prison regime at Holzminden.

Heaviest Work Required.

This regime involved forcing the prisoners to do the heaviest kind of labor. Every day they were required to break up and haul stone, build roads and work in the fields. The road building was at a distance of from five to six kilometers from the camp. Work in the factories of Holzminden was looked upon as camp duty. Because of the fact that the prisoners were for the most part students, engineers, merchants and so on, who were unused to physical labor of this sort, the tasks were particularly onerous. Furthermore, the guards were instructed to keep nagging at the prisoners.

The manner of these guards is indescribable. They received from the colonel orders of the most outrageous sort. To speed the work of the prisoners, they were told to strike them with their fists and with clubs. At the most trivial offense they were instructed to shoot. If a guard was so rash as to be friendly with one of the captives he was severely punished. To make the guards more zealous in their work, Colonel Gallus informed them that all of the civilians incarcerated at Holzminden were pirates and criminals, deserving of the most violent treatment. The result is inevitable. There were almost daily cases of physical mistreatment.

A Dreary Day.

The day's program was a dreary one. We were awakened at 3.30. At 5 we went to work. Often we could not return to the barracks at noon because we were working far away from the camp, and we were obliged to remain out-of-doors in the wet and the rain until 7.30 in the evening. At 9 p.m. we were locked up in the barracks. We had not sufficient time for sleep, rest or even for meals.

In spite of the constant activity demanded of the prisoners, the food was poor and contained little nourishment. We did have a sort of commissary committee, composed of three prisoners. But if it for a single time ventured to complain of the soup as "unsatisfactory," the most disagreeable things always happened. Mail was frequently held up by way of retaliation for alleged misdeeds. Mail was not allowed to be kept beyond eight days, and if a postcard older than that was found upon the person of a prisoner he was rigorously punished. There was not enough clothing to make one comfortable. As we had to work out-of-doors regardless of weather or season, our clothing was often wet through, and the next morning we had to put it on while it was still damp. Colds were unavoidable. The medical attention given to us was absurd. The colonel made a point of being present at almost all medical examinations and completely dominated the physicians, who cringed before him. He was fond of saying that only the lazy ones pretended to best sanatorium and hard work the best cure-all.

Cruelty to Women.

Camp Holzminden was frequently visited by General Hashnisch and other officials. They never looked at the prisoner's quarters except in the most perfunctory way. They strutted through the barracks, watched the laborers at work, and then directed all their attentions to the camp pigs. These pigs, the especial interest of Colonel Gallus, were royally treated in their pens, and led a much happier life than the prisoners, until they were slaughtered for the officers' mess.

Even the women are not spared. They are forced to do all sortsof burdensome things. For instance, they are put at braiding and unbraiding fish nets, and the only purpose of the taskmasters seems to be to make their fingers sore. Every Sunday a weird walk is undertaken to a wood about six kilometers away, from which they bring back wood on their backs. Hundreds of men and women are put at this work every Sunday, although it could easily be done by a wagon and two horses. In fact, the biggest part of the labor demanded of the prisoners is almost wholly unproductive, and serves no purpose save to torture. If any one of them dare to complain they are subjected to certain peculiar punishments, of which the most frequent is confinement in an extraordinary cell called the "hugroom," a place filled with old straw mattresses and sacks, which simply swarm with vermin.

Among the prisoners none was more badly treated than the group of young Russian students, of which I was one. Their moral and physical sufferings scarcely were to be depicted. For four years they have been shut out of the world. The priceless, splendid years of youth have flown by. Joy, health, strength and education have been denied to them. The war relief organizations would undertake a great and wonderful work of brotherhood if they could obtain the release of these wholly innocent war captives by puttin the matter before the proper authorities.

IRISH MOSS A VALUABLE FOOD

British Food Ministry Is Taking Seaweed Into Consideration.

The food control committee of Dundee, Scotland, has had its attention directed to the value as a food of carrageen or Irish Moss, and it has brought the matter to the attention of the British Food Ministry, which is considering what may be done toward popularizing this seaweed as an article of diet.

The value of carrageen as a food has been recognized by Scotch and Irish people for generations and until a comparatively recent period it occupied a prominent position in the daily food supply of the poorer classes. Of late it has gained favor among the better off middle classes.

Carrageen is known in various parts of Scotland as hen's dulse; its scientific name is Chondrus crispus. It grows abundantly on rocks and stones within the littoral zone, flourishing in salt water which has a dash of fresh in it.

In its natural state it has the appearance of dwarf dulse, the small soft and cartilaginous, and in color ranges from a greenish yellow to a purplish brown.

Among the poorer classes of Scotland it is boiled in water until it assumes the consistency of porridge and is served in a like manner with milk. It forms a jelly in from twenty to thirty times its weight in water, but is more commonly used in making various kinds of puddings. It has 35 per cent. of mucilaginous matter, 10 per cent. of albuminoids and 16 per cent. of minerals, being rich in iodine and sulphur.

This seaweed is often confused with several others which have been used as food by the Scottish people, but neither in its natural nor its prepared state has it any resemblance to them. Little doubt is felt that/carrageen, if methodically collected and properly used, would help in augmenting the national food supply.

In the bays and creeks on the west coast of Scotland it grows profusely, but the labor of collecting it in marketable quantities is great. On the east coast it can be found in any of the inland bays and on the coast generally. It can be picked up on both sides of the Tay.

Buy War Savings Certificates.

THE ADMIRAL COMES ABOARD

A War-Time Visit of Inspection To a Ship of the British Navy.

The barge is seen approaching. The rich blue paint, polished brass, and white flag, with a red St. George's Cross neatly painted on the bows, speaks the word: "Admiral."

As it nears the chosen destroyer the bowman springs up smartly with boathook in hand. This is a signal. A burly petty-officer, stationed near the ladder, with a shrill pipe calls all hands on upper deck to attention. The officers also assume the same attitude. A few moments later the barge is alongside, and the admiral mounting the ladder, steps on board, immediately followed by his flag-lieutenant. The petty-officer again pipes loudly, all officers smartly salute, and the barge lays off.

The admiral himself is an imposing figure. His left breast is smothered with ribbons of honor, his sleeves and cap covered with sparkling gold lace and laurel leaves. He has, as a man, a strong personality, and one feels somewhat afraid.

Nowadays, despite what some people say, an admiral has no time to waste, and so he proceeds on the tour of inspection.

The officers, standing on the small quarter-deck, are one by one presented by their captain—himself no more than a lieutenant-commander.

This short ceremony over, the admiral makes his way for'ard, followed by the captain and first-lieutenant. With quick glances he takes in everything—the condition of guns, torpedoes, and smoke-making apparatus, asking here and there short, decisive questions that turn upon the fighting strength of the ship. The Navy loves paint and polish, but demands efficiency first.

Nor does the great man spurn the men's quarters. Taken over the the small mess-decks, he shows a keen interest. In the men's comforts, suggesting improvements here and there.

The tour is finished, and he is again coming aft. No time has been wasted, and the inspection has been most thorough. Evidently the ship has created a good impression, for though naturally, no compliments are passed, the V.A., as he is termed, looks pleased.

The barge is alongside, and the flag-lieutenant steps in.

As the admiral follows him over the side the burly petty-officer once more shrilly calls all hands to attention.

The barge is away, the bowman ships his boathook, and the final salute is piped.

FIGHTING FIGURES.

Which Country Is Spending the Most Money?

Which country of France, Great Britain, and Germany, is spending the most money? This is one of the questions answered in "German War Profits," where a table is given, based upon the expenditure during the first three years of warfare. Great Britain spent $557.33 per head of population during this period. France comes next, with $442.24, and Germany next, with $321.22.

Assuming Germany's financial burden to be 100, France has to bear 138, and Great Britain 174.

An American statistician, writing in the "Century Magazine," carries these figures a step or two further. He estimates that, if the countries could devote every cent of their income to the national debt, it would take France the longest time to pay it off. She would require three and one-third years to do it in. Germany would take over two years. Great Britain would take just under two. The United States could settle the job in two or three months.

It is impossible to calculate a nation's income with any degree of exactness, but the following may be taken as approximately correct: United States' income, $40,000,000,000; Great Britain's income, $12,500,000,000; Germany's income, $11,000,000,000; and France's income, $6,000,000,000.

When we consider the cost of the war in the bulk, and compare it with the above incomes, we enter truly bewildering realms. During the first three years of the war, the Central Empires spent roughly $38,000,000,000, or an average of $12,665,000,000 odd a year. The Allies, excluding the war outlay of Serbia, Roumania, Greece, Japan, and the United States—spent $66,350,000,000, averaging $22,250,000,000 odd a year!

The belligerents have a credit as well as a debit account, and Germany has temporarily gained a great deal of potential wealth.

Besides "movable booty," of which there is a vast quantity, she has secured possession of 212,000 square miles of territory in France, Belgium, Italy, Russia, Roumania, Serbia, and Montenegro. Before the war the value of these vast tracts was estimated at about $32,000,000,000, but probably this figure is too low.

Against this, the Allies have little more than the German colonies in Africa. These undoubtedly contain much potential wealth, but they do not compare commercially with the gains of the enemy.

Must Not Burn Straw Stacks.

Because of the serious situation developing in Alberta and Saskatchewan so far as feed for live stock is concerned, particularly for next winter, an order in council has been passed prohibiting the burning of all straw-stacks remaining over from last year in the three prairie provinces.

The Weekly Fashions

A real soldier suit for the small boy who envies his big brother. McCall Pattern No. 8506, Boy's Suit. In 4 sizes, 2 to 8 years. Price, 15 cents.

A charming dressy suit developed in satin for mid-season wear. The smartness is attained through its simplicity. McCall Pattern No. 8495, Ladies' Coat. In 7 sizes, 34 to 46 bust. No. 8518, Ladies' Four-Piece Skirt. In 7 sizes, 22 to 34 waist. Price, 20 cents each.

These patterns may be obtained from your local McCall dealer, or from the McCall Co., 70 Bond St., Toronto, Dept. W.

WITH THE FINGERS!

SAYS CORNS LIFT OUT WITHOUT ANY PAIN

Sore corns, hard corns, soft corns or any kind of a corn can shortly be lifted right out with the fingers if you will apply on the corn a few drops of freezone says a Cincinnati authority.

At little cost one can get a small bottle of freezone at any drug store, which will positively rid one's feet of every corn or callus without pain or soreness or the danger of infection.

This new drug is an ether compound, and dries the moment it is applied and does not inflame or even irritate the surrounding tissue. Just think! You can lift off your corns and calluses now without a bit of pain or soreness. If your druggist hasn't freezone he can easily get a small bottle for you from his wholesale drug house.

Possible Diving Depth.

The fact that oxygen when subjected to sufficient pressure, becomes poisonous to breathe, limits the depth to which a diver can go with safety. It has been found that 297 ft. below the surface of the water there is real danger for the diver from oxygen pressure, if he remains at that depth long. Investigation also shows that 1½ cubic ft. of air per minute is the minimum supply with which a man can breathe and work.

This is to certify that I have used MINARD'S LINIMENT in my family for years and consider it the best liniment on the market. I have found it excellent for horse flesh.

(Signed) W. S. PINEO

"Woodland," Middleton, N.S.

If examined under a glass the thread of a piece of khaki will be found to consist of a mixture of fine hairs, of bronze, light olive green, lavender and brown.

Minard's Liniment for sale everywhere.

Rule Britannia (Aerial).

When Britain faithfully at heaven's command
Arose in righteous wrath, her treaty to maintain,
Arose in righteous wrath, her treaty to maintain;
Forth went the mandate, the mandate that shall stand,
And guardian angels sang this strain:
Rule Britannia, Britannia rule the air;
Britons evermore on wings shall dare.

The spacious firmament in azure wave
Shall yield new paths of glory for her sons to share,
Shall yield new paths of glory for her sons to share;
In freeing nations, the War Lord did enslave;
Then sing right royally, the truth declare:
Rule Britannia, Britannia rule the air;
Britons evermore on wings shall dare.

Where lightning's gleam and thunders roll,
In aerial combat dauntless they shall victory attain,
In aerial combat dauntless, they shall victory attain;
Sound forth the mandate, encircling pole to pole,
Britons everywhere shall right maintain.
Rule Britannia, Britannia rule the air;
Britons evermore on wings shall dare.

GIRLS! WHITEN SKIN WITH LEMON JUICE

Make a beauty lotion for a few cents to remove tan, freckles, sallowness.

Your grocer has the lemons and any drug store or toilet counter will supply you with three ounces of orchard white for a few cents. Squeeze the juice of two fresh lemons into a bottle, then put in the orchard white and shake well. This makes a quarter pint of the very best lemon skin whitener and complexion beautifier known. Massage this fragrant, creamy lotion daily into the face, neck, arms and hands and just see how freckles, tan, sallowness, redness and roughness disappear and how smooth, soft and clear the skin becomes. Yes! It is harmless, and the beautiful results will surprise you.

The Bible Answers the Kaiser.

From the Book of Job, Chap. xviii.

5. Yea, the light of the wicked shall be put out, and the spark of his fire shall not shine.

11. Terors shall make him afraid on every side, and shall drive him to his feet.

12. His strength shall be hungerbitten, and destruction shall be ready at his side.

18. He shall be driven from light into darkness, and chased out of the world.

20. They that come after him shall be astonished at his day, as they that went before were affrighted.

Minard's Liniment Relieves Neuralgia.

A Royal V.A.D.

Princess Mary as a V.A.D. nurse has spent much time lately in learning the routine work at Devonshire House.

Princess Mary has received a thorough and comprehensive education, and as the Queen is a great believer in practical knowledge domestic arts are not neglected.

When the Princess was only a very small child she was taught how to sew, and she is quite an accomplished needlewoman. Cookery, too, finds a place in her studies, and the personal interest she takes in it was shown by her naive reply to the question as to what she liked cooking best. "Oh, something that I can eat myself afterwards," she said.

MONEY ORDERS.

The Ravages of Peach Canker.

In passing through the peach orchards of Niagara Peninsula, or elsewhere in Ontario where peaches are grown, one constantly meets with large, dark, gummy lesions on the trunks or limbs of the trees. This diseased condition of the branches was formerly given the name of "gummosis" on account of the gum exudations which are so regularly associated with it, but a closer study of its nature indicates that this disease clearly belongs to the type of affection known as canker, for which reason the latter name is now adopted, according to Mr. W. A. McCubbin, M.A., Assistant in charge of Fruit Diseases of the Dominion Plant Pathological Laboratory, St. Catharines, Ont., in bulletin No. 37, second series, entitled "Peach Canker," that can be had free on application to the Publications Branch, Department of Agriculture, Ottawa. Mr. McCubbin proceeds to give a description of the disease, some account of the extensive damage caused by it, its prevalence in the Niagara Peninsula, Lambton, Essex, and Kent, Ont., the nature of the trouble, and steps that should be taken to control and remedy the evil. The bulletin, which is both timely and exhaustive, contains six full pages of plates, showing exactly the progress of the canker, with explanatory notes of each stage.

Minard's Liniment Cures Dandruff.

The latest coal-field discovered is a tract of some 3,000 square miles in Nigeria.

ROYAL YEAST CAKES

Now that the new government standard flour is in general use, the quality of the yeast you use is more important than ever. Use Royal Yeast Cakes. Their quality is absolutely reliable. Bread made with Royal Yeast will keep fresh and moist longer than that made with any other.

TORONTO, CANADA
WINNIPEG MONTREAL

Foch's Faith.

Before the first battle of the Marne Ferdinand Foch said to one of his chaplains: "We are to make our supreme effort in arms to-morrow. Do you also make a supreme effort in prayer. All my trust is in God." After the victory he wrote to the Bishop of Cahors—"Monseigneur, do not thank me, but Him to whom victory alone belongs." Such is the spirit of the Commander-in-Chief of the Allied Armies whom we salute to-day.

Minard's Liniment Cures Burns, Etc.

De-Hydrating Saves Space.

By de-hydrating fruits and vegetables transportation costs are saved, storage reduced to a minimum, and less packing material is needed. There is a saving of 75 per cent. in tin plate, cases and shipping space.

GLAMIS

Mrs. J. K. McLennan, who spent five weeks in Toronto taking special treatment, is home again and is feeling some better.

Mr. McClung and family left last week for Sarnia in their car. They expect to visit Mrs. McClung's people in Michigan.

Mr. Arthur Cronin, of Palmerston, spent a few days with his sister, Miss Daisy, on the 10th of Kincardine.

Rev. J. B. McCauley, who was pastor here for four years, left on Friday to take over the charge in Goderich.

Mr. John L. MacIntyre, of Guelph, was visiting his aunt, Mrs. J. C. MacIntyre, on Monday.

Quite a number from here attended the school fair on the 6th of Bruce on Monday afternoon.

Mr. Jackson and son-in-law, of Markdale, accompanied by his brother from Dakota, are guests of his daughter, Mrs. Nesbitt.

Rev. Jas. McEwen, of Toronto, was the speaker in the Baptist church on Sunday. He will also occupy the pulpit next Sunday. Mr. McEwen is spending a few days this week visiting friends and relatives in his old home town, Tiverton.

Word came to Mr. and Mrs. Jas. McLennan that their son Torrance is in Manchester hospital suffering from a gunshot wound in the right arm.

Born—At Beamsville, to Mr. and Mrs. Lloyd Tafford (neg Gertrude McKeeman), a daughter—Mary McMillan.

Mr. Tom Patterson has sold his farm to Mr. Nelson Webster.

Word came that Mr. W. J. Graham who was visiting friends in Lindsay, is sick in the hospital there.

Children Cry
FOR FLETCHER'S
CASTORIA

PINKERTON

Miss Mertis and Master Frank Donnelly returned to Toronto this week to resume their studies at the University.

Miss Margaret McRae, our school teacher, spent Saturday and Sunday at her home in Port Elgin.

Mrs. (Rev.) Richardson and children returned to their home in Arthur after a visit to her parents, Rev. and Mrs. R. M. Gale.

Mr. Will Pinkerton and Miss Alice Pinkerton, of Michigan, spent Sunday at Mrs. A. Pinkerton's.

Mrs. Smith and child, of Toronto, are visiting her parents, Mr. and Mrs. Archie Campbell.

The Red Cross at their regular meeting packed and shipped: Soldiers' comforts—123 pairs socks, 33 flannel shirts, 78 personal property bags, 19 trench candles. Red Cross supplies—25 suits pyjamas, 7 pillows, 1 pkg. old linen.

The Red Cross Society wish to thank Mr. Wm. Alexander for his generous donation of $100.

EBENEZER

A number from here attended the Paisley Fair last Wednesday, and report a good time.

Miss Pearl Quigley is visiting friends in Sullivan.

Mrs. Geo. Grant has returned from a visit to Peterboro.

Mr. Eph Grant has been granted another month's extension of leave. We are all glad to have Eph with us for a while longer.

Mr D Potts is renovating his house this fall.

The many friends of Pte. Russell McFadden hope that his reported condition may not be serious.

Mr. and Mrs. Geo. Grant received a cable from their son, L.-Corp. G. L. Grant, saying that he had got the sad news of his brother Dick's death.

Miss Gertie McFadden is visiting friends in Toronto.

Rev. Mr. Walker, of Paisley, occupied the pulpit here a week ago Sunday and gave us a splendid sermon on "Missionary work in Japan."

We were pleased to learn that Dunblane school was awarded first prize at the Port Elgin school fair last Tuesday.

The Misses Kirkland, of Montreal, are visitors at the home of Mr. Robt. Kirkland.

Mrs. Alex Anderson, of Chesley, and her aunt from Chicago, spent a few days with the former's brother, Mr. C. A. Thomas.

The Rally Day service on Sunday was a splendid success. The offering amounted to over $6.

EDEN GROVE

Miss E. Morton, a licensed evangelist from Carlton St. Methodist church, Toronto, commenced a series of special services in the Methodist church here on Sunday last. Everybody is invited to hear this gifted lady preacher. Services each evening in the week commencing at 8 o'clock, also on Sunday next at 11 a.m. and 7.30 p.m.

Mrs. Robert Alexander visited friends near Paisley on Sunday.

Miss Olive Watson and Miss Spence motored to Tara on Saturday and visited friends over the week end.

Miss Jeanie Killen is visiting friends in Hanover.

Mr. Neil Thompson, of Walkerton, spent the week end with his family.

SECOND CON. ELDERSLIE

Thos. Lamont, who worked for the summer with his brother-in-law, Geo. Addison, has gone to Toronto to take a position in a factory.

Henry Greaves has been visiting in Ottawa at the home of his sister, Mrs. Klock.

Edwin Priess is engaged with W. J. Allen for the coming year.

Arthur Lillico, of Toronto, visited his parents here last week.

Messrs. Geo. Maxwell and Jas. Vancise have invested in Ford cars.

A large number from this con. attended Paisley and Hanover Fairs.

Messrs. T. Nicoll and S. Patterson have completed the job of part re-planking the bridge at lot 20, and have also built a new culvert on 20 sideline.

Mr. and Mrs. J. B. Allen, Mr. and Mrs. W. E. Lubbock, Miss M. Burrell and Mr. Jas Allen autoed to Southampton and Chippewa Hill and also took in the sights at Port Elgin fair.

Mrs. A. Green is recovering from an accident she met with a couple of weeks ago, when the horse she was driving took fright at a jigger on the railroad near the bridge. The buggy upset as it caught a telephone pole, and all the occupants were thrown out. It was fortunate none were more seriously injured than they were.

Mrs. (Dr.) Struthers and little son Gilchrist visited Ottawa friends recently.

The children from S. S. No. 12 won second place in the drill at the Vesta school fair. A number from this con. also secured prizes in various classes for their handiwork.

The 2nd con. S. S. has organized an adult Bible class with the following officers: Pres., Miss M. Burrell; Secy., T. A. Patterson; Treas., Miss Maude Dawson; teacher, C. J. Halliday; Lookout Com., Misses Mabel Dawson, Jessie Young and Smith Thompson.

Andrew Green is laid up with an attack of mumps.

W. E. Patterson, jr., and Mr. and Mrs. E. Pfohl and family motored to Neustadt and spent Sunday with friends there.

W. E. Patterson is suffering from lumbago pains, but he is trying to do his bit at turning the sod.

Mrs. J. Tolloch, of 8th con. Brant, visited last week at the home of her daughter, Mrs. A. McGregor.

CARGILL

Mrs. W. Russell and Jean are home from a visit to friends in Edmonton, Alta.

Mrs. Rosseau spent the week end with friends in St. Catherines.

Mr. Geo. Welsford is in Sarnia.

Mrs W. J. Loughleen is back from a visit to friends in Norwich and Woodstock.

Rally Day was observed in the Presbyterian Sunday school last Sunday, the Methodist Sunday school visiting with them for the service.

Mr. and Mrs. John Sirrs, Mr. Armond and Miss Gertie Sirrs and a friend of Toronto, spent Sunday at Mr. Geo. Sirrs'.

Mr. and Mrs. H. Young attended the memorial service for Lieut. Brockelbank at Arthur on Sunday. The late lieutenant was an officer in the 71st Batt. and companion of the late Lieut. Young who was killed at the Somme a year or so ago.

Mr. Lou Cliff is home from Oshawa, being on the sick list.

Mr. Rosseau is giving up the hotel business here and going to St. Catherines, where he has accepted a position with the G.N.W. Tel. Co.

Mrs. Grainger received a cable on Saturday notifying her that the wound received by her son, Driver W. Grainger, on the 6th was not serious.

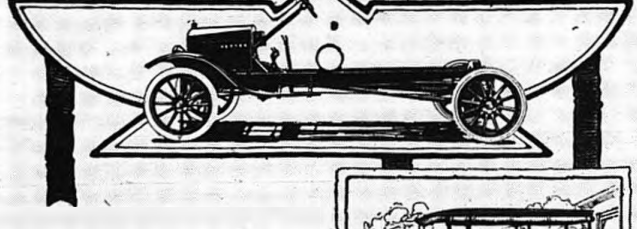
Bruce phone, Line 52, No. 12. Port Elgin R.R. 1

CHESLEY

There has been a chapter of accidents in Chesley and locality in the past few weeks, and none more distressing than that which befell Andrew, son of the late John Hetherington, on Monday at 10.30 a.m., when the chopper burst and a large piece of the plate weighing about 50 lbs., struck Andrew, who stood squarely in its path, badly smashing his right leg and inflicting other serious injuries. The young man was carried home on a stretcher, and lingered till two o'clock in the afternoon when he passed away. The piece of steel must have passed close to Pete Kirkwood who was handling a truck at the front door, for it passed through the top of a buggy at the door, broke a board at the scale fence and dropped in the yard. Another piece went through the south wall, and others were scattered throughout the mill. Andrew was a young man well thought of around town and had just started work in the mill the morning he was killed. The cause of the accident is supposed to have been from the high speed of the chopper, when it ran empty for a short time after the grain was chopped, or from a defect in the plate. Mrs. Hetherington is having to undergo a great deal of sorrow these days and public sympathy goes out strongly to her and the family. Mr. Hetherington passed away a year ago in March, her son David was killed in action in France in January, and now comes this terrible accident which takes another son.



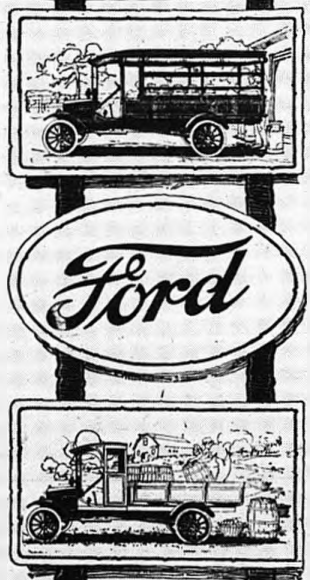
Last Thursday while assisting at the threshing of Henry Janke, a terrible accident happened to Walter, the 17-year-old son of Mr. and Mrs. Albert Sulke, of 12th con. Sullivan, when he fell through the scaffold into the cylinder of the separator. There was so much straw came down with the young man that those nearest the cylinder did not notice that Walter's leg was in the cylinder until the impact of the bone between the teeth of the cylinder and the concave threw off the belt and stopped the machine. It was necessary to take out the cylinder in order to set the young man's leg free. It was badly mutilated, and three doctors who were called in amputated the limb about four inches from the body. The young man helped to extricate his leg from the machine and when the doctors were ready to take his leg off he told them to give him lots of anesthetic so that he would not feel the pain. He stood the double shock splendidly, and being a young man in perfect health and of sound constitution, his medical attendants think his chances of pulling through are splendid. The opening through which he fell was about four feet wide. Had there been sufficient straw over it it would have supported his weight. Too often the scaffolding in barns has been the cause of accidents by the necessary safety first precautions not being observed.—Enterprise

TARA

The 60th anniversary of Knox church was celebrated on Sunday and Monday, the occasion being the formal opening of the new Sunday school rooms which have just been completed at a cost of $2,100, exclusive of gratis work done.

The residence of Mr. Harvey Merriam on River Street had a narrow escape from being burned yesterday afternoon. On returning home from school his two little boys endeavored to demonstrate to their mum how to work the electric iron. Unfortunately they left the iron connected and went outside. The iron naturally got very hot and ignited the box it was sitting on, also some clothes and two boards of the kitchen table. When Mrs. Merriam returned home about half an hour later the house was full of smoke and she at once gave the alarm, and in a few minutes help arrived and the fire was extinguished. This should be a warning to citizens using an electric iron to make sure that their iron is disconnected when not in use.

A member of the military police struck town on Saturday and caused considerable confusion in town among the young men, especially those who neglected to carry their registration certificates or exemption papers. A young man, Mr. Frank Holmes, was taken into custody for having two exemption papers, one as fireman on the C.P.R. and one as farmer. He was released on Monday and his case is being referred to the officials at London. However, we would add that Mr. Holmes was not trying to evade the law and he is a young man highly respected in the community. The officer also charged Mr. Norman Brown with failure to register under the nineteen-year-old class. No doubt through carelessness he failed to register, but it is very unfortunate, as the law is very strict in regard to registering and the authorities are very likely to impose a fine in his case. The visit of the police to Tara will be a warning for citizens to carry their registration and exemption certificates at all times.—Leader.



Saves Money
For The Farmer

PRICES of farm products have reached a high level. The farmer can take *full* advantage of this situation only by adding to his equipment of time and labor-saving machinery. Time and labor are money. When time and labor are saved, money is saved.

Time and labor-saving devices for working the land do not produce complete results in themselves. The farmer must have rapid and dependable means of placing his products on the market.

The Ford One-Ton Truck will make trips to town so much more quickly than the horse that you will have many extra hours of time to devote to productive work. A large number of farmers have proven the Ford One-Ton Truck to be a time and money-saver—have you?

Our Growing List of Fallen Heroes

PTE. HOWARD GRANSDEN

A Greenock Tp. boy, who has made the supreme sacrifice. Son of the late George Gransden and Mrs. Gransden. Enlisted in 1915, at the age of 19, with the 34th Battalion. A brother, Austin Gransden, enlisted early in the war and has been at the front for over three years. The family lived on Greenock hill, Paisley, for a number of years following the father's death.

Lt. And. E. Babcock, who had only recently returned to France after completing the officers' course in England, is among the casualties. He was admitted to 73 General Hospital on Oct. 16th, suffering from gunshot wound in left leg.

Pte. Russell Bruce McGregor, previously reported seriously ill, is now officially reported dangerously ill. He is a son of Mr. Rich. T. McGregor, Bruce Tp.

VICTORY LOAN, 1918

County of Bruce Headquarters,
Walkerton, Ont., Oct. 16

Dear Sir—In our visit throughout the county last week we were asked the cost of floating the Victory Loan of 1917. We have submitted the matter to headquarters at Toronto, and have received the following reply:

Re Cost of Last Loan

"Answering your inquiry in this connection, I beg to say that commissions paid, remuneration to brokers and organization expenses amounted to .54; newspaper work and other publicity, .10—total .64. This is the cheapest loan that ever was floated by the Dominion of Canada."

Yours very truly,
C. E. A. Gohlman,
Divisional Organizer

We may state that although Victory Bond 1917 of value of $100 were sold $98.87, a discount of $1.13 on the dollar, there seems to be an impression amongst some that this discount is a part of the cost of floating the loan, but it has nothing to do with it. It is simply a discount on the principal sum of the Bond, the same as is often done in the sale of municipal bonds, and the purchaser does not reap this benefit until the bond is paid at maturity unless the bond increases in value meantime.

Yours for the Victory Loan, 1918.
David Robertson, Co. Chairman — Geo. D. MacKay, Co. Secretary

—For Sale—Large sized Buck base burner, in A1 shape. Balmoral hotel.

Vaccine for Influenza

The Provincial Board of Health is preparing a vaccine preventative for influenza, and Dr. Gage has wired for a supply.

—Found—A pair of auto tires. Owner may have same upon proving property and paying for this adv. Apply to Ed. Fraser, Elora Road north, Paisley P. O., R. R. No. 3.

—Apples for Sale—Winter apples $1 per barrel, also fallen apples at 50c. per bbl., to be picked by the buyers. Apply to D. B. McKinnon, Paisley, O'Hagan farm.

—Found—Between Walkerton and Paisley, a tweed overcoat. Owner may have same upon proving property and paying for this local. Apply at Balmoral hotel.

—Flour, Feed, Seeds, Grain—We keep a full stock of Five Roses and Stark's high grade flours, bran, shorts, Royal Purple calf meal, poultry foods and tonics. Always in the market for coarse grains. Morning delivery only. W. Stark.

—We show many fashionable fabrics, and there isn't the slightest doubt that you could easily and quickly find something that you would be glad to call yours. There are other reasons than variety, too. Price is one of them. And price is a point that prospective buyers cannot know too much about. A good suit costs $25.00 here. From that dollar by dollar the prices advance, and up dollar by dollar also go the values. Glad to show you any time. C. B. Irwin, Tailor.

Victory Bond Campaign Opens Next Monday

The Advocate has received a despatch stating that the Dominion Executive for the Victory Bond campaign has unanimously decided, after receiving reports from all provinces, to proceed with the campaign according to schedule, commencing next Monday. It is pointed out that there is immediate need for money, as the war goes on regardless of influenza.

—Put a punch in your patriotism: Buy Victory Bonds.

An Apple Butter Adventure

Most of people probably have the idea that there is no excitement in the apple butter game, and that the procuring of a supply for winter merely involves a couple of days spent industriously picking and peeling apples, and then carting them to and from the factory. In the majority of cases this may be so. We have heard of an instance, however, in which this humdrum procedure was very much varied, providing more incidents than a day's fishing with a flagon or meeting a bear in a berry patch. It was a farmer near Paisley who concluded to conserve the fall apple crop. Twenty-seven bags of juicy fruit were gathered and loaded on the wagon, together with a quantity of peeled and cut apples. At about 3 a.m. next morning the farmer rose from his bed after rubbing the sleep from his eyes and, so that others of the household would not be disturbed from their slumbers, he quietly slipped out to make a start for town. Out of further consideration for the sleepers in his own and neighboring homes he decided to back the wagon out of the barn before hitching the team. But in the uncertain light of that hour this move was not easily carried out. The rig took a perverse twist, went over the side of the gangway and turned turtle. The accident made it necessary to rouse the boys and have them lend their strong young arms to righting the agricultural boat and salvaging the cargo. There were interludes of family worship during the operation, and eventually the outfit was set going, arriving in due time at the factory, where the process of reducing the apples to butter was completed—and it proved to be some reduction, compounded seemingly. From a heaped-on load it was compressed and boiled down so that it filled just twenty inches in the bottom of a milk can, besides reducing the cash in the farmer's pocket, by battery extraction, to the extent of $8.00. It was one great day in the apple butter business. Now, we don't want to hear any reader say, "Well, it would have been better not to have mentioned it." It is about the funniest thing we've heard tell of in the settlement for some time, and couldn't refrain from making an item of it.

—Stop! Look! Loosen! Buy Victory Bonds.

—Mr. Jas. McGill has returned from a trip to the west.

—The Victory Loan drive starts in Canada on Monday next.

—Mr. and Mrs. J. B. Fleming are up from Toronto.

—Misses Reta and Janet Donaldson have been visiting friends in Walkerton.

—Mr. Donald Elwes, who has been sailing for some months, is home for a few days.

—Miss Ina Allen, who has been on the staff of a bank in Mount Forest, is home on a few weeks' sick leave.

—Mr. J. McNeill, of Toronto, visited at Mr. J. A. McNeill's at Thanksgiving. Mr. McNeill is a member of the police force, having come to Toronto from Glasgow, Scotland.

—Mr. W. J. Ellis, who is employed in a Toronto munition works, came up last week to look after his family when they took the influenza, and was home only a day or two when he also became a patient.

—Mr. Alex Carr has rented his farm, lot 11, con. 15, Greenock, to Councillor Thos. Sawyer, who takes possession next month. Mr. Carr is having a clearing sale on Oct. 30th. He intends removing to Walkerton.

—Among the soldiers spending leave in town is Robt. Murdoch, of the R.A.F., who is visiting at the home of the Misses Miller, Albert St. His home is at Pilot Mound, Man., and he is a grandson of the late John Murdoch, a former editor of The Advocate.

—Mr. J. J. Bradley, of 4th Elderslie, having again been offered his old position in Toronto as head janitor at the University buildings, has decided to accept, and will leave for the city with Mrs. Bradley and daughter Gladys about Nov. 1st. Mr. Bradley is not selling his farm, and may spend part of the summer there.

Knox W. M. S.

The Thankoffering meeting of the Knox Church W.M.S. was held on the afternoon of Tuesday, Oct. 15th. Miss McLaren, of St. Mary's, a lady who spent many years at missionary work among the Indians of our northwest, was the speaker, and made an excellent address relative to the home mission field. A special event of the meeting was the presentation of a life membership from the Knox church branch to the baby son of Dr. and Mrs. Struthers (nee Margaret Walks) of Honan, China. The presentation was made by Jean Little, and Mrs. Struthers made an appreciative reply.

Epidemic Abating

All critical cases of influenza and pneumonia have now passed the danger stage, in fact most of the patients are out and around again. While the contagion continues to spread, there are not nearly so many as last week, and none of the new cases are threatening to life. Experience has taught the public that the trouble is not to be trifled with, and all who become affected are taking care of themselves from the onset. It is not likely that schools or churches will be opened for another week, when it is expected that the epidemic will be past.

Home From the War

Pte. James Watt, who was one of ten soldiers given a send-off in Paisley town hall on the eve of their departure for training camp just four years ago this month, arrived home from overseas a few days ago, and is at the home of his brother, Mr. Hugh Watt, Geddie St. Pte. Watt has experienced a good deal of hard service, having put in fourteen months in the trenches, and later served in a work battalion. He is pretty well shaken up, both his physical and nervous system having suffered from the strain and shock of war. His ankle was badly injured in a motor truck accident, and after being in hospital he was booked for the valid list to be sent home, but had wait for five months for transpo tion. He expects to receive his charge. After spending a doing his bit in the army he is tainly entitled to a return to the less strenuous and dangerous life of a civilian.

—Idle dollars are traitor dollars! Buy Victory Bonds.

Publisher Should Apologize

The "Flu" has certainly been very prevalent in Paisley, and the germs are working overtime in chasing up every citizen who is not in point of health invulnerable to its attack. Hundreds have suffered for a few days and recovered, but there has been only one death from that disease within the limits of Paisley, and two others in the country immediately surrounding. There was really no grounds for the following greatly exaggerated report published by the Walkerton Herald and Times, and the publisher should apologize for his rashness in accepting such statements without having them verified:

"Miss Lillian Shelton of Walkerton, who has been training for a nurse at Fergus, is attending a critical case in Paisley, where seven have already died from the "Flu." A report, which reached town yesterday stated that the epidemic was so bad in Paisley that they were seriously considering closing many of the business places."

For Men Must Work

Priscilla Sees Her Vexation Through the Eyes of Fourteen-year-old Jimmy—and Changes Her Mind

Montanye Perry.

"It's such a wonderful day! And there are so few summer days left! Autumn is trying to steal a march on us, even now!"

Leonard's eyes followed Priscilla's slim finger, pointing accusingly at a crimson branch flung out against the green forest which marched down to meet the western border of the lake.

"The sumachs turn red first of all," she said. "Next, the maples get scarlet and goldy and the little white poplars doll themselves up in the daintiest, faintest yellow. Then the oaks put on their purple russet glory like the kings of the forest they are. And in just a little while, the glory's all gone and there's nothing but dead, crackly leaves and howling winds and bleak November fogs! And you'll be 'way off in the city and I'll be here all alone. You might stay with me while you have a chance!"

He turned to the girl with an impulsive gesture, placing his hands on her shoulders and looking down at her with eyes which held a trace of reproach beneath their tenderness.

"Sweetheart, we talked this all out before. What can I do? I promised to deliver the score of the opera on the first day of October. Johannsen will put it in rehearsal then and bring it out after the holidays. I can't fail him. Think what it means!"

"But this is only the first week in September. And one day isn't much and—and how blue the sky is!"

The sky was no bluer than Priscilla's eyes, the sunshine no more golden than the waves of her hair. The ghost of a smile trembled at the corners of her pouting lips. Leonard would yield, of course. Had he not, all summer long, first demurred and then thrown scruples aside, to play with her?

The picnic luncheon was all packed; the canoe was rocking impatiently on the edge of the lake. "We're wasting a lot of time," she ventured.

"Just what I think!" What was this new, amazing firmness in Leonard's tone? She stared, bewildered, at a new Leonard—a Leonard with grave eyes, unsmiling lips and a square, very square, jaw! "It's my own fault that you think me an idler. I came up here three months ago to do this work. I fell in love with you the instant your golden head bobbed into sight under my window and I've neglected my work like a weak idiot. Now the time has come when I've simply got to get on my job. I can't go for a picnic to-day nor to-morrow nor any day for three weeks. But we can have all the evenings together and there's a glorious moon now."

"Three weeks! Then, in just a day or two after that, you'll be gone!" There was dismay, incredulity, rising resentment in her tone. Then, as his steadfast gaze did not melt, her anger came forth stormily.

"All right! If you want to shut yourself away from me, you may. You care more for your old fiddle than you do for me! No, I will not go canoeing this evening. If you think I am going to take the odds and ends of time you condescend to give me, you are mistaken!"

She whirled across the piazza and ran down the pebbled path toward the lake, bright head held high, blue eyes filled with the angry tears she would not let him see. He took an impulsive step, then paused, shook his head and stepped through the open door into the room where his violin lay in the midst of a litter of manuscript music. His eyes were troubled yet a tender, whimsical smile touched his lips.

"Dear little spitfire! She'll think it out," he whispered to the old brown violin. A moment later its voice floated out in a gay little air, and brain and soul and sensitive nerves were absorbed in composition.

The gayety of the melody, as it frolicked down to her, stirred Priscilla's soul to desperation. She was broken-hearted and he played jigs! Sitting on the green bank, she began to sob stormily.

"For the love o' Pete! 'Sangbody dead?" Jimmy, arrayed in khaki, stood gaping down at her questioningly.

"What's the matter?" he probed relentlessly. "Hurt yourself? Torn your dress?" He searched his mind vaguely for other causes of feminine woe, wavered, caught at an inspiration. "Burn the cake you was bakin' for your lunch basket?"

"No. It turned out beautifully, Jimmy!" Priscilla had her inspiration now. "Do you want to go a-picnicking with me in the canoe and stay all day? We could take books to read and you could fish. I have cold chicken and tarts and the chocolate cake all packed for our luncheon!"

Jimmy's eyes widened. "Ain't Mr. Fielden goin'?" His question went home.

"Not to-day." Priscilla's tone was cool as snow. "He's very busy. He can't leave his work."

Jimmy's lips opened and closed again silently. After all, fourteen-year-old masculinity has its intuitions and its shy, unvoiced sympathies. "Sure, I'll go," was all he said.

The canoe slipped through the waves happily. The sunshine danced on the blueness of the waters happily. Jimmy in the bow paddled and whistled happily. Priscilla in the stern paddled and reflected unhappily. The dance of the sunshine was inviting.

(To be continued.)

Food Control Corner

An Appalling Situation.

That more people will die in Russia during the coming winter than have died there since the war began was one of the startling statements made by Food Controller Thomson in an address at Montreal. These deaths will be due to food shortage. Nor will Russia be the only sufferer. It has been necessary, Mr. Thomson said, to feed fish to cattle in the Scandinavian countries in order to keep them alive, and Holland and Denmark have been practically stripped of live stock because of feed shortage.

For next year, even if the end of the war does appear to be in sight, conditions will be little better. Because of general demoralization of the country less than one-third of the usual area will be cultivated in Russia in 1919, and before the war, Russia was the world's largest exporter of wheat.

As one means of partially relieving the situation, Mr. Thomson hopes to induce two hundred towns and cities in Canada to undertake the cultivation of 2,000 acres of idle subdivisions each. A start has already been made in this direction at Montreal, and with the help of tractors, 2,000 acres of idle land near that city will be broken up before snow flies.

Your job is to grub stake this world. That is what you are up against, and it is quite a job. You can do it. You have done it for four years, and what was done then can be duplicated.

There is no such thing as a food surplus in this world. The universe is living from hand to mouth as probably never before in its history.

The stocks of food have been wiped out, and the producers have been taken from the land in large numbers. The call to those remaining is much louder than ever before. It is more insistent, and its demands must be heeded.

The full dinner pail is but a memory for millions on this earth. It can be filled sufficiently to keep life going, but it can only be filled by you. It can't be done in Europe. It must be done here.

Not until the Hun is hammered into submission, not until peace is declared, and commerce resumes its wonted way can we let up for a minute.

Get the tractors on the land. Keep them working day and night. Turn over more acres of land.

This can be done. You have the patriotism, the courage, and the heroism to do it.

Plough.

GROUND SHEETS

Making Something Out of Nothing is Tommy's Specialty.

If the rifle is a soldiers best friend, the ground-sheet is a good second. He puts it to a variety of uses never contemplated by the designer.

On the march, when the rain begins to fall, we wait anxiously for the order, "Ground sheets on!" In a moment the troops are sheltered under excellent waterproof capes, made by throwing the sheet over the shoulders. The recruit has to hold his tie place, the trained man has a bootlace in his pocket, and ties up adjacent eyelets to keep the thing in place, while the old soldier has a cunning arrangement already fixed so that he has but to pull a string, and his cape is so fastened that no wind can blow the flaps apart.

You halt for the night. Your officer, "Field Service Pocket-book" in hand, instructs you as to the making of shelters with a ground-sheet and two sticks. While he is taking your comrade has taken your sheet and his own and with two sticks and twelve feet of string he has made a neat little tent, with ample room for two inside. Next door four men have fixed up a wonderful shelter with three ground sheets—the spare sheet making a carpet.

"Blooming marquee!" you shout, expressing your confidence in your own tent.

"Lot of small property round here!" they remark to the stars.

If you are a slim man you can make a beautiful sleeping bag by lacing up the ground-sheet all round, leaving the string loose in the middle. Into the gap you crawl, your blanket tightly wrapped round you. When the string is drawn tight you are safe from frost or rain, but as helpless as a log. I once demonstrated this to an admiring group, and when I pulled the string tight there was a wild yell "Hi! here's old E—— tied up like a chrysalis! Roll him about!" With great joy they rolled me right round a large paddock and down a steep bank into a small stream. Nearly all the battalion turned up next day for a further demonstration, but I had turned sociable, and got a share in a "marquee."

ANTIQUITY OF BRITISH ARMY

Royal Scots Claim Descent From Pontius Pilate's Bodyguard.

Owing to the fact that previous to August, 1914, the "contemptible little" British Army was comparatively a small affair, never designed for aggressive purposes, the inhabitants of other countries are apt nowadays always to think of the huge "new" British armies created by the exigencies of the war to meet organized aggression upon an unparalleled scale, and in consequence to overlook the great antiquity and wonderful traditions of the British Army. This is exemplified notably in the instance of the First Regiment of the Line, the Royal Scots, which now boasts enough battalions of its own to make a small army in itself and was specially mentioned by Field Marshal Sir Douglas Haig for gallantry round Mount Kemmel and other places during the late German offensive.

The Royal Scots (Lothian Regiment) go so far back into antiquity that it is claimed that they originated from Pontius Pilate's bodyguard when he was Roman Governor in the north subsequent to the Crucifixion; and at Colinton in Midlothian, which is said to have been his headquarters, there still stands "Pontius Pilate's Tree," apocryphal or otherwise. Many times in their full and varied history of campaigning they have fought against the Germans and with the French, so that at Mont Kemmel and other places in the present war it has only been a case of history repeating itself, in the seventeenth century they spent many years on the Continent, and, after fighting with Swaden under Gustavus Adolphus against the Germans until his death, forty-five years they fought in the French service as "Le Regiment du Douglas." During that time a dispute arose with the officers of the Picardy Regiment about the age of their respective corps. The Scots claimed their descent from Pontius Pilate's bodyguard; but the Picardy officers declared that they were actually on duty upon the night of the Crucifixion itself. Whereupon the colonel of the "Regiment du Douglas" broke in, scoring the honors:—"If we had been on guard, we should not have slept at our posts."

About the House

Fireless Cookers Will Save Your Fuel Supply.

Few of us were not sufferers from lack of fuel last winter, and we are likely to have even greater troubles this winter. It behooves us, then, to save fuel in every way we can against the time when we will need it, to keep us warm as well as for cooking. One of the best ways to conserve is by using a fireless cooker.

Of course, the ideal situation is reached when you can afford to buy one of the newest electric cookers, with ventilating "system" so that all odors of cooking are removed. This is the only sort of cooker, that is, the one with the ventilators, in which you can cook vegetables satisfactorily, as vegetables should always be cooked with the cover loose enough to allow odors to escape with the steam. The light cooker, whether home-made or bought in the store, does not give good results. Potatoes cooked in it are soggy and black, and strong flavored vegetables, of course, are not appealing.

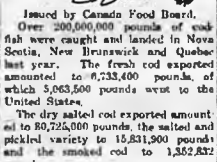
But even the home-made fireless cooker and the older style ones, can save you many times their cost. If you use them for cooking foods which require long slow cooking. Tough fowls, soup meats and boiling pieces may all be started on the stove and finished slowly in the cooker with much better results than a stove would get, for in the cooker no steam escapes and the water can not boil away and demand refilling of the kettle. Oatmeal may be started in the cooker and left to cook all night. Most cookers will keep it hot enough to serve in the morning, but if they should not it takes only five or ten minutes to reheat it, and you know the cereal is cooked sufficiently and without undue waste of heat. Beans may be cooked for several hours in the cooker, than allowed an hour in the oven. Some housekeepers even use a fireless cooker to cook jams and conserves which they are afraid of burning on the stove. If you have one, numerous uses will suggest themselves to you. Anything which needs to be cooked long and slowly, and which does not need to be ventilated as it cooks, may be cooked in the cooker. If you are using a home-made one, be sure that your food is boiling hot before you put it in the cooker. Ten minutes is none too long for meat to boil, and five minutes for cereals.

If you have nothing better, a syrup pail or a honey pail with tight fitting cover will do for a dish to cook in. Of course, a granite or porcelain pail is better, as you will need to be very careful to dry the tin every time it is used to keep it from rusting. But just now when we are being asked to use everything we have in place of buying new, the syrup pails do nicely. The idea of the fireless cooker is simply to keep in the heat. Many women are using a lard pail as a fireless cooker. The pail should be filled with hay or excelsior, packed tightly, and with a hole made in the middle just large enough to hold the dish you use to cook the food in. Make a cushion to fit the top of the can perfectly and stuff it with hay or excelsior. Start your food cooking, put it in the "heat" in the lard pail container, cover snugly with the cushion, put on the pail cover, and let the food cook itself.

The length of time necessary to cook the food will depend so largely on the care you use in making the cooker and in getting the food started, that it will be necessary for you to experiment. The tighter your pillows and covers fit, the more heat you retain and the less time will be needed for cooking. All day is none too long to cook soup bones, and five of six hours for tough meat in the home-made cooker. If the food gets cold it can be taken out, reheated and set to cooking again without any harm.

Do not expect these cookers to perform miracles. They are a great convenience, and a great saver of fuel, but they are not as satisfactory for things which require quick, direct heat as the stove. Neither can you cook vegetables nicely in them, that is in the home-made ones, and in the patented ones having no ventilators.

Housework by the Clock.



"You seem to have so much time for other things besides the care of your house," said one woman wistfully to another.

"But I didn't used to have, my dear," answered the other. "It's only since the war that I've become so efficient as to do my work in two-thirds the time that it formerly took me. Some one asked me to help in war work and I said that I hadn't the time. Shortly afterward I learned that one of my neighbors who has three children was giving two mornings a week to Red Cross work, and yet I, with only one child, was a slacker.

"Yet I had told the truth. I really had very little time indeed for outside work. To shorten my story, I called on my neighbor and talked the matter over with her. She advised me to work by the clock, to allow so much time for the doing of a certain task and to do it in that time or less. 'And be sure to wear a wrist watch,' she said. The constant presence of the time will prod you on and keep you from being a laggard.'

"It was a small 'service watch' that she wore and she said that the very sight of its military face reminded her of her duty to the Government and to the men on the other side, and kept her from wasting precious minutes. So there is the secret of the time that both she and I have to give for the great cause."

Canada's Cod Resources.

Issued by Canada Food Board.

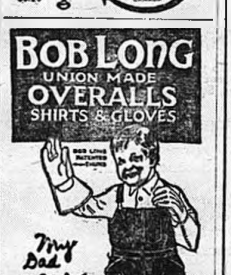
Over 200,000,000 pounds of cod fish were caught and landed in Nova Scotia, New Brunswick and Quebec last year. The fresh cod exported amounted to 6,733,400 pounds, of which 5,063,500 pounds went to the United States.

The dry salted cod exported amounted to 80,725,000 pounds, the salted and pickled variety to 15,831,900 pounds and the smoked cod to 1,352,832 pounds.

It is estimated that somewhere between 90,000,000 and 100,000,000 pounds of cod should be available for export this year if shipped fresh or frozen, and between 50,000,000 and 55,000,000 pounds if cured.

Food will win the war; don't waste it.

Left-overs are made palatable and nourishing by the addition of a small quantity of **BOVRIL**



Tommy Athins' Hardships.

"They put me in barracks," wrote a young soldier to his parents. "They took away my clothes and put me in khaki. They gave me a gun and a blanket, a short-handled shovel and a pick, and enough tin dishes to stock a kitchen. They took away my name, and made me No. 575. They took me to a church where I'd never been before, and they made me listen to a sermon for forty minutes. Then the parson said: 'No. 575, Art thou weary, art thou languid?' and I got seven days in the guardhouse because I said I certainly was."

Cornmeal, boiled rice and barley flour make excellent griddle cakes.

$2.75 and $3.25

New Remedy for Rose Mildew.

An English experimenter reports that spraying with sulphuric acid, one part in fifteen hundred parts of water, is a certain cure for mildew on roses. The proportion is eighty drops in a gallon of water.

Ingram's Velvcola Souverain Face Powder

It is every woman's duty to appear as attractive as possible. So when your skin begins to look oily and shiny just apply a light touch of Ingram's Velvcola Souverain Face Powder. It makes your complexion smooth and clear, hides the small blemishes, and stays on until washed off. It is so fine in texture that you can scarcely see it. (50c)

For the sake of a fresh healthful complexion use Ingram's Milkweed Cream. It cleanses the clogged pores, soothes and softens the skin tissue, and keeps the complexion healthful because of its therapeutic properties. Two sizes, 50c. and $1.00. Your druggist can show you a complete line of Ingram's toilet aids, including Zodenta for the teeth, 25c.

A Picture With Each Purchase

Each time you buy a package of Ingram's Toilet Soap or requisite from druggist will give you, without charge, a large portrait of world-famed motion picture actress. Each time you get a different portrait so you make a collection for your home. Ask your druggist.

The Color of Virtue.

"I am ashamed and blush." Ezra 16. 63.

"Neither could they blush." Jer. vi. 15.

"Did you ever hear the story of how the Virginian creeper got its blush?" asks a writer. "The story is only a legend, but it is very beautiful and worth repeating.

"It tells that when the plants and flowers were first created they were all green; but God sent down on earth one of His angels, and told him to give each flower a color of its own. So the angel flew busily over the earth, and each flower he touched turned some lovely shade. He gave the crocus its gold, and the violet its purple, and the rose its red, and the poppy its scarlet, the forget-me-not its blue, and the snowdrop its white. He was a very busy angel. I assure you, as he flew over hill and dale and wood and field painting all the flowers he saw.

"But alas! he missed a very small creeper lying hidden in the shadow of a great wall. It felt dreadfully sad to think that the angel had passed it over, and for a little while it lay on the ground and wept. But after a time it cheered up and said to itself, 'Well, though I may not be beautiful I can always be useful. I'll set to work and cover the great bare wall.' So it climbed and spread, and climbed and spread, till the wall had a magnificent covering of green.

"In autumn the angel returned to earth to see how his flowers were looking, and, as he flew, his eye lit upon this wonderful green thing spreading all over the wall. Though it had no color but green, it looked so glad and busy that the angel stopped to admire it and praise it for all it had so bravely done. And when the angel spoke, the Virginian creeper felt so pleased to think what it had done was good in the angel's sight that it blushed a glorious crimson. And when autumn comes and flowers decay, the Virginian creeper still blushes crimson, remembering how the angel praised it long ago.

"That is a pretty legend—isn't it? 'Yes,' I hear some of you sigh, 'but I'd rather the Virginian creeper blushed than me. It's so horribly awkward, I just can't keep from blushing, and the more I want not to do it the more I do do it. I'm so ashamed of myself sometimes.'

"Boys and girls, you should never be ashamed of blushing. What you should be ashamed of is not being able to blush. A blush is a really good thing, and it is only right that your rosy cheeks should sometimes grow a few shades rosier. Why! we blush for pleasure, we blush because of praise, we blush with honest indignation, and I here we blush for shame or guilt."

12,000,000 Cups of Tea, Coffee & Cocoa are used in Canada Daily.

of One Spoonful of Sugar Per Cup

Would mean 240,000 Pounds of Sugar used Daily

26,000 Tons of Sugar were lost in the recent Submarine raids on the Atlantic Coast. This Sugar would have served Canada's table needs for 8 months.

Why The Sugar Supply is Scant.

GERMAN IDEA OF FAIR PLAY

AS DESCRIBED BY PHYSICIAN SENT BY U.S. SOCIETY

German Idea of Civilization, of Justice, of Fair Treatment of a Conquered People.

Doctor Hutchinson, the well-known writer on medical subjects, who only recently returned from a tour of the territory of Belgium and France retaken from the Germans, wrote the following account of his observations for circulation by the National Security League in its great nation-wide effort to arouse the people of the U. S. to a realization of the true meanings of the war and the necessity for its prosecution to victory.

The German mind is different, says Dr. Hutchinson. Just how deeply different one does not realize until one sees it actually at work, is brought face to face with its outward and visible results. When crossing the beautiful Pays Reconquis last May, lovely still, even in its utter desolation, my farm-bred eye was caught by one redeeming feature in the scene of destruction, a soft green background for the picture of horror and despair. This was the waving green seas and seas of wheat which shimmered over all the fields, over every foot of tillable soil and rippled right up to the edge of the roadway and to the foot of the shapeless heaps of ruins which had once been human homes.

Sowed, But Did Not Reap.

It was the one feature of the landscape which had defied and proved too strong for the German hate. Fruit trees and shade trees they could cut down or girdle, wells they could fill up with dead bodies and infected filth, houses they could blow up into shattered stone—heaps fast turning into mud under the spring rains—but the wheat smiled and defied them. It was too young to be hurt by harrowing, it was too green to burn; ploughing it up would have only meant preparing the soil for a spring sowing, so they simply had to curse and leave it untouched.

It was so far and away the best crop of wheat that I had seen anywhere in France that it provoked inquiries. Then I found that it had been grown under instructions from Berlin, from the Wilhelmstrasse itself, after this fashion. Sixty per cent of all the plowable soil was taken over and cultivated by the German army itself, with its own artillery horses and tractors. Twenty per cent. of the land was cultivated by the peasants and the army together, while the remaining twenty per cent. was cultivated by the peasants themselves, under the direction and watchful eye of the German officials. All that the army grew it took for itself and half of the crop which it had cultivated jointly with the peasants, so that all that the peasant had left was 30 per cent. of his former crop, and the bulk of this was purchased for the use of the army and paid for in promissory notes redeemable and payable after the close of the war! Which was extremely nourishing for the peasant and his family.

The Result.

The net result was that the German army, which occupied northern France and Belgium, grew, with the assistance of the peasants all the grain that was required for themselves and their horses and even sent some back for the civilian population at home.

And I was informed that the same methods and the same results were enforced on the Russian and on the Rumanian fronts also.

The reason for the joint cultivation of one-fifth of the land was apparently to get the German under officers acquainted with the members of the peasant population and their various working capacities. When this had been ascertained every old man or old woman, every mother of a family, every boy or girl over the age of twelve, was assigned a certain number of hours' work each day, either upon the land, or cutting wood, or washing the soldiers' clothing, or cooking, or making roads, or digging trenches, or, if house-ridden, sewing sandbags. A book was issued to each one, in which was written down the number of hours per day required or the amount of piecework to be turned out. This had to be inspected and signed each week, and in some cases each day, by the local officer and at the end of the week turned in to the military police officer in charge of the district. If the bearer of the book could not then show that he or she had performed the full tale of work required he was flogged, imprisoned or otherwise severely punished and threatened with deportation into Germany to work in the munition factories or the mines.

Reduced to a System.

While this system was being brought into working order, careful census was made of the number of acres cultivated by each peasant and the probable crop that could be expected from them, of the number of fruit trees which surrounded his house and the prospects of the yield for the season. His cattle were counted, and the yield of each one of the milch cows tested, and even his hens and rabbits were carefully enrolled upon the list. Then, at the appropriate season, unless he could clearly prove that the crop had been a failure, from storms or insects, etc., he was expected to produce a certain number of bushels of grain for "sale" to the army, a certain number of apples or pears or plums, and a fixed weekly amount of milk or butter.

They even attempted to keep track of the number of eggs laid by the hens, but the feminine eccentricities of Biddy puzzled even the Grosser General Stab. Until finally they hit upon the fiendish and ingenious idea that if the number of eggs turned in did not at least approximate that to be expected from the apparently ablebodied and laying hens, the farmer was informed that some of his hens were "sojering" on him and that he must kill off the nonlayers until he had only the productive ones left. So that the luckless peasant had either to produce the eggs or lose his hens.

There were, of course, outrages in plenty, men shot, or otherwise murdered, for the most trivial causes, women and girls taken by the officers and soldiers for their own use, or carried away in trainloads into slavery. The people of certain villages were ordered to keep indoors after the sundown and strictly forbidden to even show themselves at the windows on any pretext. Then loud noises and tremendous disturbances were created in the streets, and when the poor peasants' curiosity got the better of them and they cautiously peeped out of the windows, soldiers who had been stationed across the street with loaded rifles shot them down mercilessly. Word would be sent just before bedtime that the entire population must present itself in the village square at 11 o'clock that night or 1 o'clock in the morning, and every one who failed to answer to his name at the roll call was imprisoned or otherwise severely punished.

"Lighter Reliefs."

But these were incidental, lighter reliefs, attempts on the part of the officers and soldiers to get a little amusement out of their task.

But the listing of fruit trees, the counting of poultry and eggs, the flogging of women and children and old men for not doing more work than they were capable of: these were the regular every-day, matter-of-fact routine—the German idea of civilization, of justice, of fair and kindly treatment of a conquered people. They furnish an interesting peephole into the German mind, and are of especial interest to us, because they would be the methods which would be applied to America to extract from us that huge indemnity which the Germans are confidently reckoning on to pay the entire expenses of the war—when they shall have won it.

PASSPORT OF OLD ORIGIN

Earliest One Granted by Julius Cæsar.

Passports, without which one cannot at present quit the country, except as a soldier or a sailor, are of very ancient origin, says London Answers. The earliest of which there is record is one granted by Julius Cæsar to a philosopher, and is worded as follows:

"If there be any one on land or sea hardy enough to molest Palamon, let him consider whether he be strong enough to wage war with Cæsar."

In normal times a passport is not a difficult thing to obtain in England. The application must be accompanied, by a declaration made either by the applicant's banker or any mayor, magistrate, minister of religion, barrister-at-law, physician, solicitor or notary. It is linguistically a highly ornate document, with the royal arms at the head, an imposing array of titles set forth in grandiloquent language and printed in the best copperplate.

At the base is the coat of arms of the Foreign Secretary, followed by his signature, lithographed. The bearer's signature completes the document, and the whole thing may be considered cheap at two shillings.

If a person wishes to travel in any of those countries where a passport is a necessity, he must obtain the acknowledgement of registration—this is the visa—of the embassy or consulate of that country. This costs a further sum of from two to nine shillings.

Motorists evidently have a poor opinion of pedestrians, as they are constantly running them down.

THE WEEKLY SERMON

Behold thy mother.—St. John, xix., 27.

In the tragedy of the ages, when the Son of God was crucified, His mother stood by the cross and Jesus, recognizing her presence, said to one of His disciples. "Behold thy mother." In the tragedy of the twentieth century, in the war of the ages, amidst the awful carnage Mother stands by the cross and all need to recognize her presence.

"Behold thy mother," a sentence that might well be written on the walls of all training camps and in every Y.M.C.A. hut and hospital in the war zone. When Napoleon was asked, "What was the greatest need of the French Republic?" he answered, "Mothers," and surely the greatest need of Canada in these awful times, these unparalleled days, is mothers. And, thank God, they have followed their sons to the cross.

Back of all oversubscribed Victory loans, Red Cross and Y.M.C.A. drives is mother's thrift and economy. Back of all the inventive genius, the manufacturing skill and speed; back of all patriotism that has inspired our country, amazed the world and terrified our enemies; back of all the victories of the air, land and sea, behold thy mother.

Battles Fought at Home

We life our hats and applaud in the expression of our admiration of those who wear the uniform of the army and navy, but with the same patriotism, consecration and courage mother toils on at home. While the boys are on the high seas and in battle she is on her knees. In artillery and infantry drills and the battles of the air the war may be three thousand miles away, yet many of the greatest battles are being fought in Canadian homes and hearts.

We have determined as long as mother prays and God answers and remains on His throne and rules the universe, this unholy alliance, Wilhelm and Lucifer, shall not rule this dominion of ours nor the world. The Huns will not reach the Seine, but Allies will cross the Rhine; before the Kaiser dines in Paris our mothers' boys will dine in Berlin—evidently his dinner engagement has been necessarily and indefinitely postponed because of important business at home.

A Conquering Host

If the burden seems heavy, trusting in God we will remain cheerful; the reward will come alike to those "who stay by the stuff" and those in training camps and over the seas. The best military authorities declare, measured by whatsoever standard, viewed from every standpoint, the Canadian boys are among the finest type of soldiers of any army since the nations were born. Back from the victory won by the Allies will come the cleanest, strongest, most magnificent company of young men the world has ever seen, invincible, triumphant, immortal.

And with these conquering hosts there ought to be a company of mothers at the head of the procession, and to commemorate the event, let us have a statue of a Christian mother, her feet upon the Rock of Ages, one hand resting on the open Bible, and the other pointing to the victors, exclaiming, "These are my boys!"—Rev. Milton B. Hall.

TRAFALGAR OF GLORIOUS MEMORY

ONE HUNDRED AND THIRTEEN YEARS SINCE BIG VICTORY

Lord Nelson Established Britain's Rule of the Seas and Won Imperishable Fame.

That famous saying of Nelson: "England expects every man to do his duty" may be regarded as a mental cliche. If there is one story in the world that every Britisher should know by heart it is the story of Trafalgar. This is a fortunate moment for refreshing our memories, and we glance back to that 21st day of October in the year 1805 with as keen an interest as if the battle had just been fought. We are interested because Britain's empire over the sea was then established beyond controversy. How Nelson planned! What foresight was his when the vast plans of the French Emperor included an expedition to cross the channel with the purpose of crushing England's Nelson arrived on his birthday, Sept. 29th, 1805. Fearing that if the enemy knew his force, they might hesitate from venturing to sea, he kept out of sight of land. He told Collingwood to fire no salute, and hoist no colors and wrote to Gibraltar to request that the force of the British fleet might not be mentioned in the Gazette.

All down the ages Great Britain has seldom adopted the policy of secrecy. Here, however, by the precautions of Nelson and the wise measures of the admiralty the French were kept in ignorance.

The Nelson Touch.

On Oct. 9th, Nelson sent Collingwood what he called in his diary the "Nelson touch." "I send you," he said, "my plan of attack, as far as man can dare venture to guess at the very uncertain position the enemy may be found in; but it is to place you perfectly at ease respecting my intentions, and to give full scope to your judgment for carrying them into effect."

The English fleet consisted of twenty-seven sail of the line and four frigates; the French, of thirty-three and seven large frigates. Soon after daylight, Oct. 21st, Nelson came on deck. The wind was from the west. The signal was made to bear down on the enemy in two lines, and the fleet all set sail. When Nelson saw that everything was done that could be done he returned to his cabin and wrote the following prayer: "May the great God, whom I worship, grant to my country, and for the benefit of Europe in general, a great and glorious victory, and may no misconduct in any one tarnish it; and may humanity after victory be the predominant feature of the British fleet!

"For myself individually, I commit my life to Him who made me; and may His blessings alight on my endeavors for serving my country faithfully! To Him I resign myself, and the just cause which is intrusted to me to defend. Amen. Amen. Amen."

Nelson, who was certain of a triumphant issue asked Blackwood what he should consider as a victory. That officer replied that he thought that a glorious result would be obtained if fourteen ships were captured. Nelson answered: "I shall not be satisfied with less than twenty." Soon afterward, Nelson asked Blackwood if he did not think that there was a signal tacking. But Captain Blackwood reassured him that he thought the whole fleet seemed clearly to understand what they were about. These words were scarcely spoken before that signal was made which will be remembered as long as the English language or even a memory of England shall endure: Nelson's last signal—"England expects every man to do his duty!" It is interesting to note the circumstances under which these words were uttered. Captain Pasco, who had been Nelson's flag-lieutenant in the victory, signalled the words by means of flags. His account runs thus: "His lordship came to me on the poop, and after ordering certain signals to be made, about a quarter to noon he said: 'Mr. Pasco, I wish to say to the fleet, "England confides that every man shall do his duty;"' and he added, 'You must be quick, for I have one more to make which is for close action.' I replied: 'If your lordship will permit me to substitute "expects" for "confides" the signal will soon be completed, because the word "expects" is in the vocabulary, whereas the word "confides" must be spelled.' His lordship replied with haste and with seeming satisfaction, 'That will do, Pasco; make it directly!' When it had been answered in the van, he ordered me to make the signal for close action."

England Still Calls to Duty.

These words were received throughout the fleet with a shout of answering acclamation made sublime by the spirit which it breathed and the feeling which it expressed. These words to-day ring out with a greater significance than ever. Are we living up to those expectations? Is the call to duty as real to-day as it was that day long ago? We hope so. It had been part of Nelson's prayer that the British fleet might be distinguished by humanity in the victory which he expected. Setting an example himself, he twice gave orders to cease firing upon the Redoubtable, supposing that she had struck because her great guns were silent; for as he cared not to strike, there was no means of instantly ascertaining the fact. Strange to relate, from this very ship which he had thus twice spared, he received his death. The story of Trafalgar is not only the story of our greatest battle, but the story of the death of our greatest national hero. "The heart of England throbbed from sea to sea." Nelson had touched the imagination of both high and low. More than a century has passed since the great battle was fought in "Trafalgar's Bay," but the memory of the little one-eyed, one-armed man who frustrated Napoleon's ambitious maritime plans for the subjugation of England, who represented in his person all that sea power meant when the very existence of the foundation of our empire was threatened in the latter days of the eighteenth century, must ever make a strong appeal to those for whom Great Britain stands as the greatest champion of right and justice that the world has seen.

ORCHARD FERTILIZATION

Fertilization is one of the least understood factors in orchard management, and very little accurate data can be procured on the subject. The reason for this is that many experiments to determine the best methods of fertilizing orchards have given contradictory results. We must consider the orchard soils which differ so much in their composition and treatments, as a chief reason for these results. Because of this no rules on orchard fertilization can be made. The fruit grower must find the limiting factor in his soil and endeavor to bring it up to normal.

During the first few years after the orchard is set, the trees will not show any ill effects because of improper fertilization. When the trees begin to bear the question arises as to how long they should go without the addition of a plant food. The determining factors are the character of the soil and its treatment previous to orchard planting. The lighter the soil the sooner it will have to be fertilized. The food supply of orchards located upon heavy soils is dependent upon keeping the soil in a good state of cultivation, so that the plant food is abundant when needed.

Now the question arises as to what kind of fertilizer shall be used and when it shall be put on the soil. If the soil is very deficient in plant food, the best system is to apply eight to ten tons of barnyard manure per acre once in two years. This should be supplemented in alternate years with two hundred pounds of nitrate of soda, thirty-five pounds of ground bone containing twenty per cent. of phosphoric acid, and two hundred pounds of forty-eight per cent. sulphate of potash. When leguminous cover crops are used the amount of nitrogen fertilizer may be reduced. One of the chief advantages of using manure is that it supplies vegetable matter to the soil. This vegetable matter is just as important as plant food. No matter how much plant food the soil contains it will be unable to profit by it unless organic matter is present. It is very important to always have a stock plant food available. In any soil availability of the plant food is dependable on the following conditions: (1) Good tilth of the soil; (2) a good drainage, including that of the subsoil; (3) a good stock of decayed organic matter; (4) sufficient lime to maintain a sweet soil; (5) a uniformally moist condition of the soil; (6) a warm temperature.

If the soil does not have all these conditions, or if it is low in some one of these plant food elements, it must be fed with a well-balanced commercial fertilizer that will meet plant growth requirements. No two orchards require the same fertilizer, and for this reason one should not buy fertilizer already mixed. He should find out just what the soil lacks and mix a fertilizer to remedy its deficiency. The best way is to buy the elements and put them in their proper proportions on a mixing floor, and then thoroughly mix them. Pass the mixture through a screen and it is then ready to apply to the soil.

Unless the trees are young use a fertilizer spreader in applying the mixture. The fruit grower who determines just what are the limiting factors in his soil, and endeavors in applying his fertilizer to bring them up to normal, will have a fine orchard of vigorous bearing fruit trees, provided all other fruit troubles are kept under control.

COUNTLESS TASKS FALL ON SOLDIERS

LIFE IS NOT ALL FIGHTING AND RESTING IN BILLETS

"Odd Jobs" Devolve Upon Warrior Since the Day of Camp Follower Has Passed.

Life on active service is not entirely composed, as some people are inclined to imagine, of fighting, of sitting in trenches, or resting in billets, of marching, eating and sleeping. It is true that the main activities of the soldier are comprised in the above list, but there are countless other duties which he is called upon to perform—duties which might best be called "odd jobs," and some of which are distinctly odd.

The days of camp followers, who used to perform the more menial tasks of the battle zone, are gone, never to return. The soldier must now be his own hewer of wood and drawer of water. He must himself attend to all the little details of life, the cleaning of his quarters, the digging of trenches, the carrying of his food. Broken trenches must be mended, fresh trenches dug and dugouts built. All these odd jobs, which the soldier is called upon to do in what would otherwise be his spare time, he sums up under the comprehensive heading of "fatigue."

Fatigue duty, as the name implies, is not often a light or restful form of occupation. It may involve a long march with a night's work at the end of it.

Fatigue Duty and Working Party.

The first men to be picked for a working party are the defaulters, men guilty of minor delinquencies, such as the possession of a rusty rifle or an unshaven chin at the morning parade. It follows that the term "fatigue" has fallen somewhat into disrepute, for it has come to be associated, at least in the civilian mind, with an idea of punishment. In consequence an attempt has been made to differentiate between extra work which is definitely allotted as a term of punishment and extra work which is included in the duties of every soldier, be his character ever so unsullied. For this purpose a new phrase is "working party." Men are selected for working parties in turn, so that everyone contributes a share.

So far as possible, working parties are employed on essentially military operations, such as the putting up of wire entanglements, the digging of trenches, the carrying of rations and stores, whereas a fatigue party is likely to be employed on more menial forms of occupation.

But it is difficult to change old names, and though the distinction between a fatigue party and a working party is carefully observed in official orders, the British soldier himself is still inclined to apply the old name "fatigue" indiscriminately to all forms of extra work.

In the main it is the unfortunate infantryman who is called upon to supply working parties. The engineers, for example, depend to a great extent on infantry labor for the carrying out of their various operations.

Fine words butter no parsnips, but they certainly sweeten life.

The Paisley Advocate

PAISLEY, OCT. 23rd, 1918

THE CHURCHES AND INDUSTRIAL REFORM

The reproach that the churches do not take sufficient interest in social justice and economic reforms seems to be passing away. A very radical program has been adopted by the Methodist General Conference. Recognizing the need of moral and spiritual regeneration it includes also the following matters:

"Industrial as well as political democracy.

"Substitution of the co-operative for the competitive system.

"Recognition of the social equality produced by the war—the passing of aristocracy.

"Suggestion that the Government call on kings of finance and industry to give their services to the state.

"Better housing conditions, better employment conditions, and provision against unemployment."

The most radical suggestion is the first. Our political system is democratic in form at least, although much remains to be done to make it democratic in fact. Our industrial system is autocratic. To some extent this is the necessary consequence of science applied to industry. The independent craftsman with his own shop has in many industries given way to a capitalist controlling hundreds of thousands of "hands," none of whom own the tools of their trade, many of whom are confined to one monotonous occupation, and are helpless when separated from the great industrial organization of which they are parts, to protect themselves from absolute dependence on their employer they have in many cases established trade unions.

The unions have done good work, but many believe that they are inadequate instruments, and advocate the control of industry by the workmen either absolutely or in co-operation with those who supply capital favored by conservative reformers, employers as well as employed. It is felt that workmen ought to share not only profits but control direction and responsibility.

It is significant that leaders in the churches are not afraid of these bolder projects of reform. Their interest in social and economic questions, which is indicated also by the discussions in the Anglican Synod here last summer, is a cheering sign of the times.

Such matters as housing of the workers, pensions for mothers and for the old, insurance against sickness and unemployment are also of great importance, and would naturally enlist the sympathy of religious workers. "But besides improving the comfort and material welfare of the working masses it is necessary also to aim at industrial freedom and democracy.—Toronto Star.

CONTEMPORARY RELICION

While the revision of the Anglican Prayer Book may not appear to be of a very radical character to outsiders, it is the principle involved that should be considered. It is a long step forward to have it admitted by such a conservative body as the church that revision of any kind is practicable or permissable. It is true that people in the past have dared to revise the standards of their predecessors and great revolutions have ever been preceded by the willingness or the desire of thoughtful people to reconsider the codes by which they are bound, and to determine whether they will stand or fall by their own judgment or by that of others.

The nation that has failed to think for itself has never had much influence in the world, and the same is true of the individual. It is probably no less true of churches, and it is a sign of vitality and progress when any movement gets itself on record that aims at a recognition of contemporary thought. Most of our scholarship and our authority is based entirely on what other people have thought in the past. Science has broken away from this attitude and made its phenomenal progress by doing its own thinking. All science is contemporaneous.

The churches have been bound by a self-imposed limitation which has excluded or tended to exclude all contemporaneous thinking, and the general verdict for a generation or more has been that it has failed to interest those it aimed at serving. Has the mistake not lain in this failure to take note of contemporary thought, shall we even say of contemporary inspiration?

From this point of view the revision of the Prayer Book indicates the possibility of having a contemporaneous religion, as vital, as well-informed, as progressive, as effective and useful as our contemporaneous science. As it is, our religion is medieval or archaic, and it does generally fails to touch the hearts that need to be set on fire. Large possibilities lie ahead of the church that realizes its power, its value to its own functions, faces its own responsibilities, and depends less on what other men in an ancient past thought of the eternal verities than on what living men and women think of them now. There is no lack of earnestness in the world. The war is sufficient proof of that. Many would say that there is no lack of inspiration, and would point to contemporary heroism and contemporary sacrifice as warrant for the assertion.

There is a practical side to this that need not be overlooked. If all the churches turned their attention to contemporary thought and the problems and needs of to-day, rather than the thought of men who are centuries dead, and the problems which are extinct, with the conditions which occasioned them, it might be very well that our modern hearts and eyes would agree upon many things by the very force of circumstances and the compulsion of present needs. We have been very willing to abandon our old quarrels and suspicions with allies whose loyalty to the cause we cherish has been our ample justification—a kind of modern justification by faith. Could the churches by a little contemporary thinking not find ground for an alliance in their common allegiance to the great cause of humanity?

The first thing the governments of the world did when they understood the tremendous task ahead of them was to mobilize all their forces and cut out all unnecessary labor and overhead. They consolidated the railways, the shipping interests, the factories, the mines, all the huge activities of modern civilization, in order to overcome the common enemy. They had to.

No wonder practical men ask if the churches really appreciate the huge task they have when they waste so much energy, so much wealth, so much material, not in fighting the common foe, but in competing with each other.

The reason is that they are more concerned about the thought of dead men than they are about the souls of men living. The revision of the Prayer Book is a little fluttering breath in the bosom of the church to show that life is still present. It will help many to feel that "Faith has still its Olivet, and Love its Galilee."—Toronto World.

WEST BRUCE TEACHERS' INSTITUTE

The West Bruce Teachers' Institute held its annual meeting at Southampton on Thursday and Friday, Oct. 10th and 11th. The attendance was very large, and the convention was interesting and instructive throughout. Mr. J. C. Eckford sent a paper on "Pioneers of this County," and Mr. Chas. Green addressed the teachers on the topic "Military Training in Public Schools." Mr. H. G. Martyn, of Stratford Normal School, put into practice some pedagogical principles by teaching a lesson in grammar, and no doubt many teachers will return to their schools with resolutions regarding the management and discipline of their pupils after hearing his address on "The Teacher's Relation to the Play Life of Children." An active discussion of the Grammar Manual and P. S. Readers was entered into by the teachers, and it is expected that the criticisms of the Readers, account of which was sent to the Department of Education, will have a marked effect on the new texts. A very good entertainment was given in the town hall on Thursday evening. The Rayner orchestra supplied excellent music, solos, readings, and an address by Rev. Dr. McDougall on Canadian Literature, and other items were on the programme.

The following officers were elected for the coming year: President, Mr. C. Potter, B.A.; Vice-Pres., Miss Macklin; Sec.-Treas., J. A. Lockhart; Librarian, T. H. Patterson, General Committee—Misses Currie, Akitt, Cassidy, Barnett, McDonald, Duncan; Messrs. Gatis, A. Campbell and D. D. Campbell.

The Institute will be held in Port Elgin next year.

—Bishop Fallon says: "I was born Fenian, and a Fenian I remained until I went to Germany. It was then I learned the truth. It was there that I discovered that the dear old motherland, so far from being an enemy of liberty, personifies the word. It was there that I discovered, too, that there were giant forces at work to overthrow and destroy this bulwark of liberty. And I returned from Germany a Britisher to the core."

REFUSED TO VIOLATE SABBATH FOR GOVERNOR-GENERAL

County Warden Gideon Kastner, reeve of Wiarton, wouldn't go fishing with the Governor-General last summer. The Chesley Enterprise tells the story as follows:

In religion Mr. Kastner is a Presbyterian, and his name has often been mentioned as a candidate for parliamentary honors in North Bruce in the Liberal interests. Though he does not make any profession to Puritanism, he is a believer in a rigid observance of the Sabbath, and refused to drive the Governor-General out to the fishing preserve near Hepworth when the Duke of Devonshire and his family and staff spent Sunday in their private car in Hepworth. In certain circles where loose views prevail in regard to the observance of the Lord's Day, the action of the warden in refusing to take the Duke to fish on the Sabbath was adversely criticised, but he had made up his mind to obey God's law rather than please an element that was anxious to hobnob with society. Besides being a violation of the Fourth Commandment, Mr. Kastner objected to one law for a poor man who would have been fined for fishing on Sunday, and another for the man who is the representative of the king, and should be first to observe the law of the land and the law of God, but who was a party to violating them, and as a matter of fact did go fishing that very Sunday. Of course we like the warden was right and the Duke and his sympathizers very much wrong. All honor to Warden Kastner, long may he be a representative of the County of Bruce!

VICTORY LOAN ORGANIZATION

Following are the canvassers appointed for districts in this part of the county:

Arran Tp. and Tara—C. E. Starr (Capt.), R. Kennedy, W. J. Taylor, Wm. Brunton, Fred Geerts.

Chesley and east half Elderslie—M. A. Hadley (Capt.), E. B. Caldwell, J. R. Case, John Gowsiz.

Paisley, west half Elderslie Tp., Gets of Greenock Tp. all north of con. 16—D. Porteous (Capt.), R. C. Pearce, Calvin Crawford, R. J. Mellon.

North part Greenock Tp., cons. 10 to 15 inc.—Thos. H. Purdy (Capt.), Melville Reid, South part Greenock Tp., cons. 1 to 9 inc., Walter McKinnon (Capt.), Nicholas Longworth.

North part Bruce Tp., cons. 8 to 15—Geo. Orrs (Capt.), Jas. Dryden.

South part Bruce Tp., cons. 1 to 7 inc., Tiverton village—D. J. McDonald (Capt.), D. McNaughton, con. 7.

North part Bruce Tp., cons. 8 to 14—Archd. McLean (Capt.), Geo. Brown.

Kinloss Tp.—F. W. Elliott Capt.), Jos. Lyness.

SPANISH INFLUENZA RAGES IN CANADA

Thousands of Cases Reported With Many Deaths.

THOSE WHO ARE MOST SUSCEPTIBLE TO IT

"FRUIT-A-TIVES"—The Wonderful Fruit Medicine—Gives the Power To Resist This Disease.

The epidemic of Spanish Influenza which played such havoc in Europe, has reached this continent. Thousands of cases of the strange malady have appeared and many deaths are already reported; Surgeon-General Blue of the United States Public Health Service having stated that "Spanish Influenza will probably spread all over the country in six weeks".

Practically every ship which touches our shores from abroad, brings those infected with the disease.

Surgeon-General Blue urges that "the individual take all the precautions he can against contracting the disease by care and personal hygiene". Plenty of exercise should be taken; the diet should be regulated, etc.

Spanish Influenza affects most severely elderly persons and others whose powers of resistance are weakened by illness, work or worry, especially those who were "run-down" or "not feeling up to the mark."

The really great danger from the disease is not so much in the disease itself, as that it often develops into pneumonia.

What everyone needs now is a general tonic like "Fruit-a-tives". This wonderful fruit medicine is not a germ-killer. It is a body-builder; a strength-maker; a blood-purifier; a power in protecting against the ravages of disease.

"Fruit-a-tives" regulates the kidneys and bowels, causing these organs to eliminate waste regularly and naturally as nature intended. "Fruit-a-tives" keeps the skin active, and purifies and enriches the blood. "Fruit-a-tives" tones up and strengthens the organs of digestion, insuring food being properly digested and assimilated.

Everyone can take ordinary precautions, avoid crowded places, and use "Fruit-a-tives" regularly to insure sound digestion, to keep the bowels and kidneys regular and the whole system in the best possible condition. Then we are safe from disease.

"Fruit-a-tives" is sold by dealers everywhere at 50c a box, 6 for $2.50, trial size 25c or sent postpaid on receipt of price by Fruit-a-tives Limited, Ottawa, Ont.

A PERSONAL APPEAL

BUY VICTORY BONDS—BUY TO YOUR UTMOST

The duty of every Canadian citizen is plain—as plain as the duty of every Canadian soldier.

The soldier's duty is to fight for Victory.

The citizen's duty is to "lend" for Victory.

The time has gone by for merely doing our "bit." We must do all we can. No true patriot can be content with a subscription to the Victory Loan that is less than he can afford.

Buy Victory Bonds, and buy to your utmost. The loan is larger than before, the effort therefore must be greater than before, the obligation on each and every one of us is greater. Buy all the bonds you can, and if you do not hold any war bonds now, it is more reason than ever that you should subscribe to the Victory Loan.

Back up our boys in France with a smashing over-subscription that will wake the echoes in Berlin.

Every dollar you subscribe goes to arm and equip and protect our boys in France, to save the lives of those inestimably dear, to bring them home safely.

Let your subscription measure up to your patriotism.

BUY VICTORY BONDS—AND BUY TO THE UTMOST.

County Publicity Committee, Victory Loan Headquarters, Walkerton.

THE PENSIONED SOLDIER

It is said that some employers, when engaging returned soldiers, make enquiries as to the pension received, and then fix wages accordingly. If a man is partially disabled so that he cannot do a full day's work his pension is supposed to help out, that is what it is for, to supplement what he has ability to earn. But if an employer takes advantage of a man who receives a pension, if it large or small, to get more work for less money from the returned soldier, he ought to be looked after. The Government of Canada is paying pensions for the benefit of the soldier and his family, not for the benefit of persons who never saw the war and who happen to be in a position to employ labor. If this sort of thing is done at all it should be investigated.—Clinton News-Record.

Prevention is better than cure.
It is cheaper.
It is possible when cure is impossible.
Eye trouble may be avoided by the timely use of glasses, averting discomfort, suffering and permanent impairment of sight. We are properly equipped to adjust glasses and guarantee satisfaction.

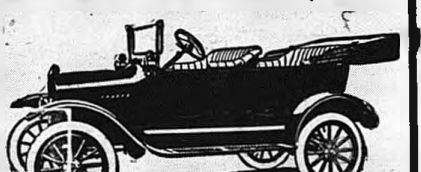
BEAUTIFUL JEWELERY

in great variety of novel patterns and artistic designs, rings, chains, necklaces, bracelets, everything in the jewelry line, may be found at our store. We give you a cordial invitation to come in and see what we have to offer, for we feel sure there will be something that will just suit you.

I. SHOEMAKER

Jeweler and Optician

Canadian women are right behind the Canadian troops in the trenches. Women nurses are now installed in hospitals 8 miles in the rear of the actual fighting line.



Many of our Canadian women are unable to take up the duties of nursing at the front, but they should know how to take care of their own at home and for this purpose no better book was ever printed than the Medical Adviser—a book containing 1,008 pages, and bound in cloth, with chapters on First Aid, Bandaging and care of Fractures, Taking care of the Sick, Physiology, Hygiene, Mother and Babe, which can be had at most drug stores, or send 50 cents to Dr. Pierce, Courtwright St., Bridgburg, Ont.

The women at home, who are worn out, should take that reliable temperance herbal tonic, Dr. Pierce's Favorite Prescription.

Woodstock, Ont.—"For nervousness I have found Dr. Pierce's Favorite Prescription to be the best medicine I have ever taken. I was terribly run down and was so nervous I could not sleep. I was suffering with a number of other troubles and it also proved to be a splendid tonic for the digestive organs." I take great pleasure in recommending Dr. Pierce's Favorite Prescription to the suffering women's world.—Mrs. Annie Strickler, 21 Arthur St.

PAISLEY GARAGE

Ford and Maxwell Service Station

We carry a full line of Ford Parts and Repairs

We aim to give up-to-date service to all car owners. With our experience in city garages we are in a position to do work that we can guarantee as satisfactory. Motorists should call us up by either phone when they have trouble.

High Grade Oils, Gas and Accessories of all kinds.
Repairing at Reasonable Rates. All kinds of Vulcanizing done.
We are equipped to remove carbon by oxygen gas.

SEVENTY YEARS AGO

In 1848 there were no railways or telegraph lines north of Toronto. The telephone had not been heard of.

The authorized school books were Lennie's Grammar, Kirkham's Grammar and the National Series.

No register of births, deaths or marriages was kept in Upper Canada.

Ottawa was "Bytown." Winnipeg "Fort Garry."

The population of Upper Canada was about 700,000, exclusive of Indians. The population of Toronto was 22,000.

The postage depended on the weight of the letter and also on the distance it was carried. A half ounce letter could be carried 60 miles for 9 cents, 100 miles for 14 cents, 200 miles for 18 cents, and so on. The rate on letters ounce.

The currency was in pounds, shillings and pence, the pound currency being equal to four dollars and the pound sterling being equal to five dollars.

The Province of Canada consisted only of Canada East and Canada West, or Upper and Lower Canada.

The Government was in the hands of the Legislative Council appointed by the Crown and the Legislative Assembly appointed by the people.

Robert Baldwin was Premier.

John A. McDonald was leader of the Opposition.

The Earl of Elgin and Kincardine was the Governor-General of British North America.

Flour was $1.50 per barrel

Wheat was 75 cents per bushel.

Beef and pork was $4.00 per 100 pounds.—Collingwood Bulletin.

—Yours not to do and die, yours but to go and buy—Victory Bonds.

BILL TURNER'S WAY

Bill Turner was a farmer; he labored all his life. He didn't have no schooling and neither had his wife. But Bill was built for business and made the wheels go round, and left a healthy fortune when they put him underground. He was always taking chances, paid five hundred for a bull. His neighbors called him crazy, but he left a stable full of cows that broke the record making butter by the ton, and Bill he had his picture printed in the "Squeedunk Weekly Sun." He had new-fangled notions of making farming pay. He even bought a fool machine to help him load his hay. The neighbors fairly snorted when they saw the blooming thing; said Bill would never make it work; it wasn't worth a ding. Bill didn't say a single word, an' didn't care a darn 'bout what they said, for as slick as grease his hay went in the barn an hour before a thunder shower came sailin' out that way, and caught his neighbors in a pinch and spoiled their new mown hay. Jim Smith put all his milk in cans, and set 'em in a tank. Bill skimmed his milk with a machine and turned it with a crank. To-day Bill's wife rides in a car and dresses up in silk. Smith's wife rides in a buggy and keeps on skimming milk.

—Lend like he fights! Buy Victory Bonds.

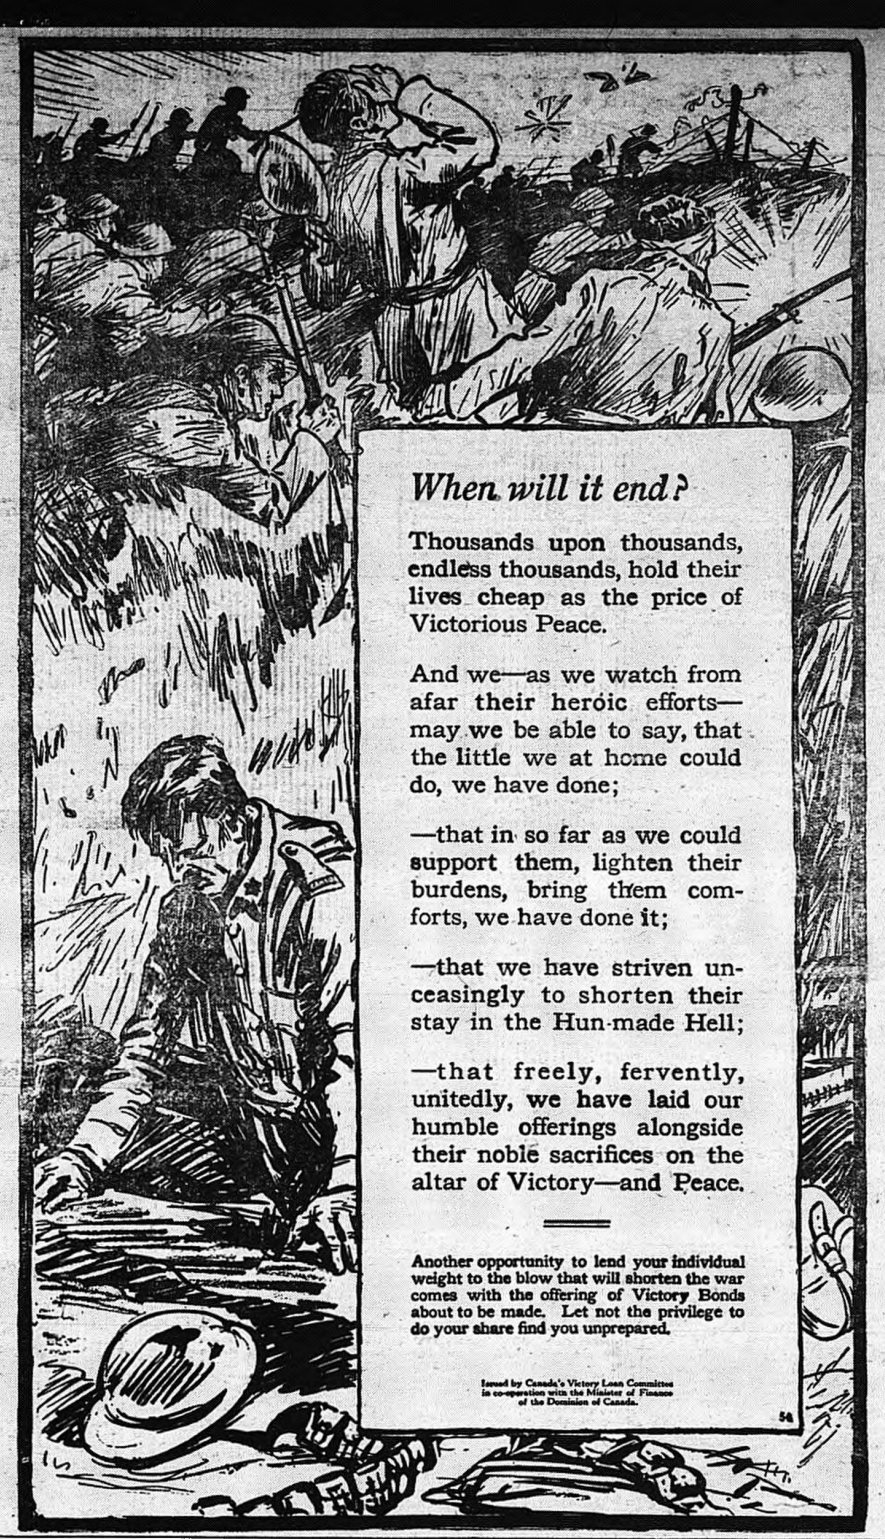
YOUNG FELLOW MY LAD

(Rhymes of a Red Cross Man)

"Where are you going, Young Fellow My Lad,
On this glittering morn of May?"
"I'm going to join the Colours, Dad;
They're looking for men, they say."
"But you're only a boy, Young Fellow My Lad:
You aren't obliged to go,"
"I'm seventeen and a quarter, Dad,
And ever so strong, you know."

"So you're off to France, Young Fellow My Lad,
And you're looking so fit and bright."
"I'm terribly sorry to leave you, Dad,
But I feel that I'm doing right."
"God bless you and keep you, Young Fellow My Lad,
You're all my life, you know."
"Don't worry, I'll soon be back, dear Dad,
And I'm awful proud to go."

"Why don't you write, Young Fellow My Lad?
I watch for the post each day:
And I miss you so, and I'm awfully sad,
And it's months since you went away.
And I've had the fire in the parlour lit,
And I'm keeping it burning bright
Till my boy comes home: and here I sit
Into the quiet night."



"What is the matter, Young Fellow My Lad?
No letter again to-day.
Why did the post man look so sad,
And sigh as he turned away?
I hear them tell that we've gained new ground,
But a terrible price we've paid:
God grant, my boy, that you're safe and sound;
But oh I'm afraid, afraid."

"They've told me the truth, Young Fellow My Lad,
You'll never come back again:
(Oh God! the dreams and the dreams I've had,
And the hopes I've framed in vain!)
For you passed in the night, Young Fellow My Lad;
And you proved in the cruel test
Of the screaming shell and the battle hell
That my boy was one of the best."

"So you'll live, Young Fellow My Lad,
In the gleam of the evening star.
In the wood-note wild and the laugh of a child.
In all sweet things that are.
And you'll never die, my wonderful boy,
While life is noble and true:
For all our beauty and hope and joy
We will owe to our lads like you."

"Daylight Saving" Ends on Saturday

Decision in the United States not to continue summer time beyond O.t. 27 is expected to be followed by similar action in Canada. Had the United States extended the summer time period a like course would have been necessary in Canada to prevent confusion in train service. As the matter now stands, clocks in Canada will be put back 60 minutes at 2 a.m. on Sunday, Oct. 27th.

When will it end?

Thousands upon thousands, endless thousands, hold their lives cheap as the price of Victorious Peace.

And we—as we watch from afar their heroic efforts—may we be able to say, that the little we at home could do, we have done;

—that in so far as we could support them, lighten their burdens, bring them comforts, we have done it;

—that we have striven unceasingly to shorten their stay in the Hun-made Hell;

—that freely, fervently, unitedly, we have laid our humble offerings alongside their noble sacrifices on the altar of Victory—and Peace.

Another opportunity to lend your individual weight to the blow that will shorten the war comes with the offering of Victory Bonds about to be made. Let not the privilege to do your share find you unprepared.

Issued by Canada's Victory Loan Committee in co-operation with the Minister of Finance of the Dominion of Canada.

54

THE PEACEFUL WARRIOR

I have no joy in strife,
Peace is my great desire;
Yet God forbid I lose my life
Through fear to face the fire.

A peaceful man must fight
For that which peace demands—
Freedom and faith, honor and right,
Defend with heart and hands.

Farewell, my friendly books;
The fate that calls me forward looks
To a duty beyond dreams.

Oh, better to be dead
With a face turned to the sky,
Than live beneath a slavish dread
And serve a giant lie.

Stand up, my heart, and strive
For the things most dear to thee!
Why should we care to be alive
Unless the world is free?

"PAY IN ADVANCE" FOR NEWSPAPERS

The United States Government recently promulgated regulations for reducing the total consumption of newsprint paper; and it is more than likely, indeed practically certain, that Canada will follow the lead. One of the rules that directly affects all subscribers is that which requires publishers to discontinue sending papers to subscribers who are more than three months in arrears.

The Advocate, like all the rest, has some who are behind—some perfectly good ones, but are just forgetful. We know they would not like to have their papers stopped; but if the order goes into effect, as it will probably do before the end of this year—there will be no alternative for us.

So we would say to all subscribers—Get ready for the change. Look at your label which tells whether you owe anything and if so, how much. And if you find that you are behind, just send us the amount—cash, cheque or money order—to put you "in good standing."

WOMEN TEACHERS FORM AN ASSOCIATION

The women teachers of the East Bruce Teachers' Convention assembled at Walkerton last week went on record in organizing a Women's Teachers' Association affiliated with the Federation of Women Teachers' Associations of Ontario, its aims being to promote the educational and financial status of women throughout Ontario. It is announced as a reason for organizing that the average woman teacher in the public schools is receiving less than the wage of a common laborer. Other aims of the federation are: Equal pay for equal work, to demand a voice in educational affairs, and to ask the Government to fix a minimum salary which shall to-day be at least a living wage. When completed this federation will have a membership of about 10,000.

Soils and Crops

By Agronomist.

This Department is for the use of our farm readers who want the advice of an expert on any question regarding soil, seed, crops, etc. If your question is of sufficient general interest, it will be answered through this column. If stamped and addressed envelope is enclosed with your letter, a complete answer will be mailed to you. Address Agronomist care of Wilson Publishing Co., Ltd., 73 Adelaide St. W., Toronto.

Avoiding Calf Ailments.

Nineteenths of the common ailments among dairy calves should be prevented by a sensible course of management from the time they are removed from the cows until they are old enough to eat dry grain and hay. Some are so anxious to glean every cent of profit, that they cheat themselves and starve their calves by saving the cream and then compelling the little calves to subsist on skim-milk when they are only a few days old. Some calves do not seem to be injured by such a diet, providing it is fed fresh and warm from the separator, but the calves a few days old have not sufficient strength of digestion to digest it properly, and it passes through the alimentary canal in an undigested condition, and the so-called white scours result. The calf, unable to digest the skim-milk, is simply starving until it is a hopeless proposition. Such a condition could have been avoided by feeding the calf whole milk a few days longer, instead of robbing it of nature's nourishment.

Other feeders find it too much trouble to warm the milk for calves and as a result their stomach become chilled so that their digestion is greatly impaired, if not ruined. Then the owner dopes the calf until digestion is completely ruined. Others have failed to feed regularly and as a result the calves get extremely hungry and when they are fed eat so greedily and eat so much that it tends to upset their digestion until they bloat and perhaps die from the effects. Even though they survive they grow up weaklings and easy prey to other serious ailments.

Some think that any old wooden pail is good enough to feed the calves from. Such pails become breeding places for millions of germ life and ptomaines and the calves are literally poisoned and become victims of gastric fever or dysentery. Some think that sour milk is all the calf needs and by the time the calf is one month old any old kind of milk they may have or get from the creamery vats is fed in any quantity. Then when digestion becomes impaired they crowd rinds of cheese, egg shells and charcoal down the calf's throat. Such kind of treatment may be in line with Darwin's theory of the survival of the fittest, but it seldom results in developing a good dairy cow.

Never compel the calf to nurse some garget-y cow that gives feverish and diseased milk unfit for human use. Feed milk from its mother or some other fresh cow until it is, at least, two weeks old, then mix it with one-third skim-milk and gradually reduce the quantity of whole milk until the calf is a month or six weeks of age. Never try to feed a calf cold milk until it is two months old. Always warm the milk to about ninety-eight degrees Fahrenheit and never scald it. If the milk is sterilized to destroy disease germs it should be doctored by the use of flaxseed jelly or linseed oil meal. It is better to feed dry grain than to mix the middlings and ground oats with the skim-milk. Some good feeders pour a little oil meal and middlings on top of the milk and the calf drinks it along with the milk more slowly than when the grain is mixed with the milk and settles in the bottom of the pail.

As early as possible calves should be encouraged to eat dry grains and clover hay. At first light rations should be fed and gradually the amount may be increased until at two or three months of age two or three pounds per day may be safely fed. Equal parts of cornmeal, wheat bran and ground oats and half a part of oil meal make an efficient grain ration for the growing calf. When the calves are turned out to pasture, sometime the grain ration until they are able to eat and digest sufficient grass to make good growth and maintain good flesh condition. Unless the pastures are unusually good keep up the grain ration until the end of the season. It is the height of folly to attempt to grow and develop good heifers on scant rations of inferior feed stuff. There is little danger of getting calves too fat so long as proper feed stuffs are used. In fact a little fat is not at all objectionable. More harm comes from feeding an excess of concentrates and not enough milk, grass and bulky feeds which promote digestion and furnish bone and muscle-building nutrients in the right proportions to maintain the health of the animal.

Horse Sense

Frequent currying and brushing will insure a healthy condition of the horse. A few minutes spent daily in currying and brushing a horse is time well spent. Aside from giving the animal a clean, glossy appearance, this daily brushing stimulates circulation. The skin is an important excretory organ, and must be kept clean and free to do its work.

It is especially important to give the legs daily care. If it is necessary to wash them in cold weather, they should be thoroughly dried before being exposed to the open air. Mud should not be allowed to collect on the fetlocks, as it causes scratches and sores on the heels and about the feet. Sores, scratches, and unsightly spots are often caused by mud and manure setting in the hair. When the mud dries it causes the skin to crack open.

In the spring the horses should be kept especially clean, as the long hours of work, dust, sweat, and heat all combine to make proper care of the skin a necessity. Sore shoulders and other afflictions, due to lack of care on the part of the owner, have often caused great loss of time and money.

Sheep Notes

A ram is half the flock. A good ram will impress his desirable qualities on his offspring. The ram must be strong in the points in which the ewes are deficient. It is a well-known fact that like begets like, and if both the ram and the ewes are weak in the same points these weaknesses will be intensified in the offspring.

If the flock is small, a ram lamb will be all right. If there are more than 30 ewes the ram should be two years old. The ram selected will depend upon the type of ewes in the flock. If the ewes are small and light-boned, a heavy-weight and heavy-boned ram will be needed. A ram with more refinement should be used if the ewes are coarse-boned and rangy.

In selecting the ram, special attention should be paid to type, mutton qualities, and denseness of fleece. Quality of mutton is the prime factor in the farm flock, and should receive the most attention. The fleece should not be forgotten, for not only will the fleece be a source of income, but a good fleece will give a higher market value to the sheep.

The ram should be strong, active, and show strong masculine character. These points are important, for on them will depend to a large extent the number of lambs produced, also their health and vigor. The ram should stand up well on his feet, and his pasterns should be strong. The back should be strong and the ribs well sprung to give plenty of room for the heart and lungs.

Funny Fold-Ups

CUT OUT AND FOLD ON DOTTED LINES

THIS PICTURE LOOKS LIKE TO BOTH SMOKING CIGARETTES, I'M ONLY JOKING:

MY CIGARETTE IS CHOCOLATE CREAM, WHAT LOOKS LIKE SMOKE IS ONLY STEAM.

Hogs

In order to make a profit from pigs it is necessary to give them the proper care and feed. They should be provided with clean, comfortable quarters, exercise, and plenty of sunshine. The sow should be given special care at farrowing time. She should be fed lightly for a few days after farrowing, and the amount of feed gradually increased as the young pigs develop.

The ration for the sow at this time should be one which will produce a heavy flow of milk. A good ration for this purpose is one composed of corn, shorts, bran, a small amount of tankage, and a good quality of alfalfa fed from a rack. Bran may make up 10 per cent. of the ration, as it has a beneficial effect on the digestive system and tends to increase the milk production.

The amount of feed given a sow may be governed largely by her appetite. Tankage should not be fed to exceed more than five per cent. Corn may make up half the ration, as it tends to prevent the sow from becoming thin.

The little pigs should be watched closely for sore mouths, especially in large litters. It is sometimes advisable to clip the tusks from the pigs, thus preventing them from scratching each other. In case of sore mouth, wash the part frequently with a disinfectant.

Hallowe'en Hilarities.

This is a special program for our young folks. Costumes allowed, but no masks:

1. The initiation: When getting the handshake, every one must have a paper bag tied over his left hand and shake hands with all present.

2. Grand march: All must march in couples, "follow the leader" plan. Whatever the first two do the rest must immediately imitate. Have piano accompaniment.

3. Rod of destiny: Two long rods, with various toys suggesting the occupation of a future husband or wife, must be suspended on opposite sides of room. Girls line up for one side, boys the other. Blindfold one at a time and let each walk forward and reach out for one object. Some objects that may be used are as follows:

Suitable for men's rod: 1, Clothespin (washerwoman); 2, yellow penmans (suffragist); 3, spool (seamstress); 4, feather (high flyer); 5, doll's hat (milliner).

Suitable for girls' rod: 1, Bottle of water (sailor); 2, flag (soldier); 3, toy bank (banker); 4, old scissors (scissor grinder); 5, pill box (doctor).

4. Cracker and water contest: A man and a girl stand together. The man eats egg biscuit or some large dry cracker while the girl drinks a glass of water, using a small souvenir spoon. They must watch each other as they do it. First one to finish wins.

5. Mess call whistled or played on piano. Refreshments, consisting of apple, lollypop, knickknacks, lemonade and false-face cookies.

"Our minds cast shadows, just as our bodies do."—Dr. A. T. Schofield.

Poultry

Stock allowed to roost outdoors during the summer must now be taught to go under shelter at night. Happily this practice of out-door roosting is not so common now as it was years ago. Instead, well-ventilated houses are provided, and the fowls have better protection and at the same time all the out-door comforts.

This is a good month to do out-door repair work. There are days in October when it is a pleasure to do this repairing; leaky roofs, drafty walls, filthy runs, etc., should be attended to.

Painters say that October is the best month in the year for outdoor painting. Take their advice and give the buildings a good coat of paint, which will not only preserve them but add to their attractiveness. Whitewashing the interior of the hen coops is an old idea, but it is a good one. It gives a cheerfulness to the building that nothing else seems to do. Disinfecting the premises is also in order, and it is work that pays.

If there were any low places in the houses last winter, which caused more or less dampness, remedy the trouble now so that the houses will be perfectly dry this year. Dampness is the starting point of chicken-pox, distemper and roup, and a little labor wisely spent now will save much during the cold months.

The pullets should be placed in their winter quarters before they begin laying. To move them after they have begun will give them a setback. Do not overcrowd. Not more than twenty-five pullets of our Canadian breeds should be in one flock, and a smaller number is better. But in the case of Leghorns or any of the Mediterranean class, twice that number will do equally as well.

"Every show a better one" is the slogan of the Toronto Fat Stock Show, and the 1918 Show promises to be no exception. The sale which follows the show is attended by buyers from all over the continent and each year the prices paid are better than previous prices. There is always a demand for choice meat at Christmas time, and farmers are realizing the big advantage of marketing their stock this way.

October.

October is a jolly fellow,
And in his yellow mack
He brings a host of merrie days
And sunshine, on his back;
Grapes and pumpkins, apples, nuts,
And lightly doth he tread
Upon the gold-leafed carpet
That old Mother Earth has spread!
And how shall we use his merrie days?
And all the joy that's in them?
Outdoors, outdoors, right after school.
Heigh ho, now let's begin them!

Wedding haste sometimes leads to household waste.

Good Health Question Box

By Andrew F. Currier, M.D.

Dr. Currier will answer all signed questions in of general interest in it will be answered personally if stamped, addressed envelope is enclosed. Dr. Currier will not prescribe. Address Dr. Andrew F. Currier, care of Wilson Publishing Co., 73 Adelaide St. West, Toronto.

Fasting.

J. E.—"How is it possible for fasting people to go so long without food. If I miss only one meal, I get a severe headache and if I go without food I am affected in the same way as when I eat too much. Sometimes it is inconvenient for me to get something to eat, and if I wait too long, I am usually laid up the whole following day. Why is this?

Answer—Eating and digestion, as well as other functions of the body, are more or less governed by habit. People usually eat three meals a day; and three times a day the stimulus of food excites the glands of the stomach, pancreas and intestines to pour out their digestive juice. If the stimulus of food were lacking, the juices would still be poured out for a while, but in smaller quantity, and by and by the secretion would cease, or nearly so. As the time for eating recurs, there is first a kind of disappointment if food is not on hand to satisfy the expectation; but, little by little, as I am told, the disappointment becomes less keen and the appetite,—that is, the desire for food—less urgent. This is particularly the case when the person who is fasting is not working, and he may get along without a great deal of discomfort if he has plenty of water which is more essential than food.

When food is withheld, the machinery must still be kept going and consequently there is gradual disintegration of the tissues, first the fat and then the muscles. Of course the person who is fasting is constantly losing strength—for, without fuel, the fires are constantly getting lower and after a while they go out entirely. One who is fasting, like the writer of the above letter, feels keenly the want of food for a day or two, and the reaction expresses itself in headache and a disinclination to work. If a person goes without food for a week, the suffering is relatively less. I am told this is the way the English prisoners in Germany feel as the result of the way they have been served. They have not exactly been starved, but the quantity of nutriment they have received, is so small and the quality so poor, that they habitually lose weight and would be physically unable to do hard work of any kind.

Questions and Answers.

Mrs. A. S.—My husband is very anxious to gain in weight. How can he do this? He does not care for milk.

Answer—I do not know of any better way to gain in weight than to take an abundance of easily assimilated fats—such as olive oil or cod liver oil, or to drink plenty of rich milk daily; however, if your husband does not like milk, he might drink buttermilk—which contains the fat in milk.

Miss I. O. B.—Am sixteen and have long been troubled with kidney disease. Can you help me?

Answer—I am afraid I cannot. Your question is altogether too indefinite. For kidney diseases covers a great multitude of conditions. Furthermore, you probably do not understand that this department is not to furnish individual attention to the sick; they must go to their physicians for that assistance.

A. E. F.—There is a gland on the side of my face as large as a bean. It does not bother me, nor does it seem to be enlarging. Is there any danger from it?

Answer—There is always a danger that such glands will enlarge and ulcerate, and become running sores. Probably it would be a simple matter to take it out; and I think that would be the best plan.

Our Thanks.

Dear Lord, while we would thank Thee
For all our worldly wealth,
We thank Thee more for loving friends—
For happiness and health.
And now, we humbly pray Thee
To guide us on our way
Until we raise our thanks and praise
On next Thanksgiving Day.

Correct style worn by well dressed young men in all localities. Lace boot—medium narrow recede toe, low heel—made in black, tan or patent calf. Price, $7.00 to $10.00.

Good Value and How to Get it

YOUR interest, as a member of the consuming public, and ours as Canada's largest manufacturers of shoes, are really identical. They may be summed up in a single phrase: "Quality Shoes at Fair Prices."

A fair price today is a higher price than usual, because the cost of every item of material and labor which goes into a pair of shoes has increased greatly and is still increasing.

In order that you may continue to get quality at fair prices, we shall feature in advertisements certain specific shoes which we know will give you good value. From our knowledge and experience, we will suggest to you the best methods of buying, whether you select shoes of our manufacture or not.

We ask you to buy for service rather than merely for style; to go to a reliable dealer, and to look for the manufacturer's trade-mark on the shoes. By so doing you may be assured of good value for your money.

TORONTO
Fat Stock Show
The Show that produces the good butcher stock and breaks the sale price records.
UNION STOCK YARDS
December 5th & 6th

Are You Exhibiting This Year?

A MAN may well feel proud to have raised stock, grain, fruit or vegetables that will stand comparison with the best his neighbour can produce.

The exhibition gives you an opportunity to show your best work, and to see what others have been producing.

It is natural to want to win a prize or a ribbon. The desire puts you on your mettle, and even though you may not win the coveted prize, the effort you make will mean an improvement in your whole year's production.

It is this constant striving that keeps all live people up to the mark. We, as manufacturers, have a tremendous responsibility to spur us on. We know our success depends on the perfect satisfaction of the millions of Gillette Razor users who daily enjoy the real luxury of a faultless shave.

The every-day shaver has put the "blue ribbon" on the Gillette Razor. His hearty commendation makes his friends want to buy the famous safety razor. It would do you good to hear him.

At the Exhibition, you will see thousands of men who owe their clean, fresh appearance largely to the Gillette. Suppose you step into a jewelry, drug, or hardware store, and look over the assortment of Gillette sets.

¶ Your year's work has entitled you to "treat" yourself to a Gillette, and you will say, as the years go by, that it was the best five dollars you ever invested.

These patterns may be obtained from your local McCall dealer or from the McCall Co., 70 Bond St. Toronto, Dept. W.

The war gardens of Canada this year have produced anywhere from $40,000,000 to $90,000,000 worth of fruit and vegetables. This production should be worth about $50,000,000.

It might bother the man who yells barnyard manure a foot deep close up to the trunk of his apple trees, to tell just why he does it. But if he will spread it around as far out as the roots grow, he will soon have a reason for the faith that is in him.

Distillation of Wood.

The destructive distillation of hardwoods is the only important distillation industry in Canada where wood is used as raw material. There are now 11 plants in Ontario and Quebec, and the industry is well organized. It is gratifying to note that manufacture is carried beyond the stage of the crude products, where so many of Canada's industrial activities cease, and that the specially refined and derived products are produced in Canada for local and export trade. In the limited list of chemicals which are regularly exported from Canada there are only three of much importance, namely, calcium carbide, acetate of lime and methyl alcohol, the last two of which are entirely produced by hardwood distillation. It is important to remember that practically all the wood alcohol and acetic acid which are so essential to modern civilization are produced by the destructive distillation of hardwoods. The plants in Canada consume, in the aggregate, over 500 cords of wood per day. Maple, beech and birch are the principal species used, although oak, hickory and other hardwoods are suitable if obtainable.

YES! LIFT A CORN OFF WITHOUT PAIN

Cincinnati man tells how to dry up a corn or callus so it lifts off with fingers.

You corn-pestered men and women need suffer no longer. Wear the shoes that nearly killed you before, says this Cincinnati authority, because a few drops of freezone applied directly on a tender, aching corn or callus, stops soreness at once and soon the corn or hardened callus loosens so it can be lifted off, root and all, without pain.

A small bottle of freezone costs very little at any drug store, but will positively take off every hard or soft corn or callus. This should be tried, as it is inexpensive and is said not to irritate the surrounding skin.

If your druggist hasn't any freezone tell him to get a small bottle for you from his wholesale drug house. It is fine stuff and acts like a charm every time.

Patriotic Jack.

"Dear me," sighed Jack Pumpkin,
"I wish I were red,
White and blue, 'stead of harrowing yellow!
Why, with colors like these
They will think I'm Chinese,
Or some sort of a queer foreign fellow!"

That night as a lantern
Jack Pumpkin hung high
And grinned at each person who came,
For a candle of white
Filled his heart with delight
And the red and blue danced in the flame.

Minard's Liniment Co., Limited.

Dear Sirs,—I can recommend MINARD'S LINIMENT for Rheumatism and Sprains, as I have used it for both with excellent results.

Yours truly,
T. B. LAVERS.
St. John.

Navy Blue.

The blue color so prominent in the uniforms of almost all marines is of hoary origin. Vegetius, in his fifth book on the military affairs of the Romans, traces the origin of this color to the Veneti, an ancient people dwelling near the coast of Biscay, and well versed in seamanship. It was customary among them to paint their outgoing ships, as well as their masts and sails with a blue color; also their soldiers and sailors wore blue uniforms. According to our author, the Latin word "Venetus," which was both the name of the color and that of the people, points to its origin. From the Veneti the custom was adopted by the Romans. Thus the son of Pompeius, after defeating Caesar's fleet in a naval battle, wore the navy blue, although entitled to the purple. The sneti were subdued by Caesar after a severe maritime war in 56 B. C.

Minard's Liniment Cures Burns, Etc.

Seeking Him.

There was a wordy altercation on the doorstep, and then the postman turned away muttering:

"Well, if that ain't the limit!"

"What's the trouble?" queried a passer-by sympathetically.

"Why," exclaimed the man "the woman in that house says that if I don't come earlier she'll get her letters from another postman!"

MONEY ORDERS.

Send a Dominion Express Money Order. Five Dollars costs three cents.

Gather squashes before killing frost. Brush the dirt from the underside and turn them bottom side up to dry thoroughly. Store in a dry, frost proof place.

Rhubarb beds should have a heavy coat of manure through the winter. Asparagus, too, after the frost-killed tops have been mowed off and burned.

Minard's Liniment Relieves Neuralgia.

CUTICURA HEALS ITCHING ECZEMA

So Bad Could Not Sleep. Red With Water Blisters and Burning.

"I had eczema so bad I could not sleep. It first started on my arm, then I had it on my body so that I could hardly wear clothes, and I had to stay in bed. My flesh was dark red with water blisters, and burning and itching.

"Everything I tried seemed to make me worse, and I had the trouble for nearly two years. I read about Cuticura Soap and Ointment, and I got them. They did me good right away, and now I am entirely healed." (Signed) Mrs. Peter McIntosh, French River, Ont., April 10, 1917.

How often such distressing, disfiguring skin troubles might be prevented by every-day use of Cuticura Soap and Ointment for all toilet purposes.

For Free Sample Each by Mail address post-card: "Cuticura, Dept. A, Boston, U. S. A." Sold everywhere.

Those who bring sunshine to the lives of others cannot keep it from themselves.—J. M. Barrie.

How to Cure Biliousness

Doctors warn against remedies containing powerful drugs and alcohol. "The Extract of Roots, long known as Mother Seigel's Curative Syrup, has no dope or strong ingredients; it cures indigestion, biliousness and constipation. Can be had at any drug store." Get the genuine. 50c. and $1.00 Bottles.

Britain's Power Output.

The coal used in Great Britain could be made to do three times its present work if converted into electricity at large central power plants, according to the report of the British Coal Conservation Sub-committee to the Ministry of Reconstruction. There are now about six hundred power stations, generating an average of 5,000 h.p. each, scattered throughout Great Britain, and it is recommended that these be replaced by sixteen "super-power" stations from which transmission lines would radiate to all parts of the country. The generators in these would produce from 20,000 to 50,000 horse power each.

LEMONS WHITEN AND BEAUTIFY THE SKIN

Make this beauty lotion cheaply for your face, neck, arms and hands.

At the cost of a small jar of ordinary cold cream one can prepare a full quarter pint of the most wonderful lemon skin softener and complexion beautifier, by squeezing the juice of two fresh lemons into a bottle containing three ounces of orchard white. Care should be taken to strain the juice through a fine cloth so no lemon pulp gets in, then this lotion will keep fresh for months. Every woman knows that lemon juice is used to bleach and remove such blemishes as freckles, sallowness and tan and is the ideal skin softener, whitener and beautifier.

Just try it! Get three ounces of orchard white at any drug store and two lemons from the grocer and make up a quarter pint of this sweetly fragrant lemon lotion and massage it daily into the face, neck, arms and hands. It is marvelous to smoothen rough, red hands.

The flag of Serbia consists of horizontal stripes of red, blue and white.

Cooking-school Teacher: "Did your husband like the doughnuts you made him?"

Mrs. Newed: "Yes, he was delighted. He said that if I could only make them large enough he could save on his motor-tire bills."

DON'TS FOR GUNNERS

Words of Wisdom for the Guidance of Hunters.

Every year the hunting season brings with it its spells in the form of human sacrifices. For the benefit of gunners who are going after game this fall the following list of don'ts is given:

Don't take any chances. The function of a shotgun is to scatter shot, but be careful where you scatter it.

Don't blaze away in haste and don't get excited. Many a shooter has filled his favorite dog full of lead just because he was over-anxious.

Don't point a gun at any person in jest. It is always the gun that "we didn't know was loaded" that goes off and does the damage. The only time to point a gun is when you intend to kill.

Don't take every rustle of a bush or a bough as a sure indication of game. Remember sometimes an inquisitive person has a penchant for being in strange places.

Don't carry a loaded gun through the street or on cars, trains, automobiles or any other kind of vehicle.

Don't get excited and shoot without making sure your object is game. Don't shoot until you see the rabbit, and then be sure that he is clear of both man and dog.

Don't drag a gun under a fence with the muzzle pointed toward you.

Don't climb over fences with your gun or lean it against a tree until you get over. Put it through the fence and on the ground, business end before.

Don't hunt with anyone you know to be careless. Carelessness with three and a quarter drams of powder behind and one and one-eighth ounces of shot is inviting "sure death."

Don't load your guns until you are actually ready for business. At all other times it should be empty. Keep your finger off the trigger until you are looking down the barrel at your game.

Don't rest on the muzzle of your gun.

Don't violate the game laws. It is not criminal, but sometimes very costly.

Don't "hog" all the game. Leave some for the next fellow.

Don't rest the muzzle of your gun in the ground. A gun muzzle clogged with dirt or mud is a dangerous proposition.

When a man wants your best calves or lambs, and you need them at home, do not hem and haw about it. Just say, "No thank you! Those are just about right for me!" And stick to it. It is the way to top-notch farming.

HIRST'S PAIN EXTERMINATOR

Pain? Hirst's will stop it!

Used for 60 years to relieve rheumatism, lumbago, neuralgia, sprains, lame back, toothache, headache, swollen joints, sore throat and other painful complaints. Have a bottle in the house. All dealers or write us.

EBENEZER

Most of the farmers around here are busy taking up their root crop, which is exceptionally good this year.

It was a great shock to the people of this community to learn of the death of John Bryce, and the heartfelt sympathy of all goes out to his bereaved family.

It was also with regret that we heard of the death of Harold Collins. Harold worked with Mr. J. W. Grant during the summer months, and all those who came in contact with him admired his kind and manly disposition. In the baseball team, where he took an active part, he proved himself to be a true sport and a jolly good fellow.

Mr. J. H. McFadden lost a valuable sheep on Sunday night, from being struck with lightning.

Mr. W. C. McKelvey has purchased a fancy driver. Watch out for some dust now.

Russell Fleming, who has been engaged with Mr. J. D. Poole, finished his term on Saturday last.

Rev. Mr. Quigley, of Dobbinton, occupied the pulpit here a week ago Sunday. He gave us a very instructive sermon on "Home Mission Work."

A number from here are helping to win the war by putting in a good amount of apple butter, which is a fine way of saving sugar.

The company threshing machine has completed its work after a successful season.

—The beast we can do, but that we must do! Buy Victory Bonds.

GLAMIS

The Baptist and Presbyterian churches were closed on Sunday. The school also has been closed the most of the week.

Mrs. Dezell, who has spent some weeks on the 10th, came home on Saturday.

Miss Mabel Kirktown is home owing to her school being closed.

Mrs. Jas. McLennan, who was on the sick list Sunday, is reported better.

Three of David Colwell's family are down with the influenza, but are doing nicely when last heard from.

The many friends of Mrs. Murison, of Toronto, will be sorry to hear that she passed away on Monday afternoon from Spanish influenza. Mrs. Murison has had very poor health for some time. She is well known around Glamis, where she lived for a number of years when her father, the late Rev. Mr. Ferguson, was pastor of the Presbyterian church here. She leaves two children, Helen and Ferguson.

Rev. P. Reith was confined to the house for a few days suffering from a cold.

Word came to Mrs. McPherson, of the boundary, that her son Stewart was missing. He went overseas with the 160th.

Children Cry
FOR FLETCHER'S
CASTORIA

BRADLEY

Wedding bells were ringing.

Mr. Hugh Watt, of Paisley, and his men are busy building bridges on the 16th con.

Threshing is the order of the day.

Miss Mabel Mooney, of Toronto, is home just now.

Miss Zeta Clark, of Detroit, is home for a few days.

Our beef ring is closed down for another season.

Miss Cora Armstrong is spending the winter months in Guelph.

A number of people around here are laid up with the "flu."

As the ground is getting very dry no plow just now a good rain would be welcomed.

CARGILL

Mrs. Leo Williams, of Windsor, is here assisting her mother to nurse several of the Thompson family who are ill.

Mr. M. Grainger, of Chatham, who has been sick at his father's home here, is improving. His sisters and wife also have been bedfast, but are getting better.

Mr. and Mrs. Jas. Clancy and babe, of Walkerton, spent over Sunday at Mr. John Clancy's.

As a precautionary measure there was no church services on Sunday last and there will not be next Sunday either, owing to the "flu" epidemic. There are several cases of this here, but as every precaution is being taken to prevent its spread we hope we will soon be free of it.

Mr. Harris, of Owen Sound, the new manager of the Bell Telephone Co. for this district, was here on Friday night.

Mr. Mathers and Miss Allen, the knowledge imparters at the school here, have gone to their homes in Palmerston and Wroxeter while the school is closed owing to the "flu" epidemic.

The remains of the late Mr. Wm. Grainger were brought home on Monday night from Stratford, where he died, a victim of the "flu." The funeral, which was private, took place on Tuesday. The late Wm. Grainger was raised here and was married to Miss A. M. Brownscombe, who with three small children, is left to mourn the untimely death of a kind husband and father. We sympathize with the bereaved in their affliction.

Mr. and Mrs. Grainger and Mr. H. Brownscombe were in Stratford last week to see Mr. Wm. Grainger and remained with him until his death.

—The deceased referred to in the following from the Tara Leader was a brother of Mr. Donald Darroch, of 7th Elderslie: The death of an old and well known resident of this section took place on Wednesday, Oct. 16th, in the person of Mr. Neil Darroch at the age of 87 years and 11 months. Mr. Darroch was born in Scotland, Isle of Jura, and after coming to this country settled in the Tp. of Arran in 1853. For con. 4, where he resided for a long period and was a prominent and successful farmer. He was a member of the Baptist church and took a leading part in the work of the Baptist congregation in the surrounding neighborhood. After the death of Mrs. Darroch he moved to Tara where he resided for several years, but for the past nine years has resided with his nephew, Mr. John Henderson, Tp. of Derby. One daughter survives—Miss Mary Darroch, who has been residing at Ottawa.

Lt.-Col. Roy Robertson, who was thrice mentioned in despatches by General Haig and awarded the D.S.O. medal by the king, had another decoration added to his collection by being made the recipient of a French decoration, Croix de Guerre, with a star, which was given him for splendid work done at Amiens. Lt.-Col. Robertson, who is the second son of Mr. David Robertson, K.C., is in command of the 9th Canadian Engineers, and has probably the distinction of receiving the most frequent recognitions of any Bruce boy in the war.—Herald and Times.

—Besides being helpful to the men, women and children of the U. S. nation who have taken advantage of the additional hour to cultivate war gardens, the daylight saving time of the past summer has, it is stated, saved the U. S. $2,000,000 in gas bills, also ten per cent. in electric bills, and one and a quarter million tons of coal. Putting the clocks ahead for one hour during seven months is therefore figured out as a national benefit, and will be favored in ensuing years.

UNDERWOOD FAIR

Again favored with perfect weather on their date, Oct. 8th, the Bruce Tp. fall fair at Underwood was very successful in many respects. There was a large attendance of spectators, and the exhibit was one of the fullest in years, particularly in horses and cattle. It took the expert judges from 1.30 to 6 o'clock to get through the horse classes. The inside department was better than usual, ladies' work, fruit, roots and grain sections being well filled. The concert in the evening was well patronized, proceeds amounting to $150.

PRIZE LIST

HORSES

General Purpose—Span, John Cummings, Gen. Jamieson, Alex Carr.

Agricultural—Span, D. Stewart, W. A. McLean, P. J. Brown & Sons; brood mare, W. McLean; J. McNaughton, Wm. Cassidy; foal, Wm. Cassidy, Chas. Drummond, McKay Bros.; 3 yr. old filly or gelding, Jas. Arch, Neil McKay Bros.; 2 yr. old filly or gelding, Wm. Hendry, McKay Bros.; yearling filly or gelding, W. A. McLean; yearling filly or gelding, Wm. Hendry, R. Carlton, Wm. Arch.

Draught—Span, D. Stewart, Wm. Arch, Wm. Arch, Wm. Semple & Sons; brood mare, Wm. Howe, McKay Bros.; foal, Wm. Semple & Sons, Wm. Arch, Wm. Howe; 3 year old filly or gelding, Chas. Drummond, Wm. A. Cole; 2 year old filly or gelding, Wm. Arch, Wm. Hendry, McKay Bros.; yearling filly or gelding, Wm. Arch.

Roadster—Brood mare, E. Clayton, P. J. Brown & Son; foal, P. J. Brown & Son, E. Clayton; 3 year old filly or gelding, Arch. McLean, Wm. Semple & Sons; 2 yr. old filly or gelding, Geo. Russell; yearling, J. H. Struthers, McLean Young; team, Arch. McLean, Peter Urquhart, P. J. Brown & Son; buggy horse, R. Laidlaw, Thos. Carruthers, Hugh McDougall.

Carriage—Brood mare, Chas. Drummond, Wm. A. Cole; foal, Chas. Drummond, McLean Young; 3 yr. old filly or gelding, E. McGillivray; yearling, P. J. Brown & Son; carriage horse, single, 1st Angus McDonald, 2nd Hugh McDougall.

Special—Best 3 draught foals, Norman McKay, Wm. Semple & Sons; best display of horses, Angus McDonald, Wm. Arch; best halter broken colt, Alex Brown, Curtis Parker; best Kosorth foal, Rich. McGregor 1st and 2nd.

CATTLE

Durham—2 yr. old bull, Geo. W. Reppel; yearling bull, Arch McLean; bull calf, Thos. Howe, McKay Bros.; Joshua Howe; best bull on grounds (dem.), Arch. McLean; milch cow, Joshua Howe, Thos. Howe 2nd and 3rd; 3 yr. old heifer, Thos. Howe 1st and 2nd; 2 yr. old heifer, Thos. Howe, Joshua Howe, McKay Bros.; heifer calf, Joshua Howe, Thos. Howe 2nd and 3rd.

Grade Milch cow, McKay Bros., Joshua Howe, Alex Young; 3 yr. old cow, McKay Bros., Joshua Howe, Wm. Arch; 2 yr. old heifer, Alex Young, W. Howe, Arch. McLean; yearling heifer, Wm. Arch 1st and 2nd, McKay Bros.; heifer calf, McKay Bros., C. Richardson, Joshua Howe; 3 yr. old steer, Thos. Carruthers, Carl McDougall, W. Arch; yearling steer, Wm. Arch, Arch. McLean, McKay Bros.; steer calf, Carl McDougall 1st and 2nd, McKay Bros.; dairy cow, McKay Bros. 1st and 2nd; best cat on exhibition grounds, Carl McDougall.

Fall or Aberdeen Angus—Bull 2 yrs. old or over, Geo. Bailey; heifer calf, Geo. Bailey.

SWINE

Berkshire—Boar over 12 months, McKay Bros.; boar over 6 months, Jas. Avis; brood sow over 12 months, C. Richardson, Jas. Avis; brood sow under 7 months, Jas. Avis 1st and 2nd.

Yorkshire—Boar over 12 mos., J. W. Johnson, McKay Bros.; boar under 6 mos., D. G. Cameron 1st and 3rd, J. W. Johnson 2nd; brood sow over 12 mos., Robt. Carleton; brood sow over 6 mos., D. G. Cameron; brood sow under 6 mos., D. G. Cameron.

Any Other Pure Breed—Boar over 12 mos., D. G. Cameron; boar over 6 mos., D. G. Cameron; boar under 6 mos., J. W. Johnson; brood sow over 12 mos., D. G. Cameron; brood sow under 6 mos., D. G. Cameron.

Grade—Sows, Only—Brood sow over 12 mos., McKay Bros., R. Gibbons; brood sow over 6 mos., Jas. Avis 1st and 2nd; brood sow under 6 mos., McKay Bros. 1st and 2nd, Jas. Avis; pair Lacon hogs, Wm. Cassidy; litter of pigs, R. Carleton 1st and 2nd.

SHEEP

Lincoln, Leicester or Cotswold—Aged ram, J. W. Johnson, McKay Bros., Carl McDougall; ram lamb, J. W. Johnson, Jas. Johnson; ram, any age, J. W. Johnson; ewe, J. W. Johnson 1st, 2nd and 3rd; ewe lamb, J. W. Johnson 1st, 2nd and 3rd; shearling ram, J. W. Johnson, McKay Bros.; shearling ewe, J. W. Johnson 1st and 2nd, McKay Bros. 3rd; pen of sheep (4), J. W. Johnson.

Shropshire—Aged ram, H. McDougall & Son; ram lamb, any age, H. McDougall & Son; ewe, any age, H. McDougall & Son 1st and 2nd; shearling ewe, H. McDougall & Son 1st and 2nd; ewe lamb, H. McDougall & Son 1st, 2nd and 3rd; pen of sheep (4), H. McDougall & Son.

ORIGIN OF "BOLSHEVIK"

Various explanations have been given of the origination of the name Bolshevik. A Russian doctor gives the true explanation of how the word came to be used. It did not arise out of the present Russian chaos. It seems that in 1901, at the second conference of the Russian Social Democratic party, when the methods employed in regard to the direction of revolutionary activities were under discussion, a difference of opinion arose and a vote was taken. There was naturally a majority (bolsheviste) and a minority (menshevists). The two groups were thereafter named, the "Bolsheviks" and the "Menshevikis."

The Money Weapon

REV. JOHN MacNEILL, B.A., D.D., the week before leaving France, was addressing an audience of four or five hundred of our Canadian soldiers in the shattered remains of what was once a high school. "In view of my impending visit to Canada," said Mr. MacNeill, "I asked those men what they would like me to say to the people at home. Their answer expressed by scores in various ways was summed up in a noble word by one of the more thoughtful men:

"'Tell the people to stand by us and we will see it through. And tell them, too, that we are willing to leave a little bit of Canada over here in France so long as we know that they will not stop till Victory is complete, and that our children will not have to come out here to fight this thing over again.'"

How Shall We Do It?

Buy Victory Bonds to the Uttermost

Here is one way to buy Victory: Suppose you buy a $50 bond, you may pay for it as follows: 10 per cent. ($5.00) on application; 20 per cent. ($10.00) December 6, 1918; 20 per cent. ($10.00) January 6, 1919; 20 per cent. ($10.00) February 6 1919, and 31.16 per cent. ($15.58) March 6, 1919. The last payment of 31.16 per cent. represents the 30 per cent. still owing on your bond ($15.00) plus 1.16 per cent. ($8c), which represents the accrued interest from the time of the application to the due dates of the various instalments. In other words you pay 58c for the privilege of deferring your full payment of the bond. But a full half year's interest ($1.25) will be paid you on May 1, 1919. The bonds are sold in denominations of $50, $100, $500 and $1,000, with interest twice a year at 5½ per cent.

Bruce's Proud Pre-Eminence in War Work

IS DUE TO THE FACT THAT

EVERYBODY HELPS

WHEN THERE'S A CAMPAIGN ON

¶ Result—Bruce has never failed yet—and won't this time. . . . . .

¶ For the last Victory Loan, Bruce was asked to raise $850,000 and actually raised $1,800,000. . . . . .

¶ This year Bruce is asked to raise $2,000,000, and the Committee want to do better than that. . . . . .

¶ This is quite possible. Last year we had over 4,000 applications, and the Committee hopes to have at least 6,000 applications this year in Bruce.

¶ KEEP BRUCE IN THE FRONT RANK, AS OUR COUNTY IS ONE OF THE MOST SHINING EXAMPLES IN CANADA, OF GIVING ITS SHARE IN BOTH MEN AND MONEY. . . . . .

Yours for the Victory Loan, 1918.

DAVID ROBERTSON, County President — GEO. D. McKAY, County Secretary

—Mrs. Esplen is visiting at the home of her niece, Mrs. Nathwell, in Dunnville.

—Messrs. W. J. and T. Ellis went to Tara on Tuesday to attend the funeral on their father.

—Mr. Wm. Hyde has disposed of his farm at Ellengowan. Mr. Alex Coates, of Walkerton, is the purchaser.

—And now an epidemic of diphtheria is threatened. Mild cases are reported in neighboring towns, but there have been none in Paisley yet.

—With the ringing of the town hall and mowing of the waterworks whistle the Victory Loan campaign was started off on Monday morning.

—Mr. Alex McRae, of North St., is in a very precarious state of health from a complication of troubles. His absent sons, Fraser, of Winnipeg, and John, of Moosejaw, arrived here a few days ago.

—Mr. Beaton Wells, who has been in Toronto during the past summer, was up visiting his friends at Pinkerton and vicinity over the week end. Beaton is employed at shipbuilding, and is earning 60c an hour. He worked on the big new vessel launched a few days ago.

Became Demented

Mrs. Cole, who had been acting strange at times during the past year, became violent last week, threatening the lives of those in her household and some of her neighbors' children. The authorities took action and on Monday the demented woman was sent to London.

Three of a Family Died from Influenza

Mr. and Mrs. J. A. Bradshaw, of 8th con. Elderslie, have lost three of their children within two weeks from pneumonia following influenza. Their eldest daughter Maggie, about 14 years of age, succumbed on Oct. 16th, at the home of Mr. Wm. Herron, where she had been working. Harry, 10 years old, died on Wednesday last at the home of Mr. Jas. Thomson, where he had been removed to, and on Monday Jerry, 8 years old, died at home. The eldest son, John, who is a drafted soldier, is also very ill, and was taken to Walkerton hospital on Monday. The deepest sympathy is felt for the bereaved family.

Gale—Pinkerton

On Friday, Oct. 25th, at the noon hour, a very pretty wedding took place at "Forest Home," the residence of Mr. David Pinkerton, of Pinkerton, when his daughter, Kathleen, was united in marriage to Rev. J. A. Gale, of Hyde Park, London. Rev. John Grey Reid, of South Kinloss, officiated, assisted by the groom's father, Rev. R. M. Gale, of Pinkerton. The bride, who entered the drawing room on the arm of her father, to the strains of the wedding march played by her sister, Miss Jennie Pinkerton, was daintily attired in blue crepe de chine and Georgette. Among the guests present were Mrs. J. G. Reid, Kinloss; Mr. and Miss Cleghorn, Kitchener, and Robt. S. Gale, Elora. The wedding breakfast was served in the dining-room, and immediately after the young couple left by motor for their home in Hyde Park.

USEFUL WAR SOUVENIR

The War Album issued by the Family Herald and Weekly Star of Montreal is to hand, and is a credit to the publishers. A copy is sent free to all who order that paper for 1 y. The Album contains a mine of valuable information and the color work could not be improved on.

It is just such a book as one would like to have close by at all times. Every school child in Canada should have it. In after years when the war is over it will be a valuable book of reference. The Family Herald costs only $1.25 a year and with the Album is certainly big value.

PTE. JAMES MILLER

Killed in Action Sept. 27th. Joined the 160th at Paisley.

Pte. John M. Woelfle, son of Mr. And. Woelfle, of Greenock, was admitted to a hospital on Oct. 3rd, with gunshot wound in right arm.

Mrs. Flora McKinnon, Paisley, received official word on Wednesday that her son, Pte. Alex McKinnon, infantry, was admitted to the 18th General Hospital, Dannes, Camiers, on Oct. 21st. He had received a gunshot wound in the hand.

The Epidemic Over

The visitation that came upon us so suddenly and laid so many of our citizens low for at least a few days, will soon be a thing of the past. Only odd new cases have developed this week. It is now announced that services will be resumed in the churches on Sunday next, and schools opened on Monday.

AMPUTATED HIS OWN LEG

"Another man, Dobson of Paisley, whose leg was shattered with a shell, completed the amputation with his own jack-knife and dressed his own wound. He thought his other foot was gone, but when the doctor told him it was only broken he said, "I'm glad, that's Jack-a-loo."

The above is a paragraph written in his special correspondence to the Saskatoon Daily Star and Chicago Daily News by Capt. R. J. Renison, Canadian chaplain, who gives the most thrilling story of the battle front that we have yet read. We have to thank Mr. John Nelson, of the Vancouver World, for the copy we received. Pte. John Dobson is the soldier referred to.

BANKS WILL HELP SMALL INVESTORS

It is announced that, in order to encourage investors to participate in the 1918 Victory Loan, the banks will lend subscribers, on the probable certainty of repayment within a year, up to 90 per cent. of the amount of the investment in the Loan. The rate of interest charged by the banks is 5½ per cent.

This should have the effect of greatly stimulating the flow of money when the big drive opens. Many people who were anxious to do their bit towards supporting the boys at the front were unfortunately restricted as to the amount they had available for investment, having immediate or future obligations which called for their ready capital. It is such as these that the banks are ready to help. On reasonable security these intending investors may receive the cash from the bank at the same rate of interest the Dominion Government pays for the entire 1918 Victory Loan. They may reduce their obligations to the banks monthly or quarterly.

The banks will also accept from small investors for safe keeping without charge the interim securities and later the bonds themselves up to a reasonable amount, for the term of one year.

Goes to a City Commission Business

Dr. Allen has acquired a partnership in a commission business in Toronto, and will hereafter devote his attention to that concern. The Dr. has been a citizen of Paisley for over thirty years, and always took an active interest in the affairs of the community. We are glad to say that his home will still be here, as the family are not removing to the city.

Extracted a Darning Needle from a Boy's Body

On Monday the sixteen-year-old son of Mr. Geo. McKillop, of Saugeen, was seized with a severe pain in the lower abdomen. On examination Dr. Gage came to the conclusion that the trouble was due to some foreign body located deep in the tissues. By using a local anaesthetic a small opening was made and a large darning needle, three and a half inches long, was extracted. It was somewhat coated over, but was perfectly whole. The boy has no remembrance of ever being injured, and the only way the doctor can account for the condition is that when the boy was a babe creeping on the floor the needle must have entered the lower part of the body and gradually worked its way in. The boy is doing well.

—James Fallis, of Brampton, sold $20,000 worth of dual purpose cattle on Thursday last. A choice cow, Right Sort, and her calf sold for $1,435. Hawthorne Blossom brought $800, Golden Drop went for $800, while another cow and her calf sold for $740.

TRY IT!

For Men Must Work

Priscilla Sees Her Vexation Through the Eyes of Fourteen-year-old Jimmy—and Changes Her Mind

Montayne Perry.

"That's the way with men," her thoughts ran. "They think only of themselves, what they want to do, the money they want to earn! I'm glad I realized all this before my life was ruined! Of course I never shall marry now but if I do, it will be a man who puts me first in his heart!"

All which proves nothing except that our Priscilla was a very young woman!

The lake was a large one with a number of islands dotting its surface at wide distances. Jimmy nodded toward one of these green mounds.

"Let's go over there. It's Hunter's Island where we're going to have the Scout camp next week. There's a nice little pebbly beach where we can make a fire for the coffee."

"All right," Priscilla agreed listlessly. Hunter's Island was as good as any other place. Every place in the world would be lonely and horrid now, forever and ever!

On the pebbled beach Jimmy built a fire place and made coffee according to approved Scout methods while Priscilla set out the luncheon on a flat rock and wished that the waves, the breezes and the birds in the green branches overhead would not all insist on singing, over and over, Leonard's merry little tune.

Luncheon ready, Jimmy ate, Priscilla meditated. Luncheon over, Jimmy read the latest Scoutcraft book, Priscilla reflected. Later, while Jimmy flaked, Priscilla brooded.

It was late afternoon when Jimmy abandoned his fishing rod to suggest, "Say, if you don't want to get home early, I could make a fire and cook the fish."

Just for an instant she hesitated. A glorious sunset was gathering. Soon the moon would come up. Was Leonard down at the water's edge now, looking out wistfully? Was he hoping she would repent and come back in time for moonlight-rowing? Almost she yielded but Jimmy chose that unpropitious moment to whistle the merry little tune! Her face hardened.

"I'll get the table while you cook the fish," she said.

"I wish I were a boy!" she declared when Jimmy served up the fish, browned to perfection. "You learn to do so many interesting things. Think of the fun you'll have in camp. Can all the boys in your patrol come?"

"All but Dan Manning. He's got a job in Deane's store."

"What a shame! But why doesn't he give up his work now? He'll give it up in two weeks, anyhow, when school begins."

"He took the job till the fifteenth."

"But Dan doesn't need the money."

"Dan's not a quitter! When a fellow has got a job, that comes first of the ammunition anything."

"O-o-o!" sighed Priscilla, under her breath. She glanced almost timidly at Jimmy. He was taking out the fire and its glow shone warm by on his serious young face.

"Jimmy, is that the way all men look at things? Does every man put his work ahead of everything else? Is his job always first?" Was there a way, still left open in Prissy's tale?

"Of course." The matter-of-fact tone of the boy! "What would be fine?"

"Why, there are other things in life beside business money making. A man's home, for instance. People who love him. Making those who care most for him happy."

"But all the other things depend on his job," Jimmy stated succinctly. "A man can't have a home nor make anybody happy unless he has a job and works at it. If a fellow doesn't do his share he's—why, he's nothing at all! Even if he doesn't need to make money, he needs to be a man. Don't you see?"

Slowly, in Priscilla's young, impulsive soul, gathered the gentleness, the tenderness and the understanding which belong to the twilight hour.

"Jimmy," she said, "let's start home now." As the canoe moved out on the purpling water, she urged, "Let's paddle fast, Jimmy!"

Swiftly they shot through the gathering dusk. In the girl's heart was a longing that was almost prayer. Would Leonard understand, have faith in her? Would he be waiting?"

"He's a real man. He sticks to his job!" she told her heart exultantly.

Round them the dusk deepened. Stars crept out, their reflections pricking the water with a thousand tiny points. In the east a band of pale silver brightened and broadened, creeping swiftly up the sky.

They rounded the point, Priscilla's eyes leaped to the tall figure, dimly visible at the water's edge. A quick mist blurred her vision; a little sob clutched at her throat.

"Oo-hoo!" yodelled Jimmy.

"Oo-hoo!" came Leonard's answering call.

The canoe grated on the beach. Jimmy jumped out. Priscilla's glance went shyly to Leonard's.

"Have you done a good day's work?" she asked, a tiny smile lurking at the corners of her lips. "If you have, I'll go out with you for a reward of merit."

"Sweetheart!" he breathed joyously.

They were alone on the beach, Jimmy, the discreet, had vanished. They turned the canoe's nose toward the open, shimmering stretches, paddling silently, full of a great content.

TRIALS OF CONVALESCENTS

How Well-Meaning Persons Bore the Wounded With Questions.

Not all of the trials of a soldier come in battle, as we can easily gather from an amusing account of hospital life that was written by a young Englishman who was wounded during the fighting in France.

In addition to my friends who were regular visitors, he says, we had occasional visits from curious but well-meaning strangers. Some people find it impossible when visiting hospitals to get beyond the everlasting phrase, "Where were you wounded?" But the limit of conversational inanity was reached by one of these casual visitors, a stout, blonde dame. This was our conversation:

"Bon jour, ben jour! You are an English officer, aren't you?"

"Yes, madame!"

"Where were you wounded?"

"In the head."

"Do you have to lie down all day long?"

"My leg is paralyzed."

"And you have no wound in the leg?"

"None at all."

"Ah, then you were paralyzed before the war!"

At times whole families, dressed in mourning, would drift into the room and stand awkwardly grouped at the foot of my bed. "Now, my little Francoise, go say good morning to this brave soldier!" and the whole tribe would come, one after another, to perform the ceremony of shake hand. After this function follow'd the inevitable question, "Where were you wounded?"

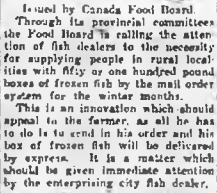
My method of dealing with that question always amused Mme. Buquet.

"Where were you wounded?" the caller would ask me, and I would reply acidly:

"At Cauder."

"Yes, but in what place were you wounded?"

"At the entrance of the village."



"Yes, but in what part of your body were you wounded?"

"In the head. That is why I wear these bandages."

"Go, Francoise, say au revoir to the poor, wounded soldier."

The function of le shake hand having been re-enacted by each member of the family, they passed on to the next bed.

Mail Order System.

Issued by Canada Food Board.

Through its provincial committees the Food Board is calling the attention of fish dealers to the necessity for supplying people in rural localities with fifty or one hundred pound boxes of frozen fish by the mail order system for the winter months.

This is an innovation which should appeal to the farmer, as all he has to do is to send in his order and his box of frozen fish will be delivered by express. It is a matter which should be given immediate attention by the enterprising city fish dealer.

Impossible!

That thinkin' patent spirit stove of yourn has gorn out, George.

Well, can't yer light it again?

No! It's gorn out through the roof of the dugout.

Every time a woman sees a mirror she pauses to reflect.

"It is by teaching that we teach ourselves, by relating that we observe, by affirming that we examine, by showing that we look, by writing that we think, by pumping that we draw water into the well."—Amiel.

About the House

What One Woman Did.

There is an atmosphere of rest about some homes, perhaps unaccountable, but undeniably present, affecting all who are fortunate enough to cross their thresholds. I know such a home intimately. It is simple and harmonious, and while it is joyously bright it is restful. There is no sense of confusion, because the woman who made it what it is used neither figured draperies nor rugs of a decided pattern with figured wallpapers. Neither did she put dark or large-figured paper in a small room, for it is always questionable and seldom looks well. She did use a dim, soft tapestry paper in the hall, and in the bedrooms some small, well-covered patterns that did not "travel."

She did not furnish any room entirely in browns, but she put plenty of dull-blue in the brown room, giving a balanced ration of color. Neither did she put a depressing blue paper on any room, for that might give the family a chronic case of the blues. "Cold" looking papers, such as grays, blues or greens, were not put in a north room, nor in a room having little light, but yellows were used to reflect all the light possible. She avoided using yellows, oranges or reds, except in small touches, in rooms having a strong glare of light, but put her grays, or cool colors, in these rooms. Nor did she use borders on her papers, for borders carry the eyes up to the ceiling.

There were not many pictures, but such as she had were good, with simple, not ornate, frames. She avoided hanging them against a figured wallpaper, for this causes confusion. Neither did she hang her pictures from one hook, thereby leading the eye, by the converging lines of the wire, to the hook instead of to the picture.

There was nothing in the house too good to be used. She avoided putting more than five objects on a mantelpiece, nor were the living-rooms cluttered with loose photographs. The rugs and large pieces of furniture were not placed "on the bias," straight, structural lines being so much more restful. There was no plate-rail, with a lot of dust-collecting plates and other objects on it; nor were there any dead, stuffed fish or birds hanging in the dining room to reproach her when she wanted to enjoy a savory little trout or a piece of game. Her china was not painted with realistic animals, or flowers, for who would care for ice cream served on a lobster's back?

Neither did this homemaker display all her silver on the sideboard, for she found that a dish of fruit and a pair of candlesticks looked so much more attractive, and required less care.

The exterior of the house was not painted a cold, stony gray, nor a bright green, nor pink. Instead it was painted white with a mossy-green roof. She did not paint her porch ceilings sea-green nor sky-blue, for such colors tire sensitive eyes. Nor did she paint the outside window-sashes black, making the windows look like great holes against the dark interior. And because of these things she did not do, she made a home that was like a bit of heaven on earth.

So many of us are controlled by circumstances that it is not always possible to follow a definite plan; but by recognizing such fundamental rules as this homemaker observed, and keeping them in mind whenever changes are contemplated, we may in time reach the goal or at least travel along the path which leads to it.

See That Children Eat Wholesome Food.

Nutrition is power, force and energy. The human body must create this for itself; man is not a battery that can be charged or reloaded at will, therefore it behooves us to look well to the requirements of our body.

Underfed children will grow to maturity fully two or three inches under normal height, and with a handicap of twelve to eighteen pounds below normal weight. This has been traced in most instances to faulty nutrition, insanitary surroundings and lack of care for the physical well being.

The efficient mother must understand thoroughly and be alert to prevent this dwarfing of the capacity of the human being.

One child is permitted to eat what he likes, discarding food that is vitally necessary if he is to grow bone, teeth and muscles structure.

Then, again, some mothers will give the child a nickel or a dime for cake, pie or ice cream for the noon luncheon. They are indifferent to the source of these articles. A saucer of well-cooked cereal and milk would have satisfied the child and at the same time have supplied him with the food needed for nutrition.

Store a Keg of Herring.

Issued by Canada Food Board

Of course you store potatoes and apples in your cellar for winter but what about a keg of herring or a box of finnan haddies? They are an investment of the best kind for you can always turn to them in time of need and prepare an appetising and economical meal in the twinkling of an eye.

There is a big victory to choose from. Of the salted and dried kind you have kippered herring, salted or dried codfish and salt pickled mackerel. The frozen varieties obtainable in the West are lake fish, sole, brill, cod, plaice, witches and flounders; and in Eastern Canada, cod haddock, mackerel, herring, sole flounders and lake fish. Other varieties of fish coming out of Canadian lakes besides white fish, trout and pickerel are ciscoes, pike, gold eyes and mullets.

Food Control Corner

Great Britain and her Allies have been short of butter for several months, and the Canada Food Board have been asked to take steps to relieve the condition which has borne heavily upon the people of Great Britain, France, Italy and Belgium. The pressure upon cargo space has been heavier than ever, since the United States has entered the war, and began moving her troops across the Atlantic. Ships are needed for soldiers and munitions of war, as well as for food stuffs. The main staple food stuffs naturally receive the first consideration.

To-day in Great Britain one-half pound butter or margarine per month, per person, is all that the supply allows, as compared to the creamery butter consumption of two pounds per person, per month in Canada.

The Canadian Government on the recommendation of the Minister of Agriculture and the Canada Food Board, at the request of the British Ministry of Food for increased shipments, has commandeered all the creamery butter made between September 30th, and November 9th, inclusive, in the Provinces of Alberta, Saskatchewan, Manitoba, Ontario and Quebec for export to Great Britain and Allies.

This does not mean, however, that Canadians need be panic-stricken, nor does it mean that there is the least justification for hoarding or profiteering. There are in store, unaffected by this commandeering order, 20,000,000 pounds of creamery butter made before September 30th. Dairy butter is not affected by the order. The average cost to cold storage companies for butter now in store is about 44¾ cents a pound. The profits of storage companies selling to wholesalers are limited by the Canada Food Board Order No. 45 of June 5th, to 4 per cent., and of wholesalers selling to retailers to 10 per cent. over cost delivered to warehouse.

The present supply of creamery butter in storage, together with dairy butter produced during the next six weeks, will be quite sufficient to fill the ordinary demands of the Canadian public.

Boarding-house keepers are reminded that they must get a license from the Canada Food Board if they serve fifteen meals a day outside their families. It is illegal not to get the license, and the penalties may be heavy.

How are those who omit to get a license to be discovered? Very easily. The grocer must not knowingly serve boarding-house keepers who have no license. He risks having his own license taken away, which would put him out of business. Boarding-house keepers must also obtain sugar certificates to get their supplies of sugar, and the retailer must endorse these at each purchase. Order 46 of the Food Board—which, it must be emphasized, is the law of the land to-day,—specifically includes among Public Eating Places private families keeping boarders and boarding-houses, provided, of course, they serve fifteen meals. Retail grocers have been warned individually by the Food Board against breaking these regulations.

A Real Surprise.

"I was talking to my colored man of all work the other day," said a well-known business man, "and I asked him if he went to church.

"'Yessor, I goes to church every Sunday,' he said.

"'Are you a member?'

"'Yessuh.'

"'What church?'

"'Prospeceryn.'

"'Do you believe in the doctrine of election?'

"'Yessuh.'

"'Do you think I am elected to be saved?'

"'Law, Mr. Mellen, I didn't even know you all was a candidate.'"

WHEAT GROWING AT O.A.C.

Valuable Information Gained by Experiments at Guelph.

For nine years in succession experiments were conducted at the Ontario Agricultural College at Guelph in treating winter wheat in different ways to prevent the development of stinking smut and the results have been very satisfactory. In the average for five years, untreated seed produced 4.2 per cent. of smutted heads, while seed which was immersed for 20 minutes in a solution made by adding one pint of formalin to 42 gallons of water produced a crop which was practically free from smut. This treatment has been found to be simple in operation, comparatively cheap, effectual in completely killing the smut, and productive of the highest yield of grain.

The results of twelve separate tests made at the College show an average increase in yield of grain per acre of 6.8 bushels from large as compared with small seed, of 7.8 bush. from plump as compared with shrunken seed, and of 85.6 bush. from sound as compared with broken seed. Thoroughly ripened seed produced more grain and produced more straw than seed which was cut at an earlier stage of maturity.

Eight separate tests demonstrated that land on which field peas had been used as green manure yielded 6.5 bush. of wheat per acre more than land on which buckwheat had been used as green manure. Winter wheat grown on clover sod also yielded better than that grown on timothy sod.

Earlaps of the Japanese.

The earlap is almost entirely wanting with the Japanese, but this apparent anomoly is done at all. It is the whose ears are badly formed, or at least different from those which nature, if not interfered with, would have given us. Our ear is disfigured because for centuries our ancestors loaded it with more or less heavy ornaments, which in the course of time elongated its inferior part. We inherited from them both the suctom and its effect—the lap. A fact goes to show that this useless and cruel custom was unknown to the Japanese, the expressions for earrings mimi-gana) and earlap (mimi-taboo), were not introduced into the Japanese language until the epoch when the Japanese entered into connection with the Occidentals, those whom they were wont to call barbarians.

Ingram's
Milkweed
Cream
Two Sizes—50c and $1

For 31 years Canadian women have found Ingram's Milkweed Cream the most efficient toilet preparation on the market for keeping the complexion clear and colorful, preventing windburn and pimples, keeping the hands soft and white even when in dish-water daily, and warding off hard work from the fingers. It has therapeutic qualities no other emollient possesses.

Always have a box of Ingram's Velveola Souveraine Face Powder (50c) in the house. A mere touch and oiliness and perspiration disappear. It covers up blemishes and gives you a clear, flawless complexion. It stays on. At your druggist's there is a complete line of Ingram's toilet products including Zodenta for the teeth (25c).

A Picture with Each Purchase

Each time you buy a package of Ingram's Toilet Soap or Perfume your dealer will give you, without charge, a large portrait of a world-famed motion picture actress. Each time you get a different picture so you make a collection for your home. Ask your druggist.

The Cardinal Gets a Red Coat.

The blithest bird in the forest was Crested Cardinal. No matter what the weather, he was always tilted on the tip of a branch, singing, "Cheer! Cheer! Cheer!" There were no dark days in his calendar, and his gayety kept the other birds in good humor. They could not very well mope and be gloomy, you know, within hearing of such a song. Why, it made them feel cheery in spite of themselves!

As you may already have guessed from his name, Crested Cardinal wore the feathers on his head pompadour. Still, he was not a bit conceited; and for all that his song was so bright, he dressed quietly in a suit that was brown to match the tree trunks and green to match the leaves, without any red.

Now, Crested Cardinal was always doing things for other people. It kept him remarkably busy, as you may suppose. The summer was not long enough to hold all the gay little surprises for his friends that he tucked into it like presents in a birthday cake; and when autumn came, it found him busier than ever.

One morning very early Crested Cardinal was awakened by a faint tinkling in his ears. It was not exactly like rain-drops, and it was not exactly like bells. He peeped this way and that, and at last he saw a merry little man in a green suit fringed with icicles. The little man was standing tiptoe on a branch, painting the leaves with red and gold paint from his palette. As he moved, the icicles jingled with the tinkling sound that Crested Cardinal had heard—a sound not exactly like raindrops, and not exactly like bells. Crested Cardinal had never seen him before, but he knew at once that it was Jack Frost.

"Hello, Crested Cardinal!" cried Jack Frost, with a glance over his shoulder. "You're the very one I want to see. Not busy, I hope? No plans on wing?"

"Not unless you make them," Crested Cardinal replied cheerily.

"Good!" said Jack Frost, skipping as he talked from one branch to the next. "What with that cold snap last night and all the trees in need of new dresses at once, I'm a bit rushed, I confess."

"Only tell me what I can do," said Crested Cardinal; and his tone was so gay that you would never have guessed that he was longing for his breakfast.

"My gold paint is gone," said Jack Frost. "It takes so much for these birches and hickories! You'll find the pail by that stump."

Crested Cardinal brought the paint and spread a fresh supply on Jack Frost's palette. It was wonderful to see the green leaves turning to gold.

"How skilful you are!" he exclaimed.

"I've had practice enough!" Jack Frost cried merrily. "Now for the oaks! Will you bring me some more russet?"

Back and forth went Crested Cardinal, carrying paints for Jack Frost. It kept him hurrying. But fast as he flew, the artist's brush flew faster still. You have to hurry, you know, to paint a whole forest by sunrise.

"Don't you stop at all?" Crested Cardinal asked breathlessly.

"Not until I've finished," Jack Frost answered. "Don't tell me you're tired."

"I won't," said Crested Cardinal, "if you'll let me say that I'm hungry."

"We shan't be long now," said Jack Frost, painting away for dear life. "Some red, please, for these maples. I have to be through before the sun gets up. It annoys him to find me about."

"Annoys him?" cried Crested Cardinal. "I should think he'd be glad to see everything so beautiful."

"He's jealous, perhaps," said Jack Frost, with a wink. "I borrow my tints from his sunset."

"I like the red best," said Crested Cardinal. "It's my favorite color."

"Mine, too," Jack Frost agreed. "A little more, please. Quick! There comes that sun now!"

Crested Cardinal stooped for the pail. Perhaps he hurried too much, or perhaps the fire rays of the sun blinded him. However it happened, the pail overturned, and from crest to tail he was covered with bright red paint.

"I've spilled it all!" he exclaimed in dismay.

"Well, never mind that!" cried Jack Frost. "Fly on where I can reach you."

So Crested Cardinal perched close to the brush, while Jack Frost used him for a palette. The maples never knew the difference. When the last one was clothed in its rosy gown, the workers slipped out of sight below a hill, and the sun stared in surprise at a world all gay with crimson and gold.

"So that's finished!" and Jack Frost drew a deep breath. "Now let's have a look at you. Clouds and sunsets, but you're glorious!"

"It won't come off," and Crested Cardinal rubbed anxiously at his glowing feathers.

"Of course not," Jack Frost assured him. "When I do a thing, I do it thoroughly. And because of the help you've been to me, you shall wear my colors always."

With his nimble brush he added a touch here and there.

"If you want to see the handsomest bird in the forest," he said with satisfaction, "look in that pool."

Crested Cardinal bent over the crystal water. From its depth a rosy, crested bird, with touches of black on its face and throat, stared up at him.

"Oh, you wonderful stranger! Where did you come from?" Crested Cardinal cried in delight. You see, he did not realize that he was looking at himself.

"Out of my paint pot," laughed Jack Frost.

And that is why the cardinal, the bithest bird in the forest, wears a red coat.

From Erin's Green Isle

NEWS BY MAIL FROM IRELAND'S SHORES.

Happenings in the Emerald Isle of Interest to Irishmen.

Knighthood has been conferred upon Sir James Johnston, Lord Mayor Belfast.

Michael McDonagh rescued a boy named James Doherty from drowning at the Derry quays.

It has been decided to increase the wages of the Ballymena surface men twenty-five shillings a week.

The rainfall at Warrenpoint, Castlingford Lough, during the month of August, was the heaviest in fifteen years.

A memorial has been erected in St. John's Church, Malone, to the memory of the late Captain Charles Seaver.

At the request of the local dealers the Belfast Food Control Committee have permitted a slight advance in the price to the consumer.

The Lord Lieutenant sent a telegram of sympathy to Mrs. Thompson, whose late husband was a member of the Belfast Harbor Board.

The Midland Railway is unable to grant the request of the Portrush Council for a motor service from Portrush to Coleraine.

The Bawnboy Board of Guardians held a special meeting to formulate a graded scale of salaries for the medical officers.

Mr. and Mrs. John Sinclair, of Wallace Park, have sent a donation of £300 to the Ulster Women's Gift Fund for Prisoners of War.

The Earl of Belmore has presented to the officers of the Inniskilling Fusiliers a portrait of his grandfather, the second Earl of Belmore.

Private George Douglas Australians, a nephew of the Prime Minister of New Zealand, is visiting his cousin, George Douglas, J.P., Limavady.

THE CZECHO-SLOVAKS

Freedom-Loving People of Bohemia Fight With the Allies.

The average person does not know enough about the Czecho-Slovaks whose success has been so wonderful in the remote parts of Russia. When the Bolsheviks, at the bidding of Germany, disbanded the old Russian Army, the Czecho-Slovak army, composed of the representatives of Austria's subject slav races who had deserted from Austrian regiments, or surrendered to Russian troops in their tens of thousands, held solidly together. They were determined to fight against, instead of for, their hereditary oppressor and became the only organized military force in Russia that stood for active opposition to both Austria and Germany. They were joined by thousands of Russians who shared their hatred of Germany of who took up arms on behalf of the principle of free nationality, but the Bolsheviks handled them badly, and drove them out to be the true defenders of Russia against both the Germans and Bolsheviks.

They are fighting the cause of all the oppressed nationalities now under German and Turkish domination from the Esthonians and Finns in the north, to the Caucasians and Armenians in the south. The insurrection of the Czecho-Slovaks is their love of Bohemia and all pertaining to it; and its sources are to be looked for in the romantic history of that noble country. One of their greatest triumphs to-day is the fact that they have been recognized by Britain as one of the Allied nations; and the break-up of the creaking Empire of Austria-Hungary has therefore already begun.

The unhappy Hapsburgs have lost their richest province, which they forcibly annexed in times gone by, but which now, at last, fittingly, has earned its right to independence. Bohemia was living in history, and gave rulers to the Holy Roman Empire, before either the Hapsburgs or the Hohenzollerns emerged from oblivion. The Slavs, therefore, of Bohemia and Moravia are only coming into their own, and the famous city of Prague seems on the way to recover its ancient dignity and become the centre of a prosperous and independent nation.

ONTARIO'S FORESTS

Pine Forests Are Giving Out, But Pulpwood Increasing in Value.

The important part the Crown timber lands of Ontario play in defraying the cost of civil government is indicated by the fact that during the year ended October 31, 1917, the forest revenue collected amounted to $1,695,703. This is an increase of $360,892 over the preceding year, and includes $118,927 collected from limit holders as fire ranging dues.

Nearly 100,000,000 ft. of pine timber was cut than during the preceding year. While labor shortage was undoubtedly a factor contributing to this reduction, the fact remains that the cut of pine timber has steadily declined for years, due unquestionably to the progressive depletion of the white pine forests of the province, which formerly produced so large a proportion of the provincial forest revenue.

The change which has taken place in this respect is strikingly indicated by the fact that, while the cut of white and red pine has steadily declined in Ontario, that of its timber and pulpwood has increased greatly. For example, the number of railway ties (mostly jack pine) taken out during 1916-17 was more than double the number cut during the previous season. The total cut of pulpwood for the province was 445,978 cords, of which approximately equal amounts were cut from settlers' lots and Crown timber lands.

The pulp and paper industry is each year assuming increased importance in Ontario, as in other provinces, in comparison with other primary forest industries. Beyond question, the pulp and paper business will increase to vastly greater proportions in Canada, both east and west, than is now the case, and this development will help materially toward the payment of Canada's war debt, and the redressing of our present unfavourable trade balance, particularly with the United States.

TWO CANADIANS TOOK 8 GUNS

Central Ontario Lieutenant With Private Got 54 Huns.

Stories of personal heroism teem in connection with the present allied offensive. Here is one: A Central Ontario battalion was taking part in the attack on St. Olle, the suburb of Cambrai. Commanding the city from the north, it had gained a footing in the western edge of the village on the Cambrai road, but its advance was held up by a formidable trench line manned by machine guns. A Lieut., formerly in the ranks, who holds the Military Medal, lined up his men in front of this position, under a rise of ground and then worked round on his left into the village. With one machine gun, which he established to enfilade the trench, he proceeded with one man along the entire rear of the German trench. The two bombed the trench as they went along and fifty-four of the enemy were compelled to surrender. Eight machine guns were captured by these two. Later, when his battalion pushed out almost into Ramilles, this Lieutenant led his men to the bridgehead, but, meeting there a point-blank fire of the enemy batteries, was forced to retire.

BRITISH INDUSTRIAL PROGRESS

SHOWN AT BRITISH SCIENTIFIC PRODUCTS EXHIBITION

Now Producing Many Articles Previously Controlled by the German Government.

A valuable demonstration of the great war that is being organized behind the scenes of the allied commercial world against pre-war German trade and industrial monopolies was given at the opening of the British Scientific Products Exhibition in September by Lord Sydenham, the president.

After a glowing reference to the work of the British navy and army in war he said that if in a military sense Britain was unready at the outset for the great conflict which was forced upon her she was probably less prepared to provide the vast industrial output required to supply the fighting forces. The Germans had designedly penetrated deeply into the whole British commercial system and had even obtained control of some of her most important key industries.

To-day, however, Lord Sydenham declared, it could not be fairly said that there was not a single branch of the industries and way in which the English could not beat the Germans. British key industries must never again be in foreign hands. Her commercial system must never again be penetrated by German influence. This she could secure by sound legislation.

The exhibits of British scientific products cover a wide range and include chemical products and processes, physical and electrical appliances, optical apparatus, measuring and mechanical instruments, surgical, bacteriological and pathological appliances, including X-ray apparatus, etc. In practically all the sections the degree of progress indicated by the exhibits is surprisingly great and even where no striking development has occurred in the way of new invention there is a marked general improvement in apparatus.

Clearly Marked Development.

Internal naturally centres around those exhibits associated with aircraft production. Here the development is clearly marked. Modern spars, for instance, are much stronger for a given weight, engines have been developed both as regards the material and the construction to the extent of reducing their weight by more than one-half, while the size and power have grown enormously and are still making advances. The metallic materials which have been produced since the outbreak of the war, and of which aircraft constructors have been able to avail themselves, have made it possible for the greater part of the engines to be made of light alloys. In non-metallic materials the investigation of timber has led to interesting results.

Before the war the Germans had practically a monopoly in the manufacture of magnetos both for automobile and airplane use. The war has changed that and magnetos are now made by nine British firms, which have turned out 300,000 for war service alone as good or even superior to the previously imported variety.

Development of "dope" for the fabric of airplanes has been the subject of many investigations and the plans of the present day machine are rendered taut and weather-proof by means which, though slightly more complicated than varnishing, are many times as efficient. The British "dope" consists of a solution of cellulose acetate made from paper or some cheaper form of cellulose, or of guncotton dissolved in suitable solvents and diluted to reduce the solution to a workable viscosity.

HOSPITAL THAT FLIES

Doctor Occupies Observer's Seat in Airplane Ambulance.

A hospital airplane is the latest innovation at the Love Field Aviation School, Texas.

An emergency machine, manned by a skilled pilot, with a doctor in the observer's seat is kept ready during all hours of flying practice to enable medical help to reach a fallen aviator.

The hospital airplane is always ready for instant use. The pilot and the doctor stay close at hand. Observer's with field glasses keep a watchful eye on the men in the air, and the instant a flier starts failing information is telegraphed simultaneously to the motor ambulance, the fire wagon, and the hospital airplane.

Often a forced landing occurs in a field distant from any road, and the ambulance can reach it only by travelling a long and round-about way. The airplane can save time not only by its speed but also by going direct to the scene of the accident.

A caterpillar can eat twice its own weight in leaves in 24 hours.

Sow seeds of sweet allyssum, candytuft, mignonette, linaria and calendula in pots or boxes for winter flowering in light windows or conservatories.

Mrs. A.: "Josephine is progressing by leaps and bounds in her piano practice." Mr. A.: "I thought she couldn't make all that racket with her hands alone."

BIGGEST HARVEST SINCE '68

Newly Broken Land in England Will Yield Much.

Sir Charles Fielding, Director-General of Food Production, in the London Daily Mail, stated that this harvest will be the biggest gathered in this country, it is said, since 1868.

On a conservative estimate the newly broken-up land will produce at least as much as the old arable land adjoining it, and in the west the produce will be more than that of the old land. Sir Charles estimated the wheat harvest at a twentieth to a tenth above the average yield.

Referring to the use of tractors, he said of an old motor car driven over 100,000 miles now drawing a reaper and binder about the fields. "As an enthusiast," he said, "I am convinced that we are going to have many million acres more under the plough. There will be room for both horses and tractors. The future of English agriculture depends on three things —more ploughed land, more labor, and more fertilizers."

The southern half of England is busy harvesting, with promise of a bountiful yield. Wheat is the crop of the year, with heavy oats and plenty of straw.

The East Midlands particularly will have a fine wheat harvest, estimated at fully a twentieth above the normal. In one heavy crop of oats at Stanton-under-Bardon, Leicestershire, a single straw, pulled at random, carried 144 grains. This is believed to be a record.

Never has Wales yielded a more abundant harvest, and the farms are astir with Irish laborers, soldiers, and schoolboys among heavy crops.

Several thousand soldiers have begun work on English farms. Strong men able to swing the scythe are especially needed in districts where there is much laid corn. The harvesters this year include also schoolboys, scouts, undergraduates, village women, girls of the Land Army, Belgian and Serbian refugees, German prisoners, and shop assistants spending their half-holidays in the fields. The fifth war harvest was the most curious assortment of laborers imaginable. The Food Production Department is opening hostels for the women workers.

PARIS MISSED TRAGIC FATE

French General Tells of German Brute's Boast.

In his preface to a book just published by M. Cocrriere, "How Paris Was Saved," Gen. Maunoury, the victor of the Ourcq, who contributed so much to the saving of the capital in 1914, gives the inhabitants a hint as to what they might have expected to happen but for that memorable success.

He says Gen. von Gluck, the German commander, boasted at one of his camps early in September, 1914, that Paris would be given over to the fury and vandalism of his soldiers as soon as he entered the city.

The sacking of Paris by the Germans leaves little to be imagined, and were it not for the victory of those brave men, many of whom no longer live, the capital may have resumbled to-day a smoking mass of debris and ashes—a Pompeii in ruins.

A big reduction in egg production is reported from all points in Ontario.

"Yes," remarked Bobby, "baby can say some words quite well."

"Been mice!" exclaimed his aunt. "And what words are they?" "I don't know," confessed Bobby. "I never heard any of them before."

THE WEEKLY SERMON

And I will walk at liberty, for I seek thy precepts.—Psalms, 119. 45

The wise King David here indicates the principle that the price of liberty is obedience to God's laws. Ordinarily one would suppose that subservience to law entailing restraint, in a sense, infringes on man's liberty. But the sagacious author of the above text felt that God's law, the moral law, would liberate man from sin, the pitfalls of life, from the enslavement of his own passions; would set him free by restoring to him the power of the will.

There may be certain kinds of liberty without law, but this spells license. It is the liberty of the savage, of the wild beast of the jungle, where the rule prevails that might makes right.

Moral freedom is a conquest, first over one's self, one's passions and evil habits, and then over evil surroundings. It means a renunciation of enervating pastimes, frivolities, selfishness, luxury and extravagance. It means the practice of self-restraint, the observance of law. To be morally free one must be a servant of the Lord.

That is the price the individual must pay for his moral freedom, and the wise pay it gladly, for they realize that the reward far exceeds in value any condition that must be met—a reward that is expressed by the consciousness of having risen to supreme self mastery.

The Price of Liberty

Civil liberty is based on the same principle of submission to law. If the government is arbitrary, it destroys the liberty of the people. No man is really free unless all men are free, that is, unless the inalienable right of all are secured by the establishment of equality before the law and equality of opportunity for the pursuit of happiness. The price of civil liberty, therefore, is the enforcement of equality and the granting of opportunity.

The world earlier endure spermanently half slave and half free. The liberty of no nation is secure as long as even the smallest nation is held in subjection. All nations must be ruled by the law of truth and justice and not by the will of an individual or an oligarchy in order to insure the peace and well being of mankind.

Obedience to Divine Precepts

Hence the war is to set the world free, to secure to all nations and individuals equal rights and opportunity in accordance with international law. The war is the price humanity is paying for its liberty. It is a price greater than has ever been paid in the history of the world, for it entails the greatest sacrifices of time, convenience, energy, talents, property, money and human lives. But the world stands ready to pay that price, to make that supreme sacrifice, for without liberty all worldly possessions, the science and arts of civilization and life itself seem but a mockery.

The world is at the cross' road—either perpetual liberty and peace or perpetual servitude and warfare. There cannot be, there must not be, any compromise between such issues. Therefore every citizen of the allied nations who would safe-guard his own freedom and the independence of his nation, as well as the welfare of humanity, must pay his share of the great price—he must either give his life or his goods, he must either fight or buy Victory Bonds. Many patriots are doing both. And when we have all done our full duty, and victory comes, then we shall all share in the liberty that spells obedience to the precepts of God—to the laws of nations.—Rev. Jacob Silverman.

Health

Acute Bright's Disease.

One usually thinks of Bright's disease as a chronic malady that affects persons past middle life, especially those who have transgressed in some way—by overworking, overeating, overdrinking or worrying, or perhaps in all four ways; but there is another more violent and more rapidly progressing disease of the kidneys, called acute Bright's disease, or acute nephritis.

Chronic Bright's disease is generally regarded as a degenerative affection, associated with arteriosclerosis and disease of the heart, but the acute trouble is, the most acute affections, a germ disease. It comes on most frequently after exposure to cold and wet, especially that combined with extreme fatigue; but those are not the causes, except as they weaken the resisting power of the system and so render it an easy prey to the germ. It often occurs also as a complication of other diseases, such as scarlet fever, erysipelas, pneumonia and mumps.

Unlike the chronic form, acute nephritis begins suddenly, often with chills, nausea and headache. A feeling of extreme lassitude and sometimes bleeding from the kidneys. Dropsy appears early, usually a day or two after the other symptoms. It is most evident in the eyelids and at the ankles. The dropsy rapidly increases and may become excessive; in that case the entire body is greatly swollen and the chest and abdomen are so filled with fluid as seriously to interfere with the breathing. The pulse is hard and tense, and the secretion from the kidneys, which is very scanty, may be mixed with blood, and contains much albumin, as the usual tests show. In consequence of the great strain the heart may become dilated, and when death occurs it is often because the heart gives out.

Fortunately, however, death is the exception in cases of primary acute Bright's disease, although recovery is often a matter of weeks or months. The treatment consists primarily in absolute rest in order to tax the heart as little as possible. The physician gives laxatives and makes the patient perspire profusely by hot packs, warm bedclothing, and sometimes the use of drugs. For the first day or two the patient should take no food at all. After that the diet should consist mainly or entirely of milk, and then bread stuffs and easily digested vegetables. For several weeks at least the patient should eat no meat. All the offending microbes may come from the roots of the teeth, the tonsils, and so forth, the physician should carefully examine those parts in order to destroy any focus of infection.

"What's her favorite amusement?" "Telling other people how ill she is."

Little Betty: "I'm hungry. I didn't get half enough dinner." Little Ruth: "What did you have for dinner?" Little Betty: "Company."

Salt deposits exist almost every where in the French Pyrenees, but they have been developed extensively at only one place.

Bank Cashier: "What is your name?" Indignant Customer: "Don't you see my signature?" Cashier: "Yes. That's what aroused my curiosity."

The Paisley Advocate

PAISLEY, OCT. 30th, 1918

—As we noted a few months ago, the result of the farmers' club movement may be the election of more of the strictly rural class to parliament. Up in Manitoulin Island they have demonstrated how it can be done by returning a farmers' candidate where heretofore a Conservative had represented the riding in the Legislature. Down in Oxford another farmer is selected through a bye-election, and may also sit as a farmer. With a preponderance of voting strength lying in the rural municipalities of so many Dominion and Provincial constituencies of this country there is no shadow of doubt but that the farmers could, at any election, dominate the Canadian House of Commons and nearly all the Legislatures should they pull together with that object in view. Several other interests have in the past had a controlling influence over our governing bodies. The railways, for instance, had things all their own way for a while. The manufacturers practically controlled the tariff for two or three decades. There is no reason to believe the destinies of this country should not be as safe in the hands of the farmers as in the hands of any other class. But here is the rub. Our governments should not be carried on in the interests or for the benefit of any single class. It is best that legislation be formulated to serve all classes. The ideal composition of a legislative body would be one in which all classes are proportionately represented by the wisest and most liberal minded men from each. The farmers of Canada have sadly neglected their legislative duties. It would be well should they send a much larger number of members than in the past.

BRUCE COUNTY COUNCIL ASKED TO HELP SOLDIER

The Problem

The statesmen of the Allied countries realize, it is said, that a greater problem than the war itself is the aftermath of the war. The period of reconstruction and adjustment is difficult and dangerous. It will be characterized by social, political and industrial upheaval and unrest. The thoughtful readers in the world are already grappling with the problem. It is estimated that of the 500,000 Canadian soldiers enlisted for the war, 300,000 will return to Canada to be absorbed into civilian life. Of these it is estimated that 100,000 will return to former positions and occupations, which will leave 200,000 who will have to be settled in some way or other. There are at present, it is estimated, 350,000 men employed in the manufacture of munitions who will be thrown out of employment at the close of the war. There are 150,000 women who have, since the war, taken the place of men. It will be seen that there are 650,000 soldiers and civilians who will have to be dealt with and adjusted to the new conditions arising after the war. In other words, one person in twelve of our population will become a settlement problem.

Now is the Time for Action

To leave this problem for the future to take care of would be an act of supreme folly and the Co. of Bruce has led the way among the counties of Ontario in organizing a league to deal with these problems. If the Co. of Bruce will take definite action now it will achieve a distinction in Canada which will become more apparent as the problem looms before the country.

The First Concrete Proposition

The County of Bruce sent to war approximately 3,000 soldiers, many of whom came off the farm, and many of whom have had experience in lumbering and bush life. The soldiers themelves outlined a plan known as Bruce Community Farming Scheme, and the League, at Southampton on the 20th of June appointed the undersigned sub-committee to deal with the proposition and report on its number of meetings, making slow progress, but getting definite information. The Community Farming Scheme was laid before each of the Provincial Governments and the Soldiers' Settlement Board at Ottawa. All the Provincial Governments, except the Government of Manitoba, endorsed the plan and made offers of assistance more or less generous. We are very glad and proud to report that by far the most generous offer which we received was from our own Province of Ontario, and the Provincial Government has given the scheme most serious and practical consideration and made very valuable suggestions and given assurances of very active co-operation and sympathy.

What Has Been Done

The Community Farming proposition has been laid before some 1,500 soldiers, perhaps more. Four hundred of them have studied it, understand it and have applied to come in under this plan; thirty of them are holding themselves in readiness to take up the plan this fall and start work immediately; they are anxious and eager to be doing something. So far no soldiers are scattered as everything is in line and the men in readiness to move at once. The Provincial Government and the County of Bruce are undertaking to assist and co-operate at the request of the soldiers themselves. The plan is their own. The Government has expended already over $1,000 in preliminary investigation and recently a sub-committee of the undersigned committee met at the Department in the Parliament Buildings in Toronto and went over the whole ground with the Deputy Minister, with the result that the Department has promised that immediately the County of Bruce and the Bruce Preparedness League give an assurance that they will stand behind the Community Farming Scheme to the extent of some necessary initial finances, the Department is prepared to expend this fall $10,000 in the erection of the first settlement buildings and proceed to carry out the terms of the offer made.

The Terms of the Government Offer

Memorandum of assistance to proposed Bruce Soldiers' Settlement, Limited, which is to be worked out on the basis of a co-operative organization:

1. We will set apart for your settlement the unlocated portions of any township you may select, and so long as your colonization work is energetically carried on, will reserve to you the exclusive use of the locations set apart.

2. We will construct the necessary roads through the township.

3. We will maintain at a convenient point in the colony a sufficient number of horses, wagons, sleighs and farm machinery for the use of the colony. We will sell any portion of these to any settler at cost, or rent them at a reasonable figure based on the cost of maintenance.

4. We will erect and equip at a central point for use, the necessary camp buildings to enable you to carry on your operations, including sleeping house, dining room, blacksmith shop, carpenter shop, store room, laundry, and such other buildings as may be deemed necessary, and allow you the use of same free of charge.

5. Should you undertake a winter operation, we will provide, free of charge, sufficient foremen to supervise and direct the bush work.

6. We will provide you with the use of a sawing machine for the cutting of your fuel.

7. We will provide, free of charge, supervision of your farming operation by trained agriculturists.

8. We will give to each settler at the expiration of five (5) years from his entering upon the scheme, a free grant of the lot that may be allotted to him. Settlement duties, as provided by the Crown Land Regulations, having been performed in the meantime in addition to the ten acres of clearing hereafter mentioned.

9. We will pay into the funds of your organization the sum of $500.00 when ten acres are cleared and made ready for cultivation upon each lot and a habitable house not less than 16x20 feet erected thereon. Any proportion of this $500 may be advanced on progress estimates from our foremen.

10. We will allow to each settler $150 in labor and materials towards the erection of a house upon his lot.

11. We will make advance to settlers up to $500 under the terms and conditions of our Settlers' Loan Act.

What It Means

The Deputy Minister stated that the Department understood in making this offer that it would be committing itself to an expenditure in the long run of about $1,000 for each soldier. This is a splendid contribution to the problem of this county, and all that is asked is that the county shall finance each man to the extent of $50 for the purpose of enabling the returned soldier to reach his destination in New Ontario and assist him in his living expenses until he can earn his first money. The Government is willing to act aside, provided it has the co-operation of the county as set out, the Township of Shackleton which consists of 55,000 acres, covered with pulp wood, worth $1 on the stump and $7 at the siding, with a clay loam soil and easily cleared. The township would be divided into farms of 1580 acres each and 350 soldiers could be settled on the land. The prospect is that the County of Bruce would take up the entire township. The value of the pulp wood in the aggregate is enormous and the transcontinental line runs along the border of the township. The returned soldiers from this county who have been to the township examined the location, resources and possibilities, have reported favorably upon the proposition.

What We Must Do

1. Co-operate with the Provincial Government in making this scheme possible for the returned soldiers.

2. Give the initial financial assistance of $300 a soldier to help in locating him in the township and in supporting him until he can get returns.

3. Give financial assistance to the extent, say of $1,000, to the Bruce Soldiers' Settlement Limited, to be incorporated largely for the purpose of maintaining supplies for the soldiers. This money need not be a gift, but a loan to be returned when the earnings from pulp wood, etc., made it possible to do so. The Provincial Government is of the opinion that the first supplies would have to be furnished in this way.

4. Give the returned soldier a chance to make good.

The Co-operative Plan

In incorporating as the Bruce Soldiers' Settlement Limited, it is not the idea to form a commune. Nothing of the sort. Every soldier at his own option may accept or reject the plan. Each soldier will have the advantage of his individual effort, energy, enterprise and development. Each soldier will have his farm of 160 acres patented in his own name at the end of five years upon performance of the Crown requirements, but in the matter of buying and selling, and in the matter of manufacturing lumber and cutting pulp wood, the co-operative plan will be adopted, experience having proved it highly successful. That by a combination of individual effort and co-operation a colony may be built up which will be a matter of pride to this county and a successful solution of one of the most difficult problems which is confronting this country at the present time.

Your obedient servants,

W. D. Cargill, C. M. Bowman, Wm. McDonald, W. D. Bell, D. M. Jermyn, A. E. McNabb, C. J. Mickle, Committee.

—Guelph Mercury: Many a slacker now at home will wish he had been a soldier at the taking of Lille. Every girl in the city calls out to kiss and embrace the Allied soldiers who had delivered them from the Huns. Surely had all the boys known of these fruits of victory, none would have been left behind.

WEEPING ECZEMA SOON RELIEVED

A Perfect Treatment For This Distressing Complaint

WARING, ONT.

"I had an attack of Weeping Eczema; so bad that my clothes would be wet through at times.

For four months, I suffered terribly. I could get no relief until I tried 'Fruit-a-tives and 'Soothia Salts' The first treatment gave me relief.

Altogether, I have used three boxes of 'Soothia Salts' and two of 'Fruit-a-tives', and am entirely well"

G. W. HALL.

Both these sterling remedies are sold by dealers at 60c. a box, 6 for $2.50, or sent on receipt of price by Fruit-a-tives Limited, Ottawa.

"Fruit-a-tives" is also put up in a trial size which sells for 25c.

"FOR YOUR SERIOUS CONSIDERATION"

THINK of the Colonel of a Canadian regiment who led his boys into the attack, and who, when he found one of them in trouble with his machine-gun, fixed it and fired it himself.

THINK of the sergeant who dropped as his platoon was rushing a deadly woods. He called out as he died: "They're out now, boys; go on and give them hell."

THINK of the Signal Corps men crouching low while the shells tore down their telephone wires, and rushing out to repair them while the shelling was still at its height.

THINK of little Corporal Jerry—submitting with ill-concealed impatience while his pal from the hospital corps dressed a wound in his forehead. He was bandaged so that all you could see of his head was half of his left eye, and he was put down on the roadside to wait his turn back in the ambulance. A moment later a lieutenant caught him stealing away to the front, rifle in hand. "Just ten minutes," he heroed, "just ten minutes. I haven't killed one yet, and I must. Just ten minutes."

THINK of another wounded man who escaped from the dressing station and was later found unconscious on the road, and it was on the road leading back into the battle.

THINK of the "Canuck" found dead on the battlefield of the Marne, who scrawled "For God and my Country" on his gas mask before he died.

THINK of these men and thousands like them, think of all their brothers in the great army of grit. THINK and go deep down in your pockets and subscribe to the VICTORY LOAN.

County Publicity Committee, Victory Loan Headquarters, Walkerton.

BRUCE TP. COUNCIL

Underwood, Oct. 26th, 1918

Bruce Tp. council met in the Tp. hall on above date, pursuant to adjournment. Minutes of previous meeting read, adopted and signed.

A number of communications were read and dealt with.

Dobson—McKenzie—That John Cottrill, lot 9, con. 13, be refunded $2 for dog tax, being error in assessment.—Carried.

McKenzie—Dobson—That James Johnson, reeve, be fuel commissioner for Bruce Tp. for the year 1918-19, or till his successor is appointed.—Carried.

McNeil—McKenzie—That the following accounts be paid and orders issued for the same, viz: John Cottrill, dog tax refund, $2; W. W. Orford, inspector B line bridge, $72; J. A. McKinnon, bridge B line, hal. and extras, $1034.08; Mrs. L. Bell, 14 sticks piling, $28; H. McLean, stone in washout, 13-10, $5; Jas. Johnson, selecting jurors $4; J. G. MacKay, selecting jurors, $4; D. H. McDonald, selecting jurors, $4; Jas. Johnson, reeve, $3.10; P. Dobson, dep. reeve, $3.35; Geo. Baker, councillor, $3.50; Jas. McKenzie, $3.50; M. McNeill, $3.40; J. Coleman, caretaking, $1.25; J. G. MacKay, clerk and treas., $25; John Nelson, rep. bridge, 9-12, $9; Mrs. S. Steinhoff, 20 yds. cement gravel, $3.—Carried.

Dobson—McNeill—That the following persons be paid the sums set after their names for statute labor gravel, viz: Mrs. L. Steinhoff $29.15, K. Robinson $46.50, T. Gamble $4, R. Reid $1.30, I. Thompson $2.50, F. Wrightson $46.45, J. B. Struthers $44.30, B. Veanard $12.10, R. Brownscombe $13.90, A. McIntyre $31.30, Job Carr $15.40, A. McGillivray $4.80, Mrs. D. Riebel $4, Geo. McKillop $5.30, D. McLellan $2.60, E. Abbs $4.37, Dan McKay $27.20, D. A. McLean $6.30, M. Campbell 30c, M. Carrie $5.50, D. Matheson $3.80, C. Robinson $8.60, John Vance $15.60, A. Smith $26.40, Mrs. D. McKinnon $32.30, H. Carr $2.10, Jos. Thomas $10.40, John Martin 60c, Jas. Robinson $5.60, D. McNaughton (Inv.) $10.80, C. McDougall $1.30, Mrs. Humphrey $2.45.—Carried.

McNeill—Baker—That this council do now adjourn to meet again on Nov. 30th for general business.—Carried

J. G. MacKay, Clerk

—Canada's prosperity depends upon it! Buy Victory Bonds.

—A team of horses belonging to W. Morgan, of Brant, broke away from Dunkeld cider mill one day last week, and ran all the way to Walkerton. Turning a street corner in that town one of the animals plunged through a $150 plate glass window in Weber's store. The horse escaped without a scratch.

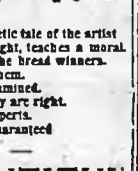
S. F. BALLACHEY

The Store with the Stock

Over the Top--to Victory

THE word has been passed down the line, "Stand ready to go 'over the top.'" But not as our soldiers do—to face gunfire and bayonet. We, here in Canada, do not have to go over the top with bayonet or bomb. Our campaign is a campaign of SUPPORT. Money must be forthcoming for the support of our men at the front, for the thousands of needs of the war which is being fought for freedom and for us.

While we await the word to advance, we consider our actual needs, we figure just how much we can spare as a loan to our country, and when WE go over the top it is with our open pocket-books in our hands, to loan on the best security in the world, the money that will bring VICTORY, and after VICTORY, PEACE!



Paisley District has been Asked for $100,000.00

When that amount has been Subscribed we shall have earned our Honor Flag

"OVER THE TOP TOGETHER"

S. F. BALLACHEY

Lost Sight or "The Light That Failed"

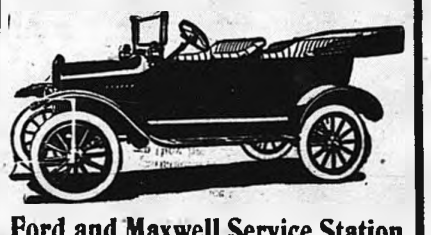
Kipling's pathetic tale of the artist who lost his sight, teaches a moral. The eyes are the bread winners. Take care of them. Have them examined. Know that they are right. We are eye experts. Satisfaction guaranteed

BEAUTIFUL JEWELERY

in great variety of novel patterns and artistic designs, rings, chains, necklaces, bracelets, everything in the jewelry line, may be found at our store. We give you a cordial invitation to come in and see what we have to offer, for we feel sure there will be something that will just suit you.

I. SHOEMAKER

Jeweler and Optician



There was never a time when the sacrifices and the help of women were more appreciated than at the present time. Women should learn wool-carding and nursing at home. There is no better way than to study the new edition of the "Common Sense Medical Adviser"—with chapters on First Aid, Bandaging, Anatomy, Hygiene, care of the Sick, Diseases of Women, Mother and Babe, Marriage—to be had at some drug-stores or send 50c. to Dr. Pierce, Courtwright St., Bridgeburg, Ontario.

If a woman suffers from weak back, nervousness or dizziness—if pains afflict her, the best tonic and corrective is one made up of native herbs, and made without alcohol, which makes weak women strong and sick women well. It is the prescription of Doctor Pierce, used by him in active practice many years and now sold by almost every druggist in the land, in liquid or in tablets. Send Dr. Pierce, Buffalo, N. Y., 10c. for trial pkg. Dr. Pierce's Pleasant Pellets are also best for liver and bowel trouble.

Stratford, Ont.—"Dr. Pierce's Favorite Prescription has done me a great deal of good. I suffered with weak and nervous and run down feeling, and was completely worn out. I also suffered with indigestion. I was a complete wreck and was down and in bed for six weeks. I had tried several doctors and different medicines, but found no relief. I had given up hope of ever getting well when I was induced to try Dr. Pierce's Favorite Prescription. I had only taken a few doses when I felt relief. I continued to take it for some time and am now strong and well. I could do all work and had no trouble with my stomach. I would do all women who are weak and run down, and particularly suffering as I did, to give Dr. Pierce's Favorite Prescription a fair trial and be healthy."—Mrs. Thomas Burleigh, 360 Erie St.

PAISLEY GARAGE

Ford and Maxwell Service Station

We carry a full line of Ford Parts and Repairs

We aim to give up-to-date service to all car owners. With our experience in city garages we are in a position to do work that we can guarantee as satisfactory. Motorists should call us up by either phone when they have trouble.

High Grade Oils, Gas and Accessories of all kinds.

Repairing at Reasonable Rates. All kinds of Vulcanizing done.

We are equipped to remove carbon by oxygen gas.

—The first, most things in life—Death, Taxes and Victory Bonds!

THE BIGGEST BRITISH ARMY UNDER THE SOD

One of the finest speeches on the war was delivered at the convention of the Minnesota Bankers' Association in Minneapolis recently by Captain Frank Edwards, of the Royal Fusiliers.

In the course of his speech he alluded to the effect that the entry of the United States had on public opinion and expressed his fear not of the pessimist, but of the optimist, who thought it was all over but the shouting. "There are many days of great slaughter before the day of great shouting, and tens of thousands, perhaps hundreds of thousands of gallant men must go down, down to the Valley of the Shadow ere the day of victory dawns. It is a blood-red pathway that leads to the final triumph," declared Capt. Edwards.

He exclaimed also against the man who said it did not matter how long this war lasted.

"Oh, men and women, it does matter how long this war lasts, and it is the bounden duty of every man here to do his utmost as a patriot, not only to gain the ultimate victory which I believe to-day is inevitable, but to gain that victory at the earliest possible hour.

How They Long for Peace

"I am not here to glorify war. God forbid; no man in this room longs for peace as I do. I have had four years of this war, and that means I have been away from home for four years, and cut off from the life of my home and my little children for four years in the happiest and loveliest years of their lives. I have a little boy at home, four years old, and that little chap has never known peace; he has never known peace in his mother's heart, he has never seen peace in his mother's face. He said the other day, 'Mother, what is peace?' A child question, what is peace? His mother tried to tell him in baby language. 'Mother,' he said, 'does peace mean that daddy will come home?' 'Yes, dear,' she said. 'Then, mother,' he said, 'why can't we have peace now?' I tell you there are tens of thousands, hundreds of thousands, millions of men in the line who long for peace now just as that little lad did; but much as I long for peace, there is a price I cannot pay for it. Much as I long for peace, I cannot purchase it, nor consent to purchase it, by the betrayal of all that I hold true and right and sacred and good.

"I know that there still is, especially among your young people, something for you about war, something of glamor, something of halo, something of romance, and of adventure. Ah, but in England for us that has passed, never to return; we have drunk of the cup of bitterness to the dregs.

"During the Cambrai fight I came to England three times in ten days, and once I had to take back 2,000 men to stop the breach. I marched those 2,000 men through one of our southern ports on a Sunday morning. The people were standing along the streets, there were thousands there, but I marched silent men through silent streets, the street was as silent as you are this morning. There were 2,000 men going over, but they knew they were going to die . . . Men marching in silence through spectators in silence, men going to die—we drank the cup of bitterness to the dregs. There is no glamor, no halo, no romance about war for England to-day.

Don't Know What War Is

"You know I never sit down to a meal in your country—this is literally true—I never sit down to a meal in your country without a feeling of sadness. Oh, the plenty of the boards pains me when I remember England. I have found on my plate on several occasions more meat for one meal than my wife and three little children at home in England can possibly hope to eat in a whole week. You don't know war yet, America.

"A man asked me the other day, there were a large number of bankers gathered together: 'Have you ever seen so many bankers together before in one room?' . . gentlemen, I have seen many more bankers than this, assembled together. British bankers. Where? I will tell you—on the fields of France marching into action. . . I have seen a battalion of a thousand men marching into action to fight and to die, and every man a banker.

'You don't know what it has cost us in man power. A man said to me the other day in America: 'You know since we have come into this war we are going to show the world what we can do, and this American nation is going to startle the world in this war.' It needs be we are going to put into the fields of France five millions of men.' Five million men! You know I could not help looking him in the eyes and asking him if he had forgotten what a colossal campaign this is, and whether it was not too late to expect to stagger the world by putting five million men in the field to-day. I said: 'Look here, my friend, you know that in the first two years of war England by voluntary enlistment, without conscription of any kind, had brought five million men to the colors, and at the end of 1917 we had placed in the field in France—in the field—an army of six million men.' And I said, 'you understand what that means to England? Six million men out of a population of forty-two million, that is one man in seven of the whole of our population, old people, women and children.'

Biggest Army Under the Sod

"A man said the other day, "What is your biggest army, where is the biggest British army?' I said, 'Don't you know?' He said, 'No, I do not.' I said, 'The biggest British army is under the sod. That is where the biggest British army is. In the first few months of the war—these figures are quite authentic, I verified them—in the first few months of the war we lost 550,000 men. We lost 78 per cent. of our entire fighting land forces in the first few months of the war. In the great retreat one division went into action 12,000 strong, and 2,000 came out. Out of 400 officers in one engagement 50 returned. You talk about the Somme fight; do you know what it cost us? 25,000 officers, half a million men.'

"Keep the home fires burning, but remember it is only possible for you to do so in the shelter and the sacrifice of your lads in the line—Pitiful little fires in the trenches. Just a bucket with wood or charcoal. . . I looked again and said, 'No, they are the grandest fires in the world, because they are the advance guard of the fires of freedom the wide world over.'

Early War Struggles

"But, oh, how much has it cost France, that line of 400 miles long?"

It is difficult to refrain from quoting at length. He tells stories of Zeppelin raids and what they meant to his own family. Of France and her sufferings and sacrifices; 100,000 French unburied near Souches in the summer of 1915, all buried now. Of the lack of shells in the early days and what the women have done in England. Of French billeting at 5c per man per night, straw included, as contrasted with profiteering here, and all in simple language—the language of the eye-witness who is telling facts in a plain sort of way, but which really constitute a great prose epic. In the winter of 1915-16 he took 250 men into the line and came out with 60 staggering cripples.

One final extract which speaks for itself: "I know a man can make profits at this period as honestly as he can at any period of the world's history. But there is one strange and sad quality attached to all the profits you make to-day, and this is it: All your profits made to-day are blood-bought. That is the message that I leave with you from the line—all your profits are blood-bought. They are bought with the blood of lives. Is it right that one man should give his son to die that another man should selfishly grow rich in the shelter of the first man's sacrifice? Is it right, America? . . Put your patriotism before your profits, play the game."

"YOURS FOR VICTORY LOAN 1918"

"Yours for Victory Loan 1918" is the Canadian letter writer's slogan in the Victory Loan campaign. Every one is asked to sign his or her letters in this way. Already some are doing it, and before the campaign is far under way it is hoped the practice will be general. It is an easy and yet most effective way of driving home the appeal for the Loan, and it will reach practically every one. Business men particularly are requested to adopt the idea. As they read their incoming and outgoing letters during the next five weeks, they will confront "Yours for Victory Loan 1918" scores of times each day. Start now signing your letters in this way. Get into the swing! Every little bit is needed if Canada is to "go over the top."

A soldier writing home to Canada from Witley Camp, Eng., while there on furlough, says:

"To those of us, now removed from actual warfare, camp life in England becomes very dull indeed, yet there are times when our pulse quickens and something of the old feelings we had on first embarking for France sends the blood again tingling through our veins. The one occasion which always brings back to us the memory of shells, guns and bombs, is the night the "drafts" march out.

"It generally happens when all the camp has quieted down for the night. After "Last Post" has sounded and the huts are plunged in darkness, far up in the infantry lines suddenly we hear the music of the band, nearly always rendering, funny enough, "The Yanks are Coming"—that popular march. If not that, then it is "Pack up your troubles in your old kit bag." Faint sounds of cheering reach us, and as the music becomes more distinct, this cheering is taken up all along the road. The soldier boys (according to regulations, fast asleep in their cots), are out in force to give the boys for France a grand send-off—nothing loth, we join in the cheering mob which lines the highway and add our voices to the throngs.

Providing the draft is large, as one band ceases to play, another takes up the duty, and so in "fours" the boys pass by, no sound of tears and vain regret is heard, only laughter and cries and words of friendly banter. "Look after my girl, Jack;" "We're off to wind up the watch on the Rhine;" "Good-bye, Witley;" such are the expressions one hears from the young troops embarking on "the great adventure." "Good old artillery, won't you help us out?" is greeted with a shout of "Sure thing, we'll be there, don't worry," by our boys.

"And so they pass, the boys from home. Some of them have been through the mill, know what to expect, yet they laugh and cheer with the rest. Others have never been "over" but no tale of hardship, toil or suffering damp their spirit, they laugh and jest at the Hun, with all his works and pomps. They know they have a great tradition to uphold, they know what their brothers have done, so with laughing eyes and cheers continuous they march proudly down to the waiting trains, while the bands play most prophetically, "There's a long trail a-winding."

To the looker-on as the music comes to one's ears, and the marching boys take up the haunting refrain, but more especially to the spectator who has come back after months in the rain, the mud and the snow, truly for many of the boys there is a long trail a-winding. For many, a trail will end in a last long sleep amid the poppy fields, whilst for others, months of racking pain and final disability are surely waiting, and for all there will come days of toil and hardship. Hence as we watch our boys go forth, not only does our pulse move with faster beat, and we long, at least for the moment, to be with them, that lump does rise in our throat, as we glow with pride of race, we also murmur with breaking voice, "Our boys," our brave boys."

And why should we not? For it is not our proud record, that coming out as citizen volunteers or draftees, if you wish, we have by our actions in the field become the first shock troops of the British army. How many at home know exactly what that means? Amongst other things it means that never yet have we attempted anything we did not succeed in bringing to a victorious finish. It means also that we are the most feared of all the British troops for where Canadians are, there also the German expects to find some new scheme of attack, some new engines of war, and surprise at any moment, and therefore, as the boys tramp out with a cheer on their lips, we have the answer why it is so. Just so long as the spirit that has ever filled the Canadian fighting men, be he old or young, exists, just so long will he continue to enhance the glory of our name, and uphold our fighting record, namely, that "The Canadian Corps is the finest fighting unit on the Western Front," and again as we watch the draft march away, we know exactly how long that period shall be, and it is as long as there is fighting to do. Therefore we feel sure these men now going forth will be authors of future great deeds, that for generations to come the name "Canadians" shall hold a special niche in the hall of fame, an example for the world, of hardihood, resource, tenacity and courage, second to none.

No wonder we murmur, "Our boys, our brave boys," as the draft moves off.

OFFICIAL PROSPECTUS

The proceeds of this Loan will be used for War purposes only, and will be spent wholly in Canada

THE MINISTER OF FINANCE OF THE DOMINION OF CANADA offers for Public Subscription the

Victory Loan 1918

$300,000,000. 5½% Gold Bonds

Bearing interest from November 1st, 1918, and offered in two maturities, the choice of which is optional with the subscriber as

5 year Bonds due November 1st, 1923
10 year Bonds due November 1st, 1933

Principal payable without charge at the Office of the Minister of Finance and Receiver General at Ottawa, or at the Office of the Assistant Receiver General at Halifax, St. John, Charlottetown, Montreal, Toronto, Winnipeg, Regina, Calgary and Victoria.

Bonds may be registered as to principal or as to principal and interest, at any of the above-mentioned offices.

Interest payable, without charge, half-yearly, May 1st and November 1st, at any branch in Canada of any Chartered Bank.

Principal and Interest payable in Gold
Denominations: $50, $100, $500 and $1,000

Issue Price: 100 and Accrued Interest

Income Return 5½% per Annum

Free from taxes—including any income tax—imposed in pursuance of legislation enacted by the Parliament of Canada.

The proceeds of the Loan will be used for war purposes only, including the purchase of grain, foodstuffs, munitions and other supplies, and will be spent wholly in Canada.

Payments to be made as follows:

10% on application;	20% January 6th, 1919;
20% December 6th, 1918;	20% February 6th, 1919;
31.16% March 6th, 1919.	

The last payment of 31.16% covers 20% balance of principal and 1.16% representing accrued interest at 5½% from November 1st to due dates of the respective instalments.

A full half year's interest will be paid on May 1st, 1919, making the cost of the bonds 100 and interest.

Subscriptions may be paid in full at the time of application at 100 without interest; or on any instalment due date thereafter together with accrued interest at the rate of 5½% per annum.

This Loan is authorized under Act of the Parliament of Canada, and both principal and interest are a charge upon the Consolidated Revenue Fund.

The Amount of this issue is $300,000,000, exclusive of the amount (if any) paid for by the surrender of bonds of previous issues. The Minister of Finance, however, reserves the right to allot the whole or any part of the amount subscribed in excess of $300,000,000.

Conversion Privileges

Bonds of this issue will, in the event of future issues of like maturity, or longer, made by the Government, during the remaining period of the War, other than issues made abroad, or arranged at 100 and accrued interest, as the equivalent of cash for the purpose of subscription to such issues.

Payments

All cheques, drafts, etc., covering instalments, are to be made payable to the Credit of the Minister of Finance. Failure to pay any instalment when due will render previous payments liable to forfeiture, and the allotment to cancellation. Subscription must be accompanied by a deposit of 10% of the amount subscribed. Official Canvassers will forward such subscriptions or any branch in Canada of any Chartered Bank will accept subscription and issue receipts.

Subscriptions may be paid in full at time of application at 100 without interest; or on any instalment due date thereafter together with accrued interest to time of making payment in full. Under this provision, payment of subscriptions may be made as follows:

If paid in full on or before Nov. 16th, 1918, par without interest, or 100%.
If remaining instalments paid on Dec. 6th, 1918, balance at 100% and interest, ($80.48 per $100.)
If remaining instalments paid on Jan. 6th, 1919, balance at 100% and interest, ($70.80 per $100.)
If remaining instalments paid on Feb. 6th, 1919, balance at 100% and interest, ($61.04 per $100.)
If remaining instalments paid on Mar. 6th, 1919, balance at 100% and interest, ($31.16 per $100.)

Denomination and Registration

Bearer bonds, with coupons, will be issued in denominations of $50., $100., $500., and $1,000., and may be registered as to principal or as to principal and interest.

The Loan is authorized under Act of the Parliament of Canada, and both principal and interest are a charge upon the Consolidated Revenue Fund.

The Amount of this issue is $300,000,000, exclusive of the amount (if any) paid for by the surrender of bonds of previous issues. The Minister of Finance, however, reserves the right to allot the whole or any part of the amount subscribed in excess of $300,000,000.

Fully registered bonds, the interest on which is paid direct to the owner by Government cheque, will be issued in denominations of $50., $100., $500., $1,000., $5,000., $10,000., $50,000., $100,000., $500,000., $1,000,000., or any multiple of $1,000,000.

Payment of Interest

A full half year's interest at the rate of 5½% per annum will be paid May 1st, 1919.

Form of Bond and Delivery

Subscribers must indicate on their application the form of bond and the denominations required, and the securities so indicated will be delivered by the bank upon payment of the subscription.

Bearer bonds or fully registered bonds will be delivered at the time of application to subscribers desirous of making payments in full. Bonds registered as to principal only, or fully registered as to principal and interest, will be delivered to subscribers as soon as the necessary engraving and printing can be completed.

Payment of all instalments must be made at the bank originally named by the subscriber.

Non-negotiable receipts will be furnished to all subscribers who desire to pay by instalments. These receipts will be exchangeable at subscriber's bank for bonds on any instalment date when subscription is paid in full.

Form of Bonds Interchangeable

Subject to the payment of 25 cents for each new bond issued, holders of fully registered bonds without coupons, will have the right to convert into bonds with coupons and of denominations of their own choice, and bearer bonds will have the right to convert into fully registered bonds without coupons, at any time, on application to the Minister of Finance or any Assistant Receiver General, or any branch in Canada of any Chartered Bank.

Forms of application may be obtained from any Official Canvasser, from any Victory Loan Committee, or member thereof, or from any branch in Canada of any Chartered Bank.

Subscription Lists will close on or before November 16th, 1918

RAILWAYS AND POLITICS

(From the Toronto World)

The Farmers' Advocate puts its finger on the sore point of corporation management of railways when it says that the American roads for years were run, not for the benefit of the public, not even for the benefit of the men in control.

This is not only true of looted and wrecked properties like the New Haven and the Rock Island, but of roads that have maintained their solvency and have plumed themselves upon their success. Even here in Canada the shareholders of the Canadian Pacific have probably lost more through stock manipulation and high finance than they have received in dividends. The Advocate truly observes that:

"If we look at the railways of the United States we will see that in the past these railways have been the playground of speculators, and the shareholders have been fleeced as well as the public through manipulation of stock values."

The Advocate has little fear that our railway service will be impaired by political interference. Political influence, it says, will not demoralize the railways so much as railway finance in the past has demoralized politics. It was the present premier, we think, who once observed that a government-owned railway was better than a railway-owned government.

Soils and Crops

By Agronomist.

This Department is for the use of our farm readers who want the advice of an expert on any question regarding soil, seed, crops, etc. If your question is of sufficient general interest, it will be answered through this column. If stamped and addressed envelope is enclosed with your letter, a complete answer will be mailed to you. Address Agronomist, care of Wilson Publishing Co., Ltd., 73 Adelaide St. W., Toronto.

The Storage of Potatoes.

The losses from improper storage of potatoes are of far greater economic importance than is generally realized. These losses are brought about by a variety of factors which may be grouped in three divisions, e.g., physical, mechanical and pathological.

The chief loss from physical factors is brought about by the storage of immature stock. Potatoes for sale to be stored should be thoroughly ripe, that is, the stalks should be dead, and the tubers should adhere firmly to the stems. Potatoes may have their stalks prematurely killed so as to resemble a natural death by being attacked by late or early blight, rhizoctonia, the flea beetle or potato bug, but upon examination the tubers under such plants will be found immature and unfit for best storage results. Frost bitten and sunburned also come in this division.

The mechanical factors that brought about loss in storage are chiefly about by careless handling of the crop at harvest time, such as broken, cracked or chipped tubers due to improper digging and rough usage in gathering the crop. The slightest injury to the skin of the potato lays it open to invasion of myriads of decay producing spores, which, when given the proper conditions will rapidly spread decay through the entire lot.

Under the pathological factors come the tubers affected by disease. Undoubtedly the late blight (Phytophthora infestans) is the most common, as well as the most destructive. Tubers affected by this disease are almost certain to decay in storage; nor is this decay confined to the diseased tubers, but spreads rapidly to the healthy ones, unless preventive measures are employed, and perfect storage provided.

The decay of potatoes in storage may be caused by a number of organisms, while each organism may have its own particular form of attack; still it is gratifying to know that the remedial measures are the same in each case.

The following suggestions regarding the storage of potatoes, if followed carefully, will practically eliminate the losses from decay of potatoes in storage.

1. Spray your potatoes frequently and carefully during the summer with Bordeaux mixture.

2. Delay digging your potatoes, if possible, until the tops are dead and dry.

3. Avoid covering potatoes after they are dug, with the tops, to protect them from sun or frost.

4. Carefully examine all potatoes to be stored, and remove immature, bruised, cracked, chipped, sunbitten, frost-bitten or diseased tubers.

5. Never store your potatoes while wet.

6. Have the tubers free from dirt. If dirty, the soil fills up the spaces between the tubers and prevents the circulation of air.

7. Provide a dry cellar with abundant ventilation, where the temperature can be between 34 and 40 degrees F.

8. Keep the storage room as cool as possible directly after the product is stored.

9. Fill your bins gradually; by so doing, the potatoes that are put in first have lost their heat before they are covered by another layer.

10. Carefully sort your stored potatoes at intervals during storage, and remove all tubers showing signs of disease or decay.

Fertilizers For 1915.

Now is the time for the farmer to plan his croppings for 1910 and in doing so to decide upon what fertilizers, if any, he purposes to use. Last spring there was considerable disappointment among farmers, especially among those who had delayed placing their orders till a few weeks before the season opened, as there was not only a shortage of material but transportation facilities were such that quick deliveries could not be made. There is no prospect that conditions will be better next spring and it therefore behooves the farmer this fall to carefully consider his needs, scan the prices and having made his selection to place his orders, stipulating an early delivery. Co-operation in ordering may effect the saving of a considerable amount in purchasing and freight rates.

During the last ten years there has been considerable increase in the number of farmers in British Columbia, Quebec, Ontario and the Maritime provinces using fertilizers, but unfortunately but a small percentage of them have any definite knowledge of the profit that may have resulted from their application. There will always be a degree of uncertainty as regards results from fertilizers, chiefly owing to the fact that seasonable conditions can not be predicted, but with close observation from carefully planned work, a very good knowledge may be gained as to the kind and amount of fertilizer which will prove profitable. A series of adjacent plots on fairly uniform soil, each with a different amount or combination of fertilizer and sown to the same crop, furnishes the most reliable means of learning the most profitable applications, but if time and labor do not permit of the adoption of this plan, a strip of the field, well staked, should be left unfertilized, and its yield weighed against that of a similar sized strip on the fertilized area. From the results so obtained the profit or loss from the application of the fertilizer may be readily obtained.

A considerable saving may be usually effected by buying fertilizer ingredients, nitrate of soda, sulphate of ammonia, superphosphate, basic slag, etc., than by purchasing ready mixed fertilizers, and this course also furnishes valuable information for future guidance obtainable in no other way.

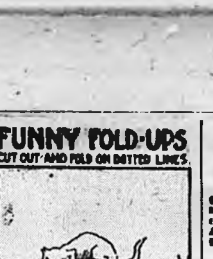
Information and advice regarding the use of fertilizers will be gladly given as far as may be practicable, by the Division of Chemistry, Central Experimental Farm, Ottawa.

The Dairy

Many stockmen deborn the stocker and feeder cattle or calves to be kept for feeders. The chief advantages of deborning are convenience and economy in the feed lot and in shipping, and possibly a slight increase in market value. Animals being fitted for baby beef should not be deborned, as with horned breeds the age can be told approximately by the horn, and when the horns are removed the buyer may suspect an animal of being over age limit and may cut down somewhat on the price.

If a feeder is raising his own calves, the best method of deborning will be found to be an application of caustic soda or caustic potash when the calf is a few days old, or when the button can be felt through the skin. Wet the stick of caustic slightly and rub it well on the skin over the horn after first clipping the hair off the region. Do not get the stick too wet or it will be apt to run down over the side of the head, burning off the hair and also causing needless pain.

When deborning is not done at this time, it is advisable to wait until the horn has made a fair growth and then use either the saw or the clippers, which must be used in either case if the feeders are purchased. Clippers are quicker and less painful than the saw. They make a cleaner cut, which bleeds longer than that made with the saw. In either case the horn should be cut a little below the union of the horn and the skin or the horn will begin to grow again.



The best time to deborn is the first part of April or the latter part of October; that is, neither in really cold weather nor in fly time. In fly time the animal is somewhat run down and flies cause great suffering, prevent the wound from healing, and are a source of infection. It is best for a few days after the operation not to give the cattle dusty hay or other feeds in which there is much dust, as the wounds are liable to become infected and cause trouble.

Poultry

A common and troublesome parasite affecting fowls is the roost-mite, when these become sufficiently numerous they not only infest the nests, but other parts of the poultry house, especially cracks and crevices, as well as the roosts. These mites are much like tiny spiders in appearance and are often called spider lice by poultry men.

Roost-mites are easily exterminated by applying coal oil to all infested parts of the building. As prevention is better than cure, it pays to paint the roosts every four or six weeks in winter time and every two weeks during the warm weather, as it is in the presence of heat that these pests increase most rapidly and are most active.

Clean nests insure clean eggs. Do not send dirty eggs to market. Rub off the dirt with a slightly dampened woollen rag. Cider vinegar will remove stains. Washed eggs do not keep, as the gelatinous substance is removed which seals the pores of the shell, and when this is removed air is admitted and decomposition begins.

Hogs

Precautions Against Cholera.

Nearly every fall there are outbreaks of hog cholera. When cholera is in the neighborhood, healthy hogs may be kept free from the disease by cleaning the feed lots, breeding pens and hog shelters, and disinfecting them with a good disinfectant. Keep the hogs away from streams, public highways and neighbors' lots. Burn all "carrion" which attracts dogs, buzzards and crows. Scare away all stray dogs, pigeons and English sparrows. Stay away from infected herds in the neighborhood, and keep visitors out of the hog lots unless their shoes have been properly disinfected. Disinfect all recently purchased hogs and quarantine them for two weeks or longer. Vaccinate with serum alone to prevent the development of the disease in recently purchased hogs.

When cholera or other sickness or cure in your herd, separate the sick animals promptly and confine them in a screened shed or closed building. Call a veterinarian to tell whether the disease is cholera. If Cholera is present, vaccinate all the hogs which are mildly infected. Do not waste serum on hogs in an advanced stage of cholera. Kill and burn without delay any hogs that are fatally ill. Disinfect the lots thoroughly, burn all rubbish and litter, white-wash the buildings and scatter freshly slaked lime about the sheds and lot.

October had no butterflies and so she
told Jack Frost
To make a million right away, no
matter what it cost;
So Jack Frost painted all the leaves
a lovely red and brown;
The wind then shook the branches
hard to make them flutter down.

BALANCING SUPPLY AND DEMAND

By R. G. Kirby.

In planning crops the farmer should study the law of supply and demand as it applies to the agriculture of his community. Even in time of war this law cannot be ignored. For example a city farmer, inspired by patriotism rented land and planted it to turnips. He reasoned that in war time every kind of food would be in great demand. He raised a large crop of turnips and found no demand for them in his community; the market was supplied. The grocers in the city had little demand for turnips. The law of supply and demand was working and the crop was unprofitable.

The farmer can safely base his plans on the established practice of the community. A new idea may be fine but possibly it has been tried and found unsatisfactory. Farmers who conduct their business along established lines will find that they are really catering to supply and demand.

This year, wheat is a crop that a farmer can grow with safety because of the demand. Men who produce wheat know that there is no risk in finding a market. They know that wheat is in demand the world over. The growing of beans, livestock and staple crops is safe because of the demand.

Some farmers find it pays to grow crops for nearby canning factories, the demand is there and will create a market for their crops. In a section without a canning factory the farmer cannot raise a large amount of certain crops without risk because of insufficient demand.

Some inexperienced observers criticize farmers because they follow more or less in the ways of their fathers. Sometimes it is called "in a rut." More often it is common sense farm management. Many good farmers have discovered that the risks of farming are great enough without growing crops which are not in demand.

A dairyman who starts with pure bred stock is playing safe if he selects a breed adapted to his community. He can sell his surplus easily at good prices. More of his neighbors may purchase a bull from him. The community association may hold auctions which will bring many buyers from distant parts who will pay good prices for animals. If he selects a breed less popular in the community he will have less chance to make money because there will be less demand for his stock. That is why certain Holstein and Guernsey centres are prosperous and build up national reputations. That demand makes the business successful. If a breeder came into such a section and attempted to build up a herd of a different breed his chances of success would be greatly reduced because he ignored the demand for pure-bred stock of the breed already popular in that community.

The poultryman who specializes with a popular breed will stand more chance of success than one who selects a fancy breed, seldom seen within miles of his home. There will be a demand, because the breed is popular. The rare breed is not in demand; consequently sales of breeding stock and hatching eggs will be difficult to obtain.

The popularity of Improved White Hulless Barley and Marquis wheat are examples of this law. Farmers are learning the merits of these varieties and consequently the demand for them is good. Farmers who study demand and plan to furnish the supply, can make their farming more profitable, while those who experiment with crops of unknown value will make little progress.

In fruit growing the demands of the buyers must be carefully considered. Certain varieties of apples are in demand and command good prices. Other varieties are more difficult to market. Mixed orchards do not attract buyers like solid blocks of standard varieties.

GOOD HEALTH QUESTION BOX

By Andrew F. Currier, M.D.

Dr. Currier will answer all signed questions of general interest. If your question is of general interest it will be answered through these columns; if not, it will be answered personally if stamped, addressed envelope is enclosed. Dr. Currier will not prescribe for individual cases or make diagnosis. Address Dr. Andrew F. Currier, care of Wilson Publishing Co., 73 Adelaide St. West, Toronto.

Biliousness.

C. W. K.—For two or three years I have suffered from periodic attacks, in which the symptoms are: A sudden partial blindness, in which half of an object may be visible, the other part a blank, the light flashing (a Letter description than flashing would be "hailing") before my eyes, the sight being confused and almost nil; this condition will last for a few minutes, the sight then clears, and a headache comes on in the locality of the eyes, lasting it may be an hour or so; my head feels dizzy, and I am inclined to reel when I walk, there is also a heavy feeling in the head, as when water is taken in the ears in bathing; my own voice will have a far away sound. The attacks come at intervals of a few weeks, a few months, or it may be only a few days apart.

I have thought the condition may be due to a disorder of the liver, or of the kidneys. Have you any treatise that you think would be valuable to me?

Th symptoms of which you complain are perfectly familiar to any physician of even moderate experience and while they may be attributable to other conditions they answer quite well to the rubric which is known in common language as biliousness.

This is a term of which writers of medical text books fight shy of for it is lacking in exactness and does not define much of anything.

It suggests a condition in which bile may be circulating in the blood, for those who are bilious are frequently jaundiced, and jaundice means that bile pigment has been taken out of the blood current and deposited in the skin.

It corresponds also to the condition which is sufficiently well known among the laity as sick-headache, the dizziness and disturbed vision being followed within half an hour or an hour by a more or less intense head ache, with want of appetite and possibly nausea and vomiting.

It has seemed to me, as I have stated, that this condition was often due to disturbance in the bile secreting function of the liver, but it may also be associated with disease of the kidneys, with chronic Bright's disease especially, for those who have this trouble or infrequently complain of symptoms such as are mentioned in the above letter.

Biliousness is also particularly connected with errors of diet; an attack of indigestion following over-eating or the eating of something which decomposes or ferments in the stomach or intestines will often produce an attack of biliousness.

It may also be brought on by emotional causes such as fear, worry, anxiety, or profound emotion of any kind.

An attack lasts several hours and with many people it is repeated periodically, particularly in the spring. When the attack is due to retention of undigested food an emetic of a pint of mustard water will promptly empty the stomach and the bad symptoms may disappear, promptly too.

For those who are subject to bilious attacks the thing of greatest importance is to live on food of the simplest character and not too much of it.

It is also very desirable to avoid means of doing this is to take a gentle constipation and one of the best errors dose of castor oil every two or three nights during the period in which the attacks of biliousness are wont to come.

When an attack is accompanied with jaundice and particularly when there is with it a feeling of tiredness in the region of the liver, a suitable quantity of calomel followed by a dose of Epsom salts will frequently be sufficient to relieve the bad symptoms and postpone another attack.

Mercury is not a substance which it is desirable to take habitually but it acts wonderfully well as an occasional remedy for certain conditions and one of these conditions is biliousness.

P. E.—Will you inform me in regard to Raynaud's Disease?

Answer—An article has been written on this disease, and you can have a copy of it by sending stamped, self-addressed envelope.

Apple Recipes for Hallowe'en.

Apples in many forms are always included in the menu for a Hallowe'en luncheon and the list of refreshments for a Hallowe'en party. The following recipes give a variety of ways in which they can be served:

Apple Marmalade Sandwiches.—Take one pound of apples, two ounces of sugar and one ounce of butter. Peel, core and quarter the apples, and cook them slowly with the sugar and the butter until they are soft. Put the mixture through a fine sieve and let it stand until it is cold. The marmalade makes a delicious filling for sandwiches made of thin slices of bread.

Apple and Blackberry Jam Cordial.—The ingredients required for this drink are four pounds of apples, two pounds of preserved blackberries and four and one half pounds of sugar. To make the jam, mix the blackberries with one pound of the sugar and let them stand for twelve hours. Then stew them until the juice is extracted from the berries. Now pare, core and cut the apples into thick slices and add the blackberry juice that has been strained from the berry mixture. Add the rest of the sugar and boil the apples for about forty-five minutes. Pour the pulp into jars, cover them securely and keep them in a dry, cool place until you wish to use them. To mix the cordial, take such quantity of the jam as you need and dilute it with water and lemon juice. Strain out the pulp and you have a refreshing drink.

Apple Meringue Pie.—Take six large apples, three ounces of sugar, two ounces of butter, three eggs, half a lemon, some ground cinnamon and some ground clove. Peel, core and slice the apples. Cook them slowly in a saucepan with the sugar and one tablespoonful of water until they are tender; then rub them through a fine sieve. Put the apple pulp into a saucepan, add the lemon rind finely grated, the lemon juice and a good pinch of clove and cinnamon. Reheat the mixture, stir in the butter and the yolks of the eggs, and cook it until it thickens. Line a pie plate with pie pastry, as you would for lemon pie, pour in the apple mixture and bake it in a moderate oven until the pie is set. Beat the whites of the eggs to a stiff froth and sweeten it with a little confectioners' sugar. Drop it on the top of the pie as you do for a lemon pie, sprinkle it with confectioners' sugar and cook it in a hot oven until it is brown.

Apple Sherbet.—Make a juicy, sweet apple sauce and cook it until it is free from lumps and of the consistency of thick cream. Add a small amount of lemon juice. Freeze it in an ice cream freezer. When frozen it is a white, creamy sherbet.

By the iron in our mountains,
By the power in our rivers,
By the harvest of our prairies,
By the skill of our inventions,
By the courage of our fathers,
By the aid of God above us,
We shall win and we shall conquer.

Harvesting Nuts as a Patriotic Pastime.

Throughout Canada there is a generous supply of nut-bearing trees which yield an abundance of edible nuts rich in food value, as the butternut, black walnut, the hickories, hazelnuts and beech nuts. Nuts are more nutritious than milk, eggs, bread and meat, one ounce of nut kernels being equal in food value to a pint of milk. Nuts are ready to eat without the labor and cost of cooking. They may be served in the form of delicious sandwiches, in salads, in fruit jellies and cakes, or a handful may be kneaded into a loaf of bread before it goes into the oven. A few kernels put through the nut chopper and scattered over the breakfast cereal adequately supply the place of bacon.

This important food crop is waiting in the woods to be gathered in. A few afternoons spent rutting in the woods during the bright autumn days will supply the home with nuts for the winter and will save the meat supply for our country's defence. After gathering, the nuts should be spread on the attic floor or on shelves in a dry place to allow the surface moisture to escape. They may be cracked at leisure by the boys and girls in dull weather and stored in air tight glass jars.

A few of the finest nuts should be saved for planting nearer home. Nothing will give the children greater pleasure than to choose and plant their own nut trees. If space allows, a future nut orchard might be planned or young trees transplanted as shade trees. The beech is a very beautiful tree, both in winter and summer and the butternut, walnut and hickory make good garden shade trees and their wood is very valuable.

The butternut occurs from New Brunswick to Ontario, while the black walnut is found in the southern part of Ontario. The shag bark hickory ranges from Quebec to the north shore of Lake Huron, the mockernut hickory occurring in Ontario only. The hazelnut extends from the Maritime Provinces to Saskatchewan; the beaked hazelnut has an even greater range extending into British Columbia. The beech ranges from Nova Scotia to Ontario.

How To Make Money.

There is an opportunity in most localities for boys and girls to develop a little business by gathering dry pine-needles for bedding nests in the chicken house. They are better than straw, or any other material I know of for this purpose, because lice or mites will not live or breed in them. Besides, they have a tendency to clean and brighten the plumage of the hens. They can be found in almost any woodlot and are easily gathered in bags. Farmers are glad to get them for a reasonable price, and quite a trade can be built up with city people who keep chickens.

Green corn soup can be made from raw cobs.

Sheep Notes

The beginner must understand that breeding ewes, to insure a good lamb crop, require that a goodly proportion of their bulky feed during the winter feeding period, be rich in proteids, such as alfalfa and clover hay—bone and muscle food—with at least one half pint of oats once a day for each ewe during the last half of the feeding period.

The cost of wintering breeding ewes is more than balanced by the fleece, with market prices placed upon the food, and then some. Whether wool sells for twenty cents or fifty cents a pound, the lambs are clear profit if your flock is properly cared for.

The fleece of a well kept band of ewes will average seven pounds, a very modest estimate. (This seems a very low estimate and I am sure many of our sheep men report much better average clips).

The lamb crop of a well cared for flock should be not less than one hundred per cent.

Provide well-lighted winter quarters, free from draft or north, east and west winds, with wide doors on south side nailed open all winter as a preventive against cotted wool and sniffles.

Dock all lambs and alter all ram lambs after week old and before shearing time, if possible.

Dip ewes and lambs soon after shearing and repeat the dip in ten days; otherwise the work will have been in vain, as one dipping does not kill the nits, which later develop into ticks.

I never bred ewes before November 20, and later, as then the lamb comes with a warm sun after April 15, at a time when the ewes are on grass, and could lamb out in the wild pastures during the day with little danger of losing lambs from exposure. I always penned up heavy ewes at sundown and released them late in the morning; then, if any lambs dropped during the night or early in the morning they were almost sure to be strong and independent. In this way my year's profit was saved by just a little inexpensive attention at the proper time.

To kill off all the cranks would not
The troubles of our era solve,
For to the cranks we owe a lot
In making wheels at times revolve.

In preserving with honey, use one cupful of honey to three cupfuls of water.

FOR THE AIR SERVICE OF THE ALLIED ARMIES

An immense R. A. F. machine ready to start with its load of bombs for Germany.

A Sitka (silver) spruce log cut on the Queen Charlotte Islands off the coast of British Columbia for the Imperial Munitions Board.

THEY are cutting spruce in British Columbia. The silver spruce forests, long neglected because of lack of market and transportation, have found their place. The straight, fine-grained, tough wood is the ideal material for the manufacture of aeroplane parts. The silver spruce grows only on the islands and ocean coast of British Columbia and the northwest United States. The American timber of this species is being used exclusively for war purposes of the States, the needs of the other allies in the great war are supplied by the wonderful forests of B. C., this supply being made possible through a splendid organization perfected during the past ten months by Major Austin C. Taylor, director of the Aeronautical Department of the Imperial Munitions Board. Hundreds of camps, scores of tug-boats, thousands of men are at work on the forests, while scores of mills cut the logs. Canadian Pacific Railway Company tugs haul great rafts across the waters of the Pacific Coast and discharge the cargo at the mills and terminals. Hundreds and hundreds of Canadian Pacific Railway cars roll eastward monthly loaded with prime aeroplane lumber, bound for the aeroplane factories in the east. The wants of France and England, Canada and Italy are filled by the loggers of British Columbia, and the industry will grow even beyond its present tremendous volume.—L. V. K.

STORY OF FRENCH HEROISM AT SEA

ENCOUNTER WITH A U-BOAT OFF COAST OF BRITTANY

Plucky Fight Against Tremendous Odds For Which All the Survivors Received Decoration.

There is the story of a sailing ship's combat with a U-boat which is a stirring example of French heroism and shows the value of efficient anti-submarine training. Having left a British port with a cargo of coal for La Rochelle, the sailing ship Kleber (227 tons), carrying a crew of twelve, was making way before the wind, and one afternoon, when off the coast of Brittany, a big U-boat appeared in the distance and opened fire.

The skipper of the Kleber, "Maitre-au-Cabotage" Le Fauvre, proceeded landward and the U-boat manoeuvred to get the advantage of the sun, keeping up a running fire, which was answered by the French boat. Several big shells struck the Kleber, one of which killed the captain and stunned for a few minutes the head gunner, a lad of nineteen, named Jain. The mate, Plessis, retaining sufficient men to man the gun, ordered the rest of the crew, six in all, to take to the boats, and then fell mortally wounded.

Deeds of Plucky Sailors.

Monnier, the boatswain, succeeded to the command. Of the six men who left the vessel, four, one of them wounded, were in he lifeboat, and two in the dory. The submarine steered for the lifeboat, and ordered the four occupants to get on her deck, took the lifeboat in tow and proceeded toward the Kleber, assured presumably that only dead or dying were on board.

But there were three plucky Frenchmen—Monnier, the boatswain, Jain, the gunner and Brazile, a deck hand, and wounded, who had taken the place of Jain when temporarily stunned. Nearing the Kleber, the U-boat opened fire and was promptly answered by the Kleber. Brazil was again struck, and his place was taken by Monnier, who continued firing. The commander of the U-boat was evidently nonplussed by the defence, for suddenly he gave orders to submerge, and his boat went under so rapidly that not only were the four men of the Kleber on her deck thrown into the water, but also one of the crew of the submarine. All five managed to scramble into the lifeboat.

Night closed and the Kleber vanished into the dark, making for the Isle of Croix, from which the moving beams of the lighthouse were seen. She safely entered port at 1 a.m. The lifeboat picked up the dory, and both crews pulled toward the Isle of Croix. During the night the U-boat again appeared. The commander ordered the lifeboat alongside and took off the member of his crew. He then entered the lifeboat away and disappeared. Later the lifeboat and the dory arrived in port.

The Minister of Marine cited in an order not only the captain, but the vessel itself, and all the survivors were decorated. "The crew of the Kleber, by their gallant behavior, fighting against tremendous odds, have saved their ship and given an example of which the whole French navy can well be proud"—so runs the special order.

PAIN? NOT A BIT! LIFT YOUR CORNS OR CALLUSES OFF

No humbug! Apply few drops then just lift them away with fingers.

This new drug is an ether compound discovered by a Cincinnati chemist. It is called freezone, and can now be obtained in tiny bottles at here shown at very little cost from any drug store. Just ask for freezone. Apply a drop or two directly upon a tender corn or callus and instantly the soreness disappears. Shortly you will find the corn or callus so loose that you can lift it off, root and all, with the fingers.

Not a twinge of pain, soreness or irritation; not even the slightest smarting, either when applying freezone or afterwards.

This drug doesn't eat up the corn or callus, but shrivels them so they loosen and come right out. It is no humbug! It works like a charm. For a few cents you can get rid of every hard corn, soft corn or corn between the toes, as well as painful calluses on bottom of your feet. It never disappoints and never burns, bites or inflames. If your druggist hasn't any freezone yet, tell him to get a little bottle for you from his wholesale house.

THE BREAD TUNNEL

One of the Most Ingenious Devices Ever Made by War Prisoners.

There is certainly more tragedy than comedy in the cruel disappointment of unhappy prisoners thwarted in a promising and almost successful effort to escape; nevertheless, the gallant gayety that has marked so many of the allied fighting men does not fail them wholly even in such circumstances. Lance Corp. Charles W. Baker, who recently recounted his prison experiences, wastes no pathos on himself or on his fellow sufferers when they failed to get safe away through their ingenious tunnel, and can even see a funny side to the affair.

Some of the other prisoners had begun the tunnel and had worked upon it daily for a month before they let him into the secret, which finally became known to several hundred of the captives.

It opened from the last hut at the end of the back row and was headed for the only clump of bushes anywhere near the camp. The soil was so sandy that it was impossible to make a tunnel in the ordinary way; a long time passed before the boys hit on a plan. After our own packages had begun to come and we had white bread to eat, says the corporal, some genius had a happy thought of using war bread for bricks. The war bread is as tough and as hard as rubber and of about the size and shape of a small stone block that you use for paving streets. We kept the bread buried until night. Then we piled it up in a kind of crate, and when the sentries were out of sight we rushed it over to the tunnel. It was the most beautiful tunnel you ever saw. The sides were built up like brick walls, and the roof was a perfect arch. The sand that we took out was the same color as the sand of the camp, and as the ground was almost always wet you couldn't tell the difference. We would take it out in small tinfuls and scatter it all over the place, and with several thousand men walking round there was no way of detecting it.

Of course it was slow work making the tunnel, for we had to accumulate war bread, and so, to amuse ourselves, we fixed it all up. We stuck pictures from newspapers on the wall and we even ran a wire down from the cookhouse and lighted it up with electricity. We took some of the lamps, and when the guard wanted to know where they were we said they had got broken.

A hundred and twenty yards had been built out of the hundred and fifty that the tunnel had to go when a miserable Frenchman, to curry favor with his captors, betrayed the secret. The other French prisoners concerned were wild with rage and shame; and when the whole camp was lined up for investigation and punishment the French noncommissioned officers stepped forward and begged "for the honor of the French army" to be allowed to take not only their own share of punishment but that of all the others.

But, of course, says Corp. Baker, the British wouldn't have that, and the noncommissioned British officers gave themselves up. It was a regular bowing and scraping, "You-first-my-dear-Alphonse" sort of proceeding. A few of the men were given five months in solitary, but most of them got off pretty easy, because the German officers were much amused. They thought they had taken away every conceivable thing that could be used for tunnel building, but they never thought of the war bread. German officers came for miles round to see the tunnel. They wouldn't let us destroy it but kept it as a curiosity. Even the general of a division near by came in to see it. He said it was the finest piece of sapping he had ever seen.

We believe MINARDS LINIMENT is the best:
Mathias Foley, Oil City, Ont.
Joseph Snow, Norway, Me.
Charles Whooten, Mulgrave, N.S.
Rev. R. O. Armstrong, Mulgrave, N.S.
Pierre Landers, Sen., Pokemouche, N. B.

Women Make Tanks.

British women are now making tanks for the army. In one factory every operation in the whole process of construction is carried on by women, and in many others they are employed on various parts. They are also making good in many varieties of shipyard work and in blast furnaces, brickyards and spelter works. A foreman in charge of a blast furnace is quoted as saying that he would be willing to undertake any form of ferroconcrete work with only women as his assistants.

Minard's Liniment Cures Burns, Etc.

If boiling meat is inclined to be tough, add a teaspoonful of baking soda.

The Menace of the Hun.

Four years we have been fighting
The Hun in all his might,
But now the day is dawning
For the triumph of the right.
The enemy is fleeing,
We must keep him on the run.
Till we rid the world forever
From the menace of the Hun.

The world is steeped in sorrow,
Our best blood has flowed in streams
To stay a vain usurper
And dispel his world-power dreams.
But the day of retribution
Is at hand, and sure to come,
When God's own sword of justice
Will descend upon the Hun.

To those whose dearly loved ones
Will no more return again,
'Tis a glorious consolation
That they have not died in vain.
They on the field of battle
Faced the foeman's blade and gun,
To save their homes and country
From the menace of the Hun.

The dark clouds now are rifted
And soon the strife will cease,
Soon ours will be the victory
And ours the terms of peace.
So still we'll bravely "Carry On"
Till we the war have won,
And the world is safe forever
From the menace of the Hun.

LEMON JUICE IS FRECKLE REMOVER

Girls! Make this cheap beauty lotion to clear and whiten your skin.

Squeeze the juice of two lemons into a bottle containing three ounces of orchard white, shake well, and you have a quarter pint of the best freckle and tan lotion, and complexion beautifier, at very, very small cost.

Your grocer has the lemons and any drug store or toilet counter will supply three ounces of orchard white for a few cents. Massage this sweetly fragrant lotion into the face, neck arms and hands each day and see how freckles and blemishes disappear and how clear, soft and white the skin becomes. Yes! It is harmless.

Germany's Lost Volcano.

Soon after the war broke out Germany lost her only active volcano, which is situated on the island of Savaii in Samoa.

Samoa is a considerable archipelago, but only four of the islands are big enough to be of any importance. Two of them (Tutuila and Manua) belong to the United States. The other two, which are much larger (Savaii and Upolu, were German property until four years ago the British took them over.

It is safe to say the Germans will never get those Islands back. But Savaii is not of much account, being mostly desert. The volcano, however, is a fine specimen. What a jolly idea it would be to drop the Kaiser into it!

Minard's Liniment Cures Diphtheria.

At the evening meal Willie was disposing of his soup with speed and noise. "Willie!" said his mother, in a reprimanding tone. Willie knew immediately what his mother meant, and, assuming an injured air, replied: "I wasn't goin' half as fast as I could!"

MONEY ORDERS

A Dominion Express Money Order for five dollars costs three cents.

"I grovel here before you in the dust!" observed the impassioned youth, as he sank on the parlor floor. "I don't know what you mean by dust!" replied she coolly. "I took after this room carefully myself every morning!"

Minard's Liniment Relieves Neuralgia.

Don't hang your herbs up to dry. This causes them to lose a large percentage of their virtue. Instead, spread them out thinly, shaded from the sun, on a dry shelf. When dry, put them into paper bags.

Headers were used this season in southern Alberta to save the short wheat crop, with the result that the grain was cut on many fields where otherwise nothing would have been secured.

SINCLAIR'S HARDWARE

GLAMIS

The Red Cross workers met at the home of Mrs. J. C. MacIntyre on Friday evening to pack the Christmas boxes for the boys overseas. They are sending over thirty boxes.

Misses Flossie McLennan, Mary Webb and Mabel Kirkstown are home, their schools being closed on account of the flu epidemic.

Mrs. Woodstock has closed up her home for the winter, and will live with Mr. and Mrs. Pearson on the 7th of Kincardine.

Miss Downing, of Niagara, is visiting at her home on the 2nd.

Rev. J. E. McCauley, of Goderich, spent a few days with friends in Glamis and vicinity.

Mr. Dan McKinnon and family, of Ripley, were visitors at Mrs. Gilchrist's on Saturday.

We are sorry to report the illness of little Katie McSween, who is suffering with pneumania.

W. J. Graham had a sale on Thursday of his stock. Everything went well.

Mr. Arch. McKinnon, tax collector, was around calling on all the people on Wednesday.

Rev. P. Reith has been confined to the house suffering with tonsilitis, but is reported better.

Mrs. Gilchrist, who has been visiting friends in Kincardine, returned to the home of her daughter, Mrs. Jos. Wrightson, this week.

CARGILL

Miss M. Martin, late of the Georgetown post office staff, visited her parents here this week, prior to taking a position in the Walkerville post office. We wish her success in her new office.

Miss Cora Ostic, trained nurse of Baltimore, Md., is visiting her aunt, Mrs. Chas. Kyle.

Mr. M. Taggart, of Walkerton, is relieving at the depot here during the illness of Mr. Wm. Russell.

Miss Treva Wurm, of Guelph, is home on a visit.

We are pleased to report that our sick are gradually improving.

Mrs. Monahon is visiting friends in the county town.

Messrs Hunstein and Wittich were in Dungannon last week.

SECOND CON. ELDERSLIE

Owing to the flu epidemic the schools on this concession have both been closed for two weeks. The S. S. is also closed. No serious cases of the flu have been reported in this section.

Miss Stewart is visiting at her home in Bluevale.

The beef ring has closed for this season. The annual meeting was held Friday evening in McKay's school.

The provident farmers in this section are laying in a bountiful supply of apple butter.

Smith Thompson spent Sunday with Williamsford friends.

TURNER'S

Lieut. Will Clark, son of Mr. Jas. Clark, is among the wounded. He enlisted with the cycle corps in Toronto in the early part of the war.

The Farmers' Club at Turner's are busy putting in new weigh scales for stock, and will soon be ready to buy hogs.

Mr. John Pollock, of Port Elgin, spent a few days with his friends here.

Mr. Wm. Schell has purchased a new Ford car.

There was no service in St. Andrew's on Sunday.

SIXTH CON. BRUCE

Wedding bells are ringing on the 6th.

Mr. John McGillivray and family are moving to Paisley.

Mr. and Mrs. D. Wittig and family spent Sunday at Mr. J. Repke's.

Miss Margaret Russell went to Teeswater to take care of her sister and family who are laid up with the flu.

Mr. Jas. Johnson went to Port Elgin on Monday.

FOR FLETCHER'S
CASTORIA

WILLOW CREEK

Mr. John Kidd has completed the threshing around here for the season.

Some of the people around here have had the flu.

Our churches and schools have been closed, also our beef ring meeting has been postponed on account of sickness.

The black-leg is in this neighborhood. Mr. John Wrightson has had his cattle treated for the disease.

WALKERTON

Nursing Sister Miss Martha Fortune, who has returned from the front after nursing overseas nearly four years, left yesterday to take a position in Bellevue, the big convalescent hospital in Montreal, after a few days visit at her old home at Vesta.

Lieut. Victor McKechnie, youngest son of Mr. and Mrs. D. McKechnie, of Walkerton, and who crossed overseas with the 160th Battalion, has been sent with five other officers on a military mission to India. The party left England for the Orient on Oct. 11th. The exact nature of their errand has not yet been disclosed, although it is possible that they may act as instructors of some big levies of Indian troops, which are being raised for service at the front.

A man near Formosa telephoned Chief Constable Ferguson one night last week and poured a tale of woe into his ear, and which was to the effect that a young girl he had hired had so many gentleman callers that he feared they would bring the "Flu" to his home, and on him notifying the gallants to stay away and hereafter make themselves conspicuous by their absence, that her ladyship quit. What the Formosaste wanted to know was whether he could compel that girl to come back, and if so, whether he would have to allow said gentlemen to call and run the possible risk of having the "Flu" germ brought into his home. This was some puzzler for the Chief, who, after sparring a little for wind, however, came back with the suggestion that the grieved employer take the matter up with the girl's parents, and that if they had the kind of control over their daughter that the patriarch, Abraham, had over his son, for whom he sent out and chose a wife, that they could probably make her step to the kind of music that her employer was preparing for her. If they refused, or couldn't exact such obedience, then the world was wide and he had better look for some other maid-servant to do his housework. Simple as falling off a log, but had a lawyer been asked to unreel that much common sense, his client would have got a bill that would have made him sicker than the Flu, or words to that effect.—Herald and Times.

On Sunday morning last the death occurred at the home of his sister, Mrs. Thos. E. Desmond, of Eden Grove, of Richard Patrick Connor, second son of the late John Connor, of Eden Grove. Deceased suffered from severe hemorrhages about eight weeks ago, and since then has been in failing health. "Dick," as he was familiarly called, was well known in Walkerton and vicinity. He was possessed of an unusually kind and genial disposition, and will be mourned by a large number of friends, particularly by his widowed mother, to whom he was very devoted. He is also survived by one brother Michael, and one sister, Mrs. Thos. Desmond, both of Eden Grove. Interment was made in the family plot in the North Brant cemetery, and on account of the influenza epidemic, was held privately Monday afternoon, Rev Father Hoffarth of Walkerton officiating.

ELORA ROAD NORTH

Mr. Wm. Tanner is home from the west

We are glad to hear that Mrs. G. Daniels is recovering.

Mr. Richard McGill and family have moved up the road to their new home.

The epidemic of influenza has been very severe in this neighborhood, causing the sad deaths of two of our citizens, Bryce and Wm. Harcourt. There are no serious cases at the present time.

BRUCE TP. BOARD OF HEALTH

Underwood, Oct. 21, 1918.

Bruce Tp. Board of Health met on the evening of the above date. Meeting called on account of the influenza epidemic. After careful consideration it was decided that in the public health interest it was necessary to avoid all crowds as much as possible. A resolution was therefore passed, that the secretary advertise that no public meetings or gatherings be held in Bruce Tp. until such time as the epidemic subsides.

A resolution was also passed that all stores and business places in the Tp. close not later than 9 o'clock each evening during the epidemic, also that the public library be closed.

J. G. MacKay, Secy

THE FARMERS' PARTY

A new political star has arisen in Ontario, and its appearance has caused some amazement and consternation in the old parties of this province. Mr. Denish Bowman was last week elected as representative to the Legislature from the constituency of Manitoulin. This new "man from Manitoulin" is quite likely to make more of a ripple on the political pond than did his predecessor, R. R. Gamey. Mr. Bowman is a farmer, and as candidate of the United Farmers was elected by the rural vote. His majority was 290. His platform as published, included the following:

"I am a farmer whose whole living is derived from the farm, and as such I believe that I can be of assistance in presenting to my fellow-legislators the point of view of agriculture, the greatest productive industry of our country. I wish it to be thoroughly understood that I am an **Independent Farmers' Candidate, with a free hand to support any measure that I may deem to be in the interest of the Farmer, the Labourer or any Industry or person in the Constituency.**

"Within the last few years the farmers have created effective organizations in nearly every province in the Dominion, and enter the political field upon the basis that the welfare of the whole community should be the supreme object of every political organization; that, properly understood, the interests of individuals do not conflict; that harmonious co-operation will produce better results than struggle between either individuals or classes; that the business of the nation should be conducted with the same care, economy, honesty and judgment that we expect in the administration of other business; that, in order that all the interests of the nation may be most carefully considered by the Legislatures, it is essential that representatives of those various interests should be present in the Legislatures; that such representation should bear a reasonable relation to the interest represented by them; that hitherto the agricultural interests have not been fairly or sufficiently represented in legislation; and by reason thereof grave errors in legislation have been made, to the detriment of not only the farming community, but also, through the farming community, of the whole nation; that, in order that the farmers may be properly represented, it is necessary for them to enter the political field; that their representatives in Parliament should be non-partizan, and should deal with every question which may arise purely upon its merits and from the standpoint of the farmer showing how it will affect the country as a whole.

"In place of partyism I would substitute a fair and equable representation of all the great interests of the Province, meeting in the Legislature, not to struggle against each other as though the government of our Province were a game, but uniting in their efforts to promote the general welfare of the community. Recognizing that all classes of productive labor are essential to the well-being of the Province, there need be no antagonism between the wealth-producers and their representatives. Your representatives (the representatives of every class in due proportion) should meet in the Legislative Assembly as the Board of Directors of a great business institution, each member giving to the others the benefit of his knowledge and practical experience. By such a Parliament we might reasonably hope the business of the Province would be conducted in a business way, and the evils of extravagance, waste, graft and corruption, inseparable from partyism, would gradually disappear, and to our returning heroes we could present a country indeed worthy of those who for us have fought to redeem the world from militarism, greed, selfishness and tyranny."

"We shall, therefore, endeavors to be enacted in the interests of agriculture, we claim that through their enactment the whole country would benefit; but I prefer to present to you as my platform for this campaign measures which are of direct interest to every citizen.

"I shall support and advocate:—

"1. The public ownership and operation of public utilities.

"2. That no more natural resources be alienated by the Government, but that the same be preserved and developed under public control for the benefit of the whole people.

"3. Direct legislation upon all important questions, through the initiative and referendum, with the right to recall any member of Parliament who ceases to represent the wishes of the electors.

"4. Such a complete reform in the Civil Service system as will free it from the debasing influence of party patronage, and make both appointment to and promotion in the service dependent alone upon merit; and the abolition of the whole patronage system in all expenditures of Provincial moneys.

Public Ownership

"Public ownership of great public utilities will destroy the combines which now fatten the few and impoverish the many. It will remove the most prolific source of corruption from our body politic. It will assure a more equable distribution of wealth. It will prevent the idle living in luxury, while the man who labors in whatever branch of industry will receive the full reward of his efforts.

Patronage

"Everyone, except those who profit by it, deplores the evils of the patronage system. It creates and maintains useless offices, and it unnecessarily subdivides necessary offices. The public foots the bill."

KINCARDINE MILLER SHOT

It is rarely that a town or hamlet the size of Kincardine has not something pending in the shape of coming events that the citizens look forward to, or are enjoying the events as they happen, but during the past week the epidemic of influenza that every person was either discussing or trying to avoid was side-tracked when on Wednesday evening it was rumored that Mr. J. W. Rae, the miller, had been shot at his mill basement, and one of the bullets hitting him in the back of the head, inflicted an ugly wound. The story, as far as it can be obtained, is this: On Tuesday evening Mr. Rae was milking his cow in the yard when a well dressed man about thirty years of age, wearing a grey coat and green soft hat, approached him. Mr. Rae bid him the time of day, the stranger replying. The stranger then asked if he sold chicken feed. Mr. Rae said he did, and asked if he wished to get some, the stranger replying in the affirmative. Mr. Rae said that he would be through milking in a few minutes and would attend to his wants. Mr. Rae remarked that he was a stranger to him and asked if he lived in town. The stranger replied that he was a stranger in town and was staying at one of the hotels. About the time Mr. Rae completed the milking of the cow, a team drove into the yard and came up to the chop. Mr. Rae turned his attention to the man with the team naturally, and when he came back to look for the man who wanted the chicken feed he was nowhere to be seen. Mr. Rae thought this was rather strange but decided that perhaps he was in a hurry and did not care to wait.

On Wednesday afternoon about 4 o'clock while Mr. Rae was engaged in the mill, two farmers drove in for chop and Mr. Rae had them attended to, and after they drove away he decided to go down to the boiler room and start up the machinery. After everything was running smoothly he again decided to go upstairs to the main floor. Climbing up the steps to the main floor, and when fairly well up, he heard a report and was hit in the back of the head. Another report followed, but by this time he had fallen to the floor below. Mr. Rae was stunned for a second, but upon regaining consciousness crawled over and shut off the engine. In doing so he noticed his man who had been after the chicken feed the evening previous (and who had also passed the mill a few minutes previous while Mr. Rae was waiting or, the farmers who were after chop) at the engine room door. Mr. Rae again hastened up the stairs with his head bleeding, just in time to see him pass the mill door towards Queen St. After reaching the street he went north towards the town hall. Mr. Rae went into the hall and tried to call up Mr. Huffman at the town hall, but the latter was not within hearing distance at the time so Mr. Rae followed up town, but the villain had made his escape.

What the motive was is what is troubling the citizens. Mr. Rae is one of our best citizens, a man who minds his own business and does not interfere in anything that is not his business. He has a host of friends and no enemies that he knows of. The only feasible suggestion that is offered is that Mr. Rae handles considerable money in his daily transactions in business and no doubt the stranger wished to get acquainted with the lay of the building and where the money till was situated, which opportunity he had on the first evening, which the man who had come for chop would disclose while paying for his toll, and as the mill is situated in a quiet part of the town and the desperado was after money, took the chance on shooting to carry out his impious design. But on hearing the machinery stop to suddenly he hastened up the stairs with his head bleeding, just in time to see him pass the mill door towards Queen St. After reaching the street he went north towards the town hall. Mr. Rae went into the hall and tried to call up Mr. Huffman at the town hall, but the latter was not within hearing distance at the time so Mr. Rae followed up town, but the villain had made his escape.

What the motive was is what is troubling the citizens. Mr. Rae is one of our best citizens, a man who minds his own business and does not interfere in anything that is not his business. He has a host of friends and no enemies that he knows of. The only feasible suggestion that is offered is that Mr. Rae handles considerable money in his daily transactions in business and no doubt the stranger wished to get acquainted with the lay of the building and where the money till was situated, which opportunity he had on the first evening, which the man who had come for chop would disclose while paying for his toll, and as the mill is situated in a quiet part of the town and the desperado was after money, took the chance on shooting

—Found—A small sum of money. Owner may have same by proving claim and paying for this notice. P. B. More.

—Cabbage for Sale—Large fine flat heads, for winter keeping, 75c per doz. Watson McKay, Elora road north.

—Dr. Allen expects to be in his Paisley office on Saturday afternoons until further notice, and will attend to those requiring his professional services during that time.

—Fresh Salmon Trout at P. Oltsher's butcher shop.

—Marriage licenses issued and money to loan. T. H. George.

—Fowl wanted, alive or dressed. Get our prices. S. F. Ballachey.

—Full line of fine engagement and wedding rings at I. Shoemaker's jewellery store.

—Highest prices paid for hides and sheepskins. H. E. McGregor, Butcher, Steele Block.

—Taxes Are Due—Pay at Putnam's office open every Wednesday and Saturday afternoons and evenings during November to receive the taxes.

—Highest price for beef hides, horse hides, calfskins, sheepskins, tallow, &c. P. Oltsher, Paisley Meat Market.

—For Sale—The cottage dwelling next to the Balmoral hotel. Freshly painted and re-papered. Apply to Neil McAllister.

—For Sale—A large and comfortable frame house with good stable, on ½ acre of good garden land, on Water St. N. McArthur, prop.

—E. Stevenson's quick healing salve is the best made. We have a choice line of tobaccos and cigars, stationery and school supplies. Agent for daily papers and magazines. Give us a call.

—Flour, Feed, Seeds, Grain—We keep a full stock of Five Roses and Stark's high grade flours, bran, shorts, Royal Purple calf meal, poultry foods and tonics. Always in the market for coarse grains. Morning delivery only. W. Stork.

Auction Sale of Cows

John Wilson will hold a sale of cattle at Pinkerton station on Thursday, Nov. 14th, at one o'clock p.m. Thirty head of good young milch cows, some fresh. 12 months' credit. John Wilson, prop.; Cavin & Hunter, aucts.

—We show many fashionable fabrics, and there isn't the slightest doubt that you could easily and quickly find something that you would be glad to call yours. There are other reasons than variety, too. Price is one of them. And price is a point that prospective buyers cannot know too much about. A good suit costs $25.00 here. From that dollar by dollar the prices advance, and up dollar by dollar also go the values. Glad to show you any time. G. B. Irwin, Tailor.

Now that the end of the war is in sight, the great requisition upon the people of Canada is to

LEND

their money to the Dominion, so that we can "carry on" our national business after peace has been finally secured.

Buy Victory Bonds

Cruickshank
The Tailor

—Mrs. A. E. Pickard will receive on the third Thursday of each month.

—Miss Colon is a visitor at the home of her sister, Mrs. J. A. Logie.

—Mrs. John McBeath, 4th Eldersl'e, is visiting her daughter, Mrs. David Keith, Owen Sound.

—Danger in skidding. Use tire chains and be safe. Sinclair's Hardware has the size for your car.

—The Hydro Electric power dam to be constructed on the Saugeen near Port Elgin may be started next spring, so rumor says.

—Mr. Robt. Parker has sold his farm, lot 27, con. 7, Bruce, to Mr. Aaron Annett, at $8,500, who takes possession about Dec. 25th. Mr. Parker intends spending the winter in Stratford vicinity.

Twice Welcomed Peace

JOYOUS DEMONSTRATIONS

The Populace of Country and Town Mingle Their Acclaim on Both Thursday and Monday

The premature report as to the armistice that came over the wires on Thursday at noon was the signal for a spontaneous outburst of joy that could not be restrained. Bells and steam whistles announced the arrival of good news, and as in most of the big cities of Canada and the U. S. our citizens gave themselves over to enthusiastic demonstration of the human mixing on record that the ravages of war had been brought to an end. Where the sound of clanging metal and rushing steam could not be heard the telephone immediately carried the long awaited message, and soon our streets were thronged with those who had hurried out from their homes within the village limits or as hurriedly driven in behind horse or motor engines from miles away to participate in the celebration. Business was suspended for the day. No one wanted to either buy or sell. The universal desire was to exchange expressive looks, words and handclasps with fellow beings, giving vent to the thankfulness welling up in the heart that the wholesale sacrifice of human life would cease with the breaking off of hostilities. The military conquest and overthrow of the enemies of freedom had been evidently completed and the war practically over.

School was dismissed and the pupils formed the body of a flag-waving procession up and down Queen St., after which "Praise God, From Whom All Blessings Flow" and the National Anthem were devoutly sung by children and adults massed on the market square.

Reeve Steele announced a programme for an evening demonstration, for which a great fire should be assembled. A blazing big bonfire lighted the square, men with rigs having gone miles out into the country and loaded on pine stumps and cedar rails for fuel, and this was supplemented with pail after pail of oil thrown over the heap. The central event of the programme was a parade of men and boys, women and girls carrying blazing brooms, beating drums and cymbals, tin cans clanking and shouting. Addresses were given from the bandstand, the speakers including the clergy, also contributions school inspector Mills and public school Inspector Reid, who were both here on their official visit, Messrs. T. Muir and H. McKerracher, with Reeve Steele presiding. A chorus of young ladies interspersed patriotic songs.

While the evening papers arrived containing the truth as to the armistice not having been signed, or even the preliminaries as yet in conference, the crowd realized that a hoax had been perpetrated, at the same time believing that the demonstration had been only a little too soon.

During the next three days everyone kept on the qui vive for further news, and about 4.30 Monday morning a private message by long distance telephone came through with the first reliable report of the Germans unconditional acceptance of the Allies' terms for an armistice. So soon as the town was astir arrangements were made for a demonstration that so far eclipsed the preceding one as to make it look like a mere rehearsal.

The big feature was an automobile parade that met itself each time a circuit of the route was made from the town hall south to the station and in the opposite direction to North St. There were about ninety cars in line, many of them decked in holiday regalia.

The crowd was larger, the enthusiasm greater, the bonfire bigger, and the weather most inviting.

Short addresses were made by Revs. Neilson, Dash, Little and Walker, Mr. McKerracher and Reeve Steele.

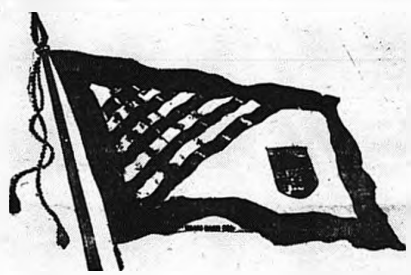
Piper Donald Brown played enlivening tunes during the afternoon proceedings, and Piper Colin McLeish was in for the evening, Efforts had been made to have a brass band for the occasion, but that could not be done.

The automobile procession in the afternoon was headed by a number of horsemen in khaki, one a young lady—Miss Helen Thornburn—also on horseback, dressed to represent Miss Canada.

While the chief note of the celebrations was one of rejoicing, both in the public addresses of the speakers and in the conversation of the crowd there was expressed the heartfelt sympathy for the families who have suffered the inevitable losses of war. To many homes there are boys who will not return, and it could not be otherwise than that parents and friends of these should feel the pangs of sorrow and heart suffering while so many others were overjoyed at the prospect of an early return of their absent ones.

An incident of Thursday evening was the sight of a strong man pacing along between the shafts of a light wagon loaded with stumps for the bonfire. This was Fred, the Baron. Born and raised in Saxony, a part of the German Empire, and put in training as a Prussian soldier, he escaped from that yoke at the first opportunity, and now rejoices that Kaiserism is done and out.

The town was again stirred to celebration on Tuesday afternoon, when Port Elgin band motored over and gave us a patriotic serenade, and heading a parade at 1 o'clock, in which the school children were more than delighted to join in full strength. Their visit was a rare treat to our town, and citizens showed their appreciation by voluntarily contributing enough cash to pay the hire of three motor cars they used. Mr. George Chapman is the veteran leader of the lakeside town's musical organization, and always has a good band. He wishes to thank Paisleyites for the generous reception accorded them here.



Any piece of discarded tinware, from a small can to a three-barrel tank served as a drum, and all shapes of tin or metal articles were good noise makers.

Messrs. H. McKerracher and C. Briggs were a special celebrations committee appointed by the council on Monday.

Several men alleged to be only luke warm in their loyalty to the Allied cause were brought before the hustlers on Monday night, hoisted shoulder high in the bright light and made to wave and kiss the Union Jack. The treatment was administered forcibly, but withal good-naturedly.

—The Women's Institute will meet in Putnam's hall on Thursday at 3 p.m. A full attendance is requested.

—Nov. 11 is Der Tag. Inspector Mills' suggestion that the date should be commemorated by making it the national thanksgiving day is a good one.

How Many Crowns for Your Honor Flag?

Of course every city, town and district will earn its Honor Flag.

But how about the crowns?

For every twenty-five per cent. in excess of its quota, each city, town and district will be entitled to add a crown to its flag.

Can you do fifty per cent. better than your quota—that means two crowns for your Honor Flag.

But double your quota and it means four crowns.

Hang a Flag in your hall, that for years to come will show that your city, town or district did better than well—

That it was a real factor in the huge success of CANADA'S VICTORY LOAN 1918.

Issued by Canada's Victory Loan Committee in co-operation with the Minister of Finance of the Dominion of Canada

DUST, BACTERIA, BAD ODORS AND FLAVORS

Handling the Milk and Methods of Feeding Determine the Purity of Dairy Products.

Dust, bacteria, bad odors and flavors are four wastes as big that to-day the dairy interests are dealing with them as live issues, taking steps for their elimination on every farm; and already much prevention work has been accomplished on the better class of dairy farms.

In every business where food is handled dirt means direct lowering of quality, if not actual spoiling. Dustlessness pays. Cleanliness is next to profits. Dust inside a dairy barn or milk house often indicates faulty construction. When the trouble is studied, and when the cause is corrected the problem of reducing the amount of sediment and bacteria in milk will be partially solved. The president of one of the big city milk companies recently said to the writer: "We place more stress upon the sediment test than upon the bacteria count, because if milk is comparatively free of sediment the number of bacteria, as a rule, will not be excessive." In a broad way the ceiling of the side walls and overhead of the dairy stable and milk house with lath and plaster or matched material will lead to the production of cleaner milk. Bacteria are closely related to dust when it comes to producing sanitary milk, and the same care in stable and milk house construction produces as pleasant results. It is still impossible to produce a germless milk—a few dust particles and bacteria enter the milk in such mysterious ways that there will always be more or less trouble from such sources, but careful stable management has reduced the amount of dust and number of bacteria to such an extent that the milk produced on many farms is a pure and healthful food. As the dairy farmer understands that this sort of thing pays the incentive to abolish dust and bacteria becomes very direct and practical.

A few dairy farmers have become interested in the fact that dust and bacteria are injurious to the health of their cattle. Many preventative measures were introduced. In a little while it was found that the cows produced better milk, more of it and that the men were better-tempered through the day and less tired at night. Dust and bacteria in the dairy barn often indicate something out of balance. When the trouble is studied and the cause is corrected the cows will produce better milk, more of it, remain healthy and need less food than is the case when they are confined in a stable, and exposed to bacteria laden dust and dirt.

Even in the most carefully constructed stables care must be exercised in feeding, cleaning the stables, bedding the cattle and preventing too free circulation of the air in the stable and milk house. Hay and roughage should not be fed until after milking time and it is better to change the bedding material during the middle of the day so that the dust will settle before milking time. If milking machines are used care should be taken not to allow the teat cups to hang close to the floor where the suction will draw dust into them and deposit it in the milk.

Healthy cows secrete healthy milk. Bacteria get into the milk after it is drawn from the cow or in the process of milking. The cow is not the guilty party. Milk does not come from the cow entirely free from bacteria, because it is impossible to keep the teats of the cow sterile; however, we can keep them clean and reduce contamination from this source. The ducts of the teats and the body temperature of the cow afford ideal conditions for the bacteria to multiply and, the last we can do, the lower ducts of the teats will contain considerable numbers of bacteria. By using the first few jets of milk to wash out the ducts the milk that goes into the pail will be practically free from bacteria. If proper care is taken at this stage of production, the few bacteria which get into the milk from this source are of but little consequence to the consumer.

On the other hand, cows that have local diseases of the udder may give milk which at times is contaminated with the bacteria which cause this disease. There is many a proof that such germs can live and pass into the body of the user and cause the same disease as the cow was afflicted with. This shows us that tuberculosis of the udder may readily be transmitted to other animals. Milk from unhealthy cows should never be used by human beings, or to feed young stock on the farm. No matter how well all other requirements are met, if the cows producing the milk are not in good health we fail.

The milkers and handlers of the milk in the dairy rooms are a prolific source of contamination. Unclean methods of milking and the handling of the products afford opportunities for the pollution of the milk by disease organisms, as well as dust and dirt that adheres to the hands and clothes of the milker. Here is where such diseases as typhoid, diphtheria and scarlet fever get into milk. Milk as it comes from the healthy cow does not contain these bacteria. They come from the outside after the milk is drawn from the cow. Any person who has been in attendance on a sick person cannot work among the cows or in the dairy room without being a source of danger to all who use the milk from such a dairy. Typhoid, diphtheria and scarlet fever outbreaks without number prove this point with their deadly results.

In the care of dairy utensils there is still further chance of contamination. This trouble is not from bacteria that commonly adhere to these utensils, but from those introduced in handling and washing. The washing and care of dairy utensils is one of the most exacting from the standpoint of cleanliness and the quality of water used. A supply of bacteria-laden water which will leave some of the bacteria on the utensils is an insidious source of danger to those who use the milk. When the milk goes into the utensils there is a fresh supply of food for these bacteria and they begin to grow and multiply with disastrous results. If typhoid germs are in well-water they will have a chance to contaminate any milk that goes into utensils after they have been washed in such water. Numerous other kinds of bacteria, such as those that cause ropy, colored and slimy milk are frequently in well-water that is used in washing dairy utensils.

Cooling the milk immediately after it is drawn from the cow will retard the development of bacteria and the more the temperature is lowered the more the bacterial growth will be retarded. Milk that is promptly reduced in temperature to forty degrees F. and held at that temperature until ready for use will keep for a long time. When the milk is shipped to the city the trouble is invariably with the morning's milk, which goes into the cans without being properly cooled. In the fresh milk the bacterial growth soon exceeds that in the older milk that has been properly cooled. Cooling the milk does not kill any of the disease-producing bacteria or the lactic acid bacteria, so that it cannot take the place of cleanliness in the production of milk. All of the bacteria present in cold milk become active as soon as the temperature conditions become favorable. Cleanliness is of first importance, cooling is next.

Dairymen frequently experience considerable difficulty in the work of tracing the source of an unnatural odor or flavor in milk. In such cases it is first necessary to determine whether or not such an odor or flavor is present when the milk leaves the cow or develops later. If any particular cow is giving milk which is tainted it is not due to bacteria, but to other causes.

If the milk from any number of cows shows the taint the feed or something else which the cattle have found in the pasture is the cause. Carrots, turnips, wild onions, ragweeds, cabbages, off-quality grains and other strongly flavored substances will cause tainted milk. Certain food stuffs for cows not ordinarily considered likely to produce bad-tasting milk will at times do so. Where the flavor is thought to have been caused by something in the ration a change will frequently remove the trouble.

Cows that are kept in the pasture will keep reasonably clean, however, if the pasture is so situated that the cows have access to muddy pools or stagnant ponds they will often stand in the water up to their knees, fighting flies and plastering themselves with mud. This mud dries quickly and readily falls into the milk pail. It is one of the most objectionable forms of dirt because it quickly finds its way through the bottom of the strainer and settles in the pails, cans and bottles. It is also loaded with dangerous bacterial life which have a deleterious effect upon the milk and its products. Cows that are plastered with this kind of mud should be thoroughly cleaned before they are milked.

One of the most prolific causes of trouble during the summer months is that of old, sour strainer cloths which are rinsed in lukewarm water and hung up to dry. These cloths should be put in boiling water and thoroughly cleansed before being used for another milking. Ordinary wire strainers are worse than none at all. They are very difficult to keep clean and are almost worthless for removing fine dirt and dust.—W. M. K.

FREE TO GIRLS

Big Doll and Doll Carriage

This Big Doll is 18 inches tall, has jointed legs and arms and natural head, hands and feet. The Doll Carriage has steel frame and wheels, and the seat, back and hood are made of leatherette. It is 21 inches high and is just the right size for the Big Doll.

Just send us your name and address and we will send you 16 Packages of lovely embossed Xmas Post Cards to sell at 10 cents a package. When they are sold send us the money and we will send you the Big Doll, with all charges prepaid, and we will also send you the Doll Carriage without any charge if you will show your Doll to your friends and get just three of them to sell our cards and earn prizes too. Send us your name and address to-day so you can get your Doll and Doll Carriage quickly.

Sheep Notes

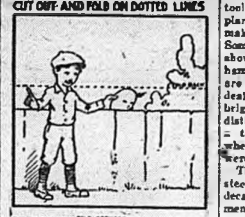
With lambs at anywhere near present prices it is especially important that every method be employed for increasing the number of lambs that can be produced from our present supply of breeding ewes. One method not generally employed but well recognized by old shepherds is that of flushing the ewes just before breeding time.

Flushing means gaining or other liberal feeding for a short time before turning in the ram so as to make the ewes especially thrifty and rapidly gaining flesh at the time of service. It has been found that where this method of handling is used, not only do a smaller percentage of the ewes fail to catch and come in heat again, but more ewes give birth to twins than when the ewes are on poor feed at breeding time. Thus it both increases the number of lambs and makes more of them come during the first three weeks of the lambing period.

The ewes do not need to be grained all winter where plenty of good clover hay or other satisfactory roughage is fed, but more satisfactory results will be obtained if they are fed well enough to keep them from shrinking in weight at any time between breeding and lambing seasons. The careful shepherd will be well repaid for his trouble of seeing to it that the ewes receive sufficient feed at this time of the year.

Sheep often pastured even into early winter and they are all right there if they really get enough food. But the frosted grass sometimes bloats them, causing them to look full and apparently doing well when they are actually hungry and losing flesh just at the time when they should be most thrifty to insure a maximum yield of lambs the following spring. A few pumpkins scattered in the pasture, once once a day or some other additional feed to short late autumn pasture will often give much greater returns than the same extra food at any other time of the year.

Poultry



Selling at wholesale and buying at retail is one of the sure methods of reducing poultry profits. Some poultry-men purchase feed at the city feed store and wholesale their eggs to the groceryman. Others buy as much of their feed as possible from farmers in the fall and sell their eggs to consumers who can afford top notch prices for high-class goods. The second class of producers usually find that poultry can be made to return a profit.

A poultry authority recently stated that buttermilk was worth five cents per quart to him in producing eggs. He was purchasing it at a price of twenty cents for ten gallons. Many farm poultry owners would make more from eggs if they were able to obtain a reliable supply of buttermilk at a fair price.

It is said that the success in specialized farming depends more upon the selling ability than the producing ability. The egg business probably falls in that classification. At extra five or ten cents per dozen paid for eggs because they are of fine quality may mean success when the commonly received market price would barely pay expenses.

Why Keep Accounts?

A man in Manitoba kept accurate accounts of his farm business. At the end of the year he added together the cash which he had on hand at the beginning of the year and his cash receipts during the year. Then he subtracted his cash expenses during the year to see whether the remainder equaled the cash balance which the book reported at the end of the year. He found he was $8 short. He asked the bank to look in his cash balance again. They reported the same amount the second time.

He took his farm account-book into the bank next time he went to town and found that a cream check of his had been credited to another man having the same initials and a similar surname.

The loss of $8 wouldn't have ruined this man—nor any man who is progressive enough to keep accurate accounts of his farm business. Eight hundred dollars might have done so, although we do not know definitely. The incident merely shows that advantage of keeping accounts. The most important thing is that this man made money that year, and having kept accounts he had the satisfaction of knowing it. So he went ahead and planned for bigger crops the next year.

Keeping farm accounts is not only an advantage; it is a necessity. Since farming people have to make income-tax returns just the same as other business people, it is absolutely essential to have figures upon which to base the reports. Hence every farmer ought to keep accounts. The time necessary to keep accounts on the farm need not amount to more than six hours a year. At the end of the year the banker or county agricultural agent will be ready to help in balancing the books, or taking the inventory which is necessary.

There are at least four important reasons why men on farms should keep accounts. The main one is to have a definite method of studying the business with the idea of making it more profitable. If farmers were to produce wheat or other farm products without a profit, soon agriculture would suffer.

A second reason for accounts and farm records is that they improve a man's credit. If a farmer can show from carefully kept records that the money he wishes to borrow is to be used for a purpose that will increase the profits of the farm, then he will be able to get a loan more readily and on better terms.

A third reason for accounts is that they often are the means of agreeably settling disputes or misunderstandings that otherwise might occur between parties who deal with one another and who never keep any record of their business transactions.

A fourth reason, and not the least important, is that a man owes it to his family to make use of every means possible to detect and prevent leaks in the farm business, and thus make the farm income sufficient for the support of the family and the education of his children.

Rice pudding makes a nice dessert for Sunday and can be made on Saturday.

Aprons, both of the attractive and serviceable sort, are becoming an actual fashion.

Marking Small Farm Tools.

In a well equipped farm shop small tools are certain to be displaced. Some plan for marking tools in order to make them conspicuous is needed. Some plans we have used may help to show what I mean. Such tools as hammers, hatchets, chisels, etc., which are used outside of the shop a great deal are identified by painting them a bright red color. This color is easily distinguishable in the grass, making a tool painted with it conspicuous where it would be hardly seen if it were the natural steel.

The paint will also preserve the steel against rust and wood against decay. A moderately thick implement paint is the best for this purpose. A small pint can will usually cover the tools, but it is well to clean off all rust before using it.

Sometimes neighbors borrow tools and neglect to bring them back, finally forgetting to whom they belong. If the tools have some identification mark on them they are much surer to come home. A good plan is to take a sharp steel punch and by repeated tapping on a smooth surface the initials may be cut into the tool in a short time on a whole kit of tools. A single tap of a hammer on the punch will make a dot deep enough to resist the wearing away of service and rust. It is seldom advisable to cut the name or initials in the wood of handles because of the rough surface it leaves for the hands.

I recall one tool that turned up after being gone for five years, the man finding it recognized the initials and returned it. The return of that one tool paid for the time in marking a whole kit. There is also a plan for initialing tools with acid, but the above plans will be found very serviceable.—J. L.

It's a wise young man who, feeling that he needs culture, makes plans to attend an agricultural college.

It is seldom wise to pasture new seeding. It is especially unwise to do so this year when growth is slow owing to dry weather.

Casseroles and other pottery dishes should never be placed in a very hot oven or on a hot stove without first being warmed a little. A sudden change of temperature may cause them to crack.

The man who chooses between a good and indifferent tree, merely on account of the difference of a few cents in price, certainly does not look very far ahead. The saving here will be wasted many times as crops come on.

Distribution of Seed Grain From the Dominion Experimental Farms, 1918-19.

By instructions of the Hon. Minister of Agriculture, a free distribution of superior sorts of grain will be made during the coming winter and spring to Canadian farmers.

The samples for distribution will consist of spring wheat (about 5 lb.), white oats (about 4 lb.), barley (about 5 lb.), and field peas (about 5 lb.). These will be sent out, free, by mail, from the Central Experimental farm, Ottawa, by the Dominion Cerealist, who will furnish the necessary application forms.

Only one sample can be sent to each applicant. As the supply of seed is limited, farmers are advised to apply very early.

J. H. Grisdale,
Director, Dominion Experimental Farms.

"You can't buy a home. A man buys a house—but only a woman can make it a home. A house is a body, a home is the soul."—The Outlook.

When one considers the enormous losses of dairy cattle in other countries, losses which farmers in America may be called on in a large measure to make good, it seems reasonable to say that it will be profitable for a farmer to raise even more than the usual number of well-bred calves.

GOOD HEALTH QUESTION BOX

By Andrew F. Currier, M.D

Dr. Currier will answer all signed questions of general interest. It will not. It will be answered personally if stamped, addressed envelope is enclosed. Dr. Currier will not prescribe for individual cases or make diagnosis. Address Dr. Andrew F. Currier, care of Wilson Publishing Co., 73 Adelaide St. West, Toronto.

Paralysis

Anxious—What is the best way to treat a person who is paralyzed on one side? After a person has had one stroke how can the next one be delayed?

Paralysis or what is commonly called "a stroke" means that there is disease or injury of the arteries. The arteries may be very soft or they may be very brittle. When paralysis occurs one or more arteries in the brain has been broken, the blood has forced its way into the brain somewhat like water soaking into a sponge and the pressure of this effused blood injures or destroys the nerve centres in the brain by which motion and sensation in the paralyzed parts are controlled. The paralysis in most cases is on the opposite side of the body from that on which the accident in the brain takes place. The reason of this is that the fibres proceeding from the brain to the spinal cord, along which impulses pass to and fro like the messages along telegraph wires, cross from one side to the other at the junction of the brain with the spinal cord so that if there is paralysis on the left side of the body we may be pretty sure there is injury to the brain on the right side. When the loss of blood is great and the consequent injury to the nerve centres in the brain great the injured person may die in a few hours or even in an hour. If however the loss of blood is small and a clot is quickly formed within the brain, the opening in the broken artery is closed by it and the bleeding stops. The clot then begins to contract, gradually relieving the pressure on the brain and if the brain has not been destroyed to a very great extent the injured person may gradually regain more or less complete use of the paralyzed parts. But, of course, the arteries remain diseased and nobody would be wise enough to tell when another break would occur any more than one can tell when another break is going to occur in a water pipe of gas pipe that has become old and diseased and has already bursted once or oftener. The only thing a person with diseased arteries can do is to lead a very quiet simple life, free from fret and excitement, from indigestion and hard work, and from everything which has a tendency to raise the blood pressure. By such a mode of life one may often continue and do useful work for many years after the first attack. One of the greatest and most useful men who ever lived was Pasteur, who he was between 40 and 50 he had a severe stroke which made him completely helpless on one side and he never completely overcame the paralysis, but he lived for thirty years afterward laying broad and deep foundations for the science of bacteriology, saving to France her silkworms, her vinegar industry, her sheep and cattle, discovering the means for treating hydrophobia and doing many other things which made him one of the greatest benefactors the world has ever had.

Questions and Answers.

A. V. R.—1. When a person has a nervous breakdown, does he sometimes imagine that he hears voices? 2. After the nervous breakdown has passed away, will he sometimes continue to hear voices?

Answer—1. Such a condition as you refer to, is very ant to be an accompaniment of mental disease, and if you are suffering from it, I should advise you to undergo an examination by an alienist.

2. As long as you continue to hear voices to which you refer, it is fair to assume that you are still suffering from mental disease.

Complete School Set-24 Pieces

FREE TO BOYS AND GIRLS

This outfit contains:
1 English School Bag.
1 Japanese Pencil Box.
1 Special Drawing Pencil.
1 Compass.
6 Rubber Tipped Lead Pencils.
2 Metal Cased Lead Pencils.
1 Pen Holder
2 Pen Points.
1 Box Crayons (12 colors).
1 Eraser.
1 Tube Paints (6 colors).
1 Paint Brush.
2 Patriotic Blotters.
2 Packages Union Jack Ring Stickers and 1 Pen Knife, with these you can keep things tidy, etc.

We will give you this whole 24-piece School Outfit free of all charge if you will sell just 20 packages of our lovely embossed Xmas Post Cards at 10 cents a package (six lovely cards in each package).

Send us your name and we will send you the cards to sell. When sold send us the money and we will send you the whole outfit. Address:

WHAT SOLDIERS WANT.

A suggestion to those who are sending gifts to soldiers overseas comes from Lt.-Col. (Canon) Frederick George Scott, Senior Chaplain of the First Division, in a cable received by friends in Montreal. He says "The men want playing cards and chewing tobacco."

"Ever-lasting-ly Good"

NEW USES FOR ZINC

May Permanently Take Place of Iron and Steel in Many Articles.

Because of the large supply of zinc in the United States, and because former uses of zinc have had to be discontinued on a large scale because of the war, new ways to consume the metal have had to be devised. The refrigerator manufacturers are turning to zinc sheets, and it is well known that zinc makes not only a much more sanitary lining for a refrigerator than galvanized iron, but a more durable one, and so in the long run a less expensive one. Some of the States are considering the use of zinc for automobile license plates. This is a field which could be materially extended, at least as long as the scarcity of steel continues.

Zinc for numerous small articles, such as shoe and corset eyelets, lace tips, show clips and metal buttons, is in every way as satisfactory as brass and materially less expensive. The enamelling of zinc seems to offer no insurmountable difficulty; there is good reason to believe that it can be as beautifully and durably finished as other metals. Cornices, ceilings and other fancy sheet work, heretofore made of copper and steel, could as readily be made of zinc with the same advantage as to cost as in the case of roofing.

Trench mirrors of polished zinc are wartime articles. If zinc can be polished in time of war, why not polish it in time of peace and turn the article so made to some advantage? Reflectors for automobile lamps, searchlights, etc., are suggestions along this line.

Telephone and telegraph wires made by twisting two strands together helically—one of iron or steel to give tensile strength and one of zinc to give conductivity—may be used to supplant copper wire.

Zinc of certain physical characteristics can be spun for ornamentation and fixture work. In this age of the automobile and the tractor, this field could be made to require a big tonnage of zinc.

SAILORS' SUPERSTITIONS

Signs and Omens Influenced Old-Time Fishermen.

All seafaring men are superstitious, but none is so completely under this influence as the old deep-sea fisherman. He believes in "signs" and omens of all kinds. Nothing would induce a skipper of the old school to sail on a Friday. One intrepid unbeliever who dared to leave the docks at Grimsby on Good Friday was hooted through the lock-gates by the scandalized populace.

If a man's hat blew overboard while leaving port many skippers would turn back and delay sailing until the next day. It was an omen that one of the crew would be lost during the trip. This sign, however, became discredited, and wily deckhands, desirous of another day ashore with their wives and families, contracted the habit of going aloft and assisting the wind to foretell disaster.

To speak of pigs aboard a fishing trawler is fatal. Poor catches and split and torn trawls will be the inevitable consequences. Similar misfortunes will result from taking off a hatch cover and laying it on the deck upside down.

To kill a "kitty," as the fishermen call the smaller kind of seagulls that follow in the wake of the trawlers, is a most dangerous act, liable to imperil the safety of the ship itself.

GROWTH OF BRITAIN'S FLEET

Navy's Tonnage and Its Personnel is Nearly 3 Times Peace Footing.

Figures made public on the growth of the British Navy during the war show that the fleet, including auxiliaries, increased from 2,500,000 tons displacement to 6,500,000 tons, and the personnel from 146,000 to 406,000.

Since the outbreak of the war 21,500,000 soldiers have been transported by sea, of which 4,201 were lost. For the requirements of the British naval and military forces more than 86,000,000 tons of stores were transshipped, while more than 24,000,000 tons were taken overseas for Great Britain's allies. Transportation also was provided for 2,000,000 animals.

The organization of convoys, due to German submarine warfare, has been an important part of the work of the British Navy since March, 1917, from which time there have been 55,020 sailings, with the losses numbering only a few hundred vessels.

The Canadian Victory Bond.

I guard the green of the forest slope,
And the wealth of the northern mine,
The precious gold of the prairie wheat
And the treasure of tree and vine.

I guard the dream of the pioneer,
That he dreamed in the wilderness,
I guard his helpmeet's toil and care,
And her courage and faithfulness.

I am the strength of the workman's arm,
And the force of the scholar's brain,
I am the mother's broken prayer,
As she weeps for her gallant slain.

I am the scraplane,
As it darts through the star-lit night.
And I am the roar of the mighty guns
As they guard the men who fight.

I am the light of the scarlet cross,
As it gleams o'er the blood-stained sod,
And I am the soldier's glittering steel
That is keen with the wrath of God.

I am Canadian faith and truth,
The word of her loyal sons.
Who holds me back is a dastard born,
In league with the Christless Huns.

Difficulties Airmen Have to Face.

The statement on behalf of the British Air Ministry that aviators are forbidden to fly lower than 1,000 feet above towns suggests that the margin of safety is perilously small in the event of engine trouble. In such an event the airman must come to earth inside a circle the diameter of which is ten times the height of the machine, and an altitude of 1,000 feet gives him a choice over an area of barely three square miles, or a horizontal distance from the point vertically beneath where his engine failed of less than a mile.

At 2,000 feet the area is increased to rather more than 12 miles—none too much in the case of towns of any importance. There is always the risk of making a bad landing in cloudy weather, especially when, as often happens, the clouds are less than 5,000 feet above the ground. At that altitude an airman forced to land would have a choice over about 70 square miles, which is considered about the minimum for safety.

Whenever there is destruction of property thrift must replace it. Waste is waste, and cannot be recovered.

Harvest sunflowers before the seeds are fully ripe. Place the heads in a loft to dry.

POSTUM

brings cheer and comfort to many a person who wants his tea or coffee but doesn't drink it because he knows these drinks hurt him.

"There's a Reason" for POSTUM

WORLD'S BIGGEST FUR AUCTION

IN SIX DAYS THE TOTAL SALES WERE $6,004,000.

3,500,000 Pelts Bring Record Prices With Buyers From Twenty-seven Countries.

What buyers who attended say was the largest fur sale the world has ever known, both as to quantity of furs sold and the financial results has just ended at the International Fur Exchange, 115 South Second Street, St. Louis.

In the six days it lasted sales totaled $6,004,000, or an average of more than $1,000,000 daily.

The week also saw the purchase by the fur men of Liberty bonds to the amount of $2,500,000, and generous donations to the Red Cross, Knights of Columbus, Jewish Welfare and other war relief funds. In addition, transactions among the buyers totaled more than $2,000,000 and it is estimated that more than $10,000,000 was involved in the week's trading.

Sixty-four kinds of fur, known to dealers from every part of the world, were listed in the 350-page catalogue of the sale. They comprised more than 3,500,000 pelts, divided into 110,000 lots for the convenience of buyers. Every state in the Union, every province in Canada, and twenty-five foreign countries contributed to the catalogue. Each pelt had to be checked, entered, graded and catalogued. St. Louis gradings and lettings are quoted and accepted as standard wherever furs are bought and sold.

All Furs in Demand.

The demand for all kinds of furs was unprecedented during the entire week, a demand that was voiced by dealers from all parts of the world and from every class of trade and many varieties sold for record prices. Muskrat, a fur that sold a few years ago for a few cents a pelt, sold as high as $2.25 while a record price of $11 for skunk was reached. Another fur that sold higher than ever before was lynx, the record skin bringing $85. It was later sold for the benefit of the Red Cross and brought $1,250. Fisher sold as high as $102 and marten at a top price of $81.

Buyers and brokers say the record prices made in all but two or three of the furs may not stand long. They look for prices to increase rather than to diminish. The labor situation was expected to hold prices down a bit, but evidently manufacturers must have settled the labor question more or less to their own satisfaction before coming to St. Louis, for the manufacturers were well and ably represented by large and important orders. Most of them are far too busy in their factories at this juncture to journey westward, but the local brokers took good care of their wants in all respects.

And, incidentally, the rise of the fur broker is coincident with the rise of the St. Louis market. Whether it were the market that made the broker, or vice versa, were negligible. Sufficient it is to know that where the big market is there the big brokers gather together.

The next sales are announced for January 27, April 28 and September 15, 1919.

The table scraps that feed many a worthless dog would feed a dozen chicken. Then hens would produce eggs and meat. The dog produces nothing.

Minard's Liniment Co., Limited.

Gentlemen,—I have used MINARD'S LINIMENT on my vessel and in my family for years, and for the every day ills and accidents of life I consider it has no equal.

I would not start on a voyage without it if it cost a dollar a bottle.

CAPT. F. R. DESJARDIN.

Schr. "Storke," St. Andre, Kamouraska

Cornmeal mush needs very thorough cooking.

"Harmony of aim, not identity of conclusion, is the secret of the sympathetic life." —John Morley.

Minard's Liniment Cures Distemper.

For Autumn Days

If it were just to have this belt slipping through in this novel fashion, one would make this simple attractive dress. McCall Pattern No. 8551, Ladies' Dress. In 6 sizes, 34 to 44 bust. Price, 25 cents.

The neat effect, together with the unique braid trimming, makes this a charming and desirable frock. McCall Pattern No. 8534, Ladies' Coat Dress. In 6 sizes, 34 to 44 bust. Price, 25 cents. Transfer Design No. 926. Price, 20 cents.

These patterns may be obtained from your local McCall dealer, or from the McCall Co., 70 Bond St., Toronto, Dept. W.

LIFT YOUR CORNS OFF WITH FINGERS

How to loosen a tender corn or callus so it lifts out without pain.

Let folks step on your feet hereafter; wear shoes a size smaller if you like, for corns will never again send electric sparks of pain through you, according to this Cincinnati authority.

He says that a few drops of a drug called freezone, applied directly upon a tender, aching corn, instantly relieves soreness, and soon the entire corn, root and all, lifts right out.

This drug dries at once and simply shrivels up the corn or callus without even irritating the surrounding tissue.

A small bottle of freezone obtained at any drug store will cost very little but will positively remove every hard or soft corn or callus from one's foot.

If your druggist hasn't stocked this new drug yet, tell him to get a small bottle of freezone for you from his wholesale drug house.

Combatting the Cut Worm.

"The destructiveness of the cut worm has not been so evident for years," declares Mr. F. Abraham, Chairman of the Home Gardens and Vacant Lot Section of the Canada Food Board. "An early season to some extent minimized the loss from this pest. If after all eggs are laid, the ground is well broken up or ploughed, 90 per cent. of the larvae will be destroyed. " I strongly advise," he added, "that every available foot of town land be ploughed this fall."

Minard's Liniment Cures Diphtheria.

"Nurse," moaned the convalescent, "can't I have something to eat? I'm starving." "Yes, you start taking solids to-day, but you must begin slowly," she said. Then she held out a teaspoonful of tapioca. He sucked the spoon dry and begged for a second spoonful, but she shook her head. Presently he summoned her again. "Nurse," he gasped, "bring me a postage stamp. "I want to read."

ISSUE No 43—'18

ROYAL YEAST

Has been Canada's favorite yeast for over a quarter of a century. Bread baked with Royal Yeast will keep fresh and moist longer than that made with any other, so that a full week's supply can easily be made at one baking, and the last loaf will be just as good as the first.

MADE IN CANADA

E.W.GILLETT COMPANY LIMITED
WINNIPEG TORONTO, ONT. MONTREAL

Broke the Silence.

Occasionally it has been known, within a thousand or two thousand yards of the front, in the early hours of the morning, for complete silence to supervene for a few minutes.

On such an occasion the veteran of Mons was enjoying the change when his companion, while reaching for matches, inadvertently knocked down his mess-tin. The clatter was immediately followed by a burst of artillery fire.

The veteran, disappointed at having the pleasurable silence cut short, exclaimed: "There you are, clumsy, you've gone and started the whole blooming war again!"

LEMONS MAKE SKIN WHITE, SOFT, CLEAR

Make this beauty lotion for a few cents and see for yourself.

What girl or woman hasn't heard of lemon juice to remove complexion blemishes; to whiten the skin and to bring out the roses, the freshness and the hidden beauty? But lemon juice alone is acid, therefore irritating, and should be mixed with orchard white this way. Strain through a fine cloth the juice of two fresh lemons into a bottle containing about three ounces of orchard white, then shake well and you have a whole quarter pint of skin and complexion lotion at about the cost one usually pays for a small jar of ordinary cold cream. Be sure to strain the lemon juice so no pulp gets into the bottle, then this lotion will remain pure and fresh for months. When applied daily to the face, neck, arms and hands it should help to bleach, clear, smoothen and beautify the skin.

Any druggist will supply three ounces of orchard white at very little cost and the grocer has the lemons.

Absent Hearts.

There are absent hearts more lonely
Than this aching heart of thine;
There are attempts more lonely
Than this questioning soul of thine.

There are kindly people near thee,
Who crave a friendly smile;
Go, give thyself, and thus forget
Thine own small griefs awhile.

Minard's Liniment Cures Colds, &c.

"Bonnie Annie Laurie."

Annie Laurie was no myth. Over 200 years ago Sir Robert Laurie of Dumfrieshire, wrote these quaint words in his family register: "At the pleasure of Almighty God, my daughter, Annie Laurie, was born on the 16th day of December, 1682." Mr. William Douglas, who wrote the song to celebrate the wondrous beauty of this maid, wooed, but did not win the far-famed Annie. Instead, she preferred a richer suitor, Mr. Alexander Ferguson. Annie died in 1764, but her name, no doubt, will be passed down to many more ages, by means of the immortal ballad by Douglas.

MONEY ORDERS.

Dominion Express Money Orders are on sale in five thousand offices throughout Canada.

Germany must become a modern democratic state if peace is to reign in the world.

The Ontario Government is investing half a million dollars in feed concentrates to tide the farmers over the winter months when transportation will be monopolized by coal and grain. Standard feed will be manufactured and sold through millers at $56.50 per ton for dairy feed and $57 for hog feed, in car lots.

City Workers Help.

Shortage of farm labor in the Estevan district of Saskatchewan led to the formation of an energetic committee to look after the supply of labor necessary to save the crops. Applications for assistance were received and owners of cars who had volunteered for the purpose organized and drove out gangs of men to the fields. Wages were set at 80 cents an hour.

Minard's Liniment Cures Garget in Cows

Where there is no thrift there can be no lasting greatness. No man ever becomes a really great man unless he is thrifty. No nation can become great or sustain its greatness unless at the very foundation lies the thrift of the people.

35¢ 50 CENTS

The Paisley Advocate

PAISLEY, NOV. 13 th, 1918

—Publicity has been given to a report, from no idea, that the Kaiser of Paisley has lost a bet in which the wager was that if the war ended this year he would get married. This is a case for more bets as to who will be his choice. We'll venture to say that there is more than one young lady who would accept him as the one best bet in the matrimonial market.

—Hostilities have ceased and the soldiers are standing at ease, but the great armies are yet to be relieved of duty and sent home before Canada and other countries can cease to provide immense sums of money for maintenance of war expenses. Whether fighting or lying idle awaiting transports home the cost continues until the men are finally discharged and get into civilian clothes. They must continue to be fed, clothed and paid the allowance from the war department for months yet. Therefore the necessity of Canada still maintaining a war fund through the sale of Victory Bonds.

—Every man who enjoys the privilege of citizenship in Canada should be willing to stand by the British flag, even to death itself. The foreign born should not be expected to be more patriotic, however, than the native born. When the demon understake to give men lessons in patriotism, as was done in Paisley and many other places at the peace celebrations, there was particular attention given to those of Teuton origin, while others of British blood and Canadian birth, who are not a whit more patriotic, were allowed to go scot free. It all were justice the crowd sought to administer, then why the discrimination? The fact is, it is altogether a dangerous proceeding, however well intentioned it might be. But planned in haste in time of excitement, it cannot always be expected that the best judgment will prevail. There is a wide diversity of opinion as to the actions of the crowd on Monday night. Some denounce it as disgraceful, while others are decidedly in favor of that method of handling those who are considered half-hearted in their patriotism. Sober consideration of the matter will convince reasonable anyone that it is a mistake to move as a mob even on special occasions.

—Inspector Mills, in his excellent address at the market square on Thursday evening, made reference to the reconstruction work that is before all nations upon the conclusion of the war, and specially emphasized the fact that educational changes and reforms are due in Ontario. The agricultural classes and working people are entitled to the same opportunities for special instruction as the professional classes, for whom our educational system has provided the greater advantages in the past. Agricultural classes are now established in numerous high schools of Ontario, and as Paisley has an extra room in the new school to accommodate such an addition to the curriculum, it should be possible to have classes opened here for the benefit of young men and women of this district who wish to take up scientific agricultural and household science. The hours and attendance could be such as would permit the young helpers on the farms and in the homes to attend to their usual duties before and after school hours. The introduction of agricultural departments in the rural school system of many of the states of the republic has proven a success, and should also be in Canada.

Bruce County Victory Loan

RURAL DISTRICTS PULL UP

Paisley Leads in Percentage of Objective

CAMPAIGN REPORT TO OCT. 11th

The canvass for Victory Bond subscriptions goes steadily forward.

Bruce County, up to Tuesday of this week had secured 61.46 per cent. of the total objective.

The local district in heading the list in point of percentage made by town and rural communities combined, while the village of Paisley, compared according to assessment has the highest percentage in the county. Present prospects are fair that we can retain the lead to be conclusion of the campaign. Teeswater and Greenock section of this district have greatly improved their showing since last week's report, and are now going strong.

One hundred flag was received last week, and more to be added with one crown. The canvassers expect to have two more crowns before the campaign closes on Saturday night

District	Objective allotment	Total subscriptions to date	Percentage of objective obtained
Lion's Head, Eastnor, Lindsay, St. Edm's	$ 50,000	$ 39,150	78
Allenford	30,000	18,450	61
Wiarton	51,000	74,550	146
North Keppel	22,500	7,800	35
Howarth and South Keppel	20,500	25,500	65
Arran and Tara	121,000	51,250	42
Chesley and S. Elm	117,000	83,700	71
Paisley, W. Federate and Greenock Gore	105,000	146,100	140
Greenock	112,000	27,500	25
Brant	100,000	41,000	41
Walkerton	60,000	74,600	124
Carrick	190,000	39,500	21
Culross and Teeswater	144,000	86,350	60
Kinloss and Lucknow	129,000	115,600	90
Huron	1,000,000	15,000	1.5
Kincardine Town	$1500	72,850	19
Kincardine Tp	120,000	42,900	35
Tiverton and Bruce	72,000	26,200	36
North part of Bruce	66,000	22,700	34
Port Elgin	34,000	116,050	341
Saugeen	71,000	40,150	56
Southampton	40,000	25,100	62
	$3,000,000	$1,229,700	61 46

The peace news boosted the campaign last week. Friday was one of the best days, many new subscribers coming in with their money, and on Tuesday again there was considerable new business in sight.

Bruce Municipal Telephone Permitted to Raise Rates

The Ontario Telephone Board, Messrs. Donald McIntyre, F. Ingram and F. A. Dagger, met at Underwood last week and granted permission to the Bruce Municipal Commission to raise the rate to $15.

There were present Commissioners Hunter, McNaughton and McLean, Reeve Johnson, ex-reeve Mackinney and others.

After discussion of the financial conditions of the system, the board suggested that the overdraft should be taken care of by a special assessment spread over three or four years.

As a matter of fact the commission has put the raise into effect, and the meeting of the board was to give it formal sanction.

The Board commissioners, the officers and those who have to do with the system were complimented by the board on the splendid work they were doing.—Times.

TEESWATER MAN FINED $1,000 FOR PRO-GERMAN TALK

Joseph Waddell, a native of Germany, was fined $1,000 for pro-German utterances at Teeswater. When solicited to buy Victory Bonds he admitted he had plenty of money, but because he believed Britain started the war and now refused to stop fighting, even when the Germans wanted to quit, he did not think much of the Victory Loan.

—On Wednesday, Oct. 23rd, a quiet wedding was solemnized at the home of Mr. and Mrs. Thompson, 6th St. Bruce, when their daughter Emma, was united in marriage to Mr. Arthur Cameron, 8th of Bruce. The ceremony was performed by Rev. J. C. Robinson, of Tiverton. The young couple, who are well known, will begin their wedded life with the best wishes of a host of friends.

Bring your Produce or Money. We will take both.

S. F. BALLACHEY, Paisley

Fin. Hepburn Wan Promotion and French War Cross

Mrs Geo. Hepburn has received a letter from her son, Pte. Jas Hepburn, in which he says that Pte was recently awarded Sergt. Major's stripes and had been promoted from France to England to take the necessary course. Pte. Knox Sanders, of Port Elgin, says the Times, sends word, too, that Pte. had been decorated with the Croix de Guerre (Cross of War). Paisleyites will readily agree that both honors are deserved, as Pte is a splendid type of the Canadian soldier.

Property Changes

The Methodist parsonage has been sold to Mr. Jas. Wilson, Greenock, and will be moved to town next spring. The church trustees bought Victory Hinds from the executors of the deal. Mr Wm. Hunter of Elderslie, has bought Mrs. D Parliament's property on George St.

Peace Thanksgiving Service

Arrangements are being made to hold a union service in Knox church on Sunday afternoon next at 3 o'clock, to render thanks to the Almighty for the restoration of peace. Ladies and gentlemen are asked to meet in Knox church on Friday evening at 8 o'clock for practice of the special music for the occasion

Break in Dam

A section of cement wall on the south side of the Fisher dam was broken down by a washout when the water rose on Saturday night last. The heavy rains of the preceding days. Although the dam proper has not yet given way, there is great danger of it at any time. It is to be hoped that the break can be repaired so that the mills will not have to be shut down for the winter.

Nearly Killed in the Bush

Mr. Wesley Cargill, of Lora road south, was almost fatally injured on Monday morning while chopping in Mr. Marshall Watson's bush. He was chopping at the butt of a tree when another which was lodged on the upper limbs came down, a large limb striking him on the head, making a bad scalp wound. Two doctors attended him, and at latest reports he was doing as well as could be expected.

Intends Coming to Paisley

Pte. Harry Woodcock, who is proprietor of the Paisley park factory building, writes The Advocate from London, England, to say that he is still all right. He had just come over from near the Cambrai front, and at that time (Oct. 29th) the Germans were going like the wind, and he felt sure we would have peace before Christmas. Having got fourteen days' leave Pte. Woodcock will come up down to his old home at Scarborough, Yorkshire. He hopes to see us all in Paisley again, after seeing the folks at home. He had met a few of the boys from here, and is sorry that there have been so many of them fallen. "I fully intend to make my home in Paisley, if all be well, and I get safely back to Canada. Many times I have said 'God Save England, with all the faults I love thee still,' but I love Canada better."

McGillivray—Nelson

A very quiet wedding took place at the manse, Pinkerton, on Nov. 6th, at 3 o'clock p.m., when Miss Mabel Eveline Nelson, eldest daughter of Mr. and Mrs. Wm. James Nelson, of Lonsi, was united in marriage to Mr. John Donald McGillivray, youngest son of Mr. and Mrs. John McGillivray. The ceremony was performed by the Rev. Mr. Gale. The bride wore a gown of white silk crepe trimmed with pearls and silk fringe. Her travelling costume was a navy blue serge tailored suit with hat to match and black fox furs. The young couple will reside on the 6th of Bruce. Their many friends wish them a happy and prosperous voyage through life.

No Shells Have Dropped in Canada

ACROSS the sea thousands of gallant men have fought the fight that has kept Canada in peaceful possession of the rights of freedom.

Many of these men have died for Canada, have died for us and for the cause for which they fought—while others still "carry on," bringing the war nearer and nearer to a victorious end—

Without food, clothing, guns and ammunition these men could not have fought our fight for us. Without **money** these things could not have been supplied to them—

Money has been the backbone of sums has been forthcoming, **no shells** this war, and because money in vast **have dropped in Canada—**

Now with Victory almost in sight, Canada asks for more money. The work must be finished. Lend—and lend to the limit of your ability—through

Canada's Victory Loan 1918

and in so doing you will be lending to yourself, safeguarding your own home, your own freedom of thought and action, and providing for the future of your families through the most attractive and the safest investment in the world, an investment bearing interest at 5½ per cent. per annum.

Now is the Time to Act!

BORN

Tonke—At Paisley, on Nov. 10th, to Mr. and Mrs W. Tonke, a son.

Campbell—In Brant, on Nov. 5th, to Mr. and Mrs. John Campbell, 12th con., twin daughters.

MARRIED

Blackwell—Long—At the Methodist parsonage, Walkerton, on Nov. 6th, by Rev. C. W. Casson, Mr. Walter Blackwell of Walkerton, to Miss Cecelia, eldest daughter of Mr. and Mrs. Robt. Long, of Brant.

IN MEMORIAM

Hamilton—In loving memory of Corporal John S. Hamilton, who gave his life at Passchendaele, November 10th, 1917.

One year has passed, our hearts are sore, As time goes on we miss him more. One of the dearest, one of the best, God in His mercy took him to rest. His smile lives on though gone from sight, That face so cheery, so brave and bright. And though his voice we no longer hear, We know and feel that he is near. Nothing so sorrow and weep no more, For we'll meet Him again on another shore. His Father and Sisters

HOW TO FIGHT

SPANISH INFLUENZA

BY DR. J. W. BOWERS.

Avoid crowds, coughs and cowards, but fear neither germs nor Germans! Keep the system in good order, take plenty of exercise in the fresh air and practice cleanliness. Remember a clean mouth, a clean skin, and clean bowels are a protecting armour against disease. To keep the liver and bowels regular and to carry away the poisons within, it is best to take a vegetable pill every other day, made up of May-apple, aloes, jalap, and sugar-coated, to be had at most drug stores, known as Dr. Pierce's Pleasant Pellets. If there is a sudden onset of what appears like a hard cold, one should go to bed, wrap warm, take a hot mustard foot-bath and drink copiously of hot lemonade. If pain develops in head or back, ask the druggist for Anuric (anti-uric) tablets. These will flush the bladder and kidneys and carry off poisonous germs. To control the pains and aches take one Anuric tablet every two hours, with frequent drinks of lemonade. The pneumonia appears in a most treacherous way, when the lissa victim is apparently recovering and anxious to leave his bed. In recovering from a bad attack of influenza or pneumonia the system should be built up with a good herbal tonic, such as Dr. Pierce's Golden Medical Discovery, made without alcohol from the roots and barks of American forest trees, or his Ironic (iron tonic) tablets, which can be obtained at most drug stores, or send 10c. to Dr. Pierce's Invalids' Hotel, Buffalo, N. Y., for trial package.

Casualty List

PTE. ROY ATKINSON KILLED IN ACTION

Mr. Richard Atkinson, of 16th Bruce, received the sad message on Friday that his son, Pte. Roy Atkinson, infantry, had died of wounds at the First Casualty Clearing Station. His leg had been shattered by gunshot wounds. The deceased was well known in Paisley, as he had been employed at the bakery prior to enlisting, and drove the daily delivery wagon. He enlisted with the 160th and had been in the trenches for almost three months. He was 23 years of age. The bereaved father and family have the sympathy of all in their loss. A memorial service in honor of Pte. Atkinson will be held in North Bruce Baptist church on Sunday afternoon.

BRUCE TP. BOY KILLED IN ACTION

Pte. Rose McLennan, fourth son of the late Allan McLennan, 14th Bruce, was killed in action on Sept. 2nd, on the Drocourt-Quenat line. The deceased went to Saskatchewan in 1910, and settled with his brothers near Roche Plana, where his mother is also living. He was 30 years of age. Two sisters and six brothers survive him. One brother is in the navy and two in the army.

Pte. Roy Hammersell, previously reported dangerously ill, is now reported out of danger.

Memorial Service

On Sunday evening a union service was held in Knox church in memory of Pte. Jas. Miller, killed in action. Cadet Harold Collins, who died in the Base Hospital, Toronto, from pneumonia following influenza, also Lawrence Hopper, who died at his home here from the same cause, but could not be given a public funeral. On two occasions the latter had presented himself for service in the army, but had been pronounced physically unfit. All the ministers took part in the service, Revs. Neilson and Diehl delivering the sermons on the two soldiers. It was announced that a memorial sermon for the late John Bryce will be given by the pastor in Knox church on Sunday morning next.

Desirable Village Property for Sale

LARGE frame house, with 5 acres of land. Good stable, hen house and hen yard. Hard and soft water. At garden lot. Known as the T. H. George property. D. DUNLOP, prop.

As a matter of business, what do you think of the plan?

You are a farmer.

Canada is a farming country.

Canada grows more food than the people of Canada need.

To prosper she must sell that surplus food.

Great Britain is our best customer for grain, pork, beef, cheese and other farm products.

Every practical man must see how important it is to hold the British trade. Canada wants not only the profit on this trade, she wishes to create a good-will in Britain towards Canadian products and thus assure our export business for the future.

At the moment Great Britain asks for credit, asks Canada to sell her the products of the farm, "on time." To hold her trade, it is necessary to give this credit.

This takes capital—immense capital. For Britain's purchases from Canada are huge, and these purchases must be paid for in cash.

In these times, it is not easy even for a nation as wealthy as Canada to procure money. Certainly, no other country can lend us money. The only way now open for Canada to secure money is to borrow from the people of Canada.

This is the reason for selling Victory Bonds.

Can anyone deny the sound business sense of this plan of protecting our valuable market?

From the standpoint of the man who lends, what better security could he get for his money? Where else could he get a five and a half per cent. return on such security? Where would he find an investment to pay interest so regularly and with so little trouble to the lender? Certainly Canadians have an opportunity to benefit very directly from this borrowing plan.

And the money Canada borrows is spent entirely in Canada—a very large part of it for the very crops the farmer has to sell.

Therefore, if the Victory Loan is a success, business in Canada must be good, the nation must prosper and so be able to carry on a vigorous war effort in France and Flanders.

As a practical man you must approve of the Victory Loan plan.

Then help it along. Put your own money into Victory Bonds; urge your friends to buy; work hard among your loyal neighbors to make the Victory Loan 1918 an overwhelming success.

Buy VICTORY BONDS

—all you can pay for in cash and all you can carry on instalments.

Issued by Canada's Victory Loan Committee in co-operation with the Minister of Finance of the Dominion of Canada.

147

Cleaning and Grading Grain.

These two farm operations may be accomplished at the same time and by the same means. The fanning mill is the most successful medium in obtaining this result and too much importance cannot be placed on the use of this machine. The successful operation of the fanning mill depends on two factors, that of wind blast and the use of sieves. The removal of light or inferior grain and the smaller and lighter weed seeds is almost wholly dependent on the wind blast. It also assists the sieves because it removes part of the grain which would otherwise have to pass through them and it prevents clogging in the sieves by light seed. The two most important sieves are those of the top and bottom. The top sieve should be just large enough to let the grain pass through and keep back the larger impurities. The bottom sieve should be of just sufficient size to keep back the good seed.

The utility of many fanning mills is impaired by the owner not possessing a full assortment of sieves and by his using poorly-fitting sieves, which allow weed seeds and grain to lodge in the mill. The efficiency of many fanning mills too is often lessened by the operator being in too much of a hurry." To obtain the best results, grain should pass slowly over the lower sieve. When the fanning mill is turned too rapidly or the lower sieve has too much slope, many of the smaller impurities will not be removed.

Well cleaned and well graded grain is not only free from weed seeds, other seeds, dirt and chaff but is larger in size, has greater uniformity, weighs heavier, is of better quality and is of stronger vitality than grain not so cleaned and graded. No farmer can afford to be without a good fanning mill and there are many farmers who would be much better off if they extended its use.—Dr. C. A. Zavitz, Ontario Agricultural College, Guelph.

A Business Proposition

CANADA looks to YOU for help in making this great Victory Loan a success.

Canada needs your MONEY.

Ours is a country whose individual citizens are more prosperous than those of any other country in the world.

Canada has come to YOU—her citizens—with a straight business proposition.

That proposition in a nut-shell, is this:

"I need Three Hundred Million Dollars to finish up my business over in Europe." Lend me the money for a short time at 5½ per cent. interest, payable half-yearly, and I pledge the return of every cent of your loan."

Plan to take all the Bonds you can possibly pay for. The payments are as follows:

10 per cent. on application.
20 per cent. December 6th, 1918.
20 per cent. January 8th, 1919.
20 per cent. February 6th, 1919.
31.16 per cent. March 6th 1919.

FARM FOR SALE

LOT No. 4, Con. A, Elderslie, property of the late W. J. Watson, containing 95 acres—about 60 acres cleared and the balance in bush. Clay loam soil. Barn 40 ft. by 60 ft. stone foundation, cement stable, log house. Well watered. All seeded down but about 16 acres. About 3 miles from Paisley. Apply to And. Watson, or David S. Watson, executors.

SCIENCE AND INDUSTRY AID VICTORY LOAN

As an instance of how science and industry have co-operated in helping to win the war, it is interesting to note that Sir Thomas White, K.C.M.G., Minister of Finance, has made a special "His Master's Voice" Record for the purpose of actually informing the Canadian Public in his own voice concerning the need of the second Victory Loan.

Science has thus made it possible for the voice of the Finance Minister to be heard in thousands of places in every part of the Country at the same time.

The illustration shows Sir Thomas "caught in the act" as he made his special recording at the Laboratories of the Berliner Gram-o-phone Company, Limited, Montreal.

PAISLEY GARAGE

Speed up the Machine

BUYING a bunch of Victfry Bonds to-day is like touching the accelerator of your car when it is running along nicely. It means more speed to the campaign against the Huns. Every bond you buy adds power to Gen. Foch's military machine. Never was a display of money power needed more than right now—to bring the enemy to the fullest realization of the forces that are united against him. Speed Up!

Buy Bonds! Then More Bonds!

G. E. MILLER

—Dr. Rogers has tendered his resignation as Liberal nominee in South Oxford for the Legislature, on the ground that during the two years that have expired since his nomination the electoral has been more than doubled by the granting of the franchise to women, and he is convinced that these new voters should have a voice in the selection of a candidate.

—The following speech was made by an Irish barrister on behalf of his client, whose cow had been killed by a train: "If the train had been run as it should have been run, or if the bell had been rung, as it should have been rung, or if the whistle should have been blown as it should have been blown—both of which they did neither, she would not have been injured when she was killed."

—Waterloo County Council has passed resolution in favor of having the Lieutenant-Governor's residence at Toronto turned over for more useful purposes, such as hospital or relief work. The mover of the resolution declared that the expenditures in connection with the Government House in the face of so much distress at the present time is a sin and a disgrace.

On the Lip of the Line

By Patrick MacGill.

Once upon the time, when the thoughts of the world turned to war, and when men went out to fight on the water and under the water, on the ground and under the ground, and up in the air, where they flew about like birds of prey, there lived a widow woman, with her two sons in a little red brick house on the banks of La Basse Canal. When the war started and when France went out to meet the enemy, the widow's eldest son, whose name was Henri, went up to his mother and said:

"Mother, I must go to war."

"And leave me," said the mother, who loved her children with her whole heart.

"The call has come," replied Henri. "All the men are going. They are going to the fighting. Even if I could I would not think a struggle that other hearts are proud to wage. Pierre will be with you when I am gone, and he will cheer you when the battle is raging."

The mother kissed her son, sewed a gold coin in a scapular, tied it round his neck and sent him out to fight the battle of France. A little while after the news came to the red cottage that Henri, the son of the widow, was dead. He had died fighting, a brave soldier, and France was proud of such men as he.

Shortly after Henri's death Pierre, the other son, spoke to his mother.

"I am of age now," he said, "and I am going to the war."

"You must leave me here, then, all alone?" said the mother.

"France needs all her sons," said Pierre. "They must go out and fight for the land they love."

"And leave this mother who love them?"

"There is a greater mother," said Pierre, "and that is France. She calls to us all. The husbandman must leave his fields, the plowman his plow, and the reaper his sickle. The harvest of war calls for all willing hearts and strong arms. The girl must give her lover, the mother her son, for the harvesters needed are many. France, the great mother, wants us all to help her."

The mother kissed her second and last son, sewed a gold coin in a scapular, tied it round the boy's neck and blessed him as he went out to fight the battle of France.

A little while after the news came to the lone widow in the red cottage by La Basse Canal that two were lying where one had lain. The great nothing had claimed both the widow's sons.

"And what purpose has it served?" the widow asked herself. "The war has gone on the same now. It is coming nearer my home, and soon the enemy will be at the door of my house, for by day I can see the smoke of the guns and by night I can see the lights of war flashing red against the sky. . . . I do not fear it, for the war can do no further harm to me. My heart is broken."

But she still kept to her little home because she had nowhere else to go, and daily the war crept nearer and nearer. One day a shell swept over her house and dropped in the field behind. The next day another shell came along and dropped on the road outside the door. A splinter of shell hit a lad who was standing on the road and wounded him severely. The widow ran out and carried him into her house and placed him on the bed where once her own sons used to lie. She dressed his wound. Who was he? Whose did he come from? The woman did not know. But one thing she did know. The boy had come from England, for his khaki dress was similar to that worn by the young soldiers who had been marching by for days singing at the top of their voices as they made their way to the field of war. As she tended the stricken youth she felt sorry for him and for the mother he had left so far away. Her heart was filled with devotion and pity for the poor soldier lying in pain so far away from his kind. . . . But still not so far away, since he was cared for by a French mother whose heart was filled with love for him. He spoke a different tongue from that of her sons, but though the tongue was different the courage was the same. That night the boy was taken away on the ambulance. Probably the woman would never see him again. . . .

On the next morning the neighbors were leaving their homes. The war was coming too near and a number of the peasants had been killed and wounded by the enemy shells.

"Come with us!" they said to the widow. "It is madness to stay here."

"I'll stay here," said the woman. "Maybe some will need my help."

"But you will get killed."

"There are some who may need the little help that I can give," said the woman. "And as there is going to be so much child-slaughter and sin to protect, me I have neither."

So the widow remained behind when the others went. The British soldiers who came by that road soon got to know her. When they halted outside her door, their limbs weary and their mouths hanging open with fatigue, she invited them in to have a drink or a bite to eat. When the stretchers from the battle line came down the road she was always ready, day and night, to come out and minister to the helpless wounded. In ministering to the needs of others she forgot her own sufferings. The widow who had given her sons to France was now giving her help to a world at war against cruelty and wrong. The lone widow by La Basse Canal was France personified.

And so, to-day, she continues her good work, helping the stricken and weary on the field of war. She is one of the simple-minded, unassuming heroines of the war, heroines such as France has given without stint. The might of martyrdom, the glory of endurance and the eternal glory of France have reached their highest point on the fringe of the firing line. The world that makes just war against wrong has reason to be proud of France, and France has reason to be proud of her own great-hearted, simple and heroic women.

"UNSINKABLE" SHIP SUNK

Buoyancy Boxes Fail When Torpedo Hits the Lucia.

The "unsinkable" American cargo steamship Lucia has been sent to the bottom by a U-boat in mid-Atlantic. She was equipped with buoyancy boxes and was supposed to be invulnerable to torpedoes.

The Lucia was formerly under Austrian registry under the same name. She was of Mobile, Ala., when the United States entered the war and was taken over by the Government and equipped at a cost of more than $200,000 with the unsinkable device. It took several months to line her holds and cabins with air-filled boxes. The owners declared that they would keep the ship afloat, no matter how much water came into her hold as a result of a torpedo attack or shell fire.

The Lucia had made several voyages without incident, and the attack which sank her was the first one attempted. She was of 6,741 gross tons and was built in Austria in 1912, before the war she was in the cotton trade between Gulf and Austrian ports.

Patriotism in the Bathtub.

Little Mary is only a scrap of a girl and as lively as a cricket. In some time before her mother could persuade her to take up knitting, but when at last she did begin no one was more zealous than she to produce wristers for the soldiers. It was as difficult to deflect her from her knitting as formerly to entice her from her play.

One Saturday night her mother suggested that she lay aside her knitting and take her bath.

"But, mother," remonstrated Mary, "I must finish this wristet to-night."

"There's another day coming, Mary. Run along and take your bath. When you are ready I will come and rub your back."

Knowing that further argument would be useless, little Mary finished her needle and whirled away to take her bath. Usually Mary was most expeditious in taking a bath, but to-night a long, long time elapsed and still no call to mother to give the finishing rub.

Finally, becoming uneasy at the long delay, her mother opened the bathroom door and beheld her little daughter sitting up to her arms in the water, with her hands hold high, knitting desperately to finish the wristet.

"Well," said Mary, in response to her mother's exclamation of astonishment and rebuke, "you wanted me to knit, and I'm knitting."

Autumn Here and There.

Here, Autumn winds make low, sweet melody,
The moonlit way a benediction hath;
The poplars proud stand in long reverie,
The stately asters stroll Oct'ber's path.

And there, O God, the tumult and the fair,
White roses, broken lilies—tragic cries!
The fateful winds moan dirge on dirge again,
And sorrow lingers 'neath the Autumn skies.

Vegetables with a strong flavor, such as cabbage and onions, should be cooked in a large quantity of water. Have the kettle uncovered.

About the House

My Poor Feet.

When my sister last visited me she gave me a new name, Woman Who Walks. I said that a better name would have been, Woman Who Weeps, for I was suffering as much with my feet that I had frequent crying spells. There were countless reasons in the countless steps I have to take every day, a long day of fifteen hours that repeats itself seven times a week because chores and housework have a way of claiming one with deadly regularity even on Sundays and holidays.

The night before sister's visit ended I was unusually footsore. I threw myself on the lounge and cried so hard that she was alarmed. A few days later there came from her a package and letter. I opened the letter first and read:

"Dear Sister: For the first time since you were 'Big Sister' and I was Baby, tugging at your skirts, I find you down and out—down as to courage and decidedly out-at-heel as to common sense, so here I come with a letting and a present.

"Since those two feet of yours form the actual physical connection between your body and your daily 'path of duty,' why don't you take as good care of your feet as I saw you take of the litter-carrier, the day it screeched on its cabin and ran hard? You cleaned and oiled the bearings and observed while you worried over it, 'I always feel sorry for neglected machinery.' It is made to give service and since it cannot repair itself I am always condemned when I do not give it a chance to do its best work.'

"Please use the contents of the box I am sending to give your feet a chance!"

Here is what sister sent me.

A shoemaker's iron last; a shoemaker's hammer and sharp-pointed awl; a keen, strong-bladed knife for cutting leather; a bow of shoemakers's nails; an extra large bottle of sweet oil and a dozen pairs of new stockings.

Every article bore a tag and the sentences on the tags were characteristic of the writer. This was on the tag fastened to the iron last:

"When the engine of your lighting plant broke down you were provided with tools and knew how to make the simple repairs needed. Why not straighten up the rundown heels on your shoes and hammer down the nails that bruise your soles? A woman's feet are more precious than a shop-made machine. Take care of them."

This was fastened to the stockings:

"These stockings are a gift. A woman's feet—but perhaps you now can say the rest for yourself!"

I was touched by my sister's thoughtfulness. A bit of resentment too crept in as I hurried away to the barn to see if the latest lamb was prospering. No one was to blame because Martin, my husband, had to leave the charge of all the young stock to me. It was our farm and our work. If my feet ached from the miles I walked every day, let them ache—one must do the best she can. Martin had not built the big convenient house or planned the location of the farm buildings. We had bought the place and it was a valuable place.

It was time to feed the pigs. With sister's preachment sounding in my thoughts in spite of my flash of resentment, I set myself to counting my steps. It grew interesting. By bedtime I had begun an imposing array of figures:

From barn to house, eighty-four steps.

From barn to windmill, thirty steps.

From barn to pigpen, one hundred steps.

From windmill to pigpen (laden with two pails of water) one hundred and thirty steps. (Lovely when it rains and blows!)

From pantry to kitchen table, four teen steps.

From kitchen table to dining table, ten steps.

From kitchen upstairs to my bedroom, fifty steps.

I could go on piling up figures by counting the steps I took every day back and forth and criss-cross, over and over, with heels run down, shoes not well adapted to my work, stockings roughly darned and wrinkled, feet none too well bathed, nails not always trimmed. But the time! How find time for fussing over my feet? Sister's labels insistently answered me and I realized how I had been foolishly wasteful of my strength and nerves.

"I will reform," I resolved, "and I will reform methodically and sensibly." It would take resolution and time but if it saved me from fits of crying and crossness, if I could do my work better, if I could be a better partner and wife, surely it was worth while.

That night I bathed my feet in hot water, plunged them for a minute into cold water, dried them thoroughly and then gave them a good massage with oil. What relieved feet! My whole body felt the comfort. I slept like a baby.

In the morning I put on a pair of the new stockings and my best shoes, resolving to cobble the crooked heels of the old ones as soon as breakfast was over. I am handy with tools as is an hour the heels were straight and I had mastered the sharp nail on the inside of the shoe over which I shiftlessly had been keeping a pad of folded paper to protect my flesh.

After dinner my feet were not so tired as usual. I had some sewing to do. Off came my shoes and for five minutes I vigorously pinched and slapped and limbered them, leaving my shoes off until again I had to be on the run.

"What in the world are you doing?" asked my husband, coming in as I was putting away the bottle of oil after bathing and rubbing my feet that evening. I told him the whole story. He listened thoughtfully.

"This house certainly was not built for a step-saver," he said when I concluded. "I could move the pigpen and I've been thinking how to pipe water to the barn and the poultry yard—maybe to the pigs too."

"Oh, if you could, Martin, there'd be so much less to do I could raise turkeys! There's money in turkeys. When we are out of debt—"

"Now isn't that like a woman! Take one load off her and she goes hunting for another!"

There was a world of tender affection in his voice.

"That's the way to advance, Martin."

The next time I went to town I bought walking shoes and decided that it was poor business to use worn-out best shoes to work in.

Life looks better to me now. The nightly bathing, the every-other night oil rub, the shoe heels kept in repair, the piped water and the fine brood of young turkeys are reasons enough for my gain in flesh, in nerve and in good temper. I am still the Woman-Who-Walks and my husband says I am also the Woman-Who-Smiles.

Food Control Corner

"How can we help the Food Board?" The question is the most frequent in the correspondence with which the central staff at Ottawa and the Provincial Committees of the Food Board deal. It is an expression not merely of individual good will, but of an underlying desire, a restless aspiration, felt in a far wider circle than those who say it, to do something to weeds bringing the war to the only end we dare contemplate.

Beyond question, the most pressing thing for which the Board now can ask the aid of outside workers is the combating of the misconception that we may "eat on our oars." Further food saving and greater farm production are as imperative as ever. The closer one sees the world's needs, the more does methodic saving seem requisite.

Tension in the food situation in Europe, let it be repeated, has been eased. The acute shortage of last winter is not present. But they have not relaxed a particle of their strict individual rationing in Great Britain, France or Italy.

Besides there is the gaunt fact that nearly 5,000,000 people have died of starvation or malnutrition through the war. Can we, dare we, in Canada ignore a decimation which would total over one-half of our own population?

Food workers at the beginning of the winter season can do nothing better, nothing more patriotic than to repeat again and again that our share of food war work is only just beginning. Measured by our unprepared-ness of fifteen months ago, we have done well. But a higher standard than ever has been set by our own success. To-day we have the organization; we have a much better understanding among the people, and we have, consequently, a far greater obligation. The work must be carried on.

You surely have not missed the little less wheat in your bread? Yet it has reduced our Canadian consumption by 200,000 barrels a month, or 12,000,000 bushels a year.

We sent 125,000,000 pounds more pork and 75,000,000 pounds more beef to the Allies last year. We saved that at the table too.

We hope to save 100,000 tons of sugar a year by spoonfuls.

All this has been done just as "Little drops of water, Little grains of sands, Make the mighty ocean, And the pleasant land."

Will you remember it is in your hands?

FROM CAPTIVE HUNS

Thoughts of Home Amid the Comforts of Prison Camps.

The excellent treatment received by German prisoners of war in Stobs, Scotland, can be gleaned from the columns of the Stobstadt, a little periodical issued in the prison camp in their own language. A recent issue which has arrived here tells of theatrical performances in the camp theatre, of concerts, dancing and laughter. But now and then the merriment gives way to sadness and melancholy, as the following extract shows:

"Despite all our comforts and conveniences here, thoughts of home now and then overwhelm us. Are we to remain here forever? Yonder is a prisoner standing on the hill, calmly smoking his pipe. He is thinking. He looks around at the vista before him and he sees the houses with the red roofs in the valley. Then he thinks of home, of wife and children. Those red roofs remind him of little houses on the Rhine. Yet how long back that wondrous happy time now seems! His heart is heavy and gloomy thoughts overwhelm him. Those red roofs have brought back memories and he turns slowly and walks down the hill, still thinking."

Described.

"What sort of a patriot is he?"

"He's the kind that will cheer the boys marching off to war, and then grumble about having to pay an income tax."

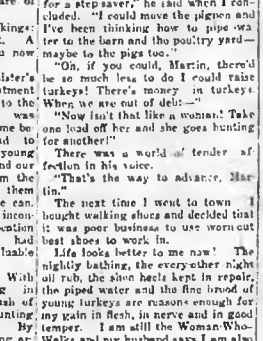
Ingram's Velvcola Souverraine Face Powder



You need never be embarrassed by an oily, shiny skin. Just apply a light touch of Ingram's Velvcola Souverraine Face Powder. It is so delicately textured that you can scarcely see it and yet it hides tiny blemishes and gives the complexion a smooth, soft appearance. It adheres until washed off even though the skin becomes moist from perspiration. 50c.

Ingram's Milkweed Cream, is an ideal preparation for softening and cleansing the skin and keeping the complexion clear and youthful looking. It has a combined therapeutic quality that tones up the complexion. Tweedsmuir, Shandon. There is a complete line of Ingram's toilet aids. Leading Druggists for the tenth time, at your druggists.

A Picture with Each Purchase

Each time you buy a package of Ingram's Toilet aids or Perfume your druggist will give you, without charge, a large portrait of a world-famed motion picture actress. Each time you get a different portrait so you make a collection for your home. Ask your druggist.

For the BOYS & GIRLS

Soldiers All.

They're swinging back to school again
In squads of two and three—
It calls for sturdy fighting men
To master Rule of Three.

It takes a valiant company
To march in order through
A lesson in geography
As far a Timbuctoo.

And he who meets and overcomes
A participle grim—
There's not a general at the front
That would not cheer for him.

They're marching back to school again—
The chaps that do their best
Will prove their fighting blood, and then
We'll trust them for the rest.

The "Parents" of Marie-Camille.

A little French girl, Marie-Camille, lives in one of the tiny villages close to the battle zone. One August morning her father woke her early and held her tight in his arms and kissed her again and again. Then he went away. Marie-Camille's mother told her that he had gone to fight for France.

One day a messenger came to the door. Marie-Camille's mother grew very white, and a look came into her eyes that never left them again. Marie-Camille was only a little girl, but she had heard many things in those months; she knew that the father, who marched away that August morning, never would come back again.

After that things became very difficult. Marie-Camille's mother worked harder, but food became more and more scarce. By and by some one who knew things were going sent Marie-Camille's name to America for "adoption." Perhaps some one over in America, where everyone had plenty, would pay ten cents a day to give a little French girl something to eat.

A class of schoolboys and girls in an American city decided to "adopt" a little girl. They could do it, they figured, if each of them paid two cents a week. A friend who knew about Marie-Camille gave them her name, and every Monday morning they brought in their pennies—"giving Marie-Camille her breakfast," they called it.

But that was not enough; if Marie-Camille was really to be their little girl, they wanted to do more than to send money for food; little girls needed clothes. They talked it all over together. The girls, with the help of the sewing teacher, could make the clothes, but the boys, being her adopted fathers, must do their part. They were starting for a ball game when the question came up. One of them put it concisely: "Say, fellows, we can't play till we've decided about Marie-Camille's clothes." So they decided to bring twenty-five cents each—and the money must be earned, too.

The "fathers" of Marie-Camille proved equal to their responsibility, and the materials were bought and made up. Meanwhile one of the girls had a birthday and received permission from her mother to choose her own gift. She brought it to school on the morning of her birthday; there was a dress with a handkerchief in one pocket and a hair ribbon in the other, socks to match, and a full set of underclothes—all for Marie-Camille!

Just then came a little from Marie-Camille herself to one of the girls who had written her.

"Mademoiselle Esther," it began, "I am so happy and so touched by the friendship you have shown me, and I will try to satisfy you by my letter; but be indulgent, mademoiselle, for you must know that I am only eight years old."

The "parents" of Marie-Camille listened with shining eyes, but neither they nor Marie-Camille guessed how great was the thing that they were doing. For the first in history not statesmen and armies alone but the children of two great nations are building up a friendship that shall be written not upon scraps of paper but upon the hearts of the people.

Health

Loss of Consciousness.

Since it is sometimes very difficult for a physician to determine the actual condition of an unconscious person, it is evident that it doubtful cases there is not much reason to hope that the person who has had no medical training will be able to solve the problem. Yet a solution is often necessary in the interest of the patient, for treatment that would do good in one case may be injurious in another. Fortunately, the diagnosis is not always so difficult, and in many cases it is not difficult at all.

Among the common causes of unconsciousness are: an epileptic attack, fainting, injury to the head, tumor of the brain, apoplexy, brain disease (such as meningitis or softening), sunstroke, alcoholism, poisoning by opium or some other drug or by gas, uremia or Bright's disease, coma caused by diabetes, and hysteria. The diagnosis is, of course, much easier when the unconscious person is not a stranger, for then you may know many facts that will help you to form a correct conclusion. If, for example, you know that the man is a drunkard, your presumption will be that he is unconscious from alcoholic poisoning, although the possibility of a head injury from a fall must be borne in mind; or if you know that he is a sufferer from epilepsy, Bright's disease or diabetes, you may be pretty sure of the real cause of his trouble.

There is one pitfall that you should carefully guard against—thinking that because there is an odor of alcohol about the unconscious person he is intoxicated. One of the first things the ordinary Samaritan does for an unconscious person is to attempt to force some brandy or whiskey down his throat; the alcohol is spilled about and so the man's reputation suffers and perhaps his life is lost through a mistaken diagnosis of drunkenness that leads to the postponement of necessary treatment.

The first thing to do is to examine the head to see if there is a fracture of the skull, and the nose and ears to see if there is any bleeding from them, for that may indicate fracture when none can be felt. Then you should look at the pupils of the eyes; if they are dilated, there may be apoplexy or poisoning by belladonna or cocaine. If they are markedly contracted, there is great probability of opium poisoning. If a corrosive poison has been taken, the burns can be seen by examining the tongue and the mouth. If the tongue has been bitten, it will be suggestive of an epileptic attack. If the person is breathing heavily or snoring, and there is no smell of alcohol, the case is one improbably one of apoplexy. If there is a peculiar sweetish or aromatic odor to the breath, the case may be one of diabetic coma.

There are many other signs, but to needless to catalogue them here, for only those persons who have had a medical training would appreciate them.

THE TELEPHONE AND THE WAR

Is the Principal Instrument of Communication on Battlefield.

How could the war be kept going without the telephone?

It is the principal instrument of communication for military purposes, the telegraph not excepted.

When troops move forward, signal corps men with phones and wire accompany the foremost line. Telephones are installed in the very trenches; they are even carried out on occasion into No Man's Land.

Every regiment or other fighting unit of an army is linked up with all the other units by talking wires. A veritable maze of such wires connects division with division and army with army. At every military base, permanent or temporary, there is a fully equipped telephone exchange.

Generals in the field receive information and send out orders by phone. The fire of artillery is directed by the same means from observation posts and from balloons.

When a "sausage" balloon is sent up into the air from a motortruck for observation purposes men on motorcycles start simultaneously across country, carrying telephone wires to batteries scattered over many miles of front. On board the truck is a switchboard, and the observer in the balloon ear directs with his voice the fire of the guns, correcting their range and aim.

Even the airplanes are now equipped with wireless telephone apparatus.

For use in the field there is an ingenious combination of telephone and telegraph, the contrivance so compact that it is contained in a small box.

Sea Caterpillars.

The caterpillars you war against when whitewashing your fruit trees are not the only caterpillars. Caterpillars populate the ocean in billions, and grow into crabs if the Greenland whale does not eat them first.

They are minute little things, about the size of salt grains. As children run before they walk, so crab-caterpillars begin by literally looping the loop from one spot to another.

Greenland whales like them on account of their diminutive size. Having no teeth and very small throats, the whales find them the most convenient form of diet. They simply pass through the shoals with their mouth open, squirt out the water, and then swallow.

An excellent "main dish" may be made of fish, potatoes and parsley baked.

KEEP HUN SHIPS AFTER WAR

British Council Urges Distribution According to U-boat Losses.

German ships should not be set free after the war "to extend their share of the world's carrying trade and so profit by the losses which their government, by means mainly piratical, had inflicted upon the ships of the Allies." This program is urged upon the British Government in a resolution adopted by the Council of the Chamber of Shipping of the United Kingdom.

The Council explains that heavy losses have been suffered by shipping companies at the hands of the Germans. Half of Germany's shipping is declared to be in neutral or other ports and Germany may have added to it by construction or purchase during the war.

The Allied countries, the Council says, will find themselves short of ships for some time after the war and declares that while Germany cannot make restitution of all the shipping sunk, there is no reason why she should not make restitution in kind to an extent to which she is able.

Shipping taken over from Germany, the Council suggests, should be distributed among the Allied countries in proportion to their losses. Each country should dispose of the tonnage among its subjects for cash. One British company at the beginning of the war had ten passenger steamships. Nine have been sunk by the Germans and the other captured. The Council declares it is inconceivable that so long as there is an enemy ship in existence the Germans should be permitted to have that ship while the shipping company which has lost all its ten boats is unable to resume its old trade.

SOLDIER HAS A LIFE BADGE

Cross Scarred in His Back by Fragments of a Bursting Shell.

Private Jean Fotsman, of New York city, hereafter will carry a cross on his back as a souvenir of the great war, says a Paris despatch. The wound that has marked him is so unusual that he is known at American Military Hospital No. 1, where he is now convalescing, as the "Red Cross Man," and doctors, nurses and patients have watched his case with unusual interest.

One morning a short time ago, just as his company went over the top, headed for a boche machine gun nest, a shrapnel shell knocked him out. He had a momentary sinking sensation and then awoke to find himself on a sanitary train from which he was taken by ambulance to the hospital.

When he was carried to the operating room, the surgeon looked him over and then called the other doctors to come and look. The boy had been hit by two pieces of shrapnel, one of which had gone down his back very close to his spine, that only a miracle saved him from paralysis. The other had crossed at right angles, leaving the mark of a perfect cross on his back.

Fotsman has those pieces of shrapnel in his bed cross treasure bag. He says they're "lucky pieces" because they "only left a scar."

Poland has lost 7,000,000 population through the war.

FIRST STANDARD SHIP

Contracted for by British Government —Launched in China.

Consul A. E. Carleton, Hongkong, British China, writes: "The launching of the first of the standard ships to be constructed in Hongkong (see Commerce Reports for Sept. 13) took place on Saturday, Aug. 10, 1918, at the shipyards of the Hongkong and Whampoa Dock Co., Limited. This is the first of six which have been contracted for by the British Government. The chairman, in the course of his remarks at the launching, stated that at present the company was dependent for the building material on Great Britain and the United States, but he predicted that the day is not far distant when it would be able to manufacture practically all the requirements, since there is in the new territory a large quantity of iron ore, and that recently other ores such as wolfram and molybdenite, both used in the production of steel, have been discovered. As yet no coal has been found within British territory, but it is known that it is abundant not far off in the Province of Kwangtung, and when these coal mines are worked the establishment of smelting works in Hongkong can be readily accomplished."

Lest We Forget.

(To the glorious and imperishable memory of the officers, non-commissioned officers and men of the first Seven Divisions who, fighting against unwounded odds, by their courage and devotion saved Europe and civilization—Mons, Le Cateau, the Marne, the Aisne, Ypres—August 23rd—October 31st, 1914.)

Oh, little mighty Force that stood for England;
That, with your bodies for a living shield,
Guarded her slow awakening, that defied
The sudden challenge of enormous odds,
And fought the rushing legions to a stand.
Then stark in grim endurance held the line.
Oh, little Force that in your agony
Stood fast while England girt her armor on.
Held high our honor in your wounded hands,
Carried our honor safe with bleeding feet—
We have no glory great enough for you,
The very soul of Britain keeps your day!
Procession?—Marches forth a Race in arms;
And, for the thunder of the crowd's applause,
Crash upon crash the voice of mountain guns,
Led by the sweet, served by the life of England,
Shouting your battle cry across the world!

* * * *

Oh, little mighty Force, your way is ours,
This land inscribe your monument.

—Harrowed Decorator.

"I'm very sorry, mum, I haven't been able to paper your two top bedrooms. They took away my last man a week ago for the army. Seems to me they think more of this 'ere war than they do of paper hanging."

BELGIAN REFUGEES

Pouring Into Holland in Pitiable State of Distress.

Weather beaten refugees, mostly from the north of France, are trickling into the Dutch provinces of Brabant and Limburg, says an Amsterdam despatch. Some 2,000 are now accommodated in towns of these provinces. About five per cent. are ill from overfatigue or influenza and are being cared for in hospitals and convents.

Distressing stories are told about the old people and babies who died from exposure on the way and were buried where they met their end. Further westward no exodus has yet taken place.

In view of the German disclaimers of pillaging by the retreating troops, it is significant that Dutch correspondents at half a dozen different points on their frontier should tell the same story, obtained from refugees.

"The Germans stole everything they could lay their hands on," a citizen of Bruges said to the Rotterdam correspondent of the Maasbode.

In the last few days the Germans have looted stores indiscriminately. One officer demanded that a city official surrender his carriage. Being used later for a voucher the officer pointed a revolver at the head of the owner and said, "This is my voucher."

Cartoons appeared in Bruges depicting the German Admiral Scheer, whom Emperor William ennobled for the "brilliant repulse" of the British attack on Zeebrugge, as fast asleep in a safe place far from the coast.

KITCHENER MEMORIAL HOME

For the Care of British Boys Whose Fathers Have Fallen in Battle.

A big house on a hill, a fine garden of an acre with trees and a drill ground in London's healthiest suburb, family, fine airy rooms for study and home life—these make the Kitchener Home which was opened recently with fitting ceremonies and great rejoicing on the part of those who have carried the idea to completion. The Home is a memorial to Lord Kitchener and planned in a modest way along lines in which he was always intensely interested, the care of British boys whose fathers have fallen in battle. The Bishop of London dedicated the home, and H. R.H. the Duke of Connaught made a charming address, in which he referred to his friendship with Lord Kitchener, whom he knew in the days of the "Shop." Lord Kitchener's only sister, Mrs. Parker, was an interested guest. There is already installed a happy family of forty-six boys, twenty of whom acted as guard of honor when their home was dedicated. There are still dormitories to be fitted up and various ways of helping with this good work. No doubt the same idea will eventually take root in Canada, and it is interesting to note the amounts listed. A whole dormitory can be named and furnished for from £50 to £100 according to size; a bed can be named and maintained for three years for £18; one boy can be maintained for one year for £10 in addition to the government grant, and £5 provides clothing for one boy for one year.

NAVAL SECRETS

Precautions Taken to Safeguard the Secrets of the British Fleet.

There are some things that money cannot buy, among them the secrets of our allies' Navy. There exist confidential volumes on wireless signalling, books on gunnery and torpedo matters, all of which are kept as jealously under lock and key and bound as are the treasures in the Bank of England.

The safeguarding of the Navy's secret library on a battleship is a special little ceremony in itself. Every officer who keeps watch has to satisfy himself when going on duty and when being relieved that the books are in their respective chests.

Special keys belong to these chests are retained by the commanding officer and his second in command. The keys are tested frequently by the naval stores officer in dockyard to see that they are correct, and have not been tampered with.

Sometimes it is necessary to destroy a reference book. Two officers then burn the book until it is reduced to ashes. Before destroying it, the number and title must be accurately recorded and its fate entered in the ship's register.

Dispose of all unprofitable stock.

It takes 20 tons of wet kelp to make 1 ton of ash and ash contains between 8 and 10 per-cent. pure potash.

The season for hunting moose and deer is now in full swing in New Brunswick. This year the hunters are required to take out of the woods all the game they kill and they may dispose of it in any way they like except by selling it. Every hunter who applies for a game license has to take an oath that he will report any infractions of the game laws he sees.

Soak a hardened lemon in hot water.

Children should not be allowed fried foods.

A mask through which air can be breathed from the reservoir of the airbrake system has been invented for the use of railroad engineers while running through long tunnels or snow sheds, where the air often is foul.

GERMAN SOLDIER —GERMAN THIEF

THEFT AND LYING ARE PART OF TEUTON CHARACTER

French Writer Speaks Particularly of the Wholesale Plunder and Misery Inflicted on Roumania.

Field Marshal Mackensen is dismayed, says a writer in La Revue Roumaine, of Paris. The reader will be at a loss to guess the cause, and so we'll let the Marshal speak, and the reader will thus better relish the savor of the words which stupefaction draws from him, words reported by a French diplomat just back from Jassy.

"I have led to Roumania an army of soldiers," he said, "and I shall lead them back an army of thieves."

We suspect the Marshal of using master of irony, as we cannot believe in the sincerity of his dismay.

Theft and lying are part of the organization of the German army, and we'll take an oath upon it that there have at all times been in the German barracks hours set apart and devoted to the training of all recruits for pillage and shameless falsehood. If this be the case we must admit that the pupils do honor to their professors, for one cannot reach greater perfection than they. Indeed, it is within bounds to say that the German army practices the super-theft and super-lie in a manner and to an extent worthy in every respect of the great German Empire.

Thieves and Liars of Old.

The history of the past assists in understanding the present. Theft has at all times been so much at home in the German army that when we go back to the Lansquenets, the first really organized German troops, we find a corps duly constituted, and solely charged with pillage, massacre and incendiarism. Later, when for want of resources the uniform of the lansquenets fell into desuetude the breeches alone were retained, large breeches intended to receive in capacious pockets, a thief's plunder. At that time the Germans were still in the infancy of the art. They have since made progress with their wonderful efficiency.

And when Mckensen pretends not to recognize his soldiers in this army of thieves, he is joking; his consternation would be real and sincere if he were to command an army of honest people. I can readily imagine him supervising the pillage with an indulgent and amused eye, even encouraging, if necessary, with a word, like a good father who smiles with tender feeling at the roguish pranks of his children.

Thieves and liars they have been, thieves and liars they will remain, from the highest to the lowest, from the Emperor to the last soldier. The Emperor steals conquers, massacres populations and has his high-handed operations sanctioned by means of extorted treaties; the officer lays hands on aid collections, on precious wines, proud of the high appreciation of his lord and master; the common soldier pillages the poultry yard of the Roumanian peasant and takes away his last handful of ornament. Thus all work in this way like the attaches, for the greater glory and eternal renown of Greater Germany.

Roumania Under Her Heel.

I jest, and my heart is bleeding at the thought of the awful misery under which the Roumanian peasant succumbs. He needs so little for his living, and the German hardly leaves him enough on which to die. It seems that, under the German heel, Roumania, already so far from all those she loves, has moved further back, very far, to the end of the world where no consoling word can reach her, and from that Roumania, cut off from all communication, come only these two certainties: That of hatred, a ferocious hatred of the Roumanian toward Germany, and that of their indomitable loyalty to the cause for which they suffer every instant of their sad existence, and, also this mournful chorus, "Roumania is starving—gets to death."

Germany will one day harvest what Marshal Mackensen's army of thieves has sown in that most fertile Roumanian land.

Not For Children.

Foods injurious or difficult of digestion for children are:

Stimulants—Coffee, tea, beer and wine.

Condiments—Pepper, vinegar, catsup, horseradish and mustard.

Fried Foods—Doughnuts, waffles, pancakes, French toast, fried meat, fried potatoes, fritters and fried eggs.

Pastry—Cream puffs, dumplings, tarts, fresh-baked cake and muffins.

Cut out the old canes from raspberries and blackberries as soon as the plants have finished fruiting and do not let the soil dry out until frost arrives.

The easiest way to wash a bean pot is to insert it in a pan which is partly filled with water in which a spoonful of washing powder has been dissolved. Place it on the stove and as the water boils, it will be sucked into the pot and then come out. When the other dishes are washed the bean pot will need only a final rinsing to make it clear and shiny.

THE WEEKLY SERMON

That all the world may know that there is a God in Israel.—I. Samuel, xvii. 46.

Men who have said that there is no God forgave this awful war came to pass; the world ought now to say that there is a God because He gives the victory that will bring peace.

Men may use their freedom to destroy; only God can save. When everything else fails we turn to God. Even the Germans pray for peace.

The story of David and Goliath needs no interpreter. Each man stages his own case. Goliath relies upon what he sees and knows—his own size and strength and the weakness of his opponent. If Goliath is right he ought to win. But Goliath assumes that there is no God in Israel. David sees all that Goliath sees, but relies on divine help. If David is right it is a moral certainty that he will win. If God is on his side he must win. David won and proved that there was a God in Israel. "They reckon ill who leave God out."

The present conflict grows out of the same conditions. It is a moral combat in which Humanity is to decide whether or not there is a God. Stripped of all nonsense, this is the real issue:—"Is there a God in the world?"

The German Belief

The Germans are supreme among the nations in knowledge and power. The greatest scholar in the world is the product of their system Ernest Haeckel. Out of the fulness of his knowledge he has declared in his own work, "The Evolution of Life," that "there is no God in heaven, no soul in man, no freedom of will, no distinction between right and wrong, no future life." He believes only in matter and force and that these are really one—two forms of the same thing.

In knowledge applied to produce power the Germans have made tremendous strides in the last fifty years. Speaking as their chancellor, the Kaiser has declared again and again that force must rule the world. His speeches abound in talk of shining sword, iron fist and heart of granite. In 1900 he used a phrase that should have wasned immediately. "I hope Germany it will be granted to become so closely united, so powerful and so authoritative as was once the Roman Empire, and that just as in the olden times they said 'I am a Roman citizen,' hereafter they will say 'I am a German citizen.'" And he would be Cæsar.

Thus we have the champions of knowledge and of power declaring to us that they have the means and the will to subdue the world. If there be nothing but matter and force to oppose them they ought to win. But they have ideals, and ideals are weapons of the soul created not by nature but by God.

"There is a God"

Then came the war to test all values. The nations have gone through fire and fury. What survives? Little Belgium—she has lost everything but her soul. France—she has been tried white indeed, purified by fire, honored, beloved as she has never been before. England—"perfidious Albion"—to the amazement of her enemy, has been faithful to a scrap of paper. It has cost her dear, but she stands as ever the guardian of decency and honor for the world. The United States—what of her? Like a giant, roused out of sleep, slowly raising her huge bulk, she stood erect, mighty, grim, valiant.

We see in these things that there is a soul in man; that there is a religion, if it be only freedom to die for cause; that there is a distinction between right and wrong. Millions of men are willing to die for what they believe to be right, and countless thousands are offering themselves in service in the single belief that if they are faithful unto death God will give them the crown of life.

So we conclude that there is a God and that His strength wins the battle. He works today as He did in the time of David, through human heart and hand. We are assured that the victory will be won by the men who believe that God is on their side. There is a God in Israel."—Rev. John R. Atkinson.

GLAMIS

Mrs. J. E. McNally, who spent the last few weeks with her daughter, Mrs. Charles Graham, returned on Saturday to her home in Sarnia.

Miss Laura Cunningham left this week to visit friends in Hamilton, London and Toronto.

Mr. Alex McSween, who spent the summer in Alberta and Saskatchewan, returned to his home on Monday of last week.

Mr. McClung has been on the sick list for the last few days.

[illegible] Guest, of Armow, spent a few days with his uncle, Mr. Jas. Guest.

Mr. Dan Finlayson, of Port Elgin, was a visitor in our village last week.

Mr. Hash and daughter Miss Pearl, who were out west on a trip, returned home to Sunday.

The Misses Flossie McLennan and Mabel Kirktown returned on Monday to their schools.

Glamis received no notice yet to open their school. The Baptist church was open on Sunday, but the card is still on St. reula.

Rev. J. E. McCauley, who was visiting his mother in Tara, spent a few days here with friends on his way to Goderich.

Mr. Alex Pinkerton and Mr. D. Robertson were in Kincardine last week and brought back a number of large trout fish.

Mr. Albert Pickard and family, of Paisley, [illegible] Sunday with friends here.

Our sick people are slowly recovering.

Mr. Henry Purdy was in our village on Saturday selling Victory Bonds.

Mrs. [illegible] McLennan is spending a few days with friends in Paisley.

The Red Cross Society will meet on Thursday, the 21st. Would like all articles in as they intend to pack.

Our village on hearing the good news that the war was ended, celebrated by ringing the school bell and firing off guns and fireworks.

GRESHAM

Mr. and Mrs. Alex Shipley and daughter, Miss Isabel, visited at Mr. Len Shipley's last week.

We are pleased to report Mr. Alex Wood is out and around again after his illness.

Mr. Robt. Parker has sold his fine farm here to Mr. Angus Annets. We don't as yet know what Mr. Parker intends doing.

Mr. Henry Deal, of Underwood, visited his home here lately.

Quite a number attended the celebrations of peace in [illegible] of Underwood, everybody showing their heartfelt appreciation of the situation.

Mr. Ernie Rose visited his cousins in Saugeen lately.

We welcome Mr. and Mrs. Art Cameron to our community, also Mr. and Mrs. J. D. McGillivray who are taking up their residence on the 6th. Congratulations.

The flu is nearly overcome in this community. It seems like the consummation of peace was what banished it from the face of the earth.

ELDERSLIE COUNCIL

Gillies Hill, Nov. 4th, 1918

Council met on above date, members all present.

A certificate was read from the Clerk of the Peace, showing that the reeve, assessor and clerk had each performed his duties as selector of jurors.

Letters from the Soldiers

Pte. Jas. Mitchell Tells of the Cambrai Drive

The writer of the following interesting letters is a son of Mr. and Mrs. Hugh Mitchell, Elderslie:

H Ward, Colchester Military Hospital,
Essex, England, Oct. 3, 1918

Dear Mother—I got hit before daylight on morning of Sept. 27th in the big drive on Cambrai. Got hit with a lead shrapnel ball in right forearm, ball going downward to wrist, fracturing arm bone. I threw off my equipment, tied a shoelace around my arm, and started back the way I came. Ran across a comrade shot through the foot. He didn't care to stay where he was and I hated to leave him, so I got him on my back and carried him a quarter of a mile. Then we both got first aid dressings and started on again. Got as far as Nord Canal, laid him down and started to look for a stick that would act as a crutch. Two Heinies evidently thought I was looking for trouble or souvenirs, for they both came running towards me, hands up, one with his watch in his hand, yelling, "Souvenir, Kamerad." I took the watch, which I still have, and, believe me, weren't they pleased to have a wounded Canadian to carry back to our first dressing station. I didn't think we could make it, as the shell fire was wicked, and part way we had to wear our gas masks. But we got out, Heines and all. I walked about four miles before I got into a Red Cross motor lorry and was driven to casualty station. It was nearly 44 hours before I got into hospital, and 24 hours after I was X-rayed and operated upon. I had an exciting time that morning, of which I will tell again. Meantime, I am doing fine in Blighty, getting best of attention and suffering very little pain except at daily dressings of my arm. But I can stand it. Say, mother, can you make out my left hand writing? I can't, myself. Looks as if we have [illegible] on a downhill drag, doesn't it?

Princess Patricia Can. Red Cross Hospital
Cooden Camp, Bexhill-on-Sea,
England,
England, Oct. 12, 1918

Dear Brother—You can bet your boots I wouldn't be writing with my left hand without cause or reason, and I have that—my right hand is "out of action," the result of catching a Fritzie shrapnel ball on the fly. I caught it all right, and have it for a souvenir. And my Heinie watch—say, it is a peach. The glass and hour hand are broken, but that is easily fixed. And I did n't even thank "Jerry" for it. But both Jerry and I got out of a lot of fighting by having to come out that morning. Well, Sandy, the morning of Sept. 27th was a lively morning on a 30-mile front. About 12.30 a.m. we crawled out of Fritzie's dugouts 40 ft. underground that we had taken possession of two nights before in "No Man's Land." It was pitch dark and pouring rain. The only light was from flares sent up by Heinie, signal rockets and the occasional flash like sheet lightning from some of the artillery as he tried to locate us or our artillery with his big shells. We saw where he got two transport wagons just ahead of us as we came up a sunken road at the edge of a ruined village. There were six dead mules to tell the tale. I expect the drivers were killed, although I didn't see them. We got to our jumping off place about two o'clock and took cover in shell holes in the rain and mud, and waited for "zero" hour—5.20, when the barrage was to start. And sharp at 5.20 believe me, it did start. It seemed as though the whole earth was one big explosion. First there were three shells fired in quick succession by three of the large naval railway guns in the rear, then hundreds, yes, thousands, of guns all "spoke" at once, and kept it up as fast as they could fire them. It was a creeping barrage, creeping along at the rate of 100 yards in five minutes, and the infantry and tanks following within 50 to 100 yards immediately behind it. Then at daybreak hundreds of aeroplanes, both ours and Fritz's, took a hand in the show. It made the grandest and most magnificent scene, and at the same time the most awful and deadly, that I ever ever witnessed, ever dreamed of witnessing or ever expect to witness again, and live to tell it. Or any one else, for that matter, as it was the heaviest barrage ever put over by any army up to that time, and I expect since then. And best of all, we all won our objectives that day and captured over 4,000 Heines. I got over the canal Du Nord about 400 yards and our company were halted a few minutes to allow barrage to creep on a little as we were getting into our own shell fire. Our section commander and I were lying in a small hole with our heads down and together talking about and admiring the barrage. I had my right hand on rifle at the edge of shell hole, and suddenly—zip! I thought at first my arm was half cut off, as the ball was extremely hot and breaking the bone gave it that feeling. I said to Campbell, "I've got a Blighty," which is, as you know, a slang word for England. "Gee, Jim," he says, "you're lucky." I thought so too, I guess. I told you the radial artery and one of the large wrist cords were cut. I was operated on Sunday morning about 12.30, about 48 hours after being hit. I had breakfast in bed, then got up and went to the hospital barber shop for a shave, and got [illegible] from the nurse when I got back. She was from Boston. However she said she would forgive me because when coming out of the chloroform I didn't do any talking. She said the language used by some of them gets too thick and she has to beat it. And right she was. I heard several at it myself. I'll tell you, Sandy, the Canadians are scrappers. On any hard place in case like Amiens, Arras and Cambrai they use them, always as storm troops. From August 8th to Sept. 30th the Canucks have encountered and beaten forty-seven German divisions and during September have captured 33 per cent. of the guns and 20 per cent. of prisoners taken on the British front. From Aug. 8th to Sept. 30th they have taken 28,000 prisoners, 5?0 guns and 3,000 machine guns and other supplies as well. On Cambrai front Heinie put the pick and pride of their army, the Prussian Guards, and their General told them to hold it at all costs, and challenged the Canadian Corps to take it if they could. They took it too. Of course ME being in it accounted for it. Well, I am afraid I am beginning to boast a little about our army, so I think I had better pull in my horns. I am feeling fine, and I sincerely trust that you are all enjoying good health. I remain as always,

Your loving brother,
JIM

INTESTINAL PARALYSIS

"Fruit-a-tives" Quickly Relieved This Chronic Trouble

580 Cadieux Street, Montreal.

"In my opinion, no other medicine is so curative for Constipation and Indigestion as 'Fruit-a-tives'.

I was a sufferer from these complaints for five years, and my sedentary occupation, Music, brought about a kind of *Intestinal Paralysis; with nasty Headaches*, belching gas, drowsiness after eating, and pain in the back.

I was induced to try 'Fruit-a-tives' and now for six months I have been entirely well". A. ROSENBURG.

50c. a box, 6 for $2.50, trial size 25c. At all dealers or sent postpaid by Fruit-a-tives Limited, Ottawa.

THE CHURCH'S CONTRIBUTION TO HEALTH

(Stratford Herald)

The churches have not protested against being closed by order of the Board of Health. Yet it has not escaped many minds that perhaps the loss of the church's influence is at any time a serious loss, and especially serious in times of fear and foreboding. From the purely physical standpoint it is doubtful if there are more sanitary places in the city than our well walled, high-ceiled edifices of worship, and it is doubtful if anywhere are gathered companies of people who are of higher health average or more sanitary habits. All one need do to confirm some of these things is to compare place with place and assembly with assembly.

This, of course, in addition to the influence of the church on the mentality of men. Medicine distinctly recognizes low-spiritedness as a condition favoring disease. The opposite of low-spiritedness is not excitement such as highly artificial drama supplies, but is [illegible], quiet trustfulness, inner serenity that "all shall be well, and all things shall be well," which contact with the profounder truths of our being inspires.

It happens that the church is the only institution purveying this state of mind or the means thereto. As an entertainer, the church is always a failure; entertainment is not its metier. As a concert hall, a social assembly, a forum of popular discussion, it is always a failure; other institutions devoted to these specialties always excel it. As a lecture platform or a movie stage the pulpit is the most pathetic spectacle imaginable. BUT, in their own specialty church and pulpit are supreme. No other institution attempts the church's peculiar and indefeasible work, and that work is to give men the touch of the higher serenities, a sense of the higher protective powers and a [illegible] that the sky begins at their feet. [illegible] state of mind induced by what for the sake of brevity may be called religion is like nothing induced by university, gallery, opera, library or any other service; and materia medica itself now recognizes this state of mind as not only preventive of disease, but as a genuine tonic and a most welcome aid in the overcoming of disease.

The church, therefore, would be an ally instead of an antagonist of public health. Much has been done by public agencies in the way of warning the people not to be fearful, but the very warning often tends to stir fear because, in the nature of things, they cannot give the real grounds of serenity. Fear must be combatted positively, is best prevented when not alluded to at all.

This goes for all the churches of every creed and name, for religion itself is therapeutic, and in the Psalms and the Gospels are to be found the seeds of every healing system that ever flashed with hope and help upon the human mind. The upward look and the quiet heart are profoundly medicinal.

Stray Heifers

CAME on the premises of the undersigned, on Nov. 8th, two yearling heifers. The owners are requested to prove property, pay expenses and remove the animals. PAUL OLTSHER.

Heifer Lost

STRAYED from Paisley about Nov. 1st, a heifer 1 year old, light orange color or nearly Jersey. Supposed to be last seen going north from Lockerby school on Nov. 6th. Information as to the animal will be gratefully received. THOS. JOHNSTON, Paisley.

BUY
VICTORY
BONDS

It is your privilege to thus secure a good, safe investment, and it is your duty to lend your money in support of Canada's soldiers in the fighting line.

J. S. DEWAR

The Bank will trust you

Perhaps you never had an account in a bank—maybe you've never done business in a bank—hardly even cashed a cheque in one. But—

that is no reason why you cannot go to a bank and borrow money to buy Victory Bonds.

If you are a steady, industrious, thrifty citizen, working and saving a part of your income, you are just the kind of person Canada's chartered banks stand ready to help to-day.

Any bank will lend you as much money as you can save during the next twelve months, with which, to buy Victory Bonds.

All you have to do is to pay ten per cent. of the amount you want to buy and deposit the receipt for that ten per cent. in the bank.

The bank will lend you the 90 per cent. balance at 5½ per cent. interest and will give you a year to repay it, the interest you get on your bond being just the same as the bank charges you.

This is a fine opportunity for you to begin a real savings account, to make a first class investment and to help your country at the same time.

Why not see a banker to-day—he will tell you all about it and you will be glad of the advice and help he can give you.

Borrow and Buy Victory Bonds

Issued by Canada's Victory Loan Committee in co-operation with the Minister of Finance of the Dominion of Canada

Paisley Leads Victory Bond Sale Records

633 PER CENT. OF OBJECTIVE

The District Nearly Doubles Its Objective

The people of the Dominion of Canada subscribed $676,027,217 to the Victory Loan, making this the most triumphant financial effort in her history. Ontario took $329,679,000 of the total.

Bruce County was asked for $2,000,000 in subscriptions, and secured $2,102,500.

District No. 7 of Bruce County, comprised of Paisley village, West Riderside and the Gore of Greenock, had the objective of $105,000, and ran up a tride over $200,000.

Paisley village residents have surpassed all records to hand, subscribing at least 633 per cent. of their objective, according to assessment. This record may not be surpassed by any municipality in the Dominion.

The local results are very gratifying. Messrs. D. Forrestar, R. C. Pearce, C. Crawford and R. J. Nelson must be congratulated upon the phenominal success of their canvass.

Canada has been divided into twenty-one demobilization areas, and the men will be allowed to select their destination.

The route of return to each area

—Hear your old favorite, Rev. C. W. Cozens, lecture in Methodist church Monday evening, Nov. 25th.

—Misses Amy McDonald and Kathleen Brown have gone to Hamilton, where they expect to take positions.

—Rev. C. J. Cameron, Home Mission Secretary for Ontario and Quebec, preached in the Baptist church here on Sunday.

—The memorial sermon for the late John Bryce, of Dunblane, will be preached next Sabbath morning, Nov. 24th, in Knox church, Paisley.

—In the absence of the pastor, Rev. M. Neilson, the pulpit of the Baptist church will be occupied next Sunday by Rev. Glen Wardell, missionary elect to China, who will preach morning and evening. Come to hear him.

—Miss Rolston, missionary organizer of the Walkerton district, gave a very interesting address to the Women's Missionary Society of the Methodist church, Paisley, on Thursday afternoon at the parsonage, which was very much appreciated by the many members and visitors present.

—Mr. Jas. Mewhinney is home from the west on a visit to his parents, Mr. and Mrs. Robt. Mewhinney, Albert St. He is employed with a construction crew on the Canadian Northern Ry. Co., and while at Edmonton the "Flu" epidemic had laid up so many employees that the crew was given a holiday, so Jim came down to spend a couple of months among his old friends after an absence of twenty years.

—The late John Davidson, of Rosebud, Montana, whose death occurred recently, was the husband of Elizabeth McRae, formerly of Paisley. The deceased was engaged extensively in stock ranching and farming, and had become one of the most prominent citizens of his county, identified with many important enterprises. He was president of one bank, and director of another, also director of insurance companies, a member of the Legislature for a term, and a leader in war work organization, as well as member of the district exemption board. The bereaved widow with her family of four sons and one daughter will have the sympathy of her old friends here.

—Let there be light! Lanterns, 98c each, at Sinclair's Hardware.

—Fowl wanted, alive or dressed. Get our prices. S. M. Ballachey.

—Big stock of Overcoats, Mackinaw Jackets and Sweaters at Hunstein & Wittich's, Cargill.

—Anniversary Services in Methodist church, Sunday, Nov. 24th. Rev. C. W. Cozens at both services. A special offering will be taken

—Paisley Photo Studio opened under new management. Old stand, Queen St. north. Open every Saturday, bright or dull weather. Fred J. Grawville.

—For Sale or Rent—House on Victoria St., suitable for retired farmer, also for rent, the premises lately occupied by the Standard Bank. Apply to D. Forrester.

—Tea will be served at Gibson's old stand on Saturday, Nov. 30th, St. Andrew's night, by the young ladies of Knox church. Proceeds to go towards buying supplies for Red Cross work.

—Breeding Birds for Sale—Some extra fine Toulouse geese, also a few Rouen ducks, and some Leghorn-Wyandotte cockerels. Watson McKinnon, Elora Road north, Bell phone.

$10 Reward

Manager McNeill finds that some person or persons are tampering with the electric light wires, causing short circuits, and offers a reward of $10 for information leading to conviction of the guilty parties.

Women's Patriotic League

The annual meeting of the Women's Patriotic League will be held next Friday, Nov. 22nd, at 3 o'clock, in Putnam's hall. Many things to be considered. All Mrs. welcome. A good attendance of officers and supporters specially requested.

Red Cross Donations

Donations of $2.50 each have been received by the Women's Patriotic League from the following persons, being the fees allowed to them as enumerators: Miss Collins, Miss Ina Galbraith, Miss Scott, Miss Walsh, H. H. Putnam, Alex Jack and D. D. Campbell, also $4 from R. J. Nelson.

More Property Changes

Mrs. A. Hough has purchased the new cement residence on Victoria St. south, now occupied by Mr. J. A. Logie. Mr. Vincent Leeson has bought Mr. Geo. Hoath's house and 18 acres of land on Cambridge St. The latter is going on a farm near Glamis, having purchased lot 32, con. 2, Bruce, from Mr. Thos. Yule.

Died from Influenza-Pneumonia

Mrs. Geach (nee Agnes Hamilton), daughter of Mrs. R. Hamilton, of Paisley, died in Wellesley Hospital, Toronto, on Nov. 6th, from an attack of pneumonia which followed influenza. She was 39 years of age. The deceased had been living in Toronto for a number of years, but frequently visited her mother here. Mr. John Hamilton is a brother, and Mrs. P. A. McConnell, of Kagawong, Manitoulin Island, is a sister. They have the sympathy of all in their bereavement.

Lockerby Red Cross

On Tuesday afternoon the Lockerby Red Cross Workers met to pack their boxes for the boys who are overseas. Ten boxes were packed, containing fruit cake, homemade candy, chocolate bars, gum, condensed coffee, tea, handkerchiefs, laces and socks. Eleven pairs of socks and six flannel shirts were donated to Paisley W. P. L.

—Don't fail to attend the anniversary service in Methodist church Sunday, Nov. 24th. Special music. Speaker, Rev. C. W. Cozens.

Twice Fined

One dollar and costs for disorderly conduct, also $5 and costs for assault is what Magistrate J. C. Gibson taxed a Paisleyite for what he said and did to a fellow citizen whom he does not like and would make believe is not loyal. The charges were laid by Constable Leitch. That there was no justification whatever for the defendant's unprovoked actions, is the general opinion of the case. The magistrate's rulings are strongly upheld, and his remarks in delivering judgment were approved of by spectators who crowded the courtroom.

Bruce Boy on Judging Class

An item of interest appeared in the Globe of Nov. 14th. The stock judging team for Chicago National Stock Show has been selected by Prof. Toole of the Ontario Agricultural College, Guelph, from the fourth year class. The name of a Bruce township boy appears in the list, that of Mr. Charles F. McKenzie, who has made a splendid showing in his college work up to this time. We hope the team may bring back the trophy to Guelph, as they did in former years. The contest is one of the most notable of its kind in the world, and only five students are allowed on each team.

—Old-fashioned tea meeting, Monday evening, Nov. 25th. Lecture by Rev. C. W. Cozens. Tea served in Gibson's store from 6 to 8 o'clock. Admission—Adults 35c, children 20c.

Peace Thanksgiving Service

The union praise service held in Knox church on Sunday afternoon, as a thanksgiving for the coming of Peace was very largely attended, the building being crowded to the doors. Revs. Diehl, Walker and Little took part in the service. Rev. Mr. Neilson was out of town that day. The only address was a brief one, made by Reeve Steele at the opening. The hymns sung by the congregation were "Onward Christian Soldiers," Doxology and National Anthem, Old Hundred. "All Hail the Power of Jesus' Name," "Hark, the Herald Angels Sing," "O God, our Help in Ages Past," and "Blest be the Tie that Binds," a large union choir leading, also rendering three other selections. The offering taken in aid of the Belgian Fund amounted to over $90.

Died in British Columbia

Mrs. D. M. Hay, of North St., received a telegram on Saturday from Greenwood, B.C., stating that her eldest brother, Mr. George McLaren, was very ill from pneumonia, and this was followed by the sad message of his death, which occurred on Sunday. The deceased left here over twenty years ago for the west, and has been mining and prospecting in British Columbia. The remains are being sent here for burial, and are expected to arrive about Thursday. The deceased was 40 years of age. He is survived by four brothers and two sisters—Kenneth and James, at Rockhaven, Sask.; Murdoch, at Edmonton; Stewart, in France; Mrs. Hay, of Greenock; Mrs. Kenneth McLennar, of Edgely, N.D., who will have the sympathy of their many friends here in their bereavement.

Thread Shortage

The harness makers will have to close their shops in the course of a short time if the thread situation is not eased up, was the announcement made by a dealer. He stated that thread which formerly sold for 80 cents a pound was now being offered, in very limited quantities, at $5 a pound. A ball, which was retailed at 10 cents a short time ago, cannot be bought for a dollar at present. The thread, in past years, has been imported from Ireland, but now the Government has placed a restriction on ships, and the product cannot be sent overseas. The Dominion Government is bonusing a company to manufacture the article in Canada, but it will not be in operation until after Christmas, and by that date the situation will be acute.

A Fighting Parker

Mr. Geo. Hoath had an adventure last week that he won't forget for a time. It was something like a boar hunt in Bavaria, except that he hadn't his gun along, and he wasn't the hu ter. About 9.30 p.m. he heard his dog barking desperately, and concluded that he should see what was the cause of the alarm. It turned out to be a visit from a stranger to the Hoath premises, Mr. Sam Pollock's old sow having wandered away from home. George undertook to drive the old porkine lady away, but to this she strenuously objected, retaliating by leaping at her human tormentor like a wild beast of the forest. Her teeth caught the waistband of George's trousers and tore the nether garment down one side to the knee, but without leaving a mark on his hide. George was prostrated by the punting blow, but was on his feet again in an instant, and quickly armed himself with a club, which was too much for the woofing belligerent. The next morning the sow was still at large and down town. Two other men had to use striking weapons to make her move away. Mr. Pollock has since sold the beast for shipment, and she will soon be due for the last encounter with human hand.

J. C. Rockwell's "Sunny South Co."

The amusement loving public will be glad to hear that the J. C. Rockwell "Sunny South" company, the show that leaves you laughing when they say "good night," is announced to appear in the Town Hall, Paisley, on Thursday evening, November 21st. It is about two years since this company was seen here, and at that time it was pronounced to be the best and most pleasing of its kind that ever appeared in town. This season it is absolutely new and right up-to-the-minute in every respect. It is characteristic throughout, being a mixture of fun, melody and dancing, consisting of all the features peculiar to the negro in Dixie Land, presented by negroes of the cultured and educated class, free from vulgarity, without any objectionable features, at the same time sparkling with wit and good humor. Comedy is all that is aimed at and nothing else is reached, but some very clever singing, dancing and entertaining specialities of the better class, which will make the audience sit up and take notice. The management wish to give the public a run for their money and have gotten together a strong and evenly balanced performance that is bound please the most fastidious seeker after amusement. There is snap and ginger from beginning to end. The music is bright and catchy. It is a new and of that popular sort that can be whistled after one hearing. It contains more real humor, with novelties and original ideas, than any similar attraction. From first to last there is not an objectionable word spoken, nor the slightest approach to vulgarity in action or glance. A good sprinkling of new songs has been introduced and with the atmosphere being of the sort where the audience leave the theatre whistling the latest song hits, you can rest assured they will be sent home feeling satisfied they have received full value for their money. The organization is accompanied by a solo concert band and orchestra. The "Koontown" parade, a decided novelty, takes place at 1 p.m. The prices of admission have been placed at 35, 50 and 75 cents, including war tax. Seats are now selling at McArthur's bookstore.

NOTE—We carry no slackers. Every male member of the "Sunny South" company has fulfilled all obligations regarding military service. They await the call enroute to Berlin.

THIS IS THE TIME TO PUT OUR SHOULDERS TO THE WHEEL IN VERY TRUTH.

WE ARE ON THE BROW OF THE HILL.—LET US MAKE THE SUPREME EFFORT.

BUY VICTORY BONDS TO THE LIMIT OF YOUR PURSE THEN BORROW AND BUY MORE.

SPACE AND POSITION DEDICATED TO THE CAUSE BY THE SALADA TEA COMPANY

PRIME STILTON

By Douglas Valentine.

When Clarence announced that his aunt in Dorset was sending him a Stilton cheese there was general jubilation in the mess. There was a cheese shortage at the time, and the prospect of a fine ripe Stilton, its beauties half-veiled beneath a snowy white napkin, evoked rhapsodies even from Corporal Mulberry, the lugubrious and unenthusiastic, who acted as mess waiter.

"It'll be tasty. Like after lunch, sir," he said, when I, as mess-president, acquainted him with Clarence's aunt's generosity. "'Ow be as it don't get stole comin' out!" he added.

Mulberry's forebodings were not realised, and in due course the cheese made its appearance on the table in the ruined farmhouse which we were using as a mess. In default of a napkin, Corporal Mulberry had pinned a copy of the Paris "Daily Mail" artistically round it.

"It smells a bit strong!" said Colfax, sniffing hard.

"Rot!" retorted Clarence, who was operating on the cheese with a spoon. "It's beautifully ripe. Look here!"

And he dumped a writhing mass of bluey-green cheese on Colfax's plate.

Colfax hurried passed his plate to me.

"—I don't think I'm very hungry to-day, thanks, old man," he said. "I expect I'm a bit over-tired. I was out very late on that burying fatigue last night!"

And he left the room very quietly.

It was a good cheese. Of course, it was a bit strong. But then that's as it should be. Clarence says in the county where they grow it's a favorite sport on the pubs to march bits of Stilton to race across the table. Personally, I thought it was very good, and I told Colfax so when the matter (and the cheese) cropped up at dinner that evening.

Colfax positively refused to sleep in the mess—we were rather short of billets, so Clarence and he dossed in a corner of the room—if the cheese were not put outside. He is a well-mannered youth and, he was very nice about it.

"Perhaps, when we're had it a week or so," he said, "I'll get used to the ripeness. I haven't been out here very long, you know, and I notice I'm not so good at stanching smells as some of you fellows. Of course, if you want to keep the cheese in here, I could sleep outside. It's a fine night."

I told him we would put the cheese in the mess-box, and stand it outside, on condition that he made himself responsible for the safety of the box. Clarence, however, was quite huffy about it. He seemed to regard any criticism of his aunt's cheese as a slur on himself. I subsequently discovered that some ass in the headquarters' mess had hung a "Gas Alert" card on the cheese, and that Clarence, coming in early to dinner, had discovered it. He was very upset, and wanted to march Corporal Mulberry before the adjutant.

Yes, it was a strong cheese. Clarence is a friend of mine, and I should hate to hurt his feelings. But, really, its odour was a trifle overpowering. It seemed to hang in one's clothes in the most extraordinary fashion. I noticed it when I was undressing in my billet that night. So, apparently, did my servant, for when he called me the next morning I found he had made ready for me a hot bath, with a piece of carbolic soap, and a change of clothes.

Of course, strong cheese has rather a hearty odour. It is a part of its piquancy. But, whilst anchovies are excellent as a relish, one doesn't contemplate the idea of subsisting entirely on them. And to have to live in close intimacy, in very hot weather, with a fulsomely ripe Stilton cheese is a bit trying. Mind you, I did tell Clarence this, because I didn't want to hurt his feelings, and his people had done our mess very handsomely in the way of parcels. But I thought it, nevertheless.

But, like its odour, that cheese seemed to force itself upon the attention. At dinner that evening an orderly brought in a note addressed to me. I opened it. It read:

"The coroner's jury, having viewed the body, returns a verdict of wilful murder against Clarence. The coroner directs that the funeral shall take place forthwith."

I tried to crumple the note up, and shove it in my pocket. I didn't think much of the humor of "R" mess from which this effort emanated. But Clarence had read the note over my shoulder. He said nothing, but handed me some cheese. I had intended to pass the cheese on airily to my neighbor, with some casual remark about having done very well, but after that note I felt I couldn't refuse old Clarence. So I took the cheese.

Really, it seemed to get stronger and stronger. Colfax, I noticed, always left the table now before the cheese came on. Clarence seemed to notice nothing, but then he has had shell-shock. I remember reading somewhere that loss of the sense of smell is one of the symptoms.

There was quite a scene in the mess at luncheon on the next day. A straw wreath, with some silly inscription, arrived from "C" mess, and some ass sent the padre round to us. He said he had come to arrange about the funeral.

Clarence was quite rude.

"There isn't any funeral," he said, getting very red.

The padre was using his handkerchief.

"Dear me!" he said, blowing his nose hard. "Then I think it's high time there was!"

At this he grinned at Clarence through his goggles; and, as no one minds the dear old padre, Clarence recovered his equanimity. But then that ass Brown chimed in.

"Raggin' apart," he said, "I think it's time we finished up this cheese. Personally, I'm not a great lover of cheese, and while for those who are it must be very delicious to live for days in its fragrance, as far as I am concerned, I shall stop moving here until that cheese is removed. Why, hang it," he cried vehemently, "the place smells like a—like a tannery!"

"Or a poison-gas factory!" said somebody else.

Colfax, his handkerchief to his nose, murmured that one could scarcely breathe.

Clarence, speechless with indignation, turned to me.

"Did you ever hear such bilge?" he asked plaintively. "Can you smell anything?"

"He asks him if he can smell anything!" grounsel Brown, fanning himself with a newspaper. "Good Lord!"

I countered calmly.

"Do you smell anything?" I asked Clarence.

"Or," a very slight and agreeable sort of cheesy odor," he replied stoutly.

(To be continued.)

OLD-TIME NEWSPAPERS

First London "Daily" Appeared in 1769.

The first newspaper came into existence when written accounts of the imperial armies of Rome were sent to the generals in command in all parts of the provinces.

In 1566 the first official newssheets were published in Venice. They were written by hand and exhibited in public places, people paying the small coin of a gazetta to read them. Hence the name.

The Church, averse to all diffusing of knowledge, tried to impede this source of education, and Pope Gregory even prosecuted the editors.

The oldest form of newspaper in England was in the beginning of the reign of James II., the so-called "News-Letters," written by hand and sent by post to subscribers in the country. In 1709 the first daily paper, the Daily Courant, was issued.

The oldest of the London daily papers, the Morning Chronicle, appeared in 1769, edited by the famous Woodfall. The Morning Post is the oldest of the existing morning papers. It was founded in 1772, followed about 1788 by the first daily evening paper, the Star.

The Times first appeared in 1788 as a continuation of the Daily Universal Register, and its originator and owner, Mr. John Walter, succeeded in 1814 in printing the Times by steam power.

In 1846 the Daily News was founded with the help of Dickens, and it was the first paper to lower its price from 5d. to 3d.

Eat Frozen Fish.

Fresh frozen fish is just as palatable as fresh fish. Only—a good many women do not know how to handle it properly.

The thing to remember is that frozen fish must be de-frosted in cold water. When this has been done clean and prepare as you would any other fish and cook in whatever form you desire.

Fish which has been frozen is just as nutrious as any other and its cheapness should make it more widely known.

Grapefruit should be cut in halves, the pulp loosened from the skin and the pith cut out, then chilled. It may be served plain, with sugar or with honey, and to some tastes salt is desirable. Serve one-half grapefruit to each person.

About the House

Knowing and Learning.

There was once a woman who thought herself an excellent housekeeper because she did thing exactly as her mother had done, no better and no worse. Then there came a guest, a little girl who had learned many things from reading the latest books and magazines a girl who was always learning. And the woman who had been satisfied with knowing found that, while a good housekeeper, she was not an excellent one, for she was wasteful of both time and strength and she had missed all the improvements that had been made on the ways and methods of a past generation. She was an 1880 model of housewife competing with the 1918 type.

The little girl who read and learned mixed the lard and flour for her pie crusts with a fork and used ice water instead of any kind that happened to be available, her crusts were flaky and feather light. She put her dust cloths in an old pail, poured in a little kerosene oil and covered them tightly for an hour. Each cloth was as good as those the woman had been buying of an agent at thirty cents each. She washed beans, peas, berries, etc., in a sieve and the work was wondrously simplified. She kept a clean newspaper over the kitchen table, changing papers as often as necessary and much scrubbing of the white oilcloth was saved.

The woman who knew watched her with a new interest in what had become prosaic, dragging housework. When she suggested that boiled salad dressing could be canned just as easily as peaches the woman doubted, but experience proved that enough dressing to last three months could be made at one time and with a big saving of time, fuel and dishwashing.

The girl who read went back to school but the woman who thought she knew subscribed for three good magazines and set herself the task of becoming the woman who could and would learn.

The Housewife's Part.

Again the housewife has to prove "the policeman of food control." In her hands lies mainly the success of making 1½ pounds of sugar do for each person in the family for a month. The burden of maintaining the Allied sugar supplies falls on us. There is not enough sugar available for us all to live in our peace time habits. Our great war-programme has reduced our sugar-carrying fleet; the sugar requirements of the army are very large; the American crop is less than we expected; we have diverted 50,000 tons of sugar shipping in order that Belgium should have food; Germans have destroyed sugar beet fields and factories in northern France and Italy; more than 50,000,000 pounds of sugar was sent to the bottom of the ocean off the United States coast recently.

Since about 70 per cent. of the country's sugar supply passes through the hands of the housewife, it is evident that she has a most important role to play in its conservation.

Just as in the use of flour substitutes, she will learn from experiment and practice many ways of using other sweetening. She will also learn how to substitute other energy and fuel-giving foods for the sugar she has relied upon in days of plenty.

All this takes time and thought, but it is a voluntary contribution to ultimate victory.

Remodeling The Child's Sweater.

In nothing do we show our patriotism more than in our willingness to fall in line with every request of the government. One of the biggest requests is to get along with as little wool as possible, a request which will inconvenience the folks of our northern clime nearly as much as the ban on sugar. So far wool cards are in the future, the giving up of wool is simply a test of our patriotism.

This is how one mother met the situation. Sweaters will wear out even on grown-ups, and when a child wears one three years it begins to look as if a new one must replace it. This sweater, a dark blue, was worn and frayed at cuffs and collar. In normal times the mother would have given it to the Salvation Army and bought a new one. This year, however, she decided on new collar and cuffs. For the cuffs she simply cast on thirty stitches, knitting with two needles, and knitted back and forth until the cuffs were as deep as were needed for that particular sweater, which depth, of course, she learned by measuring on the child. The collar is just as simple.

Cast on seven stitches and knit across the back. On the third time across cast on two more, and on the fifth, seventh, ninth, eleventh, etc., until you have twenty-two stitches. Then knit straight back and forth until the collar is of sufficient length to start the point on the other side, when narrow on every second time across down to seven stitches. The collar is then done.

The cuffs are sewed together and tacked onto the sleeve, the worn blue cuff being cut away. With the new white collar sewed in place, the old sweater has a quite dressed up look for the simple outlay of fifty cents in money for the yarn and two afternoon's work.

To Dry Citron Peel.

Pare the citron, cut in pieces of a convenient size, and boil in slightly salted water until tender. Make a thick syrup, using one pound of sugar to one pint of water for each pound of the prepared citron. Add the citron and let simmer until the syrup is nearly absorbed, then boil rapidly, stirring constantly, until the pieces are well coated. Dry in the warming oven and store in any tight receptacle, fruit jars or pails with tight-fitting lids.

Use more soup

Put in plenty of vegetables and rice or barley. Even with poor stock delicious soups can be made by adding a dash of

Ingram's Milkweed Cream

Two Sizes—50c and $1

For 31 years Canadian women have found Ingram's Milkweed Cream the most efficient toilet preparation on the market for keeping the complexion clear and colorful, preventing wrinkles and pimples, keeping the hands soft and white even when in dishwater daily, and warding off hang nails from the fingers. It has therapeutic qualities no other emollient possesses.

Always have at hand Ingram's Velvecia Souverains Face Powder (50c.) in the house. A mere touch and oiliness and perspiration disappear. It covers up blemishes and gives you a clear, flawless complexion. It stays on. At your druggist's there is a complete line of Ingram's or F. F. products including Lederia for the feet. (25c.).

A Picture with Each Purchase

Each time you buy a package of Ingram's Toilet aids at Parkes your druggist will give you, without charge, a large portrait of a world-famous screen or stage actress. Each time you get a different portrait to complete a collection for your home. Ask your druggist.

F. F. Ingram Co., Windsor, Ont.

Save Sugar

Canada is receiving only just enough sugar for her actual needs! There is no surplus for wastage.

First, all waste of sugar must cease; second, wherever possible, Corn Syrup must be used as an alternative for sugar.

You will discover a real economy, and a delicious addition to your household supplies if you

Use Corn Syrup

Here are a few suggested ways to use CROWN BRAND or LILY WHITE Corn Syrup to give to dishes a finer flavour than sugar gives:

Use CROWN BRAND Corn Syrup as a Sauce on Puddings.

Use LILY WHITE instead of Sugar in Cakes.

Use either brand in Cocoanut or other Puddings.

Use LILY WHITE in making Marmalades, Jams and in all Stewed Fruits.

The Brand is Important!

Real Corn Syrup is GOOD—very good! If your experience tells you otherwise it is because you have not tasted the genuine, which is produced from the most nutritious part of the Corn by wholesome and scientific processes.

Remember the brands. LILY WHITE and CROWN BRAND, and insist on getting them, for purity, economy and flavor.

Write to the Canada Food Board, Ottawa, for Bulletin on Corn Syrup.

A great many recipes are improved by using half sugar and half Corn Syrup.

Buy a can of LILY WHITE or CROWN BRAND Corn Syrup to-day and become acquainted with their great possibilities.

Sold by grocers everywhere in 2, 5, 10 and 20 lb. tins.

Canada Starch Co., Limited

For the BOYS & GIRLS

The Princess Who Could Not Dance.

Oh, once—oh, once, dears and ducks, there was a beautiful princess who could not dance? Think of it! All the dancing-masters in the kingdom and in all the kingdoms for miles round about could do nothing with her. They came singly and doubly and then all together, and counted one, two, one, two, three, and twirled, and bobbed, and bowed, and stamped, and swayed in and out, and whirled round like tops; and the court musicians twanged and banged and thumped, tum-tum, tiddy-um-tum, tum-tum, tiddy-um-tum, till their ruffled collars wilted, and their cheeks puffed out like red balloons—but still she couldn't dance.

The king tore his hair out by the handful—he didn't have much either; and the queen wept into her flowered handkerchief, while the dancing-masters explained this and then that, but the princess sadly shook her head instead of her foot, and there was an end of it. So of all the land there would be no dancing—no court balls or frolics, not any music even, because music made the other folks dance and the princess appear ridiculous.

And oh, my dears, that kingdom grew pokier than snuff! Faces grew long and dour, and visitors to the realm most mighty scarce. And yet this princess was really bewitchingly enchanting, her hair all tumbling golden curls, and her eyes, sweethearts, as blue as the darkest part of the sky, and her cheeks as pink as the little clouds at sunset, while her feet and hands were the tiniest ever. Oh, you would have loved her to pieces! Even her name was a dancy sort of name, for it was Dianidra.

Well, poor Dianidra grew every day more thin and sad, because all the court ladies who could dance were exceedingly unkind to her. I shouldn't be surprised if they pinched her now and then. And the king was so vexed that a real princess couldn't dance that quite often he boxed her ears. Oh, he was a crab of a King! When Dianidra went near her mother, the queen covered her face with her handkerchief, and shrieked for her smelling-salts, and moaned: "A princess who cannot dance will never marry. How disgraceful! How terrible! Unhappy me!" and a good bit more that I have not time to tell you.

So Dianidra used to wander off into the garden by herself and try to puzzle it out. She used to work it out with a paper and pencil like this: 2 steps plus 2 steps, and 1 bow plus 1 dip—the minuet. And 4 times 3 steps plus 1 turn, and 2 swings plus 1 slide—the court glide. Then—then, because she never could put the puzzle together, she would throw herself down on the ground and weep, until the flowers thought surely that spring had come. And, dear hearts, have you guessed why? Don't think she was bewitched. Not a bit. Let me tell you the way of it. The proud old king and the weepy old queen and the stupid old dancing-masters had been so busy telling the princess how to dance that they all completely forgot to tell her what dancing was. So Dianidra had it all mixed up with her arithmetic and spelling lessons. And of course she couldn't dance, because the wisest person in the world couldn't dance with his head.

Things grew worse and worse, and pretty bad, I can tell you. And one day, after the king had been unusually crabbish, and the queen most awfully weepish, and the court ladies outrageously crossish, Dianidra decided to run away. She waited until the gate-keeper was snoring, then she stood on her tippy-toes, turned the great golden key, and slipped out into the world. She ran and ran, down the king's highway, of course, crying all the time so hard that she couldn't see where she was going. And first thing you know, plump-p-p! bump-p-p! she had run into an old lady and tumbled her head over heels in the road.

"Sugar and molasses, my dear!" cried the old lady pleasantly, bobbing up like a top, "I was just hoping something would happen."

At this, Dianidra, who had expected nothing less than a box on the ears, stopped crying and looked at the old lady curiously. Her eyes were brown and dancy, and her cheeks, though withered and old, were rosy as apples. In her shabby bonnet and dress she looked younger than Dianidra herself.

"Well, well!" she chuckled, picking up her things. "Who are you, my pretty?"

"I'm Dianidra, the princess who cannot dance," the princess answered, hanging her head.

"Hoity-toity!" exclaimed the old lady. "Is that why you're crying on the king's highway?"

"Oh," sobbed Dianidra, "if I could only learn to dance!"

"Come here, child," said the old lady; and putting her head to Dianidra's heart, she listened long and knowingly.

"Yes, it's there," she muttered to herself. "It's there." All of which was very puzzling to the princess. "Now, what do you know about dancing?"

"Let me see," said Dianidra, puckering up her brow and counting on her fingers. "Two turns, plus five slides, plus six steps, plus two swings, divided by a curtsey equal— Oh, dear, what does that equal? what does it equal?"

At that, what do you suppose happened? The old lady burst into laughter—and I mean it, really. Her bonnet tumbled off, and she laughed and laughed; and her hair tumbled down, and she laughed and laughed; her cape flew away, and still she kept laughing; till finally, in an awful chuckle, she just disappeared; and out of the laughter stepped the most beautiful fairy that you can imagine —with shimmery wings and smiley eyes. Dianidra was so surprised that she laughed a little bit, herself.

"That's right!" said the fairy. "Before you can learn to dance, you must learn to laugh! You must laugh with your lips, and then with your heart, and then with your feet, Dianidra, for that's what dancing is. And I'm going to send you to the most wonderful dancing-masters in the world. Walk straight ahead between these tall trees till you come to yonder gray stone, and on the other side you will see your first dancing-master. I will tell you where to find the others. Good-bye, little princess. Before the next sunrise you will be the most beautiful dancer in all the ten kingdoms."

(Concluded next week.)

THE SUMMER COURSE AT THE ONTARIO AGRICULTURAL COLLEGE.

By Rosa Tinney, Cobourg.

The successful and influential teacher is the only one fully in sympathy and directly in touch with the rural thought and life. She must be interested in the advancement of the community she serves. The biggest organization working for the uplift of rural Ontario to-day is the Ontario Agricultural College at Guelph. The farmers' problems are its problems. Its entire time and study are centred on one aim—the improvement of rural conditions from every viewpoint. It is the Ontario farmers' college—a college where every farmer and rural teacher should receive instruction, if he wishes to get the best out of farm and school.

Enthusiasm is the motive force of a teacher. The professors at the O. A. C. emanate enthusiasm. Truly, they work for the work's sake. The students must feel that agricultural education is necessary and important so thoroughly do the professors instil its principles. No matter how hot the day, they were anxious to leave nothing hazy or undone.

If the rural teacher did nothing else than convince the farmers of the whole-heartedness of the O.A.C. professors, they would perform a mission. Farmers are too prone to undervalue the College, forgetting that their good seed, their sprays, their methods, have with but few exceptions, their impetus in the College. Farmers overlook the fact that the free Bulletins represent the life-work of men devoted to their particular branch of agriculture, entirely for the good of others. Special mention must be made of Mr. Hunt, who knows and loves the plants until he makes one feel he is on a Divine mission with the beautiful green things as sermons about a wonderful creating God; of Prof. Hewitt, a master teacher and a most scholarly man; and of Dr. Zavitz, who is glowing with enthusiasm over his wonderful work in seed selection.

The summer course is by no means a light one. However, work ends with the school hours, for time-tables provide something for every minute after lessons are over. For private study there is no provision.

Here is a general idea of the course: In Botany, we learned the weeds, grasses, trees, weed-seeds and plant diseases. The Gardening course consists in planning, digging and planting a garden with practice work and lectures work in cultivation, pruning spraying and harvesting. The Floriculture course was very interesting. We heard lectures on home and school beautifying and had practical work in planting flowers, which became our own property. In Entomology, we took a great many lectures on the history and extermination of scores of insects. This course is very valuable to a teacher of fifth classes, for science as well as agriculture. In Bees and Poultry the course is very complete. The work in Farm Chemistry opened our eyes on a sensible, valuable way of teaching Chemistry as well as to the contents of our food and the soil. The Dairy course consisted of milk testing, butter and cheese making and lectures. The breeds of farm animals are discussed and Animal Husbandry Course teaches grain judging.

We had very interesting lessons on Farm Water Systems and on Weather Observation, where we studied instruments that should be in every school yard as sectional property and guides.

An outstanding feature was the recreation. Games or community singing were the evening occupations. These were much emphasized with a view to making the school a real community centre.

Indeed, the great aim of the course is the creating of a new school, a place of interest to everybody, with its model garden, its weather instruments, the sectional milk-tester, its weed and weed-seed collection, its laboratory and museum, its organ and evening sing-songs, its tennis and baseball lawns. All that is needed to have such a school is the interest of the people. Our schools should be the central gathering place of the people. They should be used by the children from nine to four, by the people in the evenings, and their facilities for agricultural education should be sought by old and young at any time, as the Agriculture library is consulted in the city. Thus the school would be an educational force; the teacher would cease to be such a conspicuous curiosity in the neighborhood; she would be but sharing in the work of the school, directing in large measure, but only one of many, who would use the school. And, if the people saw such a use for the school, soon would follow appropriate buildings, befitting such an important centre. The day of dirty floors, poorly ventilated, heated and lighted buildings, whose ugliness would warp one's very soul, would end without pleading for money. It is not money that is lacking as much as blindness existing among the people. And I do not feel this burden should be left entirely on the teacher. Trustees and ratepayers should be frequently addressed by competent lecturers on the topic of "The New School." After generations of schools of the ordinary kind, it is not to be wondered at that the majority of people do not know there is any other way of conducting and using a school.

Any teacher will find the course an inspiration. She will forget she is a school teacher. She will talk in school; skip classes occasionally; try all sorts of adventures, and wake up with a shock when the course is over, that she really must be dignified again. Teachers assemble from all parts of the province and after two years of intercourse you leave firm, true friends, whom you never saw till going to Guelph. The jolly-care-free residence life, the games, the funny songs, are happy memories. When the Rural Leaders meet, we have the privilege of hearing gifted lecturers on lofty themes. We must not forget the picnics to Rockwood and Elora—and the picnic lunch. The O. A. C. cannot be beaten at putting up eats for hungry picnickers.

Lastly, one gets monetary reward for the summer's work. For home gardens the teacher receives a grant of forty dollars; for a school garden fifty dollars; in addition to the refunding of board and railway expenses. Thus the O. A. C. is an unusual vacation resort; you are paid a bonus for a jolly summer.

A little milk in the buckwheat cakes makes them brown more rapidly.

THE WEEKLY SERMON

"While I was musing the fire burned—then spake I with my tongue."—Psalm, 39, 3.

The three steps to the virtue of vehemence of speech are expressed in the text—Meditation—"while I was musing." Illumination—"The fire burned." Conversation—"Then spake I with my tongue." There is a silliness of ignorance whereby men talk much through knowing little, and there is an oratory of knowledge whereby men talk much because they know much. "Out of the fulness of the heart the mouth speaketh." Patriotic silliness is a popular fallacy to-day and what we need is the speech which springs from deep thought.

The Psalmist and the songster proclaim a kindred message, the one tells us what to do. "Keep the Home Fires Burning," and the other tells us how to do it. "While I mused the fire burned." The law of the fire is the law of life, and if you would know how to make a human conflagration study the blaze of the camp fire. Here are three laws:—

Keep the Fire Burning

First—Keep the embers aglow. The novice lights the fire at the top, the woodsman from below. The art of conversation is not to fill the lips with words but the brain with thoughts. You can only keep the flame of speech and act alive by the glow of the embers of the mind. Vision is thought under pressure. There are few prophets, because few men have sufficient spiritual pressure to make thought incandescent. The pulpit, the press, the school, the statesman and the official agencies of information should concentrate their extensive influence to an intensive presentation of facts. Under the energy of this breeze of knowledge the latent energy of the woodpile of humanity will burst into flame. Put the great cauldron of war activities on this fire and you will keep it boiling at high pressure. Let us hear with open mind the facts about Prussian plans, Prussian debauchery, Prussian murder, Prussian plunder, and Prussian vileness. This is the psychology of patriotism, therefore we curse and fight: the Kaiser not because we are bad, but because he has made himself accursed.

Second—Keep the embers together. You can put a fire out by scattering the embers. One ember keeps the other hot. To rekindle a fire draw the embers together. Whoever would seek to make a cleavage in the masses of national life is as one who would put the embers of the fire apart when life depends upon the flame. Keep your eyes on any one who seeks to separate the sticks on the national fire.

In God We Trust

This is the law of nature. Every peace loving creature in the animal world has the instinct of the mass and the appearance of the foe draws the units together. But every bloodthirsty creature lacks the fellowship of its kind and of others. Whether it is the hawk in the air, the serpent that crawls or the lion that springs, all lack the power of social grouping. The hound of the Hun is being deserted by the brother brutes of blood, and now, like Cain, with his hands dripping with the blood of men, of women and of children at the altar of free government he finds "every man's hand is against him."

Third—Keep the fire open skyward. The top of the fire requires care as well as the base. Live embers will not remain alive below if there are no avenues to the sky above. The skyward flues of humanity—keep the earthward life alive.

Follow the simile of the flame and we find that the visible fire depends upon an invisible force. The unseen air keeps the fire ablaze. The great French masterpiece, "The Angelus," shows only two visible figures in the personnel of the scene, but there is a third, and to this Unseen Third the pair that are seen are speaking. On every bullet, bomb and shell we can write "In God we trust," and by these agencies seek under the help of God to assert divine justice through human hands. We have noble allies, gallant allies, that are seen, but we must not forget the Ally who is unseen. "The Lord of Hosts is with us." No alliance of earth can avail without the alliance of heaven. O child of God, keep the fires of Canadian life open skyward, for it is only thus that you can

"Keep the home fires burning
Till the boys come home."

—Rev. David D. Irvine.

AUSTRIA SOWED SEEDS OF HATRED

CRUEL TREATMENT OF ITALIAN PRISONERS

It Is Fortunate That an Armistice Has Opened the Way to Relief for Italy's Tortured Sons.

Austria's systematic and unbelievably cruel treatment of Italian war prisoners is attracting wide attention.

"No nation that respects itself would so treat human beings, nor should any nation dare lay up against itself for the future such a debt of hatred," says Henry Nelson Gay, the American historian of certain phases of the war, who has made a special investigation into the conditions and has undertaken to secure better treatment from Austria of these prisoners.

"It is estimated that there are about 400,000 Italian prisoners in Austria with somewhat less than that number of Austrian prisoners in Italy. Austrian prisoners in Italy are treated well. It has been charged in Parliament that they fare better than the Italian soldiers at the front. In many cases the skilled mechanics among them are given employment in industrial establishments and paid good wages while others are used on farms or in construction work. They are neither beaten nor starved and the sick or wounded are placed in hospitals.

Forced to Work When Ill.

"In contrast to this, Italian prisoners are forced to work for a few cents a day. They are starved, beaten, wounded or killed at the whim of any guard, and, most inhuman of all, it is charged they are forced to work when ill. Tuberculosis often develops and death follows. Thousands of sworn statements containing these facts are on file at the War and State departments. They have been gathered from prisoners who have escaped or from those exchanged.

"By a convention established between the Italian and Austrian Red Cross totally unfit prisoners are exchanged each week by way of Switzerland. Italy receives about 350 weekly.

"Thirty-five per cent. of the men arrive in the advanced stage of tuberculosis," said Dr. Oswald Pollmanti, the surgeon in charge.

The men's bodies tell most of their story. Sometimes they tell how, taken prisoners are strong men, they were mistreated and underfed, being made to labor eighteen hours a day with a ration of weak soup and one pound of bread per day to each group of fifteen men. Bread sent them from home often never reaches them, or if so, the distributing guards first steal one-half of it.

When prisoners refuse to give military information after capture they are starved and tortured, and sometimes shot.

OPINIONS ON WORLD PROBLEMS

By Chas. M. Bice, Attorney-at-Law, Denver, Colorado.

The Great Work of the Navy.

Man never staged a pageant more spectacular, more awesome than a sea battle. Every school boy thrills, like the rest of us, at the name of a Nelson and scores of other sea lords.

I was expected and anticipated by some writers of fiction that the present war would furnish us with sea battles bridle which all former naval engagements of history would pale in insignificance. We had all the material and machinery for a transcendent event of this character—dreadnoughts of a stupendous size and in unprecedented numbers; guns of a range and power almost staggering belief; and in the way of accessories, submarine chasers, destroyers and seaplanes. But less than half a dozen minor engagements constitute the naval history of the war thus far from a spectacular point of view.

* * * *

Yet the floating fortresses of the sea "never played a more important part in any war. The German fleet was promptly bottled up, and her merchant marine went from the oceans at almost a single stroke, turning Germany inward to feed upon herself while retaining the resources of the world for the Allies. Transports convoyed by the navy have carried millions of soldiers in spite of the enemy's submarines from Canada and the States, and from distant Australia, New Zealand and South Africa to the allied front. Otherwise, Prussia to-day would be master of Europe.

* * * *

The U. S. navy lifted to the highest efficiency in its history, has done a share of this comparatively quiet but efficient work which receives but little notice or space in the newspapers. Said Sir Eric Geddes, First Lord of the British Admiralty, on his recent arrival in Washington: "For the last eighteen months we on either side have had the opportunity of seeing your navy at work. The unanimous determination which the States has displayed in creating a huge trained body of seamen out of landsmen is one of the most striking accomplishments of the war. Had it not been effectively done, one would have thought it impossible."

That is simple, yet very high praise, but it is nothing compared to what the British navy has accomplished in curbing and restraining the whole naval force of Germany for over four years alone.

Verily, Britannia still rules the waves! Germany does not have to be told of the desperateness of her situation, if she had any doubt on the subject, she would have pushed out of Heligoland long ago, and risked a great naval engagement, which if victorious, would have greatly strengthened the Chauvanist military clique in the Fatherland.

Haig's Report.

Not until danger was passed and the enemy was being pounded into his corner did Field Marshal Haig report on the disaster to a portion of his army at the end of last March. He does so now in a soldier-like fashion to vindicate the army and officers of whom he is justly proud, leaving politics to the politicians.

Under orders from the Army Council at the beginning of the year, Gen. Haig was instructed to "extend his line. Under the circumstances there was nothing for him to do but obey the superior command, but before he did so he went on record regarding the danger of leaving critical positions defended by too few men.

* * * *

When the German command learned of what had been done a few weeks before, it struck at the weakest link in the chain and broke it, and came uncomfortably close to securing an overwhelming success. The Fifth Army, that received the full impact, was holding 6,750 yards to a division; the Third Army had a division to every 4,700 yards. Furthermore, in order to meet the new conditions imposed on him, General Haig at the last moment had to rearrange his divisions and his entire tactics. His report states that the Fifth Army did all that was possible for men to do against tremendous odds—it gave ground and fought back and exacted a heavy toll. There came an hour, however, when in retreat, the Fifth and the Third Armies lost contact, and it was then that the Engineers, with British civilians behind the lines, leaped into the breach and stemmed the break until it could be repaired. Sir Hugh Gough, in charge of the Fifth Army, who had been assailed by amateur strategists and pin-headed politicians, is exonerated.

The question is raised by this report whether the aims of the Supreme War Council were not at fault. It is contended that the British forces "scattered their shots" by invading Palestine and Mesopotamia and other fields.

* * * *

But the day was saved, and it is the conviction of army men, and those in position to know, that in the March-April attack to reach the Channel ports, the enemy spent itself, and was never quite the same machine after it.

But the foregoing clearly indicates the far-seeing acumen and wonderful military sagacity of Britain's incomparable leader, the Honorable Sir Field Marshal Haig, and the Allies can rest content in the thought that the right man is in the right place, as the subsequent history of the struggle amply demonstrates.

Effort at Diplomacy.

We are unalterably opposed to any correspondence or conversation with the German Government or people, and we decline to haul down the Unconditional Surrender Flag, hoisted against this great energy of mankind. We have always insisted, and do so now, that there should have been no dealings with the German Imperial Government until that nation had been invaded, and the people knew from ocular demonstration that they were beaten, and that they had committed offenses against humanity which would stand against them for centuries to come, and which they will have to atone for—in short, that war is a game that can be played successfully by other nations as well as Germany, and that it is an ugly business for the one that starts it.

* * * *

With this reservation, we are willing that Mr. Wilson, President of the U. S., shall write treaties regarding what the German people must do to be saved, and to formulate abstract terms of peace, as long as Foch, Haig, Diaz and Pershing can dictate the terms on which the allied armies shall cease the physical punishment of the Hun.

Since the outline of the armistice requirements of the Allied nations has been published, the Wilson note is of importance only in its last paragraphs, the other matters dying a natural death overnight. In the closing parts of the Wilson note he again calls attention to the fact that the German people have no means of commanding acquiescence from the military authorities, that the power of the Kaiser, as King of Prussia, is unimpaired, that the initiative still hangs with the military party, and if this nation and its associates—the "allies"— in war must continue to deal with the monarchical military autocrats of Germany, the demand of the nations at war with Germany must be—Surrender!

* * * *

Even in this limited form, with the "if" proviso and all, we are glad that Mr. Wilson has at last included in his notes the word "surrender." Before it is all over, the German Government, whatever form it may take, and the German people, must hear a great deal of "surrender." The Paris armistice provisions are going to give them their first real taste of it without any sugar coating.

If Germany revolts against the present rule, according to the Wilson note, the German people will not be harshly dealt with; if they hold to their Kaiser and all that he represents, the terms will be severe.

Is not that about the size of it in diplomatic language? And it is only fair to Mr. Wilson to state that he is holding true to form, for his first war message to Congress made a distinction between the German people and the German Government as it was then constituted. If there were occasions when he felt impelled to place part of the blame on the people, on the first opening, he returned to his original gravamen, that the war was due in the main to the military party and its Kaiser.

* * * *

But surely Mr. Wilson must know by this time that if the German nation had not been solidly back of the Kaiser and equally eager for war, Germany could not have stood the strain of war for over four years as she has done.

No nation in the world could have been so compactly loyal to the war and its heroes than were the German people so long as there was a prospect of its being "Deutschland uber alles" (Germany over all).

Has defeat and the sufferings of war changed the heart and mentality of the German people? Will their universities, their schools, their churches make bonfires of their books, lectures and sermons in which were taught the "overman" of all Germans, and begin anew? Will they destroy their war prophets, their Bernhardis, et al? If so, then Mr. Wilson's note to Germany is a beautiful thing, and should be framed.

The Country Boy.

I saw a tired out mother rock to rest
Her dimpled boy—then fold him in his cot,
And I deemed, somehow, that she was distressed
At the dull quiet of a country lot.

She felt perchance, her life resembled most
Those eddies which the passing streams despise;
And thought how happy they must be who boast
A home where city smoke blots out the skies.

Then I saw fortune kiss her shadowed brow
There, in that humble home, far up, the glen;
And in the gentlest voice she told her, how
From haunts like those oft come the greatest men;

That Nature would be nurse-maid to, her child,
And then she plied her needle—re-concealed.

—Alexander Louis Fraser.

Newspapers will give as brilliant a finish to window glass as chamois.

STORY OF WAR TOLD IN BRIEF

Important Dates in Great World Struggle.

THE FALL OF AUTOCRACY

Close Study of the Past Four Years Shows That Democracy Won the Victory Because the Foes of Civilization Were Never Able to Drive Home a Blow at a Vital Spot.

DURING the first two weeks of last July, the Allies were facing the darkest days of the war, and the German war lords were proclaiming triumphantly that they were about to achieve the victory that would bring them the world domination, which was the Kaiser's ambition. The British troops with their "backs to the wall," to use the phrase of Field Marshal Haig, were fighting to keep the Teutons from reaching the Channel ports, and farther south, the French army struggled grimly to hold the Boches back from Paris. Little did the Allied world dream in those terrible weeks that in less than four months, the forces of democracy would be triumphant. No prophet could have foretold that during the second week of November the armistice would be signed which meant the complete surrender of Germany. With this collapse came the end of militarism, and the great autocrats of Europe were all overthrown. Men who, in July, believed that they were about to dominate the world were fugitives in November, flying from the executions of their former subjects.

Now that the war has become history, it is interesting to look back at the important dates of the past four years and to trace the gradual growth of the omens that pointed towards the final victory of the Entente Allies. There were two great factors in the success of the defenders of civilization. The first was the invincibility of the British navy. At no time since August, 1914, has it failed to do all that was expected of it. Britannia drove Germany from the high seas, and slowly but surely strangled the Central Powers. The second factor was the military genius of the French. When the great armies of the Allies were finally organized, Generalissimo Foch took them in hand, and by wonderful patience combined with magnificent strategy, he secured the victories on the field that finally smashed the German morale at home, which had been gradually crumbling. Political causes in the Central Powers precipitated the collapse that has left the world gasping, but it was the British navy and the French military prowess that produced these political causes.

Some persons may ask what names history will remember most distinctly in connection with the great war. The name of the Kaiser and his chief tools will be remembered with loathing. But in the nobler niches of fame may be placed the names of Generalissimo Foch, who ended the war that the Kaiser commenced, and Premier David Lloyd George of Great Britain, the greatest single dynamic force in organizing the resources of the British Empire. Foch has also given Lloyd George the credit of having made possible the choice of the French general to command the united forces of the Allies.

Looking back over the important incidents of the war, it will be noted that the victories of the Germans were all of secondary importance. The war lords were never able to deliver a vital blow that would have given them a peace based on pan-German ambitions. In 1914, they almost achieved a swift and complete victory. If the Allied world had realized in August of that year how close the Central Powers were to crushing the defenders of civilization, they would have known that only a miracle could save them. The miracle happened at the Marne, when Joffre and Foch broke the first onrush of the Hun. The Battle of Verdun was another miracle, as a knock-out blow; the Battle of Jutland was the big German effort to break British sea-power; the submarine warfare which the British navy handled in a manner that justified the highest faith of the Empire, looked like the strongest weapon of a pirate nation; then came the terrible offensives of the early summer of the present year. In all these life and death struggles, the Allies came out victorious. They made it certain that the ultimate destination of the Germans was downfall, and not world domination.

Even though the Central Powers could not score a decisive victory, they were able to win spectacular campaigns enough to buoy their people up with hopes of final triumph. Each summer of the war was ended by them with something that looked like a brilliant feat of arms. In the autumn of 1914, they massacred the Russian armies in East Prussia, and ended the only invasion of German soil; in 1915 the great Russian retreat, after a winter of victories against incompetent Austria, took place; in the autumn of that year little Serbia was completely crushed; in the autumn of 1916, Roumania was smashed in a swift and cruel campaign; and then followed the Russian revolution and the melting away of the cumbersome but important armies of the Slav. The Russian revolution, which was intended to create democracy, brought forth Bolshevikism, the most important menace that modern civilization must face now that the war is over. The defection of Russia brought another black period in the affairs of the Allies, but this was offset by the dawning upon the war of the United States, bringing with them the man-power, the morale and high ideals of the world's biggest republic. Last October, the Germans need the troops secured from Russia in an effort to knock Italy out of the war. For a week it looked as though the story of Roumania and Serbia would be repeated, but the crisis passed, and Italy more than retrieved herself in the two great battles of the Piave, fought in June and October of the present year. Germany found food for capitulation in the failure of the Gallipoli campaign and the defeat of the British at Kut-el-Amara. The Allies met with these disasters at the hands of the Turks, but the British, with characteristic persistence, went at it again, and the brilliant victories in Mesopotamia resulted in the collapse of Turkey. It was in the east that the first signs came, about two months ago, that the Central Powers were going down to ignominious and humiliating defeat.

It is possible now to look over the war and to place our fingers on the black periods of depression, but it is also easy to follow the golden line that led to the final victory of the Allies. The ultimate mood of civilization made it necessary that the Entente should win. It was a struggle between reaction and progress, and the purpose that one can trace in history made thoughtful men feel that it was impossible for reaction to triumph in the long run. The Prussian war lords made complete plans to conquer the world, and at times it did not seem possible that they would fail, but they reckoned without the eternal purpose in history. As Hilaire Belloc said of the first Battle of the Marne: The Germans had made every calculation that the human brain could devise to make certain of victory, but "it was not to be."

The effect of the Great War on Canada has already made itself apparent. Our Dominion entered the conflict as soon as the Germans threw down the challenge of battle. Canada may be proud, chiefly because her record is the record of the Canadian people. They rose to the call, and gave of their money and their young life in the cause of civilization. To our armies history will give the credit of several of the most vital victories on the Western front. History will doubtless also say of the Dominion that the great mass of Canadian citizens proved true to their loftiest ideals of devotion and self-sacrifice. If we did not have the inspiring leadership that guided some people, like the Greeks, almost unwillingly to do their duty, that fact makes the achievement of the Canadian people all the more notable. History will say that in this struggle our young nation found its soul.

JUNE, 1914.

29. Archduke Franz Ferdinand of Austria assassinated in Sarajevo, Bosnia.

JULY, 1914.

6. German war lords, headed by the Kaiser, met at Potsdam and decided to take pretext to launch world war.
23. Austrian ultimatum served on Serbia.
25. Serbia accepted ultimatum with one reservation.
28. Austria declares war on Serbia.

AUGUST, 1914.

1. Germany declares war on Russia.
2. German army invades France and violates neutrality of Belgium.
4. Great Britain declares war on Germany.
5. Lord Kitchener appointed Secretary of War.
7. Montenegro declares war on Austria.
8. First British expeditionary force lands on continent.
12. Great Britain declares war on Austria.
21. Germans reach Brussels.
23. Battle of Mons begins. Japan declares war on Germany.
26. Germans sack and burn Louvain.

SEPTEMBER, 1914.

1. Germans defeat Russians at Allenstein.
3. French Government moved from Paris to Bordeaux.
4. Germans occupy Rheims.
5. Russians take Lemberg.
7. Battle of Marne develops.
10. Battle of Marne ends in great French victory, thus ending first German rush, and civilization is saved.
11. Australians seize Solomon Islands from Germans.
17. Russian troops that invaded Eastern Prussia completely crushed by Germans.
19. Russians drive Austrians over San.
24. First Canadian contingent of 32,000 men sail for England.
28. Japanese invest Tsing Tau.

OCTOBER, 1914.

4. Russians win battle of Augustowo.
9. Germans take Antwerp.
12. Germans enter Ghent.
13. Belgian Government moved to Havre, France.
14. Allies re-capture Ypres.
16. Gen. Botha takes the field in South Africa.

27. Turkey proclaims Holy War.
Opl. Maritz defeated in South Africa.

DECEMBER, 1914.

2. De Wet captured by Gen. Botha's troops and South African rebellion ended.

ARRAN COUNCIL

Council met on Nov. 9th, all present. Minutes read and adopted. Financial statement showed balance in hand and bank $2654.58. About $1400 was paid into the bank by collectors to date. On motion of Scarrow and George the following officials were appointed to hold election in January if required: No. 1, William Harper and Adam Espley; No. 2, Wm. Grant and Robt. Henderson; No. 3, Sam Coleman and John Herron; No. 4, Albert Speer and J. W. Bailey; No. 5, J. E. Boyd and Adam Geddes; No. 6, Frank Arnott and Wm. Scarrow. By-law passed confirming the appointments. Moved by F. J. Scarrow and Fred George that this council is of the opinion that a mistake was made by the Ontario Legislature at its last meeting by increasing the dog tax. If it only applies to cities, towns and villages it is alright, but in rural places the tax of one dollar, where there was but one dog was sufficient. No farmer is right without a dog, and we believe that the alleged damage done by dogs is greatly overrated. In 1917 tax for dogs in Arran amounted to $329, and loss of sheep by dogs was $38. This year, 1918, the tax amounts to $666, and up to this date, Nov. 9th, the loss has been $30. We would strongly urge the government to restore the old tax, one dog one dollar, and that a copy of this be sent to the department.—Carried.

The following orders were ordered to be issued: Jas. Plant, 29 yds. gravel, $2.90; John Underwood, refund of dog tax, $4; Robt. Neil, salary as assessor inspector for 1918, $10; Robt. Neil, services for the year as inspector, $10.20; Wm. Coffey, 74 yds. gravel, $7.40; Wilson Nelson, 185 yds., $18.50; R. Wade, 252 yds., $25.20; T. Potts, postage and telephoning, $5.25; Wm. Cruickshank, 174 yds. gravel, $17.40; Gid Eby, 271 yds. gravel, $27.10; A. Powell, repairing culvert, drainage tile and putting in culvert 10 s.r., $1.20; Hiram Byers, 110 yds. gravel, $11; Ed Gingrich, 10 hours cutting weeds, $2.25; Wm. Menser, 16 hours cutting weeds, $3.60; R. E. Linn, treas. of Derby, Arran's share of Derby expenses, $40.57; R. McNab, services as sheep valuator, $3; A. E. Spurrell, sheep killed by dogs, $30; R. E. Linn, treas. Derby, use of steam roller, $45; Geo. Davie, culvert tile, $4.50; A. G. Esplen, postage, $2; C. A. Thomas, telephoning, $1.35; Moses Zeigler, work on 11 line near Sang's bridge, $74.85; Ed Gingrich, 259 yds. gravel, $25.90; John Fawcett, ditching on con. 10, $20; Thos. Magee, treas. Sullivan, Arran's share of county line expenses, $92.80; John Crawford, timber for Ash ditch, $14; F. J. Scarrow, committee work Sang's bridge, $7; Jas. Johnston, com. work at Sang's bridge and Baux hill, $10; F. George, com. work at Sang's bridge, Baux hill and Ash ditch, $16.50; Sam Miller, com. work, $7; Thos. Ash, to pay laborers' work, con. 4, $22.45; C. A. Thomas, inspecting Sang's bridge and culverts, work at Sang's and Ash ditch, $51; John Hopper, to pay laborers' work on B line and Miller 32 yds. gravel, and Alex McCannell 16 yds. gravel, $65.80; C. Cole rearguard, balance of work on 15 s.r., $2.02. Council then adjourned to meet Dec. 14th.

H. T. Potts, Clerk

HOW DEMOBILIZATION WILL BE EFFECTED

Number of Canadian troops overseas to be returned is 286,304.

Demobilization by units is considered impracticable owing to reinforcements of territorial regiments by men from other districts.

Men will be returned first whose trade classification shows there is immediate need of them in industries.

Preference will be given to married men, and the order of return will depend on the length of time they have been absent.

The return of single men will be carried out on the same basis.

In order to prevent cross travelling in Canada the sorting out process will be carried out in England and France before embarkation. It will be in accordance with the proportion the number desiring to return bears to the entire force.

The men will be returned in standardized drafts of 500 of all ranks and will be discharged immediately on reaching their disposal areas.

The rate of return at the beginning will be about 20,000 a month.

The militia department has already classified the men into occupational groups.

All necessary work in connection with documentation and medical boards will be completed before the disembarkation in Canada, and the troops will be immediately transported to the disposal station.

RELATED REPORT

The following letter gives all the particulars that are known regarding the death of Pte. Harry Jack, which have been delayed as explained:

France, 21, 10, 18

Dear Mrs. Jack—Please forgive me for having so long delayed writing to you again. The life out here has been so strenuous lately and we have all been so busy that it has been very difficult to make time to do so. You doubtless have long ago heard from the war office that your boy who was reported "missing" was soon afterwards found dead. It is evident that the Germans carried him only a short distance before he died.

Your son was a man very much liked by his companions and depended upon by his officers. He was very anxious to do his full share of the work out here, and felt that in the band alone he was not doing all that he might, and so it was that he went up to the trenches with the rest. Here again he was cheery and a great help to his comrades, and very general regret is felt in the company at the news of his death. Please write to me if there is anything at all that I can do. I know that it will always be a matter of pride to you that your son's record was a good one, and that he was one who did his duty very thoroughly. I pray that He who also gave us His only Son will comfort you in your great sorrow and affliction, and that you may receive strength from Him. Please believe me, yours very sincerely, C. H. Boulden, Chaplain.

MOONSHINE WHISKEY MAKING NEAR WIARTON

A real live still and 75 gallons of a "joy liquid", commonly known as swamp whiskey, comprise what is undoubtedly the greatest haul that has been made in connection with the illicit sale and manufacture of liquor in this district in recent years.

Saturday morning J. J. Johnston, inland revenue officer, Owen Sound, Inspector White of Bruce County, and License Inspector Beckett of Grey County, confiscated the above goods, which were found in a swamp near Skye Lake, and arrested Wm. Moore, Sr., and his son William, alleged to be owners, and took them to Wiarton, where they were arraigned before Police Magistrate B. B. Miller, charged with having on their premises a private still for unlawful production of liquor. Both pleaded not guilty, and the case was adjourned sine die.

They were liberated on bail of $800 each on the father's recognizance, and will appear in Owen Sound for trial next week. The still, which was located on the property of the father, was in the open and was made of tin. The worm was about twelve feet long and buried under water on the property of the son.

The officers found a number of barrels of the liquid being heated over a fire to ferment. The son was plowing in a field near by when the seizure was made. A small shanty was apparently used for storing their product. In the search of the premises for the liquor and still the officers had to wade through mud and manure knee deep. For some months the officials have been on the trail of the manufacturers of moonshine in the district, as several complaints have been received from consumers of the booze that it has a very hard "kick" and has already poisoned some of them. It is believed that the component parts of this brand of "barbed wire" liquor were apples, potatoes and brown sugar.

SPANISH INFLUENZA

Do Not Fear When Fighting a German or a Germ!

By Dr. M. COOK.

The cool fighter always wins and so there is no need to become panic-stricken. Avoid fear and crowds. Exercise in the fresh air and practice the three C's: A Clean Mouth, a Clean Skin and Clean Bowels. To carry off the poisons that accumulate within the body and to ward off an attack of the influenza bacillus, take a good liver regulator to move the bowels. Such a one is made up of May-apple, leaves of aloe, root of jalap, and is to be had at any drug store, and called "Pleasant Purgative Pellets."

If a bad cold develops, go to bed, wrap up well, drink freely of hot lemonade and take a hot mustard foot-bath. Have the bedroom well aired but well ventilated. Obtain at the nearest drug store "Anuric Tablets" to flush the kidneys and control the pains and aches. Take an "Anuric" tablet every two hours, together with copious drinks of lemonade. If a true case of influenza, the food should be simple, such as broths, milk, buttermilk and ice-cream; but it is important that food be given regularly in order to keep up patient's strength and vitality. After the acute attack has passed, which is generally from three to seven days, the system should be built up by the use of a good iron tonic, such as "Ironzia" tablets, to be obtained at some drug stores, or that well known blood-maker and herbal tonic made from roots and barks of forest trees—sold everywhere as Dr. Pierce's Golden Medical Discovery.

PTE. BRUCE McGREGOR DIED OF WOUNDS

Mr. Rich. T. McGregor, of Bruce Tp., received the sad message on Wednesday last that his son, Pte. R. Bruce McGregor, had died of wounds on Nov. 8th. The deceased enlisted at the age of 17, upon the organization of the 160th Bruce Battalion, and at the time of his death was just a month over 20 years old. He had been in France since the spring, and was wounded on Sept. 30th. He has one brother, Rob Roy, at the front. The family and friends have the sympathy of all in the loss sustained.

A memorial service in honor of Pte. Bruce McGregor and Pte. Roy Atkinson will be held in North Bruce Baptist church on Sunday afternoon.

—The cost of war to Canada in money is expected to be at least eleven hundred million dollars. Up to the end of last month war accounts, which had actually passed totalled approximately $1,046,844,000. This does not include deferred pay for soldiers in France and some large outstanding accounts. Some months will probably elapse before the actual cost of the war to the Dominion will be known, after the actual declaration of peace.

9. Kerensky declares Gen. Kornieloff a rebel and proclaims martial law in Petrograd.
11. Civil war starts in Russia.
16. Kerensky, as Minister and President, declares Russia a republic.

OCTOBER, 1917.

4. Peru breaks diplomatic relations with Germany.
24. Germans and Austrians launch great offensive against Italians in Gorizia. Italians forced to give up all conquests in Austria, and the Teutons invade Italy. Advance ends at Piave.

NOVEMBER, 1917.

3. British win naval battle of Hatteras.
6. Passchendaele is captured by the Canadians.
8. New revolutionary movement started in Russia by the Bolsheviki, who seize reins of government and promise people immediate peace.
9. Gen. Diaz succeeds Gen. Cadorna in command of the Italian troops.
12. Premier Lloyd George announces formation of inter-ally War Council.
17. French Cabinet is reorganized with Clemenceau as Premier.
19. British capture Jaffa, 18 miles from Jerusalem.
20. Bolsheviki offer separate peace to Germany.
22. Lenine takes control at Petrograd.
23. British win sensational victory near Cambrai.
27. German officers go to Petrograd to hold conference with Bolsheviki.
28. Italian crisis is declared definitely past. Germans fail to force Italy to make separate peace.
30. Germans score the first victory against the British forces in over two years. All gains made at Cambrai are retaken.

DECEMBER, 1917.

1. British troops retreat near Cambrai.
6. Hostilities between Germany and Russia suspended.
7. United States declares war on Austria.
9. Ecuador severs relations with Germany.
Gen Allenby captures Jerusalem from Turks.
17. Union Government, headed by Sir Robert Borden, returned to power in Canada on conscription issue.

JANUARY, 1918.

8. President Wilson announces fourteen peace demands of Allies.

FEBRUARY, 1918.

9. Ukraine signs separate peace with Central Powers.
16. Sir Wm. Robertson, Chief of the British Imperial Staff, resigns.

MARCH, 1918.

3. Russians forced to sign German peace terms in Treaty of Brest-Litovsk.
4. Japan moves to occupy Russian territory.
13. Germans occupy Odessa.
21. Germans launch terrific drive against British lines. The Fifth British Army was crushed in this battle.
22. Germans bombard Paris with long-range gun.
25. Germans fail to drive home attack against British.
30. Gen. Foch assumes supreme command of Allied forces.

APRIL, 1918.

4. Germans launch offensive against French.
12. Haig's army stands at bay in Flanders.
14. Canada makes final call to comb out man-power of country.
23. British block Zeebrugge harbor.
30. Drive for Channel ports smashed.

MAY, 1918.

21. Italy rejects Austria's offer of a separate peace.
24. Premier Lloyd George announces that submarines are no longer a menace.
28. Germans launch big offensives.

JUNE, 1918.

1. Germans reach the Marne for a second time in the war.
16. Austria launched big offensive against Italians on the Piave. It proved a disastrous failure, and marked beginning of Teutonic collapse.
27. Hospital ship Llandovery Castle sunk by Germans.

JULY, 1918.

7. German Ambassador in Russia assassinated.
8. Von Kuehlmann loses position of German Foreign Minister for saying they cannot win the war.
12. Allies invade Albania.
15. Germans start great drive for Paris. This was the highest point of the success of the warlords in the Great War. They crossed the Marne.
18. Generalissimo Foch launches the counter-attack of the great series of battles which were to end in Allied victory.
21. Allies win Second Battle of the Marne.

AUGUST, 1918.

2. Allies recapture Soissons.
8. Canadians capture Amiens.
29. Bapaume and Noyon taken by Allies.

SEPTEMBER, 1918.

1. Australians enter Peronne.
12. St. Mihiel taken in offensive launched by Americans.
15. Berlin offers peace terms to Belgium.
16. Hindenburg line shattered by British and French.
18. Serbians launch offensive that drove invaders out of their country.
20. Gen. Allenby started series of battles that forced Turkish surrender.
27. Bulgaria asks Allies for an armistice.
29. Bulgaria makes unconditional surrender to Allies.
Canadians capture Cambrai, one of great victories of war.
Von Hertling, the last of the advocates of frightfulness to be Chancellor of Germany, quits.

OCTOBER, 1918.

1. French troops enter St. Quentin.
2. British take Damascus from the Turks.
3. Prince Max of Baden becomes German Chancellor.
King Ferdinand of Bulgaria abdicates.
4. Bohemia declares independence of Austria.
6. Germany asks President Wilson to prevail with Allies to secure an armistice.
8. President Wilson says people of Germany must back peace offer.
14. President Wilson informs Germany that Allies demand unconditional surrender.
17. Allies enter Ostend, Bruges and Lille.
Hungary separates from Austria and becomes an independent state.
23. Germany is informed that appeals for armistice must be addressed to Gen. Foch.
27. Gen. Ludendorff resigns.
30. Austria asks Italy for armistice.
31. Turkey surrenders unconditionally to the Allies.

NOVEMBER, 1918.

3. Austria-Hungary surrenders unconditionally to Allies.
King Boris of Bulgaria abdicated.
4. Serbians enter Belgrade.
7. German Armistice delegation arrives at Allied lines and receives terms of armistice.
9. Kaiser abdicates and Hohenzollerns resign right to throne.
Germany in throes of revolution.
11. Germans accept the armistice terms imposed by the Allies which practically means a complete surrender.

Soils and Crops

By Agronomist.

This Department is for the use of our farm readers who want the advice of an expert on any question regarding soils, seeds, crops, etc. If your question is of enthusiast general interest, it will be answered through this column. If stamped and addressed envelope is enclosed with your letter, a complete answer will be mailed to you. Address Agronomist, care of Wilson Publishing Co., Ltd., 73 Adelaide St. W., Toronto.

Marketing Fresh Eggs.

Fresh laid eggs have a market value greater than eggs from the cold storage warehouses. They are worth more than eggs put down in waterglass.

Too frequently the farmer knows that his fresh eggs are worth a premium and yet he receives the same price that city consumers are paying for storage stock. It is not necessary for a farmer to accept a price for his fresh eggs no greater than the price paid for goods out of the same quality." It is being done because of carelessness in saving and marketing the eggs.

The country egg buyer who exchanges groceries and merchandise for eggs is not able to pay the price that fresh eggs should command. In the first place too many farmers keep their male birds with the hens during the hot weather. The result is a poor quality of eggs.

Next, we come to the practice of allowing the hens to hide their nests all over the farm. At certain intervals there is a general hunt for eggs and then the good and the bad are sold together. Eggs are placed in one pail or basket and the top eggs are used every day in home cooking. The eggs in the bottom of the pail are taken out each week and possibly not that often. The egg buyer knows that his purchases from farmers will contain a certain number of poor quality eggs so he strikes an average and pays a price allowing for the inferior stock which he will undoubtedly receive. The farmer producing fresh eggs is forced to suffer because of this undesirable competition.

The best plan is to keep enough fowls to make egg marketing worthy of attention. Then, produce infertile eggs except during the hatching season. Ship the eggs to a reliable dealer who is willing to pay for eggs for a select trade if you have enough eggs. If the production is too small for frequent express shipments, it pays to make arrangements with a local grocer who is willing to pay a fair price for quality eggs. If this does not seem best, try the private trade and try and work up a business with buyers who are willing to pay a slight premium over the market price for eggs that are fresh laid and absolutely guaranteed to be fresh.

It is unfair to the producer of good fresh eggs to compel him to sell at the same price paid for mixed stock and that is what happens to the farmer who makes no effort to obtain big due credit for the effort necessary to produce eggs that are right in every way. At first thought, the difference of a few cents in the price of a dozen eggs does not seem worth worrying about, but when that is multiplied by several thousand during the course of a year, the result is surprising. Little things count up in every business and it seems as if this is more true in the poultry business than in any other line.

FREE TO GIRLS

Big Doll and Doll Carriage

This Big Doll is 28 inches tall, has jointed legs and arms and natural head, hands and feet. The Doll Carriage has steel frame and wheels, and the seat, hood and hood are made of leatherette. It is 34 inches high and is just the right size for the Big Doll.

Just send us your name and address and we will send you 24 Packages of lovely embossed Xmas Post Cards to sell at 10 cents a package. When they are sold send us the money and we will send you the Big Doll, with all charges prepaid, and we will also send you the Doll Carriage without any charge. If you will show your Doll to your friends and get four of them to sell our cards and each prizes too. Send us your name and address to-day so you can get your Doll and Doll Carriage quickly.

The Dairy

The small-top milk pails have been found by experiment to keep from forty to seventy per cent. of the dirt out of the milk. It is a little more difficult to use such a milk pail but it can be done. The practical dairyman knows that it is impossible to keep every microscopic bit of dust and dirt out of the milk at milking time, even if the cows are perfectly clean and the air is as pure as good ventilation can make it. These small-top milk pails are of assistance in producing cleaner milk on the farm and they should be in more general use.

The barrel churn operated by power is a practical investment for the farmer who makes butter often. It saves time and cuts out one more of the regular farm duties which tire the muscles. Many farmers who have changed from the old dash churn to the barrel churn are wondering how they ever endured the dash churn so long and when they might the power operated churn the smile grows broader and butter-making becomes a rather enjoyable and profitable part of business.

It will pay to study the milking machines at the next fair or dairy show where they are exhibited. Many farmers believe that the milking machine is a complicated and expensive outfit that is only useful on a "rich man's farm" where style is sometimes more important than profits. This is not true and many farmers who are using milking machines find them a labor saver and an economical investment. They are not too complicated and the expense of such a machine is no greater in proportion to its usefulness than many other kinds of equipment considered necessary on the farm.

Store away plenty of cabbage and mangels to serve as green food for the fowls during the winter and early spring.

Poultry

Making the Hens Pay in Winter.

Not everybody understands how to feed and care for a flock of hens so as to get eggs in winter. A woman who is succeeding admirably in this respect the present season gives the following suggestions: First, do not expect eggs in winter unless the hens are young. Old fowls are too fat to lay well. Best results are obtained with pullets. Next, do not crowd too many hens in one flock. About twenty to twenty-five will do better than a larger number. If old and young of both sexes compose the flock it will be advisable to keep the young hens and pullets by themselves. Provide water with the chill off in cold weather. Hot bricks under the container changed twice or three times during the day will do this. If kept clean there is no objection to heating these bricks in the house. Charcoal, crushed oyster shell and grit are kept where they are accessible at all times, and meat scrap forms a portion of the ration every day. The first meal is fed as soon as it is daylight. This is a warm mash slightly moist, composed of bran, ground oats and a little corn meal fed in troughs. At this time a basket of clover chaff is emptied in the scratching shed. There is no noon meal but about four o'clock a liberal feed of corn is given. This corn is kept in the house, precious as it is this year, and so is never icy cold.

The fowls work in the clover chaff a good deal of the time through the day. They eat it with relish. Alfalfa chaff is even better. Milk would be a fine addition to the ration but this flock does not get it. Often fresh vegetables like cabbage or beets, are placed where the fowls can eat them, but no condiments or patent foods of any kind are supplied. Healthy young hens do not require them. Of course, the quarters of the flock are warm and free from vermin. They have the run of a small outside yard on fine days. When it is very cold or stormy they are kept inside.

Feed is expensive, yet the eggs which this flock are laying sell readily at forty-five cents per dozen and the owner claims the hens are paying a good profit. All the feed except the corn and the chaff is purchased outright. The chaff plays an important part as it keeps the fowls busy, besides supplying the necessary material for egg making. The moment it is placed before them they begin to scratch in it and instead of moaning they are working and singing.

Young hens, warm quarters, proper feeding, and good care, will make a profit—even in war times.—E. E. R.

GOOD HEALTH QUESTION BOX

By Andrew F. Currier, M.D.

Dr. Currier will answer all signed questions of general interest. If your question is of general interest it will be answered through these columns; if not, it will be answered personally if stamped, addressed envelope is enclosed. Dr. Currier will not prescribe for individual cases or make diagnosis. Address Dr. Andrew F. Currier, care of Wilson Publishing Co., 73 Adelaide St. West, Toronto.

Questions Relating to the Lymphatic System.

N. L.—What is the function of the lymphatic system of the body? Is there any relation between it and the blood? Is the fluid which is in blisters derived from the lymphatics? Of what use is it to the body?

The lymphatic system consists of a series of small and large vessels and glands extending from the surface of the body to its centre and communicating with the great vines of the body which go to the heart. Into these veins it discharges the fluids it has collected from the tissues by absorption. Lymphatic fluid or lymph is transparent in appearance, the lymphatic vessels are arranged in meshes or network which is closely related to the course of the bloodvessels the smaller lymphatics especially in the skin and mucous membranes being near the capillaries and the larger ones near the larger blood vessels. At irregular intervals in the lymphatic meshwork are glands from one-half to 3 inches in their long diameter, somewhat bean shaped, through which the lymph stream flows. The fluid which oozes from the capillaries in the skin and elsewhere into the spaces between the tissues thus bathes their cells with liquid food. These spaces also contain fluid material from worn out and disintegrated cells and this is soaked up by the lymphatics finally entering the large veins on either side of the neck where it is carried to the heart with the blood stream. The lymphatics of the intestines contain not only the materials of ordinary lymph but also about three times as much albumen as that fluid together with a considerable quantity of fat which has been absorbed in the form of an emulsion, hence the lymph is very closely related to the blood.

I suppose the fluid of blisters, under usual conditions is lymph or contains lymph. If you cut your finger and introduce a poison the poison may be and often is taken up by the lymphatics producing inflammation in these vessels and the surrounding tissues. You can see the evidence of the involvement of the lymphatics in such inflammations in the red lines or streaks running up the arm. The poison or the inflammation may be arrested in the glands of the armpit which become swollen, painful, frequently suppurate, and often require more or less extensive surgical treatment. The poison may be distributed by the blood over the body and the patient die from blood poisoning. Lymphatic glands in the neck and elsewhere are often the seat of tubercles and may require removal. It will therefore be apparent that the lymphatic system is a very essential part of the body in its ordinary functions and also the possible seat of serious disease.

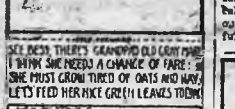
Questions and Answers.

Mother—Would you kindly tell me if anything can be done to cure my boy of stuttering, which seems to be troubling him more and more?

Answer—The only thing I can suggest is that you send a stamped self-addressed envelope and the articles on stuttering and stammering will be mailed to you.

K. B. E.—1—Would cubab berries in powder form be more effective as a remedy for catarrh than the crushed berries?

2—Would bronchitis and other throat troubles be benefitted by this treatment?



Answer—1—If you refer to using this substance by inhalation, a powder would of course be less irritating than the granulated form produced by crushing.

2—I would not advise you to use it.

Placing Bees in Winter Quarters.

Everything should now be in shape for winter. If the bees are to be stored in cellars they should be placed there as soon as settled cold weather comes on. The later the better, since there will be some mild days during which they may want a flight to discharge their feces. This prevents dysentery to which bees wintered indoors are sometimes prone.

Let the cellar be absolutely dark, and all they will require during the winter months will be an occasional airing at night for an hour or two, but never during the day.

Sweep up any dead bees that may accumulate on the cellar floor during the winter, using a feather while doing so.

To ventilate the cellar wait until it is dark and open the door for an hour or two.

When wintering outdoors be sure to use sufficient packing to keep the bees warm. Unless the climate runs many degrees below zero and stays there for a long time, it is all right to winter outdoors in the double-walled chaff hives.

"All the world" is the greatest of powers; it is sovereign and calls itself "we." What "we" does or says is called custom, what it thinks is called opinion, what it believes to be beautiful or good is called fashion."—Emiel.

Solving the Nation's Shoe Problem

A LARGE section of the Canadian public depends upon this company for shoes. Our financial resources and buying power are greater by far than those of any other Canadian manufacturer of shoes; our volume of output is more than twice that of any other. Our sales organization covers the nation from coast to coast, not merely a small section at a time.

Our six branches maintain adequate stocks within the reach of every dealer in Canada, and are now serving more than 5,000 dealers, enabling them to fill orders quickly and to cut down the amount of idle stock on their shelves.

We are making every effort to use this power to help solve the big problem of providing enough good quality shoes to go around. In the face of an actual scarcity of leather, it is difficult; but it can be done if you will co-operate with us. Buy wisely, for service rather than merely for style, and see that the shoes you buy are stamped with the manufacturer's trade-mark.

WHAT SOLDIERS WANT.

A suggestion to those who are sending gifts to soldiers overseas comes from Lt.-Col. (Canon) Frederick George Scott, Senior Chaplain of the First Division, in a cable received by friends in Montreal. He says "The men want playing cards and chewing tobacco."

CHEW STAG TOBACCO

"Ever-lasting-ly Good"

BRITISH AIRMEN WELL SCHOOLED

MUST STUDY GUNNERY AND WIRELESS TELEGRAPHY

Aspirants for Royal Squadron Are Intensively Trained from the Ground Up.

When the young cadet of the Royal Air Force has learned to march, to swing his arms with the stiffness approved by his instructors, to salute in the only possible way considered "correct" by a flying officer, to stop the other fellow from hitting him when he has the gloves on; when, in fact, he has learned discipline, and his body has been hardened by physical training and games, he leaves the camp by the sea and goes—to school. He is eager to fly, but much must be taught him before he can leave the ground.

So it is that the boy, by now very much a soldier, goes to the lecture room, and for a period "swots" as hard as military necessity and his own keenness dictate. He does not study languages or history or mathematics, but engines and aerial navigation, signalling and wireless telegraphy, aeroplane rigging and map reading. His professors and lecturers, like himself, are in khaki. Highly capable N.C.O.'s teach him the why and the wherefore of cranks and rods and cylinders; he pulls engines to pieces and sets them up again.

Studies Mechanism of Planes.

He sits in a seat with a "joy-stick" manoeuvring a quarter-sized airplane in front of him, and sees the effect on the machine of different movements of the control. By ingenious devices he learns the art of observation from the air and how to report what his eyes have beheld. He comes to know why, to correct the deflection of the wind, he must steer a machine at an angle which apparently contradicts the direction in which he wishes to fly. He becomes wise about compasses and instruments. All that is shown him he must absorb and remember, so that, at the end of the course, he can pass the test of a strict examination.

It is hard work. He cannot "cut" lectures. He must not slack. When he leaves the school a little more of boyhood has gone; the man is emerging. But he has kept fit. Every day after work he goes from the desk to the playing fields. Games count for so much that at each stage of his training, the marks which are to determine his suitability for an air force commission include an award for the degree of proficiency he shows at play.

Testing the Guns.

From the school of aeronautics the cadet passes to the school of armament, and for a time has the "tock-tock-tock" of machine guns continually in his ears. If he is not familiar with the Vickers and Lewis guns as he is with a knife and fork at the end of his lessons, it is not the fault of his instructors. In the beginning the fact is impressed upon him that an airplane is merely a means of taking guns into the air, and that if a pilot takes up a gun without being able to use it he is asking for trouble.

Trouble in such a case means death. Diagrams, cinema demonstrations, sectional models and guns, complete and in part, are brought into use to make instruction easy. For one ingenious lecture the pupil takes a seat in a cinema hall and his position in relation to the pictures which pass over the screen is that of the pilot of the photographed airplane. Here is shown how to aim his gun. He sees the approach of an enemy machine and the burst of fire which, according to its accuracy, sends the Hun crashing to the ground or misses him. The lesson is elementary in its simplicity but wonderfully effective.

While at the school the cadet passes through a gun-testing section. Every machine gun to be used for air fighting is examined minutely and severely tried before it is sent overseas. Hours are devoted to the scrutiny of each weapon. Guns as they come from the makers are quite good enough for ground use, but for use in the air they must be tuned up so that the risk of failure is reduced to the minimum.

It is a great day for the flight cadet, as the boy is now called, when he reports to the training squadron where he is to learn his flying. His mind is packed with the theory, but before him lies adventure.

The pupil is taken up by an instructor and goes "dual" before he is allowed to handle a machine alone. "In the old days," I was told at the southern aerodrome, "you were counted a dub if you could not get along after three hours' dual. If you took four hours you were heaved out." To this reflection the officer with whom I talked added another: "When the instructors had learned their flying," he said, "it was considered an insult if a pilot who had once gone solo was told that he was to be given more dual. This simply meant that men went up and got into bad habits and a sloppy way of flying."

Marvelous Gunnery.

Before a pilot goes solo at all now he is taught to loop and spin and half-roll, and to-land in any field which the instructor directs him to get into. Even so, his progress is still closely watched after he is given single control, and at intervals the instructor goes up with the pupil to correct any fault he may have developed. The number of machines crashed at one time was enormous; to-day the crashes, by comparison, are insignificant, and an accident on the occasion of a first solo flight is almost unknown.

When the instructor is satisfied that a pupil can fly a service machine properly, the boy—he has still to graduate for his wings, but if he is of the right stuff he is by now only a boy in years, and his fresh, virile manhood is an inspiring thing to see—is transferred from the elementary side of the depot to what is known as the "special flight" side and is taught aerial fighting and the use of his gun in the air. Some of the instructors under whom he is trained are marvelous gunners.

I watched one of them swoop down from the air, firing bursts into a tiny pond as he dropped, and there was an upward leap of glistening water for every cartridge used. One could imagine the havic such firing might create among marching infantry.

Venezuela means "Little Venice." Early explorers so named the South American country because of its Indian dwellings on small islands and piles driven into the water.

Butchers in Birmingham, England, have undertaken to buy bones back after the housewife has made full use of them, paying the customer half of proceeds of their disposal. They are used for the extraction of glycerine and for the manufacture of phosphate for fertilizer and a valuable pig and poultry food.

Memory.

I know a lone spot on the Arras road
Where I shall hardly bear to walk again
For fear of waking those great souls I loved
Who struggled to a death of piteous pain.

Ah! I should hear their laughter on the way,
And round my heart their boyish sights would creep;
Till I must long to leave the rushing world
And steal away to join them in their sleep.
For only they who tread the tortured path
Of those torn roads where swaying poplars sigh
Can dream of how God could give no greater bliss
Than the hushed peace beneath the sad French sky.

I know a lone spot on the Arras road
That murmurs with the moan of Memory's pain.
And I should grieve my heart with stifled sobs
If I could bear to walk that road again.

—Lieut. A. N. Choyce.

GIRLS! LEMON JUICE IS SKIN WHITENER

How to make a creamy beauty lotion for a few cents.

The juice of two fresh lemons strained into a bottle containing three ounces of orchard white makes a whole quarter pint of the most remarkable lemon skin beautifier at about the cost one must pay for a small jar of the ordinary cold creams. Care should be taken to strain the lemon juice through a fine cloth so no lemon pulp gets in, then this lotion will keep fresh for months. Every woman knows that lemon juice is used to bleach and remove such blemishes as freckles, sallowness and tan and is the ideal skin softener, whitener and beautifier.

Just try it! Get three ounces of orchard white at any drug store and two lemons from the grocer and make up a quarter pint of this sweetly fragrant lemon lotion and massage it daily into the face, neck, arms and hands.

L'Envoi.

The thousand things I could not say
Before I crossed the sea,
Dear love, the words I could not speak
And all you are to me;

The thousand dreams I could not dream
When Life for gold did dance,
Are Life to me, dear love, since Death
Became a dream, in France.

The thousand things I cannot write.
The things that I would do,
Shall all be yours, dear love, when God
Shall send me home, to you.

Minard's Liniment Co., Limited.

Gentlemen,—In July, 1905, I was thrown from a road machine, injuring my hip and back badly and was obliged to use a crutch for 14 months. In Sept., 1906, Mr. Wm. Outridge of Lachute urged me to try MINARD'S LINIMENT, which I did, with the most satisfactory results and to-day I am as well as ever in my life.

Yours sincerely,
his
MATTHEW x BAINES.
mark

What He'd Do.

An army examiner had before him a very dull candidate for a commission. The man proving, apparently, unable to make response to the most simple questions, the examiner finally grew impatient and quite sarcastically put this question:

"Let it be supposed you are a captain in command of infantry. In your rear is an impassable abyss. On both sides of you there rise perpendicular rocks of tremendous height. In front of you lies the enemy, outnumbering you ten to one. What, sir, in such an enormous emergency would you do?"

"I think, sir," said the aspirant for military distinction, "I would resign."

Every time you fill the tank of your auto or tractor by lamp or other open light, you are inviting an explosion.

Minard's Liniment Cures Diphtheria.

Had No Respect.

One artillery unit worked hard during the afternoon of the second day of the attack to get its pieces into position. It had moved up for the second time, and had not fired a shot. It was four o'clock when the lieutenant in command gave orders for every one to stand by. The gunners were to fire their first volley into the German lines. Everyone stood waiting for the final word when the telephone rang and word came that the infantry had advanced so far that it would be necessary to move up again before going into action. "Oh, hell!" said a gunner; "those infantry guys ain't got no respect for us at all!"

Minard's Liniment Cures Distemper.

Land of the Beyond.

There is a country into which there is to-day a yearly immigration with which no other country in any age has had anything to compare. Every year 25,000,000 of people enter its ports and crowd its territory as newcomers and colonists.

Every month 3,000,000 are numbered as fresh arrivals. Every twenty-four hours there are 100,000.

And this has been going on and will continue century after century. For the country in question is the Land of the Beyond, that is on the other side of the grave.

British Columbia canned herring is meeting with a growing demand. It is estimated that 250,000 cases will be packed this year, an increase of 150 per cent. over 1917.

A Dust-Stained, Fearless King.

Albert, King of Belgium, is the hero of the hour;
He's a royal arch and tower;
He is bigger in the trenches than the Kaiser on his throne,
And the whole world loves him for the sorrows he has known.

Defiance was his answer to the Teutons at his gate;
Then he buckled on his armor and pledged his soul to fate.
He stood between his people and the biggest Essen gun,
For he feared not shot nor shrapnel as his little army won.

King of Belgium, Duke of Brabant, Count of Flanders all in one;
Little Kingdom of the Belgae starr'd with honor in the sun,
You have won a place in history, of your deeds the world will sing,
But the glory of your nation is your dust-stained, fearless King.

MONEY ORDERS.

Remit by Dominion Express Money Order. If lost or stolen you get your money back.

A child is prey to many fears which have little to do with physical cowardice. The sensitive child is positively afraid of many things without realizing he is afraid. What he needs is to be given a greater confidence in life and in himself.

Minard's Liniment Cures Garget in Cows

"Thy yesterday is thy Past; thy to-day is thy Future; thy to-morrow is a Secret."—Talmud.

A bee, unladen, will fly 40 miles an hour, but one coming home laden with honey does not travel faster than 12 miles an hour.

A Kidney Remedy

Kidney troubles are frequently caused by badly digested food which overtaxes these organs to eliminate the irritant acids formed. Help your stomach to properly digest the food by taking 15 to 30 drops of Extract of Roots, sold as Mother Seigel's Curative Syrup, and your kidney disorder will promptly disappear. Get the genuine.

EATS DIRT

MADE IN CANADA

GILLETT'S LYE

Arctic Curio.

In the midst of the Arctic swamps are often found curious formations which travelers in these inhospitable regions call "ice mushrooms."

When the summer sun banishes for a brief while the frozen crust of the landscape, squat pillars of ice (sometimes as much as ten feet high) remain here and there, covered with moss that has actually grown on top of them and by which they are kept from melting. It is nature's own idea of an icehouse.

SUFFERED TWO YEARS WITH PIMPLES

Child Could Not Sleep Till Cuticura Healed.

"My little brother suffered for about two years from tiny red pimples. They appeared constantly on his body but he had the greatest trouble under his ears. The skin was red and very sore and at the least touch he would give a howl of pain. After a few seconds he would have to scratch, and he was not able to sleep.

"A friend advised me to send for Cuticura Soap and Ointment. I intended a change, and I used three cakes of Cuticura Soap and four boxes of Ointment when he was healed." (Signed) Louis Frank, 740 City Hall Ave., Montreal, Que., February 2, 1918.

Keep your skin clear by using Cuticura Soap and Ointment for everyday toilet purposes.

For Free Sample Each by Mail address post-card: "Cuticura, Dept. A, Boston, U.S.A." Sold everywhere.

AMERICAN PLAN

JOHN J. HERNAN, Manager

GLAMIS

Quite a gloom was cast over our village on Tuesday morning when the sad message came that Nurse Annie McKay had passed away, and that they were bringing the remains to be interred in Purdy's cemetery. Annie was born and brought up in Glamis, and was a general favorite with everyone. She was possessed of a bright, kind, lovable disposition that endeared her to all. She trained in St. Joseph's Hospital, Port Arthur, and was nursing a critical case of influenza in a private home, when she contracted the disease. She was taken to the hospital on Saturday and died on Monday afternoon. Much sympathy is felt for the sorrowing ones left. Just a year and eight months since Beth, a younger sister, was taken. Three brothers and one sister are left—Hector, in Regina; Lieut. Wilfred and Pte. Douglass, who are serving overseas; and Mrs. Matthews, of Port Arthur. The father, Mr. John McKay, accompanied the remains. She was laid to rest in the family plot beside her mother, two sisters and a brother.

Mrs. Hector McKay, of Regina, who was spending some time with friends in Stratford, attended the funeral of the late Nurse McKay.

Mrs. J. C. Macintyre and daughter Sarah left on Saturday morning to visit friends in Toronto.

Mr. and Mrs. Stocks, Mr. and Mrs. Bradley, of Port Huron, were week end guests of Mrs. Nesbitt.

Mr. Chas. McKinnon, whose school was closed owing to the epidemic, returned last week to Wallaceburg.

Mr. and Mrs. Thos. Montgomery and two children, of Markdale, spent Sunday with the latter's parents, Mr. and Mrs. Kirktown.

Misses Edna and Lilly McKenzie, of Kincardine, motored up on Friday and spent the evening at Mr. Neil Currie's.

Mr. and Mrs. Jas. Thomson received a message on Saturday that their son James was wounded in the hand.

Several of Mr. Husk's family are down with influenza.

Mr. Wilson Carr, of Paisley, Sundayed with friends in Glamis.

Mrs. Nesbitt and her Port Huron friends motored to Chesley on Sunday afternoon.

The services on Sunday were union. In the morning Rev. Mr. Robinson, of Tiverton, preached in the Baptist church, and in the evening in St. Paul's. Rev. P. Reith conducted anniversary services in the Presbyterian church in Tiverton.

Rev. S. Parnell, B.A., of Kenilworth, will occupy the pulpit of the Baptist church on Sunday next both morning and evening.

PINKERTON

School re-opened on Monday with Miss McRae, of Port Elgin, in charge. Miss McRae has just recovered from an attack of pneumonia.

Pte. Tom Osborne is visiting his uncle, Mr. John Wilson.

Mr. David Pinkerton returned on Saturday from a two weeks' hunt in the peninsula. Although Mr. Pinkerton was not so fortunate to get a deer, the party with which he went secured three.

The sacrament of the Lord's Supper will be dispensed on Sunday, Nov. 24th, in the Presbyterian church here. Preparatory services will be held on Friday and will be conducted by the Rev. Mr. Burgess of Walkerton.

Mr. and Mrs. Jas. Clark received the sad news on Saturday that their daughter, Mrs. N. Nelson (nee Gertie Clark), of Manitoba, was dead as a result of a severe attack of the flu. The sympathy of the whole community goes out to the bereaved parents.

SECOND CON. ELDERSLIE

Henry Schmidt is going the rounds of his neighbors helping them to lay in a supply of wood. Henry is a cracker with the sawing machine.

Mr. and Mrs. R. C. Struthers, of Galt, visited recently at the home of Mr and Mrs. D. Walks of this con.

Arthur Lillico, L.L.D., son of Mr. and Mrs. Arch. Lillico of this con., has opened up an office at 962 St. Clair Ave. Toronto. His many friends here will be pleased to hear of his success.

John Robertson, of lot 11, con. 2, has sold his farm to John Wright, of 14th con. Bruant.

Smith Thompson is engaged with Arch Dawson.

Mrs. John McDonald has had the telephone installed in her house. Her number is 9625.

Henry Ankenmann has leased a part of A. Lillico's farm.

Mrs. J. S. Lloyd and son, F.-Lt. S. Lloyd, of Newmarket, visited recently at the home of Mrs. Lloyd's sister, Mrs. J. Robertson.

Wm. Pepper, of 1st con. Elderslie, has purchased lot 24, con. 2, from And. Green for the sum of $7,500.

Mr. and Mrs. Jas. Vanche and son Allan visited Gillies Hill friends one day recently.

Mr. and Mrs. H. Ferrier and family, of "Bervie, spent Sunday with friends here.

Mr. and Mrs. A. Young and daughter Jessie visited with Sullivan friends on Sunday.

Mr. Jas. Vancise received word in Saturday that his brother Fred had died in Toronto from the flu. Fred was well known in these parts, and the sympathy of the community goes out to Mr. and Mrs. Vancise in the loss they have sustained. Interment was made on Sunday, Nov. 17th, at his home at Gore Bay.

Jas. Watt visited friends here on Sunday. Jimmie has received his discharge, nevertheless he is glad the war is over.

Was Three Months in Hospital

Mr. Wm. Campbell, who was taken from the home of his sister, Mrs. J. Sharpe, Inkerman St., on Aug. 10th, to be operated on for appendicitis in the county hospital at Walkerton, is so far recovered that he was able to leave that institution on Monday and come back to Paisley. He will remain here some time before returning to his home at Holland, Man.

—Overcoats, Overcoats for everybody—$25 and up. Don't forget we have a large stock of woollens to choose from. **C. B Irwin, Tailor.**

WILLOW CREEK

Mr. and Mrs. Reier, of Hanover, spent Sunday at the home of her brother, Mr. Chas. Helwig.

Mr. Dave Wittig was in Toronto this week.

One family here bought Victory Bonds for $600.

Mr. John Thede and family spent Sunday at Mr. D. Wittig's.

Miss Helen Wittig celebrated her good evening's entertainment.

Mr. Joe Hyde has purchased Mr. Frank Wrightson's farm. The latter intends moving to town.

Mr. K. Robinson had a sale on Saturday.

The farmers on this section have been making good use of the fine weather.

The rain Sunday night was the cause of keeping some of the young people at home. More fine weather coming.

Churches and schools are once more in full swing. But how about S. S. No. 5? Must be on the schoolless list.

Mr. J. H Roppel has installed a litter carrier in his stable. He has the job done right, at a cost of over $900.

WALKERTON

Mr. Alex Carr moved here last week from near Glamis, and has taken over the Shelton property on the cemetery road, which he recently purchased from Mr. Jas. Whitehead.

While shooting in the air at the celebration on Thursday night some one fired two holes in the telephone cable in front of the Merchants Bank and for a time all phone connection with the west end of the town was cut off. The local "trouble man" at once got to work and temporarily repaired the damage, and by midnight had most of the severed phones linked up. On Tuesday a cable man was dispatched here from Toronto and put the line in a permanent state of repair.

Mr. George Pletsch, of the 13th con. Carrick, brother of Messrs. Harry and John Pletsch of Walkerton, is suffering from a badly fractured leg, sustained on Tuesday morning last, when a scaffold on which he and John Smith, a stone mason of Carrick, were standing building a brick wall at Pletsch's home, suddenly broke and precipitated them to the ground, a distance of fifteen feet. While Smith came unscathed through the mishap, the small bone in Pletsch's left leg was broken above the ankle. As a result of the mishap he will be laid up for several weeks.

Herbert McManus of Chesley, who has many relatives in Walkerton, has laid a charge of assault against Henry Kaufman of Sullivan Tp. McManus, who was a soldier on leave from the camp, had been assisting a Mr. Lang of Sullivan in pressing hay and while at dinner at the latter's home last week, claims that Kaufman came up behind him, and with the words, "Remember, you are among Germans now," drew a big hay knife threateningly across his throat. The matter will be ventilated before Magistrate John Telford in Hanover on Friday afternoon at 4 o'clock, Lawyer Carey of Hanover having been engaged by the plaintiff to aid in the prosecution.

While dodging confetti that was coming his way like a northwest blizzard, a local young groom, who was leaving with his bride on their honeymoon, swung around the corner of the G.T.R. station on Wednesday afternoon of last week and collided with a ladder on which Geo. Dalyrample, a London painter, was industriously perched swinging an artistic brush in blissful oblivion of the activities below him. And as cupid caused man's first fall in the garden of Eden, he was indirectly responsible for the second male descent in Walkerton when the artist and his paints came down with a spill on the platform. As a "Comedy of Errors" the thing would have been a scream had not the Londoner broken his right leg above the ankle in the fall. Although the unfortunate man is said to have successfully evaded cupid in the past, it got him at last, and instead of breaking his heart, bust his leg, and sent him to the hospital rather than the home for incurables, for repairs. Marriage is sure some lottery when even the spectators are so affected by it.

Alexander McDermid, whose home in the village of Kinloss was serenaded by a mob some months ago, following his third marriage, and which resulted in a police court trial at Walkerton that culminated in the guilty parties settling for damages and costs, claims that a neighbor boy, Wm. Stanley, who lives across the road and was mixed up in the first episode, raided his house single handed about midnight on Friday last and demolished about thirty-five panes of glass. McDermid has laid a charge against Stanley, and in the witness box at the town hall, Walkerton, on Tuesday afternoon unreeled a line of evidence which was to the effect that he had got up hearing the crash of the glass, and running out had followed the assailant who ran across the road and into Stanley's house. McDermid claims to have done some peeping and to have identified the party as Ed Stanley when the latter struck a match on reaching his home. McDermid further testified that Stanley a short time later came out with a lantern, and in a conversation with some unknown person near the pump, overheard him remark that "If he has me pulled for this I'll kill him." Plaintiff maintained that his windows were smashed in with a club and the weapon was left sticking through one of the windows when the culprit took his flight. The defendant's mother and three sisters swore, however, that the accused was in bed at the time he was charged with pulling off the raid. The trial was adjourned until Monday next at 2 p.m., and the plaintiff in the meantime is to estimate the value of the damage done, and if it takes more than $20 to replace it, the offence will be an indictable one and would render the accused liable, if this hearing went against him, to be sent up to a higher court for trial.—Herald and Times.

EVANGELISTIC MEETINGS

An evangelistic campaign commenced at the 4th Bruce United Brethren church on Sunday evening, Nov. 17th, with Mr. M. Alice Durham, of Leavenworth, Kansas, as evangelist. Mrs. Durham is an evangelist of note, having held many successful meetings throughout the U. S. and Canada. She is a strong, sympathetic speaker, having ability to hold her audience as she proclaims the gospel message. Besides her evangelistic experience she also had much experience in slum and rescue work among fallen women in Chicago, Kansas City and other middle western cities, and being at present superintendent of the United Brethren Rescue Home of Leavenworth, Kansas. The meetings will continue for two weeks at least.

BEDRIDDEN WITH RHEUMATISM

Felt That He Would Never Walk Again "FRUIT-A-TIVES" Brought Relief.

MR. LORENZO LEDUC

8 Ottawa St., Hull, P.Q.

"Fruit-a-tives" is certainly a wonder. For a year, I suffered with *Rheumatism*; being forced to stay in bed *for five months*. I tried all kinds of medicine but without getting better; and thought I would never be able to walk again.

"One day while lying in bed, I read about 'Fruit-a-tives' the great fruit medicine; and it seemed just what I needed, so I decided to try it.

The first box helped me, and I took the tablets regularly until every trace of the Rheumatism left me.

I have every confidence in 'Fruit-a-tives' and strongly recommend them to every sufferer from Rheumatism".

LORENZO LEDUC.

50c. a box, 6 for $2.50, trial size 25c. At all dealers or sent postpaid on receipt of price by Fruit-a-tives Limited, Ottawa, Ont.

GRESHAM

The induction of Rev. Mr. Wallace took place in Underwood church last Tuesday, 12th inst., in the afternoon. A large number were present. The Presbytery was represented by Revs. Gale of Pinkerton, Reith of Glamis, Dr. McDougall of North Bruce, Robinson of Tiverton, and Mr. Hawke of the Methodist church. Mr. Reith preached the sermon and Mr. Gale addressed the minister and Dr. McDougall the congregations. Tea was served at the close.

Mr. Wm. Young is visiting his brother and sister in Kincardine this week.

Mr. and Mrs. Wallace were called to Barrie this week to see one of their daughters there who is down with the influenza.

Mr. Len Shipley visited his brother Lionel at Port Elgin, who was operated on for appendicitis last week.

We understand Mr. Allan Bell has bought Mr. Angus Anness' farm.

Mr. McLean Young has got another valuable driver. He is getting ready for the mud.

Mrs. Knapp is visiting her daughter, Mrs. A. McLean, 6th con.

A fine large eagle was seen flying round this vicinity.

CARGILL

Mr. Wm. Russell is back at his duties at the G.T.R. after a month's rest. Mr. M. Taggart, who has been relieving, left on Monday to resume his duties at Walkerton.

Mr. Frank Smith a former teller in the bank here, now filling a similar position in Harriston spent over Sunday here.

Mr. John Parker had two horses killed and a third one had its leg broken by the late train on Thursday night. This is a severe blow to John, and we sympathize with him in his loss.

We are glad to see Mr. M. Grainger able to be around again after his recent illness.

Mr. and Mrs. Wm. Russell were in Moorefield last week attending the funeral of a relative.

Mr. Wm. Rowney landed home on Saturday night with "Big Ben," having finished the threshing season.

Mrs. Wm. Grainger and children arrived from Stratford in Saturday night, and will in future reside with Mr. and Mrs. R. Brownscombe.

Miss Jean Hood, of Walkerton, Sundayed at her home here.

Mrs. Jas. Alexander received word on Monday that her brother was seriously ill in Owen Sound. She left for there on the afternoon train.

Miss L. Brown is home from Wiarton, where she has been visiting her sister, Mrs. Zeigler.

The depot here was treated to a new coat of paint this week.

SIXTH CON. BRUCE

Mr. Gairns, from New Westminster, B. C., is visiting at Mr. A. Russell's.

Mrs. Menno Roppel is at Hanover at present, taking care of her sister who was ill with the flu.

Miss Margaret Russell has returned home from Teeswater.

Quite a number attended the presentation to Mr. J. D. McGillivray.

Miss Mamie Foster is at present in Paisley.

Children Cry
FOR FLETCHER'S
CASTORIA

—Hon. G. S Henry, Ontario Minister of Agriculture, in a recent address showed the wonderful increase in the production of pure-bred stock since 1911, 167 per cent. in the case of horses and 66 per cent. in the case of cattle. As an example of the profitable nature of this branch of agriculture he mentioned the case of a pure-bred calf raised in Ontario having a pedigree extending back more than thirty-five years, which recently sold for $106,000, probably the most valuable animal in the world.

Cruickshank The Tailor

—Mr. John D. McArthur, of Port Elgin, was in town on Tuesday.

—Mrs. Jas. McKee was taken to Walkerton hospital last week to receive treatment for stomach trouble.

—Miss Phemie McKinnon, of Toronto, was visiting Paisley friends for a few days last week, a guest at the home of her sister, Mrs. Neil McArthur, Albert St.

—Mr. Kenneth McLaren, of Rockhaven, Sask., arrived here on Friday, having come down to attend the funeral of his brother, the late Geo. McLaren, and will remain for a few weeks.

Entertainment

An entertainment will be given in the Town Hall, Friday evening, Nov. 29th under the auspices of the ladies of the Church of the Ascension. Besides singing and music by some of Paisley's best musical talent, Capt. (Rev.) E. Appleyard, returned chaplain, will give an address on the soldier's life at the front. Capt. Appleyard was with the Canadian troops for over a year in France, and for gallantry at the battle of Vimy Ridge was decorated by the king with the Military Cross. Admission—25c. and 15c.

Died in the West

On Monday evening, Nov. 11th, after an illness of ten days from Spanish influenza, Clarence V. Poole passed peacefully away at Lady Minto Hospital, Melfort, Sask., at the age of 24 years, 5 months and 2 days. His birthplace was Bruce county, Ontario. At the age of twelve he moved with his parents to Melfort, where he has lived since. He leaves to mourn his loss his parents, Mr. and Mrs. W. M. Poole, his brother Lawson, and sister Vera. Much sympathy is felt for the sorrowing family in the loss of a son who was greatly esteemed by all who knew him. The funeral was held on Thursday, Nov. 14th, to Mount Pleasant cemetery, the service being conducted by Rev W. R. Taunton, assisted by members of the Oddfellows Lodge, of which the deceased was a member. At the time of his death the mother, sister and brother were ill with the same disease.

The Late Mrs. McLeod

Mary McGillivray, widow of the late Peter McLeod, of 12th con. Bruce, who passed away on Sunday, Nov. 17th, was one of the original pioneers and perhaps the oldest person living in the township, as she was over 97 years of age. The deceased had lived on the 12th con. since 1854. She was respected and esteemed by all who had known her. Born in the Island of Mull, Scotland, she came to Canada with her mother, two brothers and one sister in 1847. They settled in Glenelg Tp., Grey Co. Five or six years later the subject of this sketch was married at Kitchener, and in 1854 they came to Bruce Tp., she walking all the way from Durham and carrying her baby boy in her arms. As this incident in her life would indicate, the late Mrs. McLeod was a strong type of the womanhood of that time—ready to brave and conquer all hardships peculiar to life in the unbroken country to which they came as first settlers. Hope and courage were their predominant characteristics, and without these existence would have been an impossibility, and the goal of happiness never been attained. Mrs. McLeod was predeceased by her husband in 1888. She is survived by their two sons—Colin, who has been in New Zealand for many years, and Alex N., with whom she lived on the old homestead. The funeral was held on Nov. 19th. Services were conducted by Rev. G. C. Little, of Knox church, with which congregation the deceased had been a worshipping member ever since its organization. Interment was made in Lovat cemetery.

—Let there be light. Lanterns, 98c each, at Sinclair's Hardware.

—Fowl wanted, alive or dressed. Get our prices. S. F. Mallachey.

—For Sale—Eight head of heifers and steers, 1 and 2 yrs. old. Wallace Megraw, Greenock. Both phones.

—Lost—Automobile tire chain lost on Elora road north on Nov. 17th. Finder please leave at Advocate office.

—All Deering repairs and twine accounts not paid at once will be placed in other hands for collection. F. Carter & Son.

—For Sale Privately—One steel-tired buggy, 1 good cutter, 1 Melotte cream separator, 1 Good Cheer cook stove. Apply to J. A. McRae, 12th Bruce.

—All accounts due the undersigned must be settled by Dec. 15th. We have been allowing liberal credit during the busy summer, but must have the money now to meet our obligations that are due. J. S. Dewar.

—Tea will be served at Gibson's old stand on Saturday, Nov. 30th, St. Andrew's Day, afternoon and evening, by the young ladies of Knox church. Supper from 5 to 7 o'clock. Proceeds to go towards buying supplies for Red Cross work.

—Paisley Photo Studio opened under new management. Old stand, Queen St. north. Open every Saturday, bright or dull weather. Come early for the Christmas work. Don't leave it to the last moment. Fred J. Granville.

Methodist Anniversary

Paisley Methodist congregation made a big push against that insidious foe of church organization—lack of financial support—on the occasion of their anniversary on Sunday and Monday last, and latest reports indicate that the objective of a $300 offering will likely be attained. In point of spiritual and intellectual interest the anniversary was also a red letter occasion, as the people had the opportunity and privilege of again hearing a former pastor, Rev. C. W. Cosens, now of Walkerton, who during his pastorate of four years had won a warm place in the hearts of not only the denomination he ministered under, but also with the community in general. Mr. Cosens has lost none of his interesting individual style of preaching.

In his sermon on Sunday evening Rev. Mr. Cosens upheld the Bible as the light of the world. Without light, he said, the earth would become the abode of death, and the most vigorous forms of life would die. The oceans would freeze up, and all therein become a mass of death. There are great forces that operate in the spiritual and intellectual world that cause them to reach perfection. God has sent his revealed word to enable men to reach the higher plane. The speaker dealt with some objections that are raised against the Bible. Modern science agrees with Moses' account of the creation, although in the past scientists had raised objections thereto. Some have disagreed with the Bible because, they say, polygamy is approved in its pages. But polygamy is not countenanced by God. The human race has been given two different starts—when Adam stood with one woman as his wife in the Garden of Eden, and when, following the deluge, Noah and his wife (again one woman only) were as head of the family. God put his great seal of disapproval upon any transgressions of the law in this respect by the patriarchs. If the Bible is the source of light, why was there the darkness of the middle ages? The answer is that darkness was caused by the need of the Bible in that period. Scarcely anyone knew there was such a volume as the Bible. The great Book of life was closed to them. They couldn't read it, and if they did they were cursed and cast out of the church of that age. It was by mere chance that Martin Luther discovered a copy of the Bible, learned the truth, and began the Reformation of Europe. When the Bible became an open book to the people the darkness disappeared. Down through subsequent history those peoples who cherished the Bible and its doctrines had become blessed, while those who had not are cursed. Spain rejected it at the time of the Reformation, and witness her decay from the one-time glory of her greatness. Britain received the Book, and opened her doors to its teaching. If ever a nation had a great moment it was when a great navy the other day hauled down its colors and surrendered to the British admiral. The Bible is unnecessary, say some. Conscience is sufficient. But it is conscience saying "Do right! Do right!" that impels the mothers living on the Ganges to commit the darkest crime that human can commit by casting their children to the crocodiles in the stream. Those who burned the heretics in the middle ages also did what they conscientiously believed to be right. Conscience, after all, is only the opinion of education. Morality is sufficient, say others. Moral codes differ, however. In the South Sea Islands a boy is taught that he must get a head before he can be considered a man. The standard of morality laid down in the Bible, "Do unto others as you would have others do unto you," has stood for two thousand years, and yet there can not be taken one word from that sentence. The material condition of India was contrasted with that of young Canada, much to the latter's advantage, for here property is worth a great deal more and land worth more. One country had no revelation from the sky, and the other had. That is the difference. The Bible has never known defeat. The sappers and miners of the devil have not destroyed it. The Bible and its teachings will soon be forgotten, some men such as Voltaire have declared. But that period immediately following France's terrible revolution witnessed the establishment of the British and Foreign Bible Society, and their presses have since issued the Bible the most popular book in the world. There is nought that can be put in its place. Men may live without it, but when they come to die it is only to the Bible they can turn for comfort and assurance. It is also a source of victory. "When I remember these things," concluded the speaker, "I say the Word is a fountain of light."

The tea-meeting on Monday evening was of the real old-time form—a good supper, which was served by the ladies in the Gibson building, followed by a fine programme given in the church.

The choir rendered a number of selections in admirable style. These also the solos sung by Miss Lottie Kerr and Miss Edna Carter, were highly appreciated. Rev. Mr. Cosens was the leading speaker, giving an address that was full of good thoughts presented in such a way as to make it easy for his hearers to retain and profit by them. Revs. Little and Diehl represented the sister churches and made short addresses also. The chair was occupied by the pastor, Rev. Mr. Walker. The result of the effort made at this time will be a source of special encouragement to one who was only placed in charge of the congregation a few months ago.

WOMEN'S PATRIOTIC LEAGUE ANNUAL REPORT

At the annual meeting of the Women's Patriotic League, held on Friday afternoon, the following report of the treasurer was submitted and adopted, which shows the extent of the work carried on during the year ending Sept. 30th, 1918:

Receipts

Sept. 30 1917, bal. on hand	$ 427 54

Mrs. D. McArthur, Sec.-Treas.

Supplies shipped to the Red Cross Society from Oct. 1917, to Oct., 1918, by Paisley Women's Patriotic League: 1200 prs. socks, 203 flannel shirts, 93 suits pyjamas, 19 sheets, 2 pillows, 388 pillow covers, 12 housewives furnished, 36 housewives not furnished, 90 personal property bags, 213 Turkish towels, 143 huckaback towels, 866 trench towels, 47 stretcher caps, 3 trench caps, 1 Balaclava cap, 2 mufflers, 380 cheesecloth handkerchiefs, 82 washcloths, 28 quilts, 5 pairs old flannel and linen—total valued at $1,120.85.

The following officers and committees were appointed for the ensuing year: President, Mrs. S. Ballachey; Vice-Pres., Mrs. G. D. Irwin; Secy-Treas., Mrs. D. McArthur.

Buying and Cutting Com.—Miss Dewar, Miss Nettie Scott, Miss Maxwell, Mrs. Geo. Fullerton, Mrs. G. B. Irwin, Mrs. T. Ellis.

Shoemaker, Mrs. Sinclair, Mrs. Packing Com.—Miss Scott, Mrs. Diehl.

Executive Com.—Mrs. Geo. Craig, Mrs. H. Fletcher, Mrs. J. N. Collins, Mrs. A. Sinclair, and conveners of other committees.

Work Com.—Mrs. Daniel, Mrs. R. Fullerton, Mrs. Gregg, Mrs. Bryce, Mrs. Tooke, Mrs. Cruickshank, Mrs. Cavill, Mrs. Smart, Mrs. Grant, Mrs. Trelford, Mrs. Pearce, Mrs. Alexander, Mrs. Maclachlan, Mrs. McKerracher, Mrs. Pickard, Mrs. Carter, Mrs. McMahon, Miss Ross, Miss Diehl, Miss Davison.

Presbyterian Forward Movement

The Presbyterian Church in Canada has a general campaign under way for the advancement of spiritual life in the church, and a special meeting of the Presbytery of Bruce was held in Knox church, Paisley, on Tuesday. Three sessions were held, morning, afternoon and evening, at which addresses were delivered by prominent men of the denomination, such as Rev. Prof. Kilpatrick, Rev. Dr. McKay of Toronto, and Rev. Mr. Knox of London. There was a large attendance of delegates, and the deepest interest manifested by all. A report of the proceedings will appear in our next issue. The ladies of the congregation served lunch in the basement at noon and at tea-time and the visitors spoke in most appreciative terms of the entertainment thus provided.

—For Sale—Young registered Shorthorn bull, 9 months old. Apply to C. Ribble, 20th Greenock, R. R. No. 2, Paisley P.O.

—Dr. Allen will be home Friday and Saturday of this week. Please make a note of it and arrange in time if you need his services.

—The Sunny South show in the town hall on Thursday evening drew a full house. The big audience got the worth of their money in good melody music, dancing and fun dispensed by the stage troupe and orchestra.

CARD OF THANKS

The officials of the Methodist church desire to thank the public for the large attendance at the anniversary services on Sunday, and their generous patronage of the tea-meeting entertainment on Monday evening.

Soils and Crops

By Agronomist.

This Department is for the use of our farm readers who want the advice of an expert on any question regarding soil, seed, crops, etc. If your question is of sufficient general interest, it will be answered through this column. If stamped and addressed envelope is enclosed with your letter, a complete answer will be mailed to you. Address Agronomist, care of Wilson Publishing Co., Ltd., 73 Adelaide St. W., Toronto.

Goose Raising for Profit.

Here is a branch of the poultry business that is not likely to be overdone, at any time in the near future. While there is doubtless an awakening, in many sections, to the fact that geese are very profitable yet a great many people imagine that they are hard to raise. Nothing could be farther from the truth. The fact is, that under ordinary conditions, geese are less difficult to raise than any other domestic fowl. Neither great skill nor expensive equipment are required.

Easy to Start

A few good, healthy stock geese and plenty of pasture are the most important requirements in making a start. Of course, shelter of some kind should be provided, but almost any dry shed will answer. During the winter months the birds do better when protected from the elements, especially at night. However, the goose is a hardy bird and can endure a great deal of cold without apparent suffering. In spite of this fact, we always have comfortable quarters for the geese, old and young. Geese are very thrifty birds and are free from lice. They are also free from disease. We have raised geese for a number of years and have never yet lost a single bird from disease.

We seldom lose a gosling. After a gosling is four days old, we consider it almost as good as raised. A few geese can be kept as a "side-line" by almost any farmer without interfering with other poultry, or in fact, with any other farm industry. They should not be fed or housed with other poultry, however, as they are more or less abusive, as a rule, especially when feeding. Those who admire water fowl should keep geese. We can get more genuine pleasure from a flock of geese than from any other poultry on the premises. They are easily managed and really seem to be more intelligent than any other fowl we have ever raised.

Pasture is Essential

As stated above, plenty of pasture is necessary. It is, in fact, the most important point to be considered.

The goose is essentially a grazer; in fact, grass or roughage is as essential to a goose as it is to a cow. They are not over-particular in regard to the quality of the pasture and their downy coats yield a profit that should not be ignored, even in this day of "new fangled" invention in the way of bedding. There has never yet been a time that we have had any difficulty in disposing of the feathers, at good prices. A well matured bird will yield about a pound of feathers in a year. Laying geese must never be picked until the laying season is over. We are very careful in handling the geese.

Right now is a good time to plan for goose-raising, if the work has not been done before. If the venture is to be a success, don't put it off until spring. Geese mate in February, as a rule, and new stock should be procured before that time. We have found it advisable not to disturb old mated geese. Once they are properly mated they will so remain, year after year, unless the ganders get quarrelsome. Some ganders will mate with one or two geese, while others will choose four or five. Young stock should be kept separate from the old mated birds at first.

Do Not Give Free Range

We learned, by costly experience, that where the goslings have free range it is impossible to control them after they once acquire the habit of running away.

A few years ago when we began raising the China geese, (which are much more active than any other geese we have ever raised), a large swamp was fenced for the old birds. This pasture which is not at all suitable for other live stock, makes a very good range for a flock of geese during the greater part of the year. Coarse grass and weeds make good goose pasture. However, one must be on the alert for foxes and turtles.

As a range for goslings we use an apple orchard fenced and equipped with suitable houses. Young goslings must be protected from rats and other destructive animals. Also, they must have shelter at night and during hard rain storms. A cold rain will sometimes kill good-sized goslings, before they can be rescued. A gosling is easy to raise but must not get rain-soaked on the back.

We keep the White Chinese geese at the present time and find that they have a number of good points not found in other geese. They are the same in every way except color, as the Brown Chinese. Both are very beautiful in appearance. White China geese have pure white plumage and their bodies are very graceful. Their long, slender, curved necks give the birds a swan-like appearance, which is always greatly admired. The feathers are of the finest quality and always bring the highest market price.

A Good Market Goose

These birds, while not as large as some others, are suitable for market purposes where very large geese are not wanted. While they are sometimes called the "Leghorn of the goose family," they are somewhat larger than common geese. It is not unusual for young birds to weigh fifteen pounds each when ready for market. They can be made much heavier if kept longer and fed a considerable amount of grain, but nothing will be gained this season by feeding large quantities of marketable grain.

We always try to have poultry in good condition before being sent to market, but have always been opposed to "stuffing," partly because it seems like "cruelty to animals" to keep fowls closely confined, and partly because we never have been convinced that it was very profitable.

We feed a reasonable amount of grain and always sell poultry of all kinds alive.

Geese require less grain from the time they are hatched until ready for market than any other fowl we know of. While we have always raised geese as a side-line, so to speak, we plan to raise about two hundred young birds each season. We use large, heavy chicken hens. Have never tried hatching with incubators, but have been told that it can be done.

Use Leg-Bands to Distinguish

However, we succeeded in raising 174 fine young geese and together with the old birds, which were twenty-two in number (seventeen geese and five ganders), we had a pretty nice flock.

We use leg-bands on the old geese as they sometimes get together during the latter part of the season and it is hard to tell old from young.

Sometimes the entire flock is allowed free range. Since cool weather began in October we have been feeding more grain than during the early fall because most of the birds now on hand will go to market soon. We have sold quite a number locally, to be kept for next year's stock. We never sell geese alive.

We have found the China geese to be excellent layers. Young geese will seldom lay as many eggs as mature ones, but an old bird will often lay from seventy-five to one hundred eggs in a season. One young bird laid fifty-four eggs last season.

Green rye is a good substitute for grass in winter. Geese must have some sort of roughage. They like clover hay, alfalfa and silage. We feed plenty of these during the winter. Also, grain twice a day. Raw vegetables, chopped, with bran added (also a little salt), gives variety to the ration. Provide good, clean water to drink.—A. W. G.

Be interested in everybody's troubles except your own.

The cellar is not the best place for squashes and pumpkins. A good cool room upstairs in the house is all right. But see to it that rats and mice do not gnaw holes into them. They like the seeds, and the only way you can be sure that they will not get them is to go into the trapping business, and stick to it till the last rat is under the sprig.

FUNNY FOLD-UPS
CUT OUT AND FOLD ON DOTTED LINES

AT FOOT BALL WILLIE'S SLICK AS GLASS HE STRAIGHT ARMED BOB AND TRIED TO PASS AND VERY NEARLY DID IT TOO. BUT BOBBIE CAUGHT HIM BY THE SHOE.

Poultry

To make a good powder for lice on chickens mix three parts gasoline and one part crude carbolic acid with as much plaster of paris as the liquids will moisten. Allow the material to dry for a few hours and then place the powder in airtight containers. The powder should not be mixed or placed near a flame. It is necessary to hold the fowl while dusting and care should be taken to work the dust into the feathers thoroughly. Ten pounds of the mixture will treat 250 mature birds.

The head louse, which lives particularly on little chickens, can be exterminated with mercurial ointment or "blue butter." This contains about 50 per cent. of metallic mercury, which kills the head lice. Mercurial ointment is a stiff substance and should be mixed at the rate of one part to two part of vaseline to apply easily. A bit of the mixture the size of a pea applied with the tip of the finger and rubbed into the feathers about the head will destroy the lice. It should not be used too freely.

Hogs

Weaning Pigs.

Weaning is one of the most dangerous periods of a pig's life. Young pigs are often seriously injured if allowed to eat too much feed at one time. They should have access to corn and other grains while they are with their mother, so that when they are weaned they will know how to eat.

Skims milk or buttermilk is desirable feed for pigs at weaning time. The milk should be fed in the same condition at all times, either sweet or sour, otherwise digestive disorders are likely to be caused. The feeding trough should be kept clean.

Care should be taken that the pigs are not overfed. Overfeeding will stunt their growth. One of the greatest secrets of success in the rearing of weaning pigs is the frequent feeding of small quantities of food. The stomachs of the pigs are not capable of storing a large amount of food at any one time.

Usually the pigs are large and thrifty enough to wean at the age of six to eight weeks. They should have access to forage such as alfalfa or clover, if at all possible.

The Dairy

The following are the necessary requirements for first-class dairy production:—

1. Sterilized, i.e., strictly clean, dairy utensils. Boiling hot water or live steam must be used to attain the standard.

2. Clean cows. The udders and teats should be washed if badly soiled, or wiped with a damp cloth if slightly soiled. Flank and belling should be brushed to remove loose hairs and dirt.

3. Small-top milk pails with cover half over the opening.

4. Immediate cooling of the milk to 50 degrees Fahrenheit.

The cow that drops her calf before her time is a proper subject for suspicion and should not be allowed to run with the other cows.

Machine-milking should not be forced too fast. Allow the cows a reasonable amount of time to get adjusted to the new method of milking.

Carcasses of animals dying on farms should be cremated or buried. Exposed, they are not only unsightly, but may spread contagious diseases.

Our readers will note by advertisement carried in this issue that entries for the Ninth Annual Toronto Fat Stock Show close Nov. 18th. From entries already received this show promises to keep up to the high standard of previous years both as to quality and numbers. Anyone contemplating entering stock should get entries off without any delay and avoid possibility of entry arriving after closing date.

What Farm Activity Pays You the Best?

Keeping books pays as well on a farm as in a bank, a railway office or a factory. Many large farms have a regular bookkeeping department. The average size farm does not need such an elaborate system of account books any more than it needs three or four binders, seven cream separators, nine churns, or five hay loaders. The size and detail of the system depend on the acreage of the farm and the amount of business the farm does.

Some person on the farm can learn how to conduct a set of books for the farm. Then only a few minutes a day, or once a week, will be needed to keep a set of farm account books.

Here are several important things books: How many dollars' worth of a farmer knows if he keeps a set of foodstuffs sold off the farm last year? How much money was cleared on the farm last year? What crops are not paying? How did this year's profits compare with last year, two years ago, five years ago?

A farmer will be able to check up every item of farm expense such as seed, poultry, cattle, and hogs, their cost and the value of their product to the farm.

Another pleasing and profitable thing about a set of farm books—one can take an inventory at the end of the year of all the live stock, the implements, the buildings, the grain on hand, and all of the equipment and know just where the farm stands financially.

The Commission of Conservation has issued a very simple yet comprehensive farmer's account book which will be sent free to Canadian farmers who ask for it, stating at the same time how many acres they work. The supply of these is limited and the rule of "first come, first served" will apply.

The Extra Touch.

One more stroke with the brush rubs the paint in so that it lasts longer.

Once more over the plowed ground with the harrow and the seed-bed is mellower and the promise of a good harvest greater.

Go and do the right action over again and again and it becomes a habit of the life which can not easily be broken.

The extra touch is the only mark between success and failure that can not be wiped out. That will stick, and it amounts to more than it costs.

Rats Are Big Eaters.

Experts have estimated that one rat will consume 40 to 50 pounds of food in a year. It has also been figured that it requires the continuous work of about 165,000 men with farms, agricultural implements, and other equipments to supply the foodstuffs destroyed annually by rats in the United States and Canada. In addition rats destroy other property, mainly of agricultural origin, the production of which requires the work of about 55,000 men. This gives a total of 220,000 men whose economic output is devoted solely to feeding and otherwise providing for rats.

To Prevent Potato Rot.

Pick over your potatoes about three or four weeks after you have stored them away. The wet weather this season increases the tendency to rot and unless the diseased potatoes are at once separated from the healthy, there will be heavy loss. Many potatoes that look good when harvested will decay after being in storage a few weeks.

Potatoes should be stored in a cool dry place. The odor the atmosphere, providing, of course, freezing is not permitted, the better they will keep.

The outdoor fall air is the best tonic in the world. Drink lots of it and be thankful every minute.

GOOD HEALTH QUESTION BOX

By Andrew F. Currier, M.D.

Dr. Currier will answer all signed questions in of general interest. If will be answered personally if stamped, addressed envelope is enclosed. Dr. Currier will not prescribe for individual cases or make diagnosis. Address Dr. Andrew F. Currier, care of Wilson Publishing Co., 73 Adelaide St. West, Toronto.

Scrofula.

Forty or fifty years ago it would have been difficult to find a person of average intelligence in this country who did not have an idea of what was meant by the term scrofula. Nowadays the item is so seldom used that the average person is ignorant of its meaning, showing that words, like fashions prevail, become obsolete, and are forgotten. Fifty years ago scrofula was thought to be a real disease like mumps or chicken pox, and the scrofulous person, old or young, had a thick, swollen neck with running sores. As now recognized, scrofula is an irregular collection of symptoms, without any definite disease history. When we speak of scrofulous gland nowadays we usually mean tuberculosis in the lymph glands of the neck, when we speak of scrofula deema we mean various kinds of skin eruption of tubercular origin. Scrofulous blood used to be regarded as impure blood causing acne and other eruptions and was the excuse for giving children sulphur and molasses, senna, stillingia, sarsaparilla and other remedies supposed to be required for an annual spring cleaning. It may be said that scrofula stands for tissues and organs which easily get out of order and get well slowly. Sores on a scrofulous child heal slowly, run indefinitely and when healed are followed by others in the vicinity. Scrofulous children have weak mucous membranes, catarrh of the nose, mouth and ears, adenoids and enlarged tonsils. The glands of the neck and elsewhere in such people are large and often the seat of running sores. Such people resist disease badly and are always catching diseases that have the possibility of being caught. A scrofulous child is almost sure to have had parents or grandparents who had the same trouble else tuberculosis or syphilis, and if a child with this tendency lives amid bad hygienic surroundings he will almost to a certainty develop scrofula.

The germs of tuberculosis are most frequently found in such cases attacking the glands of the neck and also skin and causing swellings and eruptions which are only too common. Scrofulous children often have intestinal catarrh with enlarged abdominal glands, diseased bones and joints and in almost all of them the tubercle bacillus will be found, they are also sufferers from all kinds of ear diseases. Two kinds of children are described as scrofulous in the writings of half a century ago, one being pale with tender, white skin, large veins, flabby muscles and quick intellect, the other with red face, thick nose and lips, and dull intellect. Beware of patent medicines for such troubles. The sins of patent medicines makers in imposing on the public, especially the poor, in advertising and vending their nostrums for scrofula are many and if there is to be retribution for such sins I hope they will get it good and proper. Good food, plenty of sleep, out of door life, a daily bath, a well ventilated home and school, these are the best means for fighting scrofula. Three drugs have been found effective in treating scrofula, iodine, cod liver oil and iron, and they should be given not only in a form in which they can be readily assimilated but in one which will make them acceptable to the sensitiveness of children.

Questions and Answers.

S. E. B.—1—Are there certain foods which are beneficial when one is suffering from a torpid liver?

2—Please mention a good medicine to restore such an organ to its normal condition.

Answer—1—I suppose you mean by a "torpid" liver, an organ which is not secreting the proper quantity of bile. If that is due to an obstruction by gall stones, of course the obstruction must be removed; if it is merely a feature in the general condition, an abundance of simple, easily digested food would be all that you would require.

2—You must remember that this department is not for the purpose of treating individual cases or providing prescriptions. If you need a medicine to affect your liver, your physician is the proper person to furnish it.

LIP GRATITUDE AND TEA

An Appeal by John Galsworthy to Face the Facts in the Wounded-Soldier Problem.

Only by revivifying in each separate disabled soldier the will to live can you save him from the fate of merely continuing to exist.

There are wounded men, many, whose spirit is such that they will march in front of any effort made for their recovery. I will remember one. These—a Frenchman—nearly paralyzed in both legs. All day long he would work at his macrame, and each morning after treatment, would demand to try and stand. I can see his straining efforts now, his eyes like the eyes of a spirit; I can hear his daily words: "Il me semble que j' ai un peu plus de force dans mes jambes ce matin, Monsieur!" ("I think I have a little more strength in my legs this morning, sir") though, I fear, he never had. Men of such indomitable initiative, though are rare, are but a fraction. The great majority have rather the happy-go-lucky soul. For them, it is only too easy to postpone self-help till sheer necessity drives, or till someone in whom they believe inspires them. The work of re-equipping these with initiative, with a new interest in life, with work which they can do, is one of infinite difficulty and complexity. Nevertheless, it must be done.

The great publics of our countries do not yet, I think, see that they too have their part in the sacred work. So far they only seem to feel: "Here's a wounded hero; let's take him to the movies and give him tea!" Instead of choking him with cheap kindness, each member of the public should seek to re-inspire the disabled man with the feeling that he is no more out of the main stream of life then they are themselves; each man, accordingly to his or her private chances, should help him to find that special niche which he can best, most cheerfully, and most usefully fill in the long future.

The more we drown the disabled in tea and lip gratitude the more we unsteel his soul, and the harder we make it for him to win through, when, in the years to come, the wells of our tea and gratitude have dried up. We can do a much more real and helpful thing. I fear that there will soon be no one of us who has not some personal friend disabled. Let us regard that man as if he were ourselves; let us treat him as one who demands a full place in the ranks of working life, and to try to find it for him.

Editor's Note—The foregoing is from the foreword written by John Galsworthy for the "Report of the Allied Conference on the After-Care of Disabled Men." It is reproduced here in the hope that it may assist in the rehabilitation of our wounded heroes by helping the public to realize that we must face facts and disregard fancies and suppositions in the solution of this present problem.

Cleaning Old Barrels.

Old barrels should be used cautiously. If they have contained no material which has permeated the wood, they may be cleaned by the use of steam, hot potash lye obtainable from wood-ashes, or crude potash secured at drug-stores. They must be treated repeatedly, and thoroughly rinsed and drained.

Barrels in which sauerkraut or molasses has been stored can be cleaned by first scalding well with boiling water (letting the water stand in them till cold); then fill with cold water, and threw in a large quantity of live coals from a wood fire, leaving the cask uncovered. Another and better method is to rinse the barrels with a strong solution of oil of vitriol and water.

"A sneer is the apology for argument made by a man who does not understand."—G. H. Morrison.

"Mr. and Mrs. Acres Desire the Pleasure of Your Company-"

A Gillette enthusiast has boldly stated his belief that the famous razor has caused a complete revolution in social life in the rural districts today!

It is true, as he says, that one cannot now distinguish between the city man and his brother in the country.

But do not give *all* the credit to the Gillette Safety Razor.

Smooth chins assuredly do prompt correctness in other things, but it hardly seems possible that the smartness of the social gathering in present-day farm homes is due to a razor—even the best razor in the world.

You answer an invitation to call at a friend's house, and enter a softly-lighted room to find well dressed women and keen looking, clean shaven men.

How glad you are that you came prepared to hold your own in any company.

And how satisfying it is to know that if guests drop in on *you* unexpectedly, the daily few minutes with your Gillette finds you READY to receive them.

One thing is certain—a Gillette Safety Razor should be part of the equipment of every man of today.

Gillette Sets are sold by Jewelers, Druggists and Hardware Dealers everywhere at five dollars.

Gillette Safety Razor Co. of Canada, Limited,

Office and Factory: 65-73 St. Alexander St., Montreal.

LEMONS WHITEN AND BEAUTIFY THE SKIN

Make this beauty lotion cheaply for your face, neck, arms and hands.

At the cost of a small jar of ordinary cold cream one can prepare a full quarter pint of the most wonderful lemon skin softener and complexion beautifier, by squeezing the juice of two fresh lemons into a bottle containing three ounces of orchard white. Care should be taken to strain the juice through a fine cloth so no lemon pulp gets in, then this lotion will keep fresh for months. Every woman knows that lemon juice is used to bleach and remove such blemishes as freckles, sallowness and tan and is the ideal skin softener, whitener and beautifier.

Just try it! Get three ounces of orchard white at any drug store and two lemons from the grocer and make up a quarter pint of this sweetly fragrant lemon lotion and massage it daily into the face, neck, arms and hands. It is marvelous to smoothen rough, red hands.

CURIOUS FACTS ABOUT COLD.

Strange Effect Which Extreme Cold Has Upon the Human Body.

Cold presents many odd facts. In the first place, water made by melting snow is very unwholesome and causes painful inflammation of the throat, palate and tongue.

Intense cold causes a dulling of the senses, taste and smell becoming almost nil. The lack of these two senses seems, however, to be a very kind and wise provision of nature to enable the traveller in the cold regions to eat all kinds of oily, disagreeable foods like blubber and fat, which are necessary as heat producers. The effect of cold on the eyes is very dangerous. It causes them first gradually to close and then to freeze tight.

Beards do not freeze except where the moisture from the breath is converted into snow; but the color glands are rendered somewhat torpid by the cold, and dark beards gradually become lighter, until after a while they seem entirely changed in color.

Another curious fact about the cold of the Arctic regions is that when a person stops walking or working in any way whereby the feet get exercise, the sole of the foot loses all sense of feeling.

In all extremely cold lands, the moisture exhaled from the body condenses into small, hard crystals which make quite a bit of noise as one walks about.

To Utilize Old Tin Cans.

It is estimated that $3,000,000 worth of used tin cans are wasted every year in Canada. A company, called Can Conservers of Canada, Ltd., has been formed in Toronto to collect these, and cleanse, sterilize and re-top them for use again. It is understood that Mackenzie-Mann interests and J. P. Morgan & Co., of New York are interested in the undertaking.

Origin of Sandwich.

Sandwich takes its name from John Montague, fourth Earl of Sandwich, in 1792, who used to have slices of bread served to him while he was at the gaming table so that he need not stop playing. To go farther back, he derived his title from Sandwich, a town in Kent, England, the name of which was made up of the Anglo-Saxon words, sand and "wic," meaning town—sandy town.

There are many advantages to a single pitch roof on the poultry house. This type is most easily built. It gives the highest vertical front exposed to the sun's rays and throws all of the rain water to the rear.

An Uncanny Clock.

The most uncanny clock is in the possession of an Indian prince. It has no dial, only a round disk to which numerous little bells are attached. Its mere sight at every full hour is sufficient to strike an awe into nervous persons. For this uncanny clock indicates the hour by uniting, as if by magic hand, into a skeleton a number of bones heaped about it. The skeleton then seizes a bone and strikes with it at the bells as often as are hours to be indicated. This done, the skeleton falls again to pieces. The strange clock has, of course, many admirers. Thus, an English banker recently offered $5,000 for it, but the owner could not be induced to sell it.

Australia's Contribution.

Australia sent abroad 336,000 men of a population of 5,000,000. Of that number the total casualties were 290,191. The dead reached the remarkable figure of 54,431, while the prisoners numbered 3,401, and the wounded 156,000. The recruiting when the war ended was at the rate of 4,240 a month.

Minard's Liniment Co., Limited.

Gentlemen,—Last winter I received great benefit from the use of MINARD'S LINIMENT in a severe attack of LaGrippe, and I have frequently proved it to be very effective in cases of Inflammation.

Yours,
W. A. HUTCHINSON.

A very good use for worn-out blankets is to fold them double and put them in pretty sateen covers. Buttoned or machined, the covers keep in position and make excellent "eider-downs." Small covers for cots and bassinettes are readily made this way, and very warm cosy they are.

Minard's Liniment Cures Garget in Cows

Squash, turnip, carrot or potatoes will be much better if cooked in the oven. Add just a little water and cover tight in an earthen dish.

One of the most difficult tasks confronting well-meaning farmers is that of doing their share toward creating and maintaining rural conditions which will attract Canadian-born men and their families.

Minard's Liniment Cures Diphtheria.

A Quick Relief for Headache

A headache is frequently caused by badly digested food; the gases and acids resulting therefrom are absorbed by the blood which in turn irritates the nerves and causes painful symptoms called headache, neuralgia, rheumatism, etc. 15 to 30 drops of Mother Seigel's Syrup will correct faulty digestion and afford relief.

LOOKING INTO THE FUTURE

British Scientists Have Evolved Many New Materials.

Becoming economically independent of Germany, in the future, and to a lesser degree of other nations, is an incentive which has appealed to the best brains among the Allies. What has been accomplished by British scientists so far promises much for the future. Rare metals have been experimented with for use in both war and peace; chemicals which have become available make a long list. There is a new stainless steel, among other things, and the discoveries in glass-making places optical work well beyond German monopoly. Dyes re also out of Germany's control. Among the new materials which have been evolved is one made of resin that will soon appear in parasol handles, frames of lorgnettes, cigarette holders and numberless dainty accessories. It comes in finest clear amber color as well as in green and brown.

Herb growing holds a noticeable place in this research work and hygienic appliances for the caring of milk and the making of cheese show the importance which these will have in the future. Much of this work lies easily within women's sphere. Already she has shown herself to be an expert in optical work and nothing more delightful can be imagined for the woman gardener than herb growing. Everything pertaining to dairy work is legitimately in women's realm and if many of the flagrant shortcomings and omissions existing today are carried over into the new world of to-morrow it will be due quite as much to woman's neglect of her duty as to man's. Indeed, the day is already passed when women can rightly complain of many things which need improvement. The world of to-morrow will be a place where men and women will work together and where praise and blame will be shared equally.

An Unsinkable Spirit.

There was a submarine on the port bow. The captain and every member of the crew knew it. There was the usual nervous efficiency. Seamen who had been torpedoed before were assuring their comrades that they would all get off safely, hurrying while they spoke to get their life-belts adjusted.

One of the stewards, full of anxiety for his commander, rushed up to the captain and asked where his life-belt was.

"I wanted to buckle it onto you, sir," he said, excitedly.

"Mind your own business," retorted the Irish captain promptly, "and you help with the guns. I'm from Cork and I don't need any life-belt."

Minard's Liniment Cures Distemper.

Put tea leaves and all waste kitchen stuff on the fire after dinner. This will keep your coal bill down.

An onion sliced up and put in a basin of cold water will absorb the smell of new paint in a room.

Water the work horses often, but avoid letting them drink too much after being fed, or when over heated.

Minard's Liniment Cures Colds, Etc.

AutoStrop SAFETY RAZOR

for National Service

GEN. CURRIE has stated repeatedly that the morale of our troops is without equal.

He knows that this depends to the confidence and smart appearance.

The officers are responsible for discipline—the Autostrop for smart appearance.

The AutoStrop Safety Razor has been of National Service in keeping, with the aid of soap and water, the faces of many of our soldiers in a fresh, clean, comfortable condition.

Your soldier will appreciate more than anything else, an AutoStrop—the only razor that automatically sharpens its own blades, therefore, the only one that is permanently ready for service.

Price $5.00

At leading stores everywhere

We forward will deliver an AutoStrop Razor Overseas by first class registered mail.

AutoStrop Safety Razor Co., Limited

83-87 Duke St., Toronto, Ont.

For Autumn Days

When developed in broadcloth and trimmed with fur, this model is suitable for dressy wear. McCall Pattern No. 8668, Ladies' Coat Suit. In 7 sizes, 34 to 46 bust. Price, 25 cents.

These patterns may be obtained from your local McCall dealer, or from the McCall Co., 70 Bond St., Toronto, Dept. W.

Chinamen at the Front.

In France at the war's close there were about 50,000 Chinamen employed in road and railway making, machine repairing, and blacksmith and carpentry work for the allies. Their wages range from $9 a month for coolies to $6 a month for skilled fitters; board and lodging, clothes, light and fuel being found by the Government, which also conveys the workmen from and to China free, and gives a bonus in hard cash of $270 on embarkation, $75 in case of injury, and $150 in case of death.

Scatter coarse salt on the carpet before sweeping it. This helps to bring the colors up.

Put your brushes in salt and water to stand a while as this stiffens the bristles and makes them work like new.

Nervous People

who drink tea or coffee find substantial relief when they change to

POSTUM

This pure, wholesome table drink does not contain caffeine or any other harmful, nerve disturbing ingredient.

"There's a Reason"

KNOCKS OUT PAIN THE FIRST ROUND

Comforting relief from pain makes Sloan's the World's Liniment

This famous reliever of rheumatic aches, soreness, stiffness, painful sprains, neuralgic pains, and most other external twinges that humanity suffers from, enjoys its great sales because it practically never fails to bring speedy, comforting relief.

Always ready for use, it takes little to *penetrate without rubbing* and produce results. Clean, refreshing. Made in Canada. At all drug stores. A large bottle means economy.

Sloan's Liniment Kills Pain

30c., 60c., $1.20.

In the treatment of all skin troubles bathe freely with Cuticura Soap and hot water, dry gently, and apply Cuticura Ointment to the affected parts. These fragrant super-creamy emollients tend to prevent little skin troubles becoming serious if used for every-day toilet purposes.

For sample of each free by mail address post-card: Cuticura, Dept. N, Boston, U.S.A. Sold by dealers throughout the world.

AMERICAN PLAN

JOHN J. HERNAN, - Manager

The Paisley Advocate

PAISLEY, NOV. 27 h, 1918

—Prospects for a full supply of anthracite coal this winter are improving, according to published information. And President Wilson has given orders that the fuel administration of the U.S. give Canada its full allotment.

—Sir Chas. Ross, Bart., is claiming compensation to the tune of $18,897.-724.08 for the expropriation of the Ross rifle factory by the Government of Canada. Well, there should be at least eighteen millions of an allowance made for having the honor of a knighthood bestowed upon him.

—The presidents of the different farmers' clubs of Oxford County, at a meeting in Woodstock on Saturday, thoroughly discussed the question of providing land for returned soldiers, and a resolution was adopted to the effect that soldiers be given the opportunity of settling on land here in Old Ontario, instead of New Ontario, as at present proposed. Another resolution passed asked the adoption by the Ontario Government of a rural credit system, whereby the Government would lend money to purchasers of land to give them a start.

—The liquor interests are opening a new campaign in Canada, judging from the literature that is reported to be in circulation already, of which the following is a sample :

"A Fact

"During the last 30 days more deaths have occurred from the want of liquor than there did from the abuse of it in the last 30 years.

"The Remedy

"At the coming election defeat the Hearst Government. Place good Pooh pincher strokes opposite their opponents' names on your ballots.

"Equal rights for everybody. Will you do your bit ?"

Cards containing the foregoing information (?) and advice are being circulated in large numbers in Toronto, says the Mail and Empire. The author and publisher has omitted the addition of his name to the cards, but he seems to have been well supplied with funds, judging from the number circulated. The "fact" is, of course, a wild flight of the imagination, and the "remedy" a curious one in view of the genuine fact that long before the suffering ones got a chance to mark their ballots against the Hearst Government and in favor of the Liberal candidates they will have an opportunity, on a referendum, to vote the Ontario Temperance Act out of existence.

HIGHER PRICED COAL

Another conundrum is presented to the coal consumers. We were told that the war made the coal prices go up. Now, the war is over, and immediately the largest raise of the year takes place. There is no thought of crookedness, locally, but the public have a hunch that there is nothing but crookedness and speculation behind the many increases in coal costs. The present increase is made to safeguard the operators from loss, because of the war's closing. Some coal operators ought to get warmed up on some of their own products, for in the present case, the cost of labor has not increased, coal is just as plentiful, the demand for war purposes is lessened, transportation facilities are bettered, yet the price jumps up $1.05 per ton. And some of these capitalists wonder why people get revolutionary ideas.

The profiteering that has gone on since the war started, both in Canada and the United States, has been scandalous, and the governments of either country have made little attempt to stop the practices, and, least of all, the Canadian Government. A few stiff sentences were handed out in the United States, but the heads of the conspiracy were seldom entangled by the law.—Guelph Mercury.

A HOST OF CANADIAN SOLDIERS PREFER FARMING

Out of 220,000 of Canadian soldiers now overseas, who have been interviewed upon the subject, 105,000 have expressed the definite wish to take up Farming after the war. Ontario and Alberta seem to be the favorite provinces, as 25,400 wish to settle in the former and 23,072 in the latter. British Columbia and Saskatchewan are the choice of over 15,000 each.

As the Dominion Government is considering ways and means of providing all returned soldiers with land who desire it, and the provinces are also offering inducements, also county patriotic organizations are looking after the interests of their local returning men, there seems to be a fair prospect that all our boys who have done their bit in the trenches and return to our Dominion able to go on the land may have the opportunity of peacefully following the furrows for future years.

The scheme for soldier settlement that is being promoted by Bruce County Representative League is again set forth in a communication appearing in this issue of The Advocate from the committee in charge of the plan.

HUGH CLARK SUCCEEDS McCURDY IN CIVIL RE-ESTABLISHMENT

It is announced by Sir James Lougheed that Hon. Hugh Clark, M. P. for North Bruce, parliamentary secretary for the department of militia and defence, has taken over the duties of parliamentary secretary for the department of soldiers' civil re-establishment in succession to Hon. F. B. McCurdy.

—Head not a blusterer, but beware of a silent man.

—He that serves well need not be afraid to ask for his wages.

—The more powerful an obstacle the more glory we have in overcoming it.

TO CHECK CONTAGION.

"Do not cough or sneeze without a handkerchief before the face." Since the outbreak of influenza, how often have doctors, and others interested in public health, advised us of this, and yet how frequently is the warning disregarded?

The failure to obey this simple rule is probably responsible for the spread of much contagion. Take for example those in the early, unsuspected stages of consumption—a single, unguarded cough may release millions of deadly tubercle bacilli; to be breathed in by others around. Until recent years consumption was considered incurable, but we now know that it can be cured if taken in time. The Muskoka Free Hospital has proved this without a doubt, for thousands of its patients have been restored to health and lives of usefulness.

One ex-patient of that hospital writes as follows: "Just eight years ago this Christmas time I entered your Sanatorium. I was a very sad and discouraged girl that Christmas Eve, but I have been home over seven years, and I can hardly believe that I ever had T. B. I look back to the days I spent there, with great thanks to God and those faithful workers who understood our cases and needs, and ministered to us so faithfully."

To carry on this great work the Muskoka Free Hospital for Consumptives is again appealing for help. "There is much to do. Will you lend a hand?

Contributions may be sent to Sir William J. Gage, 84 Spadina avenue, Toronto, or to George A. Reid, Secretary-Treasurer, Gage Institute, 223 College street, Toronto.

—Entertainment, town hall, Paisley, Friday evening, Nov. 29th.

—Efficiency is so scarce that everybody is willing to pay the limit for it.

Letters from the Soldiers

FROM JOS. YOUNG

Mr. and Mrs. John C. Young, of River Road, Saugeen, received a letter from their son Joe, dated Oct. 27th, "I had quite a pleasant surprise yesterday," he says, "when walking around the village I bumped into—Hardy. He had just returned from seeing the interviewing officer of the Air Force, and if things go as he hopes, he will be in Blighty in a short time learning to fly. He has had 18 months or more out here. When on leave last March he was up in a machine and now he has made up his mind to try his hand at it. . . The old man with whom we are staying had word of one of his sons to-day. He is alive and well. The other one has not sent word yet. Poor old lad hadn't heard of them in four years, and when the word came in he broke down for a minute. Say, I felt glad. No wonder. He is 70 years of age, and alone except for a grandchild who stays with him at night. We don't get too much to eat, but between us we manage to give him one good meal a day. One will give him rice or pudding, while another gives up part of his bread, etc. This morning his breakfast, besides what we gave him, was hard unsweetened biscuit and cold spuds—not much nourishment for an old man and child. Things will be better now for them, though, as the French army is supplying them with some food. The Huns made them pay for food sent over from the States. I have seen with my own eyes empty cans of milk which were sent from the States and used by the German army. It has taken a great many lives to push him back so far on all fronts, but if it takes as many more he must be licked. I realize now how little I formerly understood the position of these poor people. This old man tells us he has seen thousands of corpses passing back to Belgium and Germany, and he claims they went to a factory. Barbarians could not imagine or carry out the hateful deeds that the Huns have practised in the course of the war.

PTE. ALEX BLUE AGAIN HEARD FROM

France, Oct. 30th, 1918

To the Paisley Women's Patriotic Society :

Dear Friends—Just a few lines in acknowledgement of your parcel received a few weeks ago. I should have answered it at the time, but was then busy. At present we are having a nice rest. The weather is fine, and our billets are cosy and comfortable, which we needed. I met Fred Blue, Kirke Hyde and Wallace Diehl a few days ago, and all three look well and seemed pleased with things. Jack Devine is in my battalion, and a good soldier he is, and likes it. Sam Tooke is well, and Robert Dobson is alright. Lieut. Babcock was wounded but by last reports is doing well. We are all looking forward to see the finish soon. When I can't say, but the time is close at hand. I don't think we will be home for Christmas this year. But you can rest assured, those who are left will be at home the following. I don't think there is a great deal more fighting to be done but if there is we have got the goods to produce. Will ring off, wishing you one and all a Merry Christmas and Happy New Year.

A. E. Blue, 18th Batt.

A FRENCH GIRL WRITES TO PAISLEY RED CROSS WORKER

Toulouse, France, Oct. 28, 1918

Dear Miss Dewar—From the hospital I send you this letter. I found your address in a pocket of a shirt. This shirt was given to a wounded Canadian soldier who is nursed here. At the same time you will receive a letter from him. He was very happy to receive your few words, and is going to write you shortly. My mother is in the hospital since the beginning of the war, and it is not the first time that we have received from Canada many shirts and other things which are welcomed. From time to time ladies of the Canadian Red Cross come to ask what we desire and after we receive the things that we asked them for. Many thanks, dear sisters of Canada, who thought of our soldiers before yours. It is four years ago that you did very much for us. But now in France we have the pleasure to know your brothers; we do our best to receive them well. We shall always be grateful for that which you do for us, your kindness and good-heartedness. One word only—we love Canada. I cannot write a long letter in English, neither tell you all that I could tell in French, because I do not speak or write your language correctly. To be nearer to you I take English lessons, and I begin to speak a little, just with the Canadian boy who writes to you. I hope with a little patience to arrive to speak correctly. I am looking for a Canadian correspondent who will write sometimes to me, but I have never yet found one. I shall be very happy if you will answer this. Now I have the pleasure of spending some time with the American ladies who are organizing all over France exhibitions for children how to nurse them, etc. They are now at Toulouse. I go every morning to help them. I do not understand always when they speak too quickly. That makes us laugh.

With my kind regards believe me,
Yours sincerely,
Jane Bonnefond,
48 Rue Alsace-Lorraine,
Toulouse,
Haute, Garonne, France

WIPING OUT THE COUNTRY SCHOOLS

Communities as Well as the Children Would Be Better Off with a New Central System

Many a rural community in Ontario would be money in pocket if its public schools were closed up, torn down and sold for the lumber and building material it contains.

But what of the children? Well, what of the children? What sort of education can three or four lonely little mortals get when they assemble in an echoing school room, and at recess gather in the school yard to wait the ringing of the bell, unable to have a ball game or play any competitive game; and when they come into the school again, unable to indulge in competitive study—by reason of their scanty numbers?

Drive to Neighboring School

And so it would be better for the community if the school were torn down and the few children driven each day to a neighboring school, where they would probably double the attendance, and would find school life more interesting.

The writer is informed that green girl graduates from the Toronto Normal School are being advised to demand salaries of $650 or $700. For much less than this transportation could be secured to a neighboring school.

An American Example

Eleven large schools were torn down in one district two years ago and replaced by one centralized school, covering an area nine miles wide and eighteen miles long. Eleven teachers were planting the seeds of knowledge into 160 little heads as best they could.

In 1918 these eleven schools were abandoned and the 160 children who had formerly attended them were transported in eleven autos to a beautiful $26,000 central school, possessing its own water system, sewer system, electric lighting system, a fine assembly room and most of the other necessities and conveniences usually found in all good schools.

In the new school twelve men and five women teach twelve grades, four of them teaching the eight lower grades, while the other three teach the high school grades.

Unfortunately this was in the United States. In Ontario we lag behind desperately. Our rural life and our nationhood suffers. When will we demand something better?—Goderich Signal.

—A faithful friend is the medicine of life.

—Money can buy all the friends you want, but they are never worth the price.

To Avoid and Relieve Influenza

BY DR. FRANKLIN DUANE.

Many people have been frightened by what they have read or heard of influenza. The more you fear the disease, the surer you are to get it. Go right about your business and forget it. As the disease is spread principally by contact thru sneezing, coughing or spitting, many health authorities have advised that everyone wear a gauze, which is daily washed and saturated with a one to five hundred solution of zinc sulphate in water, and then dried before wearing over the nose and mouth. You should avoid crowds, common drinking cups and public towels. Keep your strength up by taking lots of exercise in the open air and plenty of nourishing food.

If you have any of such symptoms as chilliness, nasal obstruction, flushed face, headache, feverishness, restlessness, weakness, or irritating cough, give up work at once and go to bed. This will save your strength to help overcome the disease. Put your feet in hot water for fifteen minutes. Thoroughly loosen the bowels with some such mild and non-irritating physic as Dr. Pierce's Pleasant Pellets. Drink principally of hot lemonade and flaxseed tea, cover up with plenty of clothes in bed so as to get a good sweat. When sweating is free and the fever reduced, take a dose or two of Anuric Tablets every four hours, followed by drinking at least a glass or two of hot water. Anuric Tablets help quickly to relieve the soreness of the muscles and bones from which most patients complain and help the kidneys flush out the poisons.

To relieve nasal obstructions and excessive discharge from the nose, probably nothing is better than such a mild, soothing, antiseptic wash as Dr. Sage's Catarrh Remedy. It will give great relief. Employed as a gargle, in some strength as made up for use in the nose, and as hot as can be borne, it quickly arrests soreness and dryness in the throat.

If coughs, weakness and fever follow influenza, so that there is danger of bronchitis and pneumonia developing. To combat this tendency and fortify the patient's strength insist that he keep in bed at least two days. Probably nothing will aid at this stage against the recovery and strengthen the patient more than an iron-tonic tablet called "Irontia" or that well known herbal tonic, Dr. Pierce's Golden Medical Discovery, which has been used by thousands in the past two generations.

Farms for the Returning Soldiers

Chesley, Nov. 16, 1918

Sir :—

The sub-committee appointed on the 20th of June last at Southampton by the Bruce Preparedness League to enquire into the question of soldier settlement, is now ready to submit its report, and the patriotic press of the County of Bruce is requested to publish this report for the information of the public. The report is as follows :

The Problem

To the Bruce Preparedness League :

Gentlemen—With the end of the war in sight the problem of how the County of Bruce can best deal with the returned soldier becomes more acute. It is estimated that over 300,000 soldiers will return to Canada to be absorbed into civilian life. Of these it is estimated that 100,000 will return to former occupations, leaving perhaps 200,000 for whom Canada is in honor bound to make some suitable provision. All that these men ask is that they shall be given an opportunity to make good. They will return with their nervous systems more or less shattered by the horrors and hardships through which they have passed. There will be amongst them the profound unrest that in all ages has characterized the returning soldier. Army discipline destroys individuality, and the men have to learn to think and recover their individuality, and this readjustment is difficult and sometimes dangerous.

The County of Bruce sent approximately 3000 soldiers to the front. Of these probably 1000 to 1500 will not go back to their old occupations for various reasons. What preparation is the County of Bruce making for the day soon to come when something must be done?

Prospective Plans

1. There is no doubt that vocational re-education of returned soldiers, who have been so disabled as to prevent them from resuming their former occupations, will provide for quite a number. It is a system of free instruction given under the direction of the Government of the Province of Ontario.

2. Public works carried on by the Federal and Provincial Governments and municipalities will offer an opportunity for others.

3. The Civil Service and the Department of Soldiers' Civil Re-establishment, preferential employment by corporations and manufacturing establishments will provide for others.

These are some of the plans which are now under way, but all outside the scope of any county organization. Another plan to which the county of Bruce may well devote itself is the settlement of the soldiers upon the land. It is to this plan that duty and honor summon us.

Why ?

1. **The returned soldier has asked for it.** The G.W.V.A. at a Dominion convention recently held in Toronto unanimously passed the following resolutions :—

1. "That the Great War Veterans Association of Canada in national convention assembled, petition the Government of Canada for the adoption of a land settlement scheme embodying these fundamental principles : (a) "That a cabinet minister be appointed whose sole duty shall be to evolve a scheme for the rehabilitation of the returned and returning soldier on the agricultural lands of the provinces of Canada in which the prospective settlers are domiciled.

(b) That areas of land be secured or acquired by the Dominion Government sufficient to meet the estimated requirements of soldier settlement of a quality suitable for successful farming within easy access of railway facilities, and that provision be made for easy and equitable selection of land by those who may return at a later date.

(c) "That the Dominion Government be requested to call a special committee meeting, at an early date, composed of representatives of the several provincial governments and the dominion government, to review the present legislation on soldier land settlement, with a view to drafting more equitable laws, and that representatives of the G.W.V.A. be present."

On the 26th of August last a committee of returned soldiers, composed of H. B. Fenton, 18th Batt., D. Kennedy, 5th Batt., and G. Reddon, 160th Batt., all of Bruce County, reported on a trip made through the township last summer. The report is lengthy and complete. Amongst other things the soldiers report favorably on Kapuskasing in the same district, the Ontario government's colony for discharged soldiers. They report that all the soldier settlers are satisfied with the progress made and enthusiastic about the scheme and working with good will. Of the township of Shackleton they report that it is heavily timbered and should supply needs of the settlement for fifty years. The ground is rolling, with natural drainage, and practically every acre suitable for agricultural purposes. It is most adapted for grain and grazing purposes, and all kinds of vegetables and small fruit can be grown successfully, while strawberries, raspberries, and blueberries grow in profusion. They conclude, 'our impression of the district and the township is indeed very favorable. It is the land of opportunity. To the man who is willing to put in reasonably hard work for a few years an independent future is in store.'

2. **The overseas soldier has asked for it.** In 1917 the Federal Government issued an inquiry to the overseas soldiers to ascertain their views on land settlement. The question was discussed by the 160th Batt. as one of the units interested. The result was a committee outlined a plan and appointed Major Moffat, on behalf of the battalion, to submit the plan to the Bruce Preparedness League and the County Council. Over 400 soldiers from the county of Bruce have applied in writing to join a Soldiers' Settlement when the plan has been properly completed.

3. **Soldiers' Settlements have an historical basis.** The settlement on land of returned soldiers is as old as the Assyrian Empire. Our ally, Roumania, had its origin in a settlement of Roman soldiers ; in Quebec several soldiers' settlements have been the wise and wonderful of the best that there is in the French Canadian life and character ; the county of Glengarry is famous in Ontario history because it traces its ancestry to a soldier settlement. The principal world powers of to-day are all busily engaged in formulating plans of settlement for returned soldiers. Great Britain has appropriated millions of pounds to provide 20 acres for each returned soldier, and has already set himself of the opportunity. Australia and New Zealand have also spent large sums of money for the same purpose. In America a nation-wide movement to provide farms for American soldiers on their return is in full swing. The Secretary of the Interior, Mr. Lane, proposes to reclaim for farm production all the unused farm lands in the United States. These lands run into millions of acres. The arid land in the west, the cut-over land in the north-west, lake states in the south, and the swamp lands of the middle west are to be reclaimed. Secretary Lane says : "My programme is that the nation should reclaim their own lands, build their own homes ; that it should not be a matter of bounties or charities, but simply an opportunity." He advocates establishing group settlements of young vigilis, who have had an opportunity of seeing the careful cultivation of European farms, and who will bring home a larger conception of their duties as citizens.

The Proposed Bruce Plan

The undersigned committee corresponded with the Federal Government and with the Provincial Governments west of and including Ontario, asking terms for the settlement on land by returned soldiers. By far the most generous proposition came from Ontario. The offer briefly is as follows :

1. To set apart for Bruce soldiers the **Township of Shackleton** and a **second township** if required.

2. To erect and equip in the township the necessary **camp buildings**, including sleep houses, dining room, blacksmith shop, carpenter shop, store room and laundry, and other buildings necessary, and allow the use of same free of charge. The Government will have these buildings **ready for occupation** by the 1st of May, 1919.

3. **To construct necessary roads** through the township. The Government will, next summer, employ returned soldiers to work in, paying them the highest wages, and to finding outside employment for them throughout the whole season and enabling them to maintain themselves and families.

4. **To provide free of charge experienced foremen** to supervise and direct bush work in the winter time.

5. There is $500,000 worth of merchantable timber in the township and in addition it is estimated there is $7,000,000 dollars worth of pulpwood.

6. To maintain at a convenient point in the colony a sufficient number of horses, wagons, sleighs and farm machinery for the use of the colony to be hired out, and ultimately the settlers can purchase these at cost.

7. To provide a **sawing machine for cutting firewood.**

8. To provide free of charge supervision of **farming operations by trained agriculturalists.**

9. To give each settler, at the expiration of five years, on the performance of settlement duties, a **free grant of a lot of about 160 acres.** This lot will be the individual property of the soldier and his individual effort, energy and enterprise will have free scope.

10. **To pay into the funds of the organization $200**
(a) When 10 acres are cleared.
(b) Made ready for cultivation.
(c) A habitable house not less than 16x20 ft. erected thereon.

11. Proportionate payments will be made on progress estimates. Each settler will be allowed $150 in labor and material toward building a house.

12. To advance to settlers **loans up to $300** under the settlers' Loan Act.

The above offer will mean an expenditure eventually of over $1500 for each soldier. The Provincial Government has now spent over $10000 in preliminary investigation and is earnestly solicitous to promote the welfare of the returned soldier by active co-operation with the County of Bruce in this pioneer land settlement. Other counties having heard of this movement, are now making enquiry of the provincial government with a view to similar action, and it is essential to the success of the plan that the county give active assistance to its promotion.

What the County is Asked to Do

1. **To finance each soldier to the extent of $50** to enable him to pay for transportation, which the Provincial Government has arranged with the Dominion Railway Board shall be one cent a mile, and to maintain him until he can avail himself of the money to be paid by the Government.

2. **A co-operative store will be opened** either by the Government or **by the soldiers themselves in the settlement, to furnish the soldiers with supplies.** The financial assistance of the county will be asked to assist in establishing this store.

3. A special act of the Legislature will be asked, incorporating settlers under the name of **"Bruce Soldiers' Settlement Limited."** Each soldier will have one share of $1 with a right to vote. **No shareholder will have more than one share nor more than one vote.** The directorate will have on its board ex-officio the Warden of the County of Bruce, the president of the Bruce Preparedness League, Sergt.-Major John Spicer, 160th Batt., Wiarton, Sergt. D. Kennedy, 54th Batt., Whitechurch, Pte. Jas. Leach, R. C. R., Walkerton.

Mr. Johns, himself an old Bruce boy, of the Provincial Secretary's Department, has kindly offered to the county the assistance of the law clerks expert in drafting legislation.

Applications

All applications will be carefully considered. There are **400 applications for admittance to the settlement.** Of 160 returned soldiers to Bruce County of which the committee has a record, 40 have applied and 20 are ready to go at once ; five of them have deposited money for that purpose. **The township would furnish homes for about 200 soldiers.** In addition to those who would be engaged in farm work there would be occupations similar to those found in the ordinary towns and villages in the rural parts of Ontario. These will, however, come only with the growth of the colony.

The Township of Shackleton

The township of Shackleton is in the District of Temiskaming on the Transcontinental Railway, a distance of 520 miles from Toronto and 45 miles west of Cochrane. There are two railway sidings in the township and two small settlements. There is a good station erected and telegraph office installed. There are through trains to Toronto, Winnipeg and Montreal daily. There are two small experimental stations, producing the finest quality of farm produce in the province. **The soil of the township is clay loam, absolutely free of stone, and wonderfully fertile.** In the clearings there is richer pasture than is known in old Ontario. The Ground Hog River three times as large as the Saugeen, runs through the township and is navigable for 20 miles ; there are four small lakes.

The pulpwood in the township furnishes the best opportunity to the settler to provide himself with ready cash. As it is worth 50c a cord in the stump, and $7 at the railway siding and can be cut in the winter up to the 15th of January. The township is only 12 miles from Metagami, a modern village with every modern convenience, and the site of the famous Metagami dam which has a 45,000 h. p. development. The pulp mill at Metagami, which cost over a million dollars, furnishes a convenient market for pulpwood. The mill ships five carloads of newsprint every day. In the township itself are two small mills each with a capacity of 10,000 feet a day.

Conclusion

The sub-committee hopes that the people of Bruce will carefully consider the outline set out here and awaken to an active interest in the problem of the returned soldier. Criticism which finds fault with a plan and offers no alternative is valueless and harmful ; intelligent criticism is welcome.

The Government has received the assurance of the county that Bruce will co-operate with the Provincial Government in carrying out this plan. The active sympathy and co-operation of the people of Bruce, with suggestions that may be helpful, are earnestly desired by the committee. The Hon. G. H. Ferguson has promised to go to Walkerton in January and address the League, the members of the County Council and the public generally, on the plan now actually under way, and on the resources of and remarkable development of New Ontario.

W. D. Cargill, Wm. McDonald, W. D. Bell, D. M. Jermyn, A. E. McNab, C. J. Mickle, Committee.

PAISLEY GARAGE

Ford and Maxwell Service Station

We carry a full line of Ford Parts and Repairs

We aim to give up-to-date service to all car owners. With our experience in city garages we are in a position to do work that we can guarantee as satisfactory. Motorists should call us up by either phone when they have trouble.

High Grade Oils, Gas and Accessories of all kinds.

ONTARIO'S BIG CROPS

Ensure Equal Crops Next Year by Attention to Seed Grain.

Large Profits From Live Stock Made When Stables Are Given Thorough Clean-up — Live Stock Thrive Better In Dry, Well-Ventilated Stables.

(Contributed by Ontario Department of Agriculture, Toronto.)

ONTARIO is fortunate this year in having a good supply of grain in almost all classes of crops. The more grain there is to select from, the better chance there is to get the very best seed for sowing in the spring. Too many farmers forget the seed supply for next year's crop until most of their grain is fed or sold.

If the best of this grain was set aside for seed at threshing time or taken from the grain bins before any of it was fed or sold, there would be less work of seed preparation in the spring and a foundation provided for better seed than is often sown.

Small, shrunken or broken seed has a feeding value nearly equal to that of large plump seed. The following results of seed selection experiments conducted at the Ontario Agricultural College at Guelph will show, however, that there is very great difference in the value of these for seed purposes :—

Selections.	Weight per Measured Bushel (lbs.).	Tons of Straw per Acre.	Bushels of Grain per Acre.
Oats—			
Large Plump Seed ...	42.2	1.9	82.0
Medium - sized Seed	32.2	1.8	54.1
Small Seed ...	31.8	1.8	46.6
Barley—			
Large Plump Seed	49.5	1.5	62.8
Small Plump Seed	48.8	1.5	56.4
Shrunken Seed	48.1	1.4	44.0
Broken Seed..	48.6	1.3	43.2
Spring Wheat—			
Large Plump Seed	59.1	1.4	31.7
Small Plump Seed	58.3	1.3	28.0
Shrunken Seed	58.9	1.3	16.7

(Oats were tested seven years, barley six, and spring wheat eight.)

Selecting the best seed from that which the farmer has available will not only provide large plump seed for sowing which will produce the most vigorous plants and the largest yield of best quality, but it will very largely eliminate any weed seeds which may be in the grain. — Dr. C. A. Zavitz, Ontario Agricultural College, Guelph.

Clean, Dry and Ventilate Stables.

Cleanliness, dryness and good ventilation are hygienic conditions very desirable in the housing of all kinds of live stock. Horses, cattle, sheep, hogs and poultry all do better and are less liable to contract infectious and contagious diseases when kept under such conditions than when dirt, dampness and poor ventilation are found in the stables in which they are housed. Undoubtedly, outbreaks of infectious and contagious diseases do occasionally occur in the best built and kept stables, but the danger of these spreading is much less than where unhygienic conditions prevail.

Without doubt good stock has been produced under stable conditions that were not of the best, but the chances of producing and maintaining good healthy stock are much greater where cleanliness, dryness and good ventilation in the stables are the order of the day.

Dirt of all kinds, whilst it does not itself produce disease, is liable to harbor and foster the bacteria or other germs that do cause infectious disease, hence, so long as it is lying around inside the stables it is a source of danger to the stock.

If there is one class of stable more than another in which cleanliness is desirable it is the dairy stable. Milk is an ideal food for many varieties of bacteria as well as for human beings or live stock, and many varieties of bacteria are always present in stable dirt. Consequently, when dirt or stable dust gets into milk, many contaminating bacteria get in with it. It is the action of these bacteria in the milk that causes it to spoil either by souring or putrefaction. Consequently, one step in the production of good clean milk is to have it produced where there is little danger of dirt or dust getting into it.

Dampness is a great agent in the spreading and fostering of disease. Perhaps the one disease that it is most liable to induce is pneumonia. Many hogs are lost annually as a result of contracting pneumonia through being kept in low-lying, damp quarters. Dampness due to bad ventilation is very conducive to the development of various lung troubles with all kinds of stock. The damp stagnant air in badly-ventilated stables lowers the vitality, depresses the blood circulation and so puts the animals kept under these conditions in such a state as to make them ready subjects for the development of such diseases as influenza, pneumonia, tuberculosis and others.—Prof. D. H. Jones, Ontario Agricultural College, Guelph.

Binder for Stone Road.

If a broken-stone road gets very heavy auto traffic then it must be laid with a tar or asphalt binder to keep the pieces of stone from grinding on each other and finally powdering up under traffic.

Time to Use Road Drag.

If the roadway is full of holes or badly rutted the drag should be used under the road is soft and muddy.

SCHOOL CHILDREN'S WAR FUND

The school children throughout the Province of Ontario each year in connection with their school fairs endeavor to raise money for their own war fund. During the past three years enough money has been raised in that manner to purchase ambulances. One of these is doing duty in France and two others are assisting the returned soldiers in Toronto.

In 1917 the boys and girls taking part in the school fairs in Bruce County with the assistance of the people in attendance raised $300 out of a total of $3,235, standing first in the province. The following is a report for 1918 :

School Fair Patriotic Money, 1918

Sale of buttons.....	$110 36

Children Cry
FOR FLETCHER'S
CASTORIA

WALKERTON'S OLDEST RESIDENT PASSED AWAY

Mr. John Klein died on Nov. 9th in the Bruce county hospital, at the age of 93 years. Born in Alsace on October 13th, 1825, he emigrated at the age of eight years with his parents to Ontario. After a short stay at Short Hills, near St. Catherines the family moved to New Germany, Waterloo County. The young man assisted his father in the difficult work of a pioneer in the wilderness and at the same time studied at home and took lessons from the parish priest, until he was able to qualify as public school teacher. He taught first in Rummelhart, and in the early fifties, the old red school house near the Mennonite church at Berlin. During this time he was a member of the first council of Berlin. Later he kept the Franklin hotel and conducted a general store.

In 1850 he married Ludvika Lang, a sister of the late Reinhold Lang, founder of the Lang Tanning Co. and in 1858 the family moved on a 200 acre farm near Kincardine. In the winter he taught school at Zurich, in 1860 at Baden, and in 1865 he assumed charge of the school at Wellesley for six years. In 1867 he moved to Carrick and took charge of Bleman's school, and in 1868 of Neustadt school.

In 1870 the Glocke was founded at Walkerton by the deceased. In 1875 he sold out to Ely & Bittinger, and established the "Wochentliche Saugeen" at Neustadt. In 1882 this printing office and the family home were destroyed by fire, and owing to the failure of the insurance company no insurance could be collected. In 1883 he moved to Walkerton and established a business as conveyancer and insurance agent. He was appointed notary public and commissioner for taking affidavits. In addition he acted as Government examiner for teachers, as well as returning officer in 1892 and 1896. His wife died in 1903, and the following children survive : Judge Klein and Barrister O. E. Klein, Walkerton ; Isidore and Edmund, in New York ; Theodore, in Cleveland ; Oscar, in Milwaukee ; and Miss Isabella, at present a patient in the Walkerton hospital.

The deceased was a Reformer in his early days and an active friend of McGee, Foley and Blake. In 1870 he supported Sir John A. MacDonald and after that he remained a Conservative. He was a loyal subject of the British Crown and supporter of the Allied cause. May he rest in peace.

The funeral was held from the residence of his son, Mr. O. E. Klein, on Tuesday morning at service at the R. C. church being conducted by Rev. Father Cummings. The pall-bearers were four sons, Judge A. B. Klein, O. E. Klein, Isadore and Oscar, and two grandsons, Jack of Fort Williams and Herbert of Bridgeport, Ont. Hi sons, Theodore and Edmund, were unable to be present owing to sickness.

Earn from $16 to $25 a week. Learn without leaving your home. RITAL COLLEGE OF SCIENCE, 708 Yonge St., Toronto, Can.

Ingram's Milkweed Cream

Two Sizes—50c and $1

No ordinary emollient can compare with Ingram's Milkweed Cream. For it is therapeutic and curative in effect as well as softening and cleansing. Used daily it keeps the complexion free of blemish, tones up the delicate tissues, and holds the youthful color and freshness all women want to retain. There is no substitute, so "just as good."

Ingram's Velvola Souveraine Face Powder (50c.) is a delicate fine-textured powder that blends and harmonizes with the complexion. It conceals little defects in the complexion, banishes oiliness and shine and yet can scarcely be detected. There is a complete line of Ingram's toilet products, including Zodenia for the teeth (25c.) at your drug store.

A Picture
With Each Purchase

Each time you buy a package of Ingram's Toilet aids or Perfume your druggist will give you, without charge, a large portrait of world-famed motion picture actress. Each time you get a different portrait so you make a collection for your home. Ask your druggist.

F. F. Ingram Co., Windsor, Ont.

machine gun for miles around seemed to be loosing off.

I whisked off my respirator, taking a deep breath as I did so, and took a gentle sniff. The smell that tickled my nostrils was the smell of fruity Stilton cheese, the odor, in which I seemed to have lived for years. The wind had changed, and seemed to be blowing that ghastly scent straight down the trench.

I found the sentry who had given the alarm. He was posted on the extreme right in a fire-bay that jetted out from our line close to a stretch of abandoned trench. He said he had just come on duty when he smelt gas, and promptly gave the alarm.

I knew at once what had happened. Clarence's cheese was with us again. There was no smell of gas in the air, and no sign of a gas-cloud in No Man's Land. But the alarm had been given, and the whole corps' front seemed to have been roused. Our artillery was banging away, and the Hun was retaliating by putting down a barrage behind our front line.

The atmosphere was so impregnated with the odor of the cheese that it had some difficulty in getting the men to take off their masks. Things were quietening down when the C.O., accompanied by the adjutant and the doctor, arrived. As the early-morning zephyrs wafted to them the all-pervading odor of Stilton, the doctor gave a gasp.

"Good Lord!" he cried. "Clarence's cheese!"

Then he explained. The cheese had not been buried but merely camouflaged beneath a bush behind the mess. Here the doctor had found it, and, recognizing Clarence's property—for the fame of the cheese had spread afar—determined to go up to the line and restore it to its owner, for he did not know that Clarence was on leave. On the way up the doctor lost his way, and finally wandered into the abandoned trench on the right of our line, where, overcome by the heat and the melting fragrance of his burden, he deposited the cheese in disgust. With the assistance of the varying wind the Stilton had thus outflanked our trench from the right, and successfully alarmed the entire corps' front.

That morning the R. F. sent up a party, and exploded Clarence's cheese with a charge of ammonal. Clarence has been transferred to the Royal Air Force.

OUR UNSTABLE EARTH

Effect Produced by the Swinging Around of Its Axis.

It is explained by science that the axis of the earth is not fixed in position, but swings around in such a way as to cause the North Pole itself to revolve once in fourteen months around a circle ten yards in diameter.

It is evident, according to some authorities, that such a wabbling of the earth's axis of rotation, small as it may be, must produce some effect upon the level of the ocean at its shores, and examination of the records which have been kept for many years of the height of the tide in the canal at Holland, has been made for the purpose of determining whether such an effect could be perceived. The examination shows that the average level of the water had varied with great regularity, in a recurring period of fourteen months, ever since the records of the tide were begun in 1851.

The inference is that this regular change of level must be due to the swinging of the axis of the earth. The amount by which the level changes, a little less than five-eighths of an inch, also corresponds to the calculated change that should result from the supposed cause.

Acurious result of the slow changes of level proceeding at various points of the earth's surface has been pointed out by a member of the Geographical Society of Canada. This is a gradual tipping up of the shores of Hudson Bay, as if some gigantic power were engaged in an attempt to empty that great basin of water into the adjoining sea.

One of the earliest indications of what was going on came to the attention of the officers of the Hudson's Bay Company when they found that the water at the mouth of the rivers where their posts are stationed was gradually getting shallower and navigation consequently becoming more difficult. Examination showed that the shore was lined with old beaches of sand and gravel lying as high as fifty feet more above the present level of the bay.

When Hudson in 1610 discovered the great body of water that bears his name he wintered with his ships on the east coast of the bay in a harbor that has now disappeared, or, at least, has been so far cleaned out no longer to be recognizable from his description.

What He Wondered.

Little Frederick went with an aunt through the cemetery. Upon his return home he went to his father and said: "Father, I went for a walk with auntie through the cemetery to-day, and we read the inscriptions on the tomb-stones." "And what were your thoughts, my son, after you had done so?" asked the father. "Well, father," replied the child, seriously, "I wondered where all the wicked people were buried."

A good citizen is known by the fowl he eats.

I have tried painting buildings almost every time of the year, and it is my opinion that late fall is best. Too warm, the oil dries out before it has time to strike well into the wood. Too late, cold weather freezes it. When it dries slowly and surely it stays. After finishing a job of painting do not waste what is left. Pour on half an inch of linseed-oil, place in the cellar and it will keep a long time.—V.

Do Not Worry If You Cannot Get Sugar

You do not have to forego sweet things because of the present shortage of sugar. Corn Syrup is available, and for years has been available, as a perfect alternative for sugar for cooking, in puddings and preserves, in the making of desserts, and on cereals.

People didn't recognize this fact while sugar was cheap and plentiful. Now they are hailing the discovery with delighted surprise.

Buy Crown Brand or Lily White Corn Syrup from your grocer. They are wholesome, delicious and nourishing—true products of the Corn—and, you will soon find, most economical, too.

CROWN BRAND
AND
LILY WHITE
CORN SYRUP

And the use of Corn Syrup instead of Sugar is a War Service to-day! The carrying of raw sugar on the ocean has meant a huge loss of life and tonnage. It takes ships that are sorely needed to carry troops and supplies.

Corn is grown on this continent and the syrup is manufactured right here in Canada.

Write to the Canada Food Board, Ottawa, for a booklet of recipes in which Corn Syrup takes the place of Sugar. The authorities heartily approve of this movement to conserve Sugar.

Sold by grocers everywhere in 2, 5, 10 and 20 lb. tins.

About the House

WHAT MAY I SERVE?

Food Board Answers the Question That Arises Every Day Where Women Foregather at Patriotic Teas and Entertainments.

Do the food laws for public eating-places govern patriotic teas and all entertainments where refreshments are served?

Yes. They apply to all public entertainments, lawn socials, bazaars, tea meetings; public luncheons, dinners, picnics, fairs, club and fraternal societies' meetings; private and semi-private luncheons, dinners, parties and picnics where food is served to fifteen or more people other than members of the family.

Is a license required before food can be served at any of these gatherings?

No.

Is the Food Board opposed to the serving of *refreshments* at patriotic entertainments?

The Food Board lays down no hard and fast rules on the subject, but believe in every woman exercising common sense and good judgment in this matter.

Can sandwiches be served at all?

Yes, any time except between 11.30 a.m. and 2.30 p.m.

What can be served in place of sandwiches?

As it is only in the middle of the day that they are taboo there should be no difficulty on this score. Cold chicken, fish or meat breads, give plenty of variety and adequately fill the bill.

May bread be served as a garnish?

Only with poached eggs.

Can white bread be served without a substitute being put on the table as well?

No. Substitutes must always accompany white bread when served at any kind of public function.

Where can recipes be secured for the use of substitutes?

Write to the Food Board for its bread-making booklet, enclosing five cents for same. Clip the papers for recipes.

How much butter may each guest have?

Half an ounce is the allowance, although an additional half-ounce may be given if asked for.

What are the meat restrictions?

Beef and veal may only be served at the evening meal on Sunday, Monday, Tuesday, Thursday and Saturday. Only one helping is allowed to each guest.

When can bacon be served?

Any time. The pork restrictions have been removed.

What about sugar?

Here a hostess has to step warily. No sugar bowls must be in evidence. One level teaspoon or two small cubes are allowed for beverages, and a similar amount for fruit or other dessert.

Should sugar be served unless asked for?

No. If not used it is apt to get moist in the saucer and go to waste.

What sort of cake may be served?

The plainest possible with a 20% proportion of substitutes and no sugar icing.

Can cake be iced at all?

Yes, provided no cane sugar is used. The confectioners make maple icing now.

Are there any substitutes for sugar that may be used in making cake?

Yes. Write to the Food Board for its glucose and white corn syrup leaflet, which contains recipes for cakes and puddings, showing how to use these products as sugar substitutes.

Is it legal to serve ice cream?

Yes, but if made at home, care must be taken to see that no more than 10 per cent. of fats is used in the preparation, and no more than five and a half pounds of sugar to eight gallons of ice cream.

What about wedding refreshments?

The simpler the better. The days of the "bending board" have gone out of fashion. The hostess shows her good sense at a time like this in vying with her friends in the attainment of the simple, rather than the elaborate in the fare she provides.

HEBREW UNIVERSITY

Establishment at Jerusalem Will Have 12 Foundations.

The foundation stones of the Hebrew University at Jerusalem, recently laid in the presence of Gen. Allenby, and representatives of the French and Italian detachments, are twelve in number, one for each of the twelve tribes of Israel.

The site of the university is on the summit of the Mount of Olives, facing Jerusalem on the one side, and the Hills of Moab on the other.

The Portuguese language is used by about 20,000,000 persons.

FOOD BOARD ESTABLISHES NEW PACIFIC INDUSTRY

Steam Trawlers Operate Off the British Columbian Coast—Monthly Average is 400,000 Pounds of Flatfish.

Twenty car-loads of frozen Pacific flat-fish recently left a British Columbia fishing port to supply the demand on Canada's National Fish Day —October 31st. This shipment went to Calgary, Edmonton, Saskatoon, Regina, Moose Jaw, Winnipeg, and as far east as Toronto and Montreal.

A year ago, Pacific flat-fish were practically unknown in the Canadian markets. To-day, it is one of the staple lines of food fish in ever increasing demand, and bids fair to become as popular as salmon and halibut.

The Pacific Coast has long been famous for salmon and halibut, and the efforts of British Columbia fishermen has mainly been directed to the catching and marketing of these two species. The ready market for these fish on this continent has resulted in depletion, and for the past three years both fish have climbed into the luxurious class. Halibut, once to be plentiful within a few hours' steaming from Vancouver or Prince Rupert, is now caught up in the Gulf of Alaska—the nearby grounds having been cleaned up—and each year sees the fishing vessels proceeding further afield to get them. In former years, trips of halibut could be got in small sail and motor craft within a few days. Nowadays, only large steamers with ample bunkers and oil tanks and capable of a lengthy steaming radius can get them, while their voyage may run from two weeks to a month

Depleted the Halibut Stocks.

In 1917 the fishing interests on the Pacific Coast were awakening to the fact that the halibut fishery was showing signs of depletion, and the day was fast approaching when halibut fishing would be no longer possible or profitable. Just when they were casting about for means of future employment of plants, vessels and men, the Canada Food Board was looking for supplies of cheap sea fish for the citizens of the Western Provinces.

It so happened that the Food Board's Chairman, Mr. H. B. Thomson, had just completed a session as a member of a Pacific Fisheries Commission, and he had secured a wealth of information as to the unutilised fish of the Pacific Coast. These were the flat-fishes—brills, soles, plaice and witches—and certain cods —rod cod, grey cod and ling cod. All of these species were to be found in Pacific waters in enormous quantities, but no fishery existed for them, and it was impossible to catch flat-fish by hook and line.

Novel Experiment.

After studying the problem and making investigations into the most economical methods of catching and marketing these fish, Mr. Thomson enlisted the aid of Mr. John P. Babcock, Assistant Commissioner of Fisheries for British Columbia. Through him the Canadian Fish and Cold Storage Company, Limited, of Prince Rupert, B.C., were induced to fit out one of their halibut steamers as a trawler to engage in the fishery for flat-fish and cods. Arrangements were made with the fishermen to bring the fish in at a set price. The profits of wholesalers and retailers were limited to a reasonable amount, and the Department of Fisheries further aided the scheme by bearing two-thirds of the transportation charges to all points west of the Manitoba boundary. The trawler "James Carruthers" commenced operations in March, 1918, and has been landing a monthly average of 400,000 pounds of flat-fish and cod over sides.

Later in the summer, the Canadian Fishing Company, Limited, of Vancouver, B.C., fitted out the halibut steamer "Imbricaria" with trawling gear, and this vessel is now landing capacity catches for the Canadian market.

These two vessels are revolutionizing the Pacific fisheries. A new industry is being rapidly built up to take the place of the declining halibut fishery, and the famous European method of steam trawling is being successfully applied to the Pacific.

Steam Trawling.

Trawling is the most modern method of fishing. The vessels employed are powerfully designed steel steamers of about 125 feet long, and capable of steaming at 10 knots per hour. Arriving on the fishing grounds where flat-fish and cods are known to abound, they lower away a huge poke-shaped net with a mouth about 100 feet wide. This is dragged over the sea bottom by means of steel wire warps made fast to the trawl winch on the fore-deck of the vessel. In its passage over the bottom, the fish are swept into the maw of the net, and after an hour's dragging, the net is hauled up to the surface by means of the warps and the trawl winch. The fish slide into the apex of the net, and the whole is lifted aboard the vessel. The draw-rope closing the apex is pulled and the fish are discharged into the pens on the trawler's decks.

Experienced fishermen sort, gut and clean the fish and they are stowed away upon crushed ice in the fish-rooms below. After forty to sixty hours' continuous fishing without cessation, the trawler steams to port, and the fish are landed, cleaned, graded, frozen, glazed and packed in 50-lb., 100-lb. and 200-lb. boxes for shipment to market in express refrigerator cars.

Food Board Propaganda.

The Food Board, having arranged for the supply, set to work to create a demand. They had a good product to advertise, but the unaccountable prejudice against eating any other fish but halibut and salmon had to be overcome. The Board determined to show Canadians how these fish were caught; how they were marketed, and their food value. Capt. F. W. Wallace, of the Food Board's Fish Section, took the work in hand and made two voyages on a trawler, accompanied by an expert motion picture camera man, and a film was prepared, which was later circulated throughout the West. Recipes, showing how to cook flat-fish and cods, were embodied in the Board's Fish Recipe Book, and the press was supplied with data regarding them. The fish trade loyally got behind the movement and pushed the sale.

To-day, seven months since the first trawler was fitted out, the Pacific flat-fish and Pacific cods are prime favorites with the public. An excellent sea fish has been given to the public at a cheap price, and so popular have they become that Toronto and Montreal dealers are now importing them by the car-load. The successful establishment of this fishery is but an indication of what can be done in other lines.

Our dissatisfaction with any other solution is the glazing evidence of immortality.—Emerson.

Feed well now if you expect to get eggs next winter when they will be scarce and the price high. Invest now by feeding.

If your chimney is defective it is likely to set your house afire. Better give the chimney a careful inspection. Insurance companies find that about ten per cent. of the chimneys they inspect are unsafe. Unsafe chimneys are frequently imperfect just beneath the roof. This is caused by water following down the bricks and making them soft. Not infrequently a part of a brick is entirely dissolved and gone. Then when the chimney is very hot, or is burning out, or some inflammable substance is put into one of the stoves, a spark passes out of this hole and starts a blaze in the dry shingles.

SELF-GOVERNMENT FOR INDIA

BRITAIN TO GIVE FRANCHISE TO 230,000,000 VOTERS

Tremendous Experiment by Which a Vast Population is to Receive a Voice in Making Own Laws.

The most interesting and the most important experiment in self-government the world has seen is about to be undertaken in India. After years of thought, years of discussion, Britain has evolved a system by which hundreds of millions of the subject races in the great Asian empire will be permitted a voice in the management of their affairs. The program of reforms is completed and awaits only the approval of the Parliament, which probably will be given to it in the session soon to begin.

Students of politics will watch with some concern and much real interest the development of an electoral theory among a body of 230,000,000 persons to whom the franchise is a new and strange right and among whom 328,000,000 are declared by Indian authorities to be not only indifferent, to but in total ignorance of all governmental machinery. It certainly is an experiment to stir the imagination and it effectually dwarfs all the efforts of the U. S. to qualify the inhabitants of the Philippines for the measure of self government they enjoy.

Provisions of Home Rule Law.

The scope of the home rule measure prepared by Mr. Edwin S. Montagu, Secretary for India, and Lord Chelmsford, Viceroy and Governor General, after consultation with eminent men both in England and India includes briefly the following:

Provincial legislatures to be composed of representatives elected directly by the people.

A viceregal legislative body for all India, to be composed of two chambers, the Legislative Assembly of India and the Council of State. Two-thirds of the lower house, comprising one hundred members, are to be elected, and twenty-one out of fifty of the upper house.

The Indian Privy Council, members of which are to be appointed by the King-Emperor.

A Council of Princes.

Ten years after the establishment of the system a general survey of political conditions in the Empire is to be taken and on the showing made in it further reforms or the extension of the self-governing principles will be decided. After the first decade re-surveys are to be made at twelve year periods for the same purpose. By this means the Imperial authorities will be able to gauge accurately the growth of education, the increase of interest in empire affairs and the capacity of the body politic to assume more and more the burdens of government.

Difficulties in the Way.

In the minds of many students of Indian affairs Britain has been precipitate in her action and has failed to weigh carefully enough all the conditions that certainly will complicate the work of establishing even this modified form of home rule. Among the points brought out as having strong bearing on the success of the program may be mentioned these:

The seemingly irreconcilable antagonism that exists between the religions, race prejudices and the life habits of the different peoples of India.

The natural impossibility of applying the principles of western constitutionalism to a country which does not and cannot possess an alternative executive.

The imperial obligations to the native States, and the fact that these States are increasing in population at a rate so much greater than that of British India that the relations between the two necessarily will be altered in the near future. (Between 1872 and 1911 the native States have increased by 23.3 per cent. and British India by only 30 per cent.).

The big problem of caste.

The inability to obtain even approximately representative opinion of any but small sections of the population, and none at all from that part of the population which has expressed no desire for, and apparently has no interest in, popular government; a section which in the event of internal trouble would far outnumber the constitutionalists.

The last consideration to be referred to here is the argument of failure which has followed the attempted introduction of Western methods of representative government in similarly composed Eastern peoples.

On the other hand, it is an experiment to which Britain has committed herself in all her dominions, and which never has ended in disappointment. Through all her recent history there has been a clearly determined goal in her administration of the affairs of subject peoples—that of gradually educating them to become qualified for a large measure of self-government. This has taken the form of the establishment of schools, the encouragement of native students to attend the English universities, the introduction of all the most modern sanitary and hygienic thought and a general raising of the native moral and physical plane of living.

Certainly it never has been a question of the road to be followed in the relations between the imperial government and the people; rather it has been a question of the pace to be set in arriving at a state of home rule. Has the pace that is affecting the people of India now been too swift? is the question all students of the situation will be eager to see decided. And it cannot be decided without actual experience in the workings of the reforms.

The loyal, whole-hearted support given to Great Britain in the war by the peoples of India has had much influence on the London government in its determination to place the nation on a modified home rule basis. Aside from the Mohmands, up on the northwestern frontier, among whom fighting is the popular pastime, the races making up the state were almost unanimous in their support of the war. In the earlier days of the conflict German propaganda, originating in Persia and in the United States caused some unrest and compelled the retention of large bodies of troops in the hills provinces especially, but the effect was not long lasting, and aside from the Mohmands, who required the attention of some units of white soldiers, the internal situation in all India may be regarded to-day as excellent.

Augurs Well for Future.

The war has served to draw India and the British Empire closer together. It has made Britain understand India better and it has made hundreds of the educated men of the Indian races who in other days were dangerous agitators against the imperial relationship, understand Britain better. Were it not for this change in the hearts and minds of the two peoples the big step that is being taken in the readjustment of India's political life would be looked upon with much less confidence. As it is, however, there is a fresher sympathy, a more ready inclination to exchange opinion, a more hearty spirit of co-operation, that augurs well for the future.

In the extension of autonomy Britain has wisely kept a strong guiding hand on the governmental machinery. While the provincial affairs will be settled largely by the people themselves through their elected representatives, the Governor as agent of the Crown will have a voice with which to speak when the occasion requires. In the larger field of empire affairs it will be recalled that the elective votes in the viceregal body will comprise a constitutional minority. The majority against them in a joint vote will be 82. It is scarcely possible, in the circumstances, for measures inimical to the welfare of the empire to obtain passage when originated among the native members. Yet with the provisions of a resurvey of conditions at the end of ten years, we have the machinery for transferring a greater weight of responsibility to the native representatives should their development warrant the action.

Prussians Really Huns.

The appellation of Huns, which the former Kaiser coveted and had himself applied to Prussians, even to the extent of naming one of his sons for the infamous Attila, the Hunnish "Scourge of God," seems really to belong to that people in an ethnological sense. Mr. Lawrence, in his "Studies in Prussian History," tells us that the Prussians are "a people belonging to the Lithuanian race mixed with Finnish elements; which would make them kindred with the Huns, Turks and Bulgars. They were of old colonized, Christianised and ousted from their old domain by the famous Knights of the Teutonic Order. The last Grand Master of that Order, Albert of Brandenburg, espoused the Reformation, secularized the domains of the order, and made himself hereditary Duke of Prussia—that is, Po-Russia, or "Near Russia." It is interesting to recall that the first Hohenzollern Duke of Prussia began his historical career as a renegade, a perjurer and a traitor. Truly the Hohenzollern line has been what cattle breeders call "constant to the type!"

THE WEEKLY SERMON

Preach the word; be instant in season, out of season; reprove, rebuke, exhort with all long suffering and doctrine.—II. Timothy, iv., 2.

The war has taught us many lessons. It has awakened the thought of the world and is leading to a new seriousness on the part of many reflecting persons.

One of the great lessons we should learn is the necessity for a more vital religion in our lives and in the life of the nation. Germany has counted herself a Christian nation, but the war proves that the religion "made in Germany" was not the real thing. We have wondered how any nation that pretended to be Christian could sink so quickly into barbarism and utter indifference to all moral obligations, national and international.

The reason is that the Christianity of Germany was not real and vital. It was only formal and did not grip the hearts and change the lives of men. Germany's "God" was the Almighty-the-Goal-of-Fierce-and-Power, and not the God of mercy, meekness, compassion, love. You saw this in all the Kaiser's speeches and messages. It was always the "Almighty God" he mentioned, and never the Christ.

The religion of Germany was the "kultur" of the mind, and not the changing of the life into Christlikeness. We learn that "kultur" without Christ is valueless to prevent war or barbarism or ruin.

The second is like unto it—the power of strong religious education to lead man and nations astray and the power of right religious instruction to mould the character of men and nations.

All the schools and churches of Germany were under government control during the Imperial regime. The salaries of preachers and teachers were paid by the government, consequently the government was able to dictate the teaching it desired in school and church. And that teaching, as we have seen, has been "kultur" and not Christianity.

This teaching has permeated and possessed Germany. It is this teaching that has regraded Germany and made such a wicked and wasteful war possible.

We see by contrast very clearly the importance of teaching a vital truth in church and school. Wrong teaching, error of any kind will lead an individual or a nation astray. Truth only will lead to God. That is the second great lesson we learn from the world war.

Then, thirdly, we note the result to this nation of these two lessons learned. These two lessons learned should have a marked influence on the future of our nation. If we are to live and grow and really and truly become a Christian nation for righteousness and peace in the world we must have a vital religion in our lives and in the national life.

Church and State are separate here. The State is responsible for what we call secular teaching, but the responsibility of religious instruction rests with the Church. Great, then, is the function and great the opportunity and responsibility of the Church. The opportunity for religious teaching of the children of the nation as well as of the Church rests very largely upon the Sunday school. At the present time many of the children of the nation are not in our Sunday schools, and hence are growing up without any vital religious instruction.

These children form the chief danger and menace to our country, for the Sunday school is about the only chance the nation has to teach the children. This makes the work of the Sunday school one of national importance, one in which every patriot, every lover of his country, should be interested and, if possible, engaged, for it is the place of greatest importance in the future of our country.

If we are to escape the fate of Germany we must teach the truth of God to the children of God the nation over. This will not be an easy task, but it must be done. The future of our nation depends upon it, and we who love our nation must do our full part in this great task.—Rev. Daniel H. Overton.

The Princess Who Could Not Dance.

(Continued from last week.)

Then, sweethearts, the fairy kissed Dianidra and flew up, up, out of sight. And I might tell you that the fairy's name was Happiness, if you have not already guessed it.

Something about the fairy kiss kept the Princess laughing softly all the way along between the tall trees till she came to the gray stone. She peeped round it curiously and there, sure enough, was her first dancing master, a rippling, racing, merry little brook!

"Lean down Dianidra," called the brook. And Dianidra, obeying, was drawn gently into its arms and away it danced singing:

"Run, don't slip; glide, don't trip!
Merrily, gay, that's the way.
Dianidra, dancing's play."

You never could guess how pleasant it was dancing with the brook. The sunbeams came, too, and joined in. But finally the brook whispered to the Princess that on the top of the next hill another dancing master was waiting, shaking the diamond drops of water out her sunny locks and wringing out her dress.

And straightway the began running and gliding as easily as the brook, singing all the time the bit of a song he had taught her. When she had come to the top of the hill, there, sure enough, was her second dancing master. 'Twas the south wind. He seized Dianidra's hands and spun her round in a hundred gay circles; and she bowed and swayed as gracefully as you have seen the flowers do when the south wind dances with them.

"Oh, off with a rush, now away, now stay.
Now bend and bow, and again away!"

whispered the south wind in her ear. And away and away they swept over the flower-splashed hill—down and down to the edge of the sea. There the south wind left her to learn something from this, her last dancing master.

The sea rushed toward Dianidra with his hundred dancing waves, and, catching her up in his mighty arms, drew her out to where the swells rose and fell with majestic rhythm. The dance of the sea, sweethearts, was the most beautiful of all. First he held her curled in the hollow of a giant swell, then tossed her lightly as foam on the rising crest. Now with a rush a great wave ran with her merrily up the sand, teaching her the most wonderful curtsey, the curtsey the waves have been making to the shore for years and hundreds of years.

He brought her up from his treasure chest a wonderful coral chain and clasped it round her neck and he wove her a crown of seaweed and pearly sea flowers, and, with a last caress, set her high upon the beach.

The sun had slipped down behind the hill. It was night, and the moon came up out of the sea and smiled at the runaway Princess dancing over the sands. Her satin dress was torn and dripping, but she was more beautiful than ever before, because her eyes were laughing, her lips were laughing and, more than all else, her feet were laughing!

It chanced that a most royal palace stood on that beach, and the Princess, running and gliding like the brook, and swaying and bending as the south wind, and curtseying, and dipping like the sea, danced up to the golden gates, which were open, straight into the gaily lighted ballroom. Gorgeous princesses and queens and ladies of high degree were dancing with princes and kings and gentlemen of high degree, for it was the royalest ball of the year, and from the east and west, from the north and south, from all the ten kingdoms, in fact, the company had gathered.

When Dianidra swept lightly into their midst, dears and ducks, it was the most surprised company ever! The musicians all stopped trumping and banging, and, with their cheeks still puffed out and their hands uplifted, stared and stared. And the gorgeous princesses and queens and the ladies of high degree stopped right in the midst of a wonderful figure and with their satin slippers daintily pointed to take the next step stared and stared. And the princes and kings and the gentlemen of high degree, with their courtly backs bent for the deep bow, stopped and stared and stared; and, more proudly they stared the hardest of all. But Dianidra danced merrily on.

Just about as long as you could count twenty they all stared, then—Crash ! ! ! went the music, and started up the most marvelous bouncing—quite like the roar of the sea—and the most royal of the princes unbent his back and ran lightly on to Dianidra, and away they whirled down the centre of the room. Then—then I am sure you would have laughed at what happened next—because all the kings and princes and gentlemen of high degree were so anxious to dance with Dianidra that they trod upon each other's toes, and in the scramble they lost their crowns, and they shoved and pushed each other quite terribly, without ever once saying "Beg pardon," or anything like that —while the princesses and queens and ladies of high degree grew red and stamped first one foot and then the other and glared at the dancing Princess through their gold lorgnettes. No wonder! Dianidra, in her torn frock and seaweed crown and coral neck-lace, was more beautiful than all of them together; and who after dancing with her cared to dance with any one of them?

So she danced with each of the royal gentlemen, but oftenest, as you are already supposing, with the most royal prince; and pretty soon they danced out into the castle gardens, and perhaps she told him all about her strange dancing masters—but that I cannot say. They spoke so very softly that I could not possibly hear one word. But after a while the prince ordered his most royal carriage, and the fifty white horses galloped over hill and dale to the palace of Dianidra's father.

There they found the erabbish king tearing out what little hair was left him, while the queen, nearly smothered in smelling salts, was weeping and sobbing. "A Princess who could not dance was better than no Princess at all."

But when they saw Dianidra they ceased their crabbishness and weepishness straight off, and when the prince on bended knee asked for their daughter's hand they were overjoyed and delighted.

So, Dianidra and the Prince were married in a year and a day and the wedding was most gorgeous! As the fairy had promised, Dianidra was the most wonderful dancer in all the ten kingdoms, for in her dancing was the ripple of the brook, the swaying of the trees in the south wind and the mystery of the sea. And she and the most royal prince lived happily ever afterward. That, sweethearts, was the way of it.

WILLOW CREEK

—Don't miss the entertainment in Town hall, Paisley, Friday evening, Nov. 29th.

The war is over, over there. We see the State of Ohio is burying Kaiser John and Kaiser Bill together.

Canada's Victory Loan 1918 was $3,000,000 less than Canada's drink bill in 1914.

Mr. Wm. Schnittker has purchased a sawing and grinding outfit.

Mr. Joe Hyde has bought another farm on con. 2. Joe will soon have to make a bee and move his farms together.

The U. B.s are having fine weather for their meetings as well as large crowds.

The Evangelicals "went over the top" on Sunday last when they held their annual missionary meeting. The levy on Bruce was $75 and the amount raised was over $80. A number of the members were not present, and it is expected that by the time these hand in their offering the amount will be around the $100 mark.

The Y.P.A. was closed here Sunday night. The members went to assist in the meetings in the U.B. church.

Mr. Reuben Wittig spent Sunday with friends in Kincardine.

Our beef ring members had their meeting last week, with Mr. Jas. Johnson in the chair, and Tom Foster as secretary.

GLAMIS

—Hear Capt. Appleyard, town hall, Paisley, Friday evening, Nov. 29th.

Redvers Johnston, who has spent the last three years in the west, returned on Tuesday of last week, and is staying with his uncle and aunt, Mr. and Mrs. Groves.

Mrs. Telford, of Beamsville, and little daughter are visiting her parents, Mr. and Mrs. W. J. McKeeman.

Miss Margaret and John Currie, who have been sick with influenza, are improving.

Mr. John McKay left on Friday for his home in Port Arthur.

Mrs. J. K. McLennan is on the sick list again.

Mrs. John Wrightson is visiting her son on the 4th, Mr. Herbert Wrightson.

Mrs. McCormick, of Pinkerton, is nursing the sick at Mr. Neil Currie's.

Thanksgiving services will be held in both Presbyterian and Baptist churches on Sunday next.

The Red Cross shipped the following articles on Thursday: 60 pairs socks, 18 sheets, 84 pillow cases, 12 suits pyjamas.

THREE TIMES WINNERS

For three years in succession S. S. No. 15, Bruce, has won the shield given by the Dept. of Agriculture to the school winning most prizes per pupil at the school fair. The standard of the schools ranking highest in Bruce School Fair District is: No. 15 Bruce, 57 points, No. 9, 21 points, No. 7, 19 points.

PINKERTON

—Entertainment, town hall, Paisley, Friday evening, Nov. 29th.

Rev. Mr. Burgess, of Walkerton, conducted preparatory services in the Presbyterian church on Friday and made a very favorable impression on his initial appearance here.

The Bradley Gun Club held their annual "shoot" on Friday afternoon and some excellent shots were recorded on each side. In the evening the members enjoyed themselves at a dance held in the Foresters' Hall.

At the time of writing Mrs. N. Fitzsimmons, of the village, is very ill, suffering from an attack of pneumonia which followed a chill contracted on Friday last.

Practising for the annual Christmas tree to be held in the Presbyterian church here, begins on Saturday, and a turn-out of all the children is hoped for.

PRESENTATION AT LOVAT

Mr. and Mrs. John McGillivray were given a splendid send-off upon the occasion of their leaving the farm to take up their residence in Paisley. A large number of friends and neighbors gathered on the evening of Nov. 15th, at the old home, and presented Mr. and Mrs McGillivray with a fine pair of easy chairs, also their daughter, Miss Bessie, with a gold necklace. Mr. Geo. Brown was appointed chairman of the gathering and under his direction an impromptu programme was carried out. Short speeches were made by Messrs. Alex Mewhinney, Robt. Brown, Peter McLean and J. R. Laidlaw, songs by Messrs. Barltrop and Laidlaw, also violin selection by Mr. Geo. Snowdon. The following presentation address was read by Mr. Thos. Foster, jr.:

Dear Mr. and Mrs. McGillivray and Bessie:

We, your friends and neighbors, have assembled here this evening to spend a few pleasant hours with you. You have long lived among us, and we have always found you willing and helpful neighbors. We shall miss you greatly from among us, but we know that what is our loss is some one else's gain. We felt that we could not let you leave us without our showing you in a small way the high esteem in which you are held. So we ask you, Mr. and Mrs. McGillivray, to accept these chairs, and Bessie this pendant, as a slight remembrance and may they ever remind you of your many friends. Signed on behalf of your friends and neighbors, J. Foster, R. MacKay.

The visitors were then given the freedom of the house, and many enjoyed dancing for several hours.

The Cattle Situation

Normal Prices will Probably Not be Restored for Ten Years

Farmers are Urged to Market their Grain Through Live Stock

Toronto, Nov. 19th, 1918

The Toronto Live Stock Exchange, composed of members exclusively interested in the buying and selling of live stock, wish to set before the producers of live stock the following facts:

(1) The close of the war, instead of diminishing, will greatly increase the demand for food, and particularly for meat. It is already evident that the chief reason for the capitulation of the Central Powers was that they had not food to go along with.

(2) The products of the Canadian farms are cereals and food animals. At the present time the demand for both is unlimited. The first demand to be satisfied will, unquestionably, be that for cereals. All the world can immediately set itself to the raising of cereals. One crop will greatly ameliorate the famine; two crops will probably restore wheat reserves to normal.

In regard to live stock this is not the case. The building up of cattle herds, particularly, involves a programme of years. Even if the foundation stock and the fodder were immediately available in Europe, the cattle herds could not be restored in less than five or six years, but all European countries—combatants and neutrals alike—are stripped both of live stock and of fodder. An unlimited demand will exist for years, both for breeding stock and for meats.

(3) The situation is, therefore, as follows:

Prices of grain will probably decline on a scale which will restore them to normal in two or three years.

Prices of live stock will decline on a much slower scale. Normal prices will probably not be restored for ten years.

During these ten years, the advantage to the farmer of marketing his grain through the medium of live stock will be greater than at any previous time in a generation.

(4) The farmers of Canada will not be able to take advantage of this situation unless they have the live stock to sell. They can place themselves in this position only by keeping their breeding stock this fall. Therefore, farmers, keep your cows and your sows. Every breeding female held over this fall will bring rich dividends in the years to come. If Canada produced ten times her present supplies of cattle and hogs, there would be a profitable market for them all.

(5) In regard to feeders for the present winter. It seems now as certain as anything can be that there will be a profit in the feeding deal this season. We unhesitatingly recommend farmers to tie up as many cattle as they can feed.

THE TORONTO LIVE STOCK EXCHANGE.

(Sgd.) F. MAYBEE, Sec'y

EBENEZER

—Are you going to hear the returned chaplain at town hall, Paisley, Friday, evening, Nov. 29th? Sure!

Mrs. H. McFadden spent a week visiting Mrs. Jas. Park, of Centenary.

Mrs. Robertson, of Port Elgin, and her mother, Mrs. Stevenson, have been recent visitors at Mr. F. Quigley's.

A number from this burg attended the missionary and social service convention held at Arkwright a week ago Monday.

Miss L. Grant has returned from a visit to Owen Sound.

Mr. Scarrow, of Allenford, attended our service last Sunday, and gave us a splendid missionary talk.

Mr. and Mrs. Dwight Potts and family spent last Sunday with Arran Lake friends.

Mrs. Wm. Sergison, of Detroit, is a visitor at the home of her mother, Mrs. Wm. McKelvey.

The many friends in this neighborhood of Mr. Wesley McFaul, of Owen Sound, were very sorry to hear of the death in action of his second son, Lieut. Clarence McFaul, who was killed in action the day before hostilities ceased.

ONLY MEDICINE MADE FROM FRUIT

Extraordinary Success which "Fruit-a-tives" Has Achieved

One reason why "Fruit-a-tives" is so extraordinarily successful in giving relief to those suffering with *Constipation, Torpid Liver, Indigestion, Chronic Headache, Neuralgia, Kidney and Bladder Troubles, Rheumatism, Pain in the Back, Eczema* and other Skin Affections, is, because it is the only medicine in the world made from fruit juices.

It is a concentrated extract of the medicinal principles found in apples, oranges, figs and prunes, together with the nerve tonics and antiseptics of proven repute.

50c. a box, 6 for $2.50, trial size 25c. At all dealers or sent postpaid by Fruit-a-tives Limited, Ottawa.

GREENOCK COUNCIL

Knox's Hotel, Pinkerton,
Nov. 18th, 1918

Council met as per adjournment, all the members present, the reeve in the chair. Minutes of last meeting read and adopted.

The following accounts were presented for payment: Chas. Webb, 85 yds. gravel, per div. 54, $8.50; Jas. Quinlan, 133 yds. gravel, per divs. 21, 22, $13.30; Jos. L. Arnstett, iron for bridges, con. 16, $40; Geo. Bell, filling approaches at Sheridan's bridge, $10; Geo. Bell, removing timber from ditch, $1; Wm. Nicholls, filling approaches at Clark's bridge, $14; R. Sheridan, lights at bridge, $1.50; P. Dales, cleaning ditch and hauling gravel, con. 10, $20; John O'Hagan, putting in culvert, s. l. 15, $8; H. Clark, lights at bridge, $4.25; A. E. Knox, room for council meeting, $2.

Sawyer—Gilchrist—That the foregoing accounts, being found correct, be paid, and that the reeve and treasurer be authorized to sign checks for same.—Carried.

Campbell—Symon—That this council do now adjourn to meet at Chepstow on Monday, Dec. 16th, for general business.—Carried.

Thos. H. Purdy, Clerk

KILLED ON LAST DAY OF FIGHTING

Lt. Clarence McFaul, son of Mr. Wesley McFaul, of Owen Sound, was killed in action on Sunday, Nov. 10th. The deceased enlisted in 1915 with the 93rd Battalion, and was in France in July, 1916. He served with such distinction that he was awarded a military medal and a commission. He was wounded in August last and had only returned to the front thirteen days when he made the great sacrifice. One day more and the fighting had ceased. Lieut. McFaul was not only well known but very highly esteemed by everyone who knew him. He leaves, besides his father, two sisters, Misses Evelyn and Violet, at home, and two soldier brothers, Lt. Lawrence and Pte. Cecil McFaul, both of whom are in France.

HOME GARDEN COMPETITION

Following are the prize winners in the home garden competition, which was conducted in Arran and Elderslie townships during the past summer: 1 Emily Teasdale, 2 Howard Coleman, 3 Bessie Strong, 4 Harold McKay, 5 Jessie Bailey, 6 Kenneth Cleaver, 7 Innis Sparrow, 8 N. McCulloch, 9 G. Barclay, 10 Walter Patterson. This competition is for boys and girls who have left school, and in all grow thirteen different kinds of vegetables, in a garden 20 x 20 ft. The seed is supplied by the Dept. of Agriculture, and plots are inspected during the summer by the Agricultural Representative. There were 25 competitors in the contest.

The Boy Who Lies Out Yonder

These are the fathers and mothers who wept when the whistles blew,
Visioning over and visioning over a little lad they knew;
Visioning over and over, and seeing once and again
The little lad they had seen march off—a man—with men;
Broken of heart, undone, visioning now in their tears
An empty chair .....and the lonely, empty years.

What shall repay the services which nought on earth can repay?
How shall a nation render a thanks in its heart this day?
Whistle and horn and clamor, trumpet and shout and song—
But the boy who lies out yonder.....he will sleep long.
And the father and mother who lost him steal up to an empty place,
The mother with lips a-tremble, the man with his stony face—
HIS room, she had kept it ready to welcome him back again,
Since the little lad they had cherished marched off—a man—with men.
What shall requite their service, which nought on earth can requite?
Who shall appraise or name it who measures its worth aright?
Out from the noise and clamor, now while the siren blows,
What shall a nation whisper, knowing the debt it owes?
When the father and mother who lost him steal up to his room to weep,
What word shall a nation send them to lighten the watch they keep?
For not in whistles or trumpets, and not in the tunes they play
Shall a broken heart of a mother find comfort and strength this day.
Not in the horns and trumpets—but e'en as the mourners kneel,
Thus shall a nation whisper "Know ye the pride we feel.
Ye who have paid our ransom, paid it in blood and tears,
Your sons have bought us freedom. Look! They have cleansed the years,
And the thing they have bought us is finer than palace or jewels or gold.
The right of the weak to flourish as the strong have flourished of old.
Ye—ye have sown in your tears that a world may reap in joy.
Ye also have cleansed the years.....with the life of your boy."

These are the fathers and mothers who wept when the whistles blew,
Visioning over and visioning over a little lad they knew;
Visioning over and over, and seeing once and again
The little lad they had seen march off—a man—with men;
They have bought freedom.....theirs are the holiest tears;
They and that sleeping boy, who have cleansed the years.

SPLENDID WAR ALBUM

The War Album issued by The Family Herald and Weekly Star of Montreal is one of the best souvenirs of the war. Future generations will cherish this book. It will be a complete diary of the great struggle and contains a whole mine of information regarding the Allies. We learn the supply is limited. Any home that fails to secure a copy now will regret it. $1.25 pays a full year's subscription to that great weekly paper and a copy of the War Album. Sample may be seen at this office.

REEVE OF CARRICK FINED $200 FOR SEDITIOUS UTTERANCES

Moses Filsinger, Reeve of Carrick, was on Thursday fined $200 for disloyal and seditious utterances made in Mildmay village last June. Magistrates Chapman of Port Elgin and McIntosh of Southampton heard the case in the town hall at Walkerton. The evidence was that Filsinger, who was about to board the train at Mildmay as a delegate from Carrick to the Farmers' Convention in Toronto to protest against the drafting of farmers' sons, said in conversation with two men that Borden was selling Canadian soldiers in England for $6 apiece, like little pigs. He admitted in court making the statement, but claims to have heard it while attending a previous farmers' convention at Ottawa. The magistrates in imposing the fine, said they had seriously considered giving Filsinger a three months' jail sentence as well, but on further consideration had decided to forego the prison term.

Millinery Reductions

The knife is sharp. It is cutting deep.

Here are some of the results: Ladies' regular $12.00, $10.00 and $8.00 Hats now for $5.00; Ladies' $7.50, $7.00 and $6.50 Hats now for $4.00; Ladies' regular $5.00, $4.50 and $4.00 Hats now for $2.98. Misses' and Children's regular $5.00, $4.50 and $4.00 Hats now for $2.50; Misses' and Children's $3.75 and $3.50 Hats now for $1.98.

Only Three Weeks for Shopping before Christmas

Get busy. Select your wants. We have them. Only can mention a few: A new ready-made Dress for your wife or daughter. a Separate Silk Skirt and Waist. New goods just arrived, Crepe Silk in dress length, Furs for the neck or hands, separate or sets, Sweaters in Brushed Wool or Worsted Goods, Scarfs and Caps to match, Colored Hosiery, Kosey Footwear for the bedroom, etc., etc.

Rugs

For your floors in large or small sizes, seamless, all wool, cannot be bought at the present time from manufacturers. We have them.

Men's Heavy Rubbers

All kinds and sizes for the Youth, Boy or Man. See ours before buying elsewhere.

8-12,18tf **Hold your Poultry until after the 10th of December**

and get the best price. We want your goods. You need ours. We appreciate your patronage.

All accounts are now due. Let us square up 1918 accounts in full.

THE PAISLEY MERCANTILE CO.
F. S. MacLACHLAN, Manager

The People's Bakery

License No. 8-6329

HAVING remodelled our bake shop throughout and installed an up-to-date portable oven, we are now prepared to meet the demands of our customers with high-class baking of all kinds.

Special till the New Year

1-lb. can Dalley's Baking Powder, 35c; 6-oz. can Dalley's Baking Powder, 25c; ½-lb. can Dalley's Coffee, 20c; Holly Rice and Milk Pudding, 15c each; Trench Candies, 4 for 25c; Lemon and Vanilla Extract, 3 for 25c; Extra Special Bulk Black Tea, 70c lb.

Raisins, Currants, Peels, etc., for Xmas Baking

We also carry a full line of

Groceries, Flour and Substitutes

D. H. COOPER - Baker and Confectioner

Increased Production

DR. HESS' STOCK TONIC

IS GUARANTEED TO INCREASE PRODUCTION

NEVER before have the Dr. Hess goods sold like they are selling to-day, and there is nothing strange about that. They are goods that make for increased production. They are a real factor in just what the Government is requiring, viz., more beef, more pork, more mutton, more milk, more butter, more poultry and more eggs, and thus they serve a patriotic purpose.

BRING ALONG YOUR COUPONS FOR A PACKAGE OF DR. HESS' POULTRY PANACEA.

MORE'S DRUG STORE

SUBSCRIPTION RATES

$1.50 per annum in advance. To United States subscribers $2.00 per year in advance.

ADVERTISING RATES

Legal and other casual advertisements 10c per nonpariel line for first insertion, 5c per line for each subsequent insertion.

Advertisements of Strayed, Farms for Sale or to Rent, and similar, $1 for first three weeks and 25c for each subsequent month.

Advertisements without specific directions will be inserted till forbidden and charged as ordered. Transient advertisements must be paid for before insertion.

Advertisements in the local columns are charged 10c per line for first insertion, and 5c per line for each subsequent insertion. This includes announcements for church or school concerts, lectures, garden parties &c. Notices of Births, Marriages and Deaths 25c per item. Regular ad rates 10c per line. No adv. less than 25. Set in black-faced type, price and one-half.

—For Rent—Flat for years occupied by Dr. Allen. Apply to P. J. Hare.

—Pianos, Organs, Sewing Machines, Edison Phonographs, records and small instruments. P. McKinnon.

—Calves for sale. Enquire at this office.

—Fresh Salmon Trout at P. Oltsher's butcher shop.

—Marriage licenses issued and money to loan. T. H. George.

—A large range of Kosey House Slippers for every foot. F. Carter & Son.

—Full line of fine engagement and wedding rings at I. Shoemaker's jewellery store.

—Highest prices paid for hides and sheepskins. H. E. McGregor, Butcher, Steele Block.

—The party who borrowed a lumber wagon from Fisher's shed is requested to return to J. S. Dewar.

—Winter repairs and care of cars at Paisley Garage. See us before laying up your car for the season.

—Highest price for beef hides, horse hides, calfskins, sheepskins, tallow, &c. P. Oltsher, Paisley Meat Market.

—For Sale—The cottage dwelling next to the Balmoral hotel. Freshly painted and re-papered. Apply to Neil McAllister.

—For Sale—A large and comfortable frame house with good stable, on ½ acre of good garden land, on Water St. N. McArthur, prop.

—For Sale or Rent—House on Victoria St., suitable for retired farmer, also for rent, the premises lately occupied by the Standard Bank. Apply to D. Forrester.

—Special Tire Sale—One Dunlop traction tread, 1 plain tread, 1 Van o' Land, 2 K & S Special, and 2 31-4 Goodyear all weather tread, also tubes, at prices to clear out. Paisley Garage.

—E. Stevenson's quick healing salve is the best made. We have a choice line of tobacco and cigars, stationery and school supplies. Agent for daily papers and magazines. Give us a call.

—All accounts due the undersigned must be settled by Dec. 15th. We have been allowing liberal credit during the busy summer, but must have the money now to meet our obligations that are due. J. S. Dewar.

—Flour, Feed, Seeds, Grain—We keep a full stock of Five Roses and Stark's high grade flours, bran, shorts, Royal Purple calf meal, poultry foods and tonics. Always in the market for coarse grains. Morning delivery only. W. Stark.

—Auction sale of household effects on the market square, Paisley, on Saturday, Dec. 14th, at 2 p.m. Dining room set, hall rack, bedroom suites, 3 rocking chairs, parlor tables, 1 large oriental tapestry rug, Morris easy chair, coal oil stove, small round heater, stovepipe, dishes, jars, etc. Mrs. A. Rose, prop.; R. C. Pearce auct.

Cruickshank
The Tailor

—Miss Sadie Jack is home from Elora.

—Mrs. Thos. Muir is visiting in Kingston.

—Mr. Fred A. Lewis, piano tuner, is at the Central Hotel for a few days.

—Winter made a very seasonable opening, arriving on the night of Dec. 1st.

—Mrs. P. O'Hagan is up from Guelph visiting her friends for a short time.

—Mrs. P. Porter and daughter Irma spent the week end with Walkerton friends.

—Mrs. J. Hyde is up from Toronto visiting at the home of her daughter, Mrs. G. B. Irwin.

—The W.C.T.U. will meet at the home of Mrs. F. S. MacLachlan, on Friday, Dec. 6th, at 3 p.m.

—The Presbyterian ladies realized over $65 at the tea room in the Gibson building on Saturday night.

—Mrs. H. Pfaff was called to Hanover last week by the death of her aged father, who had reached his 95th year.

—Mrs. (Dr.) Struthers went to Galt on Monday, where she expects to meet her husband, who has been in France.

—The Women's Institute monthly meeting will be held Thursday, the 5th inst., at 3 o'clock, in Putnam's hall. A full attendance is desired in view of some new work to be dealt with.

—Lt. Roy R. Thompson, of Port Elgin, was killed in France on Nov. 3rd. He was a son of Mr. Jos. A. Thompson, hardware merchant. In 1915 he enlisted with the Princess Pats' Fifth University Corps. He transferred to the R.A.F. after recovering from wounds, and went back to France in August of this year.

—Mr. and Mrs. Jas. G. Kerr (nee Miss Bertha King), of Arcola, Sask., will have the sympathy of Paisley friends in the bereavement they have suffered by the loss of their youngest boy, aged 2½ years, who died from pneumonia on Nov. 15th. The flu was so epidemic in that section that business places were closed.

Destitute French Children

An urgent appeal has been sent out asking all Red Cross Societies to aid in making clothes for destitute children in that part of France that has been laid waste by the enemy. The garments are ready cut, plain and easily made. The work committee of the Paisley Women's Patriotic League is giving out the cut goods every Saturday afternoon and evening. We want to ship a Christmas bale by the 15th. Every woman please help y making one or more of these little garments.

—Good brick house on Goldie St. to rent or for sale. J. C. Gibson.

—Dr. Allen does not expect to be home for Saturday of next week. Please note.

—See our fancy china before buying your Christmas gifts. F. Carter & Son.

—For Sale—Eight head of heifers and steers, 1 and 2 yrs. old. Wallace Megraw, Greenock. Both phones.

—Taxes are past due, only a few more days until the roll should be returned. H. B. Putnam, collector.

—Paisley Photo Studio open on Saturday. You want a photo for Christmas? Come in early. F. J. Granville.

—Auction sale of farm stock and implements, at Ellengowan, on Tuesday, Dec. 17th. W. J. Hyde, prop.; R. C. Pearce, auct.

—For Sale — Young register Shorthorn bull, 9 months old. Apply to C. Ritchie, 20th Greenock, R. R. No. 2, Paisley P.O.

—For Sale Privately—One steel-tired buggy, 1 good cutter, 1 Melotte cream separator, 1 Good Cheer cook stove. Apply to J. A. McRae, 12th Bruce.

—Notice of Taxes—To receive the balance of Bruce Tp. taxes, I will be at McLean's hotel, Underwood, on Saturdays, Dec. 7th and 14th, from 9 a.m. to 12 o'clock noon. W. J. Kieso, collector.

—A tea-meeting and Christmas concert, under the auspices of the Ladies' Aid and the Sabbath School of Salem Presbyterian church, will be held in the church, Tuesday evening, Dec. 17th, at 7.30 p.m. Admission—Adults 35c, children 15c. Scholars of the Sabbath School admitted free.

Walkerton Xmas Fair

December the 19th. Over $300 in cash prizes—$175 for heavy and light horses. Write for Prize List. D. McKerracher, Secretary; R. Goode, President.

Box Social

To be held in S. S. No. 2, Elderslie (Manley's school), on Friday, Dec. 20. A good program is being prepared, of songs, drills, recitations, dialogues, etc. Admission 15c, ladies bringing boxes free. Funds to go to Red Cross and an organ for the school. R. C. Pearce, auct. Come and bring your friends. Everybody welcome. Doors open at 7 and program commencing at 8 o'clock.

The Presbyterian Forward Movement

The Presbytery of Bruce met in Knox church, Paisley, on Tuesday, Nov. 26th, in connection with the Forward Movement of the Presbyterian denomination. There was a full attendance of ministers and a large number of representatives of the congregations was also present.

The moderator, Rev. Mr. Wilson of Salem, occupied the chair and presided at all the meetings.

At the morning session some business was transacted and committees appointed.

The object and purpose of the Forward Movement was explained briefly by Rev. G. C. Little, convener of the budget committee.

Dr. R. P. McKay, the venerable Secretary of Foreign Missions, gave an address on "Our Field of Work." The address was interesting and illuminating, as Dr. McKay has spent some time in visiting many of the foreign mission fields.

On motion of Dr. McDougall of Queen Hill and Rev. P. Reith of Glamis, the following resolution was passed: "The Presbytery of Bruce, thanking God for the deliverance He has brought on the world, perceiving that His providence has laid upon the church a distinct and decisive task in moulding the world, freedom has been possible, realizing that a great draft has been made upon men available for the Christian ministry, but believing that a fountain of altruistic service of hope and of faith, therefore expresses gratitude to God as the General Assembly has in conjunction with the other branches of the church, bring in the Forward Movement in the spiritual life of the people in seeking recruits for the ministry, making the home and the church school effective in building Christian character, in Christian giving and in upholding again the agencies of the church and its board and an aggressive missionary movement, at home and abroad. The Presbytery thereby adopts the plan of the Forward Movement as presented by the Assembly's commissioners, and pledges itself to use every endeavor to carry out the movement throughout its congregations."

In the afternoon the first speaker was Dr. Kilpatrick, of Toronto. He asked what would be the outcome of these meetings. They would largely be a failure unless there was a real revival with a real vision of the Lord Jesus Christ. The objective of Home Missions was "Canada for Christ." Jesus must be supreme in the parliament, in the legislatures and among the people. We are here to make a church which is a star, a candlestick. The Home Mission problem is many-sided. There is first of all the problem of the city. The condition of many of our cities is serious because of vice, the non-church element, social unrest, and the idle rich. There is also the problem of the stranger or alien. There are masses of people that must be brought into the whole and permeated with Christian ideals. Nearly one-half of our population is foreign. These people will remain alien unless the church make them Christian. Education alone will not do it. The politician must be made to back up the church in all its problems. Then there is the problem of religions. There are pagan Indians, Buddhists, Mormons, Christian Scientists, Roman Catholics, Greek Catholics, and in the evangelical churches themselves there are many differences. The gospel must be preached in its purity and simplicity. By means of charts the doctor illustrated the actual work that must be done. In Montreal the foreign population numbers 105,700. In New Ontario there are 45 per cent. now Anglo-Saxon. In Manitoba 42 per cent. are foreigners, while in Winnipeg, the gateway of the great west, 58 different languages are spoken. In Saskatchewan 45½ per cent. are non-British, and in Alberta 40 per cent. In British Columbia the situation is complicated by the presence of many thousands of Chinese and Asiatics. Dr. Kilpatrick closed his splendid address with an appeal to greater consecration and united action.

Miss Mitchell, General Secretary of the Women's Missionary Society, spoke of the work and object of the society. The object is to link up every woman of the church with the society. In Western Canada there is great need, on account of the foreign population, for twenty hospital units, ten school homes such as are now in operation at Teulon and Vegreville, three new centres of Jewish work, fifty deaconesses, and one hundred women workers, besides $362,000 annually for the work. In Quebec the Point-aux-Trembles schools had done good work, but there was lack of accommodation, and more rooms were needed. In India more doctors and nurses were required for the hospitals. The Canadian church was asked to look after and evangelize fifteen million heathen, of whom eight million could be found in Honan, China.

Rev. Mr. Knox, of London, emphasized the need of better and more efficient training of the young. A large percentage of the young people are lost to the church. Great life decisions are made in the teen age, and this is the time when they must be looked after. With regard to actual conditions there was inefficiency in the schools, and the moral conditions of some of the high schools were not the best. How much is done in the home for religious education? Germany failed in the religious training of her youth. The ideal set before them was the ideal of the state, and by military training this ideal could be reached. Germany failed because her ideal was wrong. Religious education is effected by the personality of Jesus Christ and by the personality of his followers. The prime agency is the home. Making character is of the greatest importance. Jesus Christ was an educator. And the aim of all Sunday School work must be to link up the boy and girl with Christ.

Mr. Halliday's address on "Recruits for the Ministry and Ministers' Salaries," provoked some lively discussion.

Both Dr. Kilpatrick's address and Dr. McKay's of the evening were inspiring. Dr. Kilpatrick spoke of sacrifice. "We don't know," he said, "all that the soldiers have sacrificed for us. We don't know all their sufferings, all their faith. There must be an answering sacrifice on the part of the people. If we use their victory for our own selfishness we betray their trust. If we continue to set man against man, labor against capital we are not true to them. We shall fulfil our task as we realize that Christ is our sacrifice." Everything worth while has come to us through sacrifice—sacrifice of saints, prophets, covenanters, missionaries. Are there to be no answering sacrifices? Prayer is sacrifice, prayer is dwelling with God, entering into fellowship with God. If any man will come after me, said Christ, let him deny himself and take up the cross and follow me.

Dr. McKay's address on the aims of the Forward Movement and how it originated was a fitting close to a day that will long be remembered by those present.

During the afternoon a vote of thanks was tendered to the speakers, and a hearty vote of thanks and appreciation given to the ladies of Paisley church for the splendid dinner and supper provided in the basement of the church.

—Mr. and Mrs. Henry Bowden, of Viscount, Sask., announce the marriage of their daughter, Myrtle Marietta, to Mr. Wilfred Grant Burrows, a former Paisley boy, son of the late J. E. Burrows, of the public school staff. His mother, now Mrs. Murchison, lives at Viscount. Paisley friends will join in the congratulations.

November Shipment to the Red Cross from Paisley W.P.L.

78 pairs socks, 10 flannel shirts, 7 suits pyjamas, 2 pillows, 1 sheet, 5 furnished housewives, 27 Turkish towels, 26 trench towels, 24 cheesecloth handkerchiefs, 1 parcel old flannel, 1 parcel old linen. Donation from Lockerby—14 pairs socks, 6 flannel shirts.

Elderslie Election Rumors

Reeve Jas. Lewis is not anxious for re-election, in fact would prefer to retire, it is understood. Councillor Clarence Fraser may be a candidate for the reeveship only in the event of Mr. Lewis stepping out. The names of ex-reeves Geo. McKay and Sam Ewart are mentioned for the office also, but the former is not aspiring, and whether the latter is ready for further devotion to civic duty, we do not know. We have heard that Councillor Allen will not again accept nomination. The general outlook at present is that, in the absence of anything like decided issues in municipal affairs, a council will be selected without causing an election.

Received $2,400 Damages

By settlement out of court, Mr. Allan Bell, 10th Bruce, is to receive $2,400 damages from Mr. Wm. Hunter of Kincardine, for injuries he sustained when he was struck by a motor car owned by Mr. Hunter and driven by the latter's daughter. The accident happened in Port Elgin on Dominion Day, 1917. Five doctors gave evidence as to the injuries, as a number of other witnesses were heard on the case, including Mr. Bell when the defendant's counsel proposed settlement, which was effected as above stated. Each party is to pay his own costs in the action. D. Forrester of Paisley, and Hartley Dewart, K.C., of Toronto, were counsel for plaintiff, P. A. Malcomson of Kincardine and Wm. Proudfoot of Goderich, for the defendant.

Died at Sarnia

Many old friends here will regret to learn of the death of Mrs. Thos. Patterson, who passed away at the home of her daughter in Sarnia on Nov. 25th. The maiden name of deceased was Jessie Scofield, and she is the fifth member of that well known pioneer family of this section to be laid to rest within the past six years. Mrs. Patterson went from here with her husband and family over twenty years ago to the Canadian Soo, where Mr. Patterson died in January, 1915. For the past two years Mrs. Patterson had been living with her daughter, Mrs. A. J. Addie, in Sarnia. Three other daughters and one son survive—Miss Jean, in New York city; Mrs. R. J. Patterson, of Montreal; Mrs. E. L. Watkinson, of Sault Ste. Marie, Ont.; John T. Patterson, of Langham, Sask. One sister of deceased, Mrs. Thos. Moffat, of Cargill, is now the only surviving member of the Scofield family.

The AUTOMOBILE

What An Auto Engine Is.

The essential parts of the motor are few and easily learned. Every one has heard of an engine having, four, six, or more cylinders. The cylinder is the important part of the engine. Inside it are the moving parts which give power. The more cylinders employed the smoother the engine is supposed to run. The moving parts inside are first the piston, then the wrist pin passing through it. This serves as a hinge for the connecting rod which transmits the power to the crank shaft running the length of the engine and receiving power from all the cylinders.

The purpose of the piston is fourfold: First, to draw in the fresh mixture on the suction stroke; second, to compress it on the compression stroke; third, to receive the force of the explosion on the power stroke and transmit it to the crank shaft, and fourth, to push out the burned gases on the exhaust stroke. The wrist pin serves as a hinge and the connecting rod passes the power along, transmitting it to the crank shaft and causing same to revolve. The action is almost identical with that of the foot on a bicycle pedal. The leg moves up and down in a reciprocating manner and causes the pedal to revolve. In the same way the connecting rod and crank shaft change reciprocating motion into motion of revolution.

The four strokes of the engine, just mentioned, however, cannot fully be understood until the valves are explained. There are two of these to each cylinder, one to let in the fresh gas, called the "inlet valve," and the other to let out the burned gas, called the "exhaust valve." They are held tightly closed by springs and are only opened when occasion requires. To do this a cam shaft is necessary. It is a long shaft, running the length of the motor, with as many cams as there are valves. A cam is a projection on the side of a shaft, smooth in outline, which revolves with the shaft and so opens the valves. It does not touch the valve directly, however, as there is a small part called a "valve lifter" which reaches from cam to valve stem. This gives a more direct push to the valve, gives a broad surface for wear, and has an adjustment which enables one to secure best results in operation.

The necessary connection with the crank shaft is provided by the "two-to-one gears," or "half-time gears," as they are sometimes called. The gear on the cam shaft has twice as many teeth as the gear on the crank shaft. Since this arrangement drives the cam shaft at half the speed of the crank shaft, it will be readily seen why they are called "half-time gears."

Now that we have arranged for the operation of the valves, it will be easy to understand what follows. The piston goes down with the inlet valve open. This sucks in the fresh gas and is called the suction stroke. Having filled the cylinder with explosive mixture, the piston now rises, forcing the gas into the top of the cylinder, the "combustion chamber." As both valves are tightly closed, the gas cannot escape but is compressed in the top of the cylinder. So this is called the compression stroke. Now comes the electric spark, setting fire to the compressed gas, which burns, expanding as it does so. The pressure developed by the expanding gas drives the piston down, setting crank shaft and flywheel in motion, thus producing power. This is the power stroke. Both valves remain tightly closed until the piston nears the end of the power stroke, when the exhaust valve opens to let out the burned gases. As the piston returns upward it drives out the burned gases effecting the exhaust stroke. This is followed again by the inlet stroke, and the series of operations is repeated so long as the engine runs.

CATHERINE BRESHKOVSKAYA

Scene at the Trial in 1910 of the "Little Grandmother of the Revolution."

I was present in the grim court in the Litelnyi Prospect in Petrograd in the spring of 1910, writes a correspondent to the Manchester Guardian, when sentence was pronounced on Catherine Breshkovskaya. I shall never forget the stoicism of this wonderful old lady. The judges, representative of the various social orders, each dressed in the uniform or costume pertaining to his class, filed into their places on the bench. Mme. Breshkovskaya and her fellow prisoner, M. Tchaikovsky, stood when the president rose to read the sentence. The stillness was unearthly.

After a brief resume of the case the president announced the acquittal of M. Tchaikovsky. Turning to Mme. Breshkovskaya, he said that, as she had pleaded guilty to and even gloried in her membership in the Central Revolutionary Committee, there was nothing to do except to pass sentence of banishment. Throughout the reading of the sentence the dignified old lady looked straight at the president and only momentarily lowered her eyelids when the decree of banishment was pronounced.

A well-known press correspondent and I were permitted to talk to her for a few minutes. She was plainly gowned in black, with a cameo brooch at the throat. Her hair was quite white, but she had a pink complexion that a debutante might have envied. She smiled most sweetly and, speaking perfect English, but pronouncing each word separately and distinctly, said:

"I am so glad to greet you, and to speak English with you. It is many years since I have spoken your language. I am so happy because you have come and spoken to me."

In reply to our expressions of sympathy, she remarked:

"Do not let this trouble you. I have been through it all before."

The guard intervened, but just before she was led away Mme. Breshkovskaya leaned over the edge of the dock, kissed each of us on the fore head and cheerfully wished us "Good-by!" Friends in England and America sent her gifts of money and clothing to her faraway place of banishment, but she gave the money to her fellow exiles, and all she would accept of the clothing was a set of woolen garments.

THE OLD SUN-DIAL.

In a sweet old English garden,
'Midst the lilies tall and fair,
Crimson cloves and damask roses
Breathing fragrance in the air,
You will find a moss-grown sun-dial,
And with patient care may trace
Wisdom in the Latin motto
Quaintly carven on its face.
On the lichen-covered marble
Where the ivy tendrils twine,
"I will number not the hours
When the sun forgets to shine."

To our hearts we take this wisdom,
Garnered in the days of old,
We will keep no recollection
Of the moments grey and cold.
But will treasure in remembrance
All the happy, halcyon days,
When the way of life was sparkling,
And its sun was all ablaze.
Golden light of love shall linger
In its glory all divine,
We will number not the hours
When the sun forgets to shine.

—Charles H. Mansfield.

REMEMBRANCE.

I plucked a primrose sweet this morn;
I reared on a grassy mound,
And marked the land, from heaven crown'd
With flow'rs of gold. I heard no sound
In that dear haven I had found.
Save on the wind, a huntsman's horn.

I gazed into dear eyes this morn;
Clear eyes of blue that vainly tried,
Through burning tears their fear to hide;
Sweet trembling lips to clear me lied
A fragile form clung to my side,
And pray'rs went out for Peace Day's dawn!

For ere to-morrow's sun is born,
I go to France, to blood-red skies,
To hear no sound save hellcat cries,
Perchance to gaze in glassy eyes,
Perchance to sever love's sweet ties
And I plucked a primrose sweet this morn!

—Leon Pollock.

Tell your pleasant experiences but keep your troubles to yourself.

HOW TO BEAT THE U-BOAT PIRATES!

SUMMARY BY EXPERT OF SOME COMBATIVE MEASURES

The Navies of the World Are Battling With the Sternest Menace in Britain's History.

There is no infallible remedy against the submarine at the moment, but there is just as much reason to believe that we shall ultimately master the U-boat as there was that we should master the Zeppelin, writes an English authority. And we know now that the high-flying, swift-travelling aeroplane is more than a match for the gasbag.

The submarine will be conquered not by one means, but by a variety of means, cleverly co-ordinated. The problem, while it calls for new inventions, also demands the intensification of existing anti-submarine measures.

Hussars of the Sea.

What are the ways in which the submarine can be fought? There is, to begin with, the simple expedient of destroying its frail carcass with shellfire. The armed merchantman that gets its shot in first stands a good chance of sinking its U-boat assailant. That is why the properly-armed ship with expert gunners has ten lives compared to the one life of the unarmed ship.

The U-boat positively loathes the armed trawler, and with good cause, for our trawlers have sent many of the sea-pirates to their doom, either with well-directed fire, or by crashing into them. But more than the armed trawler, the submarine hates the thirty-knot destroyer, at the sight of which she at once prepares to submerge, and, happily for us, often too late. There are any number of instances where U-boats have been cut in two by violent collision with the Hussars of the ocean, and it can be imagined what it must be like for a U-boat commander to see the sharp, ominous form of a destroyer racing towards him, its track marked by a ribbon of white foam.

Duels in the Deep.

Catching the U-boat in nets is a source which worked successfully in the earlier days of the war, when the submarines specialized in local waters. The advent of the ocean-going U-boat, however, has limited the possibilities of netting the pirates, since it is obvious that there are not enough nets in the world to apply to the sealanes of traffic.

The U-boat fears the mine, and it generally moves in the daylight to avoid it, resting at night below the surface of the water, on the sea-bed. Mines, nevertheless, take a substantial toll of submarines, and it may be that in a far greater extension of mines lies a much more effective U-boat menace.

The submarine can also be fought by the submarine. If when the war broke out we had had Zeppelins, they would certainly have been used to fight their kind. An Italian submarine has shown how practicable it is to oppose submarine to submarine. Each can seek the other out, and in the dramatic duel below the water victory will go to the better boat and the better crew, which, after all, is all that any sportsmanlike and fair-minded nation could wish for. We shall surely live to see not isolated encounters between U-boats and E-boats, but actual battles, in which half a dozen units on either side may participate.

Importance of Aircraft.

Seaplanes are a splendid means of combating the submarines. They can spot the U-boat, and attack it with bombs or with charges, the tremendous violence of whose explosion must destroy any light craft in the immediate vicinity, and there is no more delicate floating craft than a submarine. The importance of aircraft in warning merchantmen of the presence of U-boats can hardly be exaggerated.

If we sum up the generally known means of fighting the U-boat, they are as follows:

(1) Sinking by shell fire.
(2) Destruction by collision.
(3) Catching with nets.
(4) Blowing up with mines.
(5) Destroying by submarine attack.
(6) Sinking by aircraft bombs or "depth charges."

In addition, there are other devices belonging to anti-submarine organizations, such as fouling the periscopes with fatty or resinous matter, over which a veil must be drawn.

The U-boat, in presence of all these measures aiding at its destruction, seeks safety largely by avoiding, as far as possible, the protected areas, or by piercing the cordon of protective measures. It is a reasonable argument, then, that the more the scope of the anti-submarine measures is widened, the greater the menace to the pirates.

Seen in this light, the problem resolves itself into one of constructing combative means quicker than the Germans can build or replace submarines, and the greater encouragement of those restless, mechanical geniuses—"mechanical" here being used in the engineering sense—who, when called upon by Mr. Lloyd George at the time he was organizing the Ministry of Munitions, helped us first to cope with, and then to eclipse, the trench warfare material of the enemy.

A Wise Warning.

The U-boat, with its travel radius of three thousand miles, must ever have some successes; but the number of them can be reduced in time as scarcely to affect the issue. If a dozen Zeppelins come over England to-day, one or two may still hope to escape; the fact that heavy losses, however, are practically inevitable makes the game hardly worth the candle. When the day in which far more U-boats are sunk than can be built arrives, that day sees the German submarine properly countered, and in the belief of competent judges it is not so distant as some people imagine.

We are told that in default of a sovereign remedy against the U-boats, our best and only plan is to reduce the demands on available shipping by cutting down imports to the utmost limits, and build new ships as fast as possible. This is a wise warning, but it would be folly to argue from it that it implies any cessation in the efforts to fight the submarines.

The Unwearying Hunt.

The U-boats must be hunted with an ever-increasing number of patrols, destroyers, seaplanes, and submarines; there must be hundreds of seaplanes to spot them and bomb them, and many more minefields to make their movements in the lanes of traffic far more precarious.

The genius of Allied inventors might, in the course of their experiments, devise more effective means of betraying the presence of U-boats, and, with their location, a more effective means of securing their destruction.

What man builds, man can destroy. In essence, the problem of the U-boat is no greater than the problem of the Zeppelin, which we have successfully countered. It is a question of tireless study—concentration—just as air ascendancy is a question of increasing improvement and experimentation. Given a multiplication, even of existing anti-submarine measures, and, with confidence, it can be said that the U-boat menace loses nine-tenths of its gravity.

The destruction of U-boat lairs, needless to say, enters into the problem; but that is rather a matter of Grand Fleet strategy.

THE BEGINNING OF THE TANKS.

Had Their First Trial in the Bogs of Lincolnshire.

It was the Foster prairie-engine for agricultural purposes, with its huge travelling wheels, that was the germ of the Tank. A plan was submitted to the authorities by Messrs. W. Foster & Co., a Lincolnshire firm, and in time, after much labor and discussion, two uncouth monsters took shape. These were tried on Lincolnshire bogland first, then, at dead of night, over a slippery hillside, a trench, a shell-crater, and barbed wire.

Finally, there was an official test "somewhere in England." Secretly, the tanks were taken to the trial ground. Over a piece of ground which had been made to resemble the worst part of the war zone they were driven, and the keen, critical eyes of British and French military experts watched the two tanks clear trenches, crush down parapets, ignore barbed wire, and negotiate a big, muddy puddle.

Numbers of tanks were then built with admirable speed and secrecy, and the crews trained. Then one day there came a report, dated September 15th, from Sir Douglas Haig, that "we used a new type of heavy-armored car, which has been of great assistance." The tank had made its debut.

CONTROL OF SEAS IS CHIEF FACTOR

PEACE WILL COME WHEN SUBMARINE IS CURBED.

Concentration Which Produced Effective Army Must be Applied to Combat Sub Warfare.

Three years of the war have served two purposes:

First, to push all reasonable prospect of a decision further ahead than it seemed at the beginning; and,

Second, to turn the whole situation topsyturvy.

At the beginning Britain's navy was the dominating maritime factor. Germany's army was all powerful on land, says a London writer.

To-day the British navy has lost control of the sea, and the Germany army has lost control on land.

In this reversal of form, however, decision has not been brought closer. The German army is not supreme; but also it is not beaten.

The British navy is not ruling the seas; but the German navy has by no means won the struggle for maritime control.

If it has taken three years to revise the understanding of what a modern war is without bringing decision in sight, how long may it be expected to take to organize and win a decision under the new conditions that are just beginning to be understood?

Submarines a Big Factor.

It is only since the unrestricted submarine campaign reached its present stage of continuing and increasing effectiveness that the public at large has been brought to realize the probability of a long war.

The German submarines are inflicting more damage upon the Allies through the destruction of shipping than the allied armies in France are inflicting on the Germans through the gradual destruction of the German positions and the slow recovery of occupied territory. There is good reason to believe that the Allies' superiority in artillery and other equipment makes it possible for them to conduct offensive fighting with less loss than the Germans are compelled to sustain on the defensive. That has been, indeed, the rule of this war, reversing the rule of former great contests, because this is so greatly a war of machinery. The Allies are establishing a distinct superiority in machinery.

But the great outstanding development to this date is the fact that there is no such thing any longer as control of the sea. The Germans cannot sail their merchant shipping on the seas and the British cannot protect and support their merchant marine. The sea is no longer the safe highway for either side.

The British fleet can blockade Germany to the extent of driving German ships off the ocean, but cannot shut up the German naval bases so tightly as to prevent the submarines coming and going. If the German fleet would come out and fight a real naval supremacy presently might be established by the Allies, because if the fleet were once substantially destroyed it would be possible for the allied naval Powers to attack the German naval bases. But those bases are so powerfully defended by mines, by submarines and by land fortifications that a direct attack on them even by the greatly superior British fleet would involve too great chances. To make that attempt and lose would be to forfeit the last claim to control of the sea.

Britain Recognizes Situation.

Unless the submarine can be definitely subjugated it must be accepted as having completely revolutionized the whole art of naval war. There will be no such thing as a free ocean highway in the future. There can be no reasonable guarantee of security in war time under the rules that Germany has made in this war and so long as the submarine continues as effective as it now is. The effects of this development will be far reaching and more important than can yet be realized.

The British Empire depends for its stability on the maintenance of supremacy at sea, and if that supremacy is definitely lost the empire cannot permanently be held together. Englishmen realize, and the most far seeing of them admit all this. But to them it means not that the empire is to be abandoned, not that the sea as the world's highway is to be surrendered, but merely that the war must somehow or other be kept going long enough to get time and opportunity to devise means of coping with the submarine.

Attention Focussed on Sea.

The most encouraging feature of the situation is that at last there is a thorough appreciation of what the problem it that must be dealt with. The campaign in the north of France no longer is looked upon as probably marking the beginning of the war's end. The public is indulging in fascinating dreams of an early victory through success in that quarter. Attention is being given more and more to the maritime problem, while the military situation is considered in a satisfactory position.

The same energy and enterprise devoted to the submarine problem that made it possible for England to raise and equip its army of 5,000,000 men in fewer than three years will bring a solution of the submarine problem and restore something like the original relationship of powers on the sea. Tardily, but with all zeal and determination, the British Government is turning its attention to this problem of the sea. There is no thought of failure, no hesitation in any quarter in insisting that the sea must be only one result—the conquest of the submarine and the restoration of the right of a free sea.

THE KAISER'S INVESTMENTS.

German Emperor's Reported Foreign Holdings is a Fairy Tale.

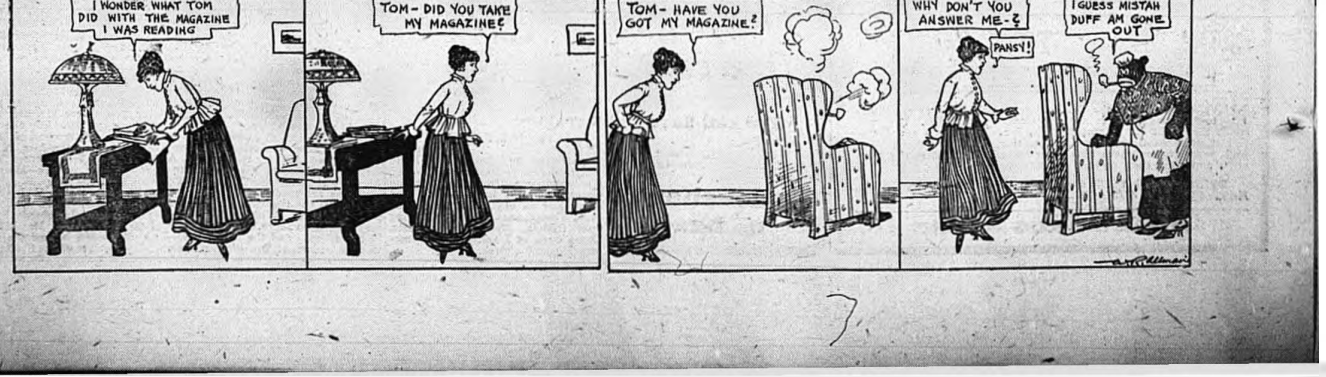
The story of the German Emperor's investments in America and elsewhere, as given in a London Sunday paper, meets with small credence in circles most likely to know something reliable about such subjects, says an English writer. To begin with, it has long been a matter of common notoriety that the War Lord has repeatedly been in financial straits. For, large as was the income he inherited as King of Prussia—the dignity of German Emperor does not bring him in a red cent—his "out-goings" are enormous. It need be only recalled that he has between fifty and sixty chateaux to keep up, several of which he has repeatedly tried to dispose of. Also his various industrial speculations, far from being a source of income, are well known to be one of expense.

As for the millions of dollars the Emperor is stated to have invested in Hamburg-American and North German Lloyd shares, the directors of these two important concerns could tell a very different tale, namely, that they have had to pay heavily for the "booming" which he has, in many ways, given them from time to time.

Altogether these fairy tales of the foreign investments of sovereign princes are to be accepted for what they are worth—nothing at all.

Piano Firm 18 Years Older than Confederation

On July first Canada celebrated the semi-centennial celebration of Confederation.



Looking back over the progress accomplished in Canada during those years, the many remarkable achievements seem hardly possible.

The industries of Canada have progressed step by step as the population increased. Among the older "truly Canadian" firms is The Williams Piano Co., Ltd., of Oshawa, Ont., makers of the famous Williams New Scale Piano.

R. S. Williams came from England and established this concern in 1849—65 years ago. Canadians will feel proud to know that they have such a "truly Canadian" piano—the Williams New Scale, which they can be proud to place in their home. The Williams Piano Co. at Oshawa will be glad to send interesting points concerning the "Artist Choice" piano, free upon request.

The heavy horse produces the most power for feed consumed when drawing a load at the rate of two and one-half miles per hours.

The Doings of the Duffs.

Farm Crop Queries

Henry G. Bell.

Conducted by Professor Henry G. Bell.

The object of this department is to place at the service of our farm readers the advice of an acknowledged authority on all subjects pertaining to soils and crops.

Address all questions to Professor Henry G. Bell, in care of The Wilson Publishing Company, Limited, Toronto, and answers will appear in this column in the order in which they are received. As space is limited it is advisable where immediate reply is necessary that a stamped and addressed envelope be enclosed with the question, when the answer will be mailed direct.

Question—C. B.:—What is your opinion regarding summer-fallowing? On what does success depend?

Answer:—Summer-fallowing is an efficient practice of getting rid of troublesome weeds, if the soil is tilled sufficiently often so as to cut off the young weeds as they sprout. It also stores up moisture to a considerable extent and if the soil is fairly full of organic matter, it conserves plantfood for succeeding crops.

Success of summer-fallowing depends upon working the surface of the ground sufficiently often to prevent the escape of moisture and to prevent the growth of weeds which exhaust the moisture and plantfood of the soil. The ground should be plowed early in spring, disked and harrowed immediately after plowing, and harrowed and disked sufficiently often to keep the surface clean and open.

Question—L. J.:—Can one pasture new seeding for a while this summer and then turn the cattle out and cut a crop of clover seed? The wheat on this field was thin last year and while the clover came up evenly and made a splendid growth it was weedy in places and for that reason I do not want to cut it for hay.

Answer:—It is possible to pasture new seeding if there is sufficient clover growth, granted that the soil is not a heavy clay type. If the soil is heavy clay, pasturing with heavy stock will tend to tramp the soil together, so that the clover setting will be smothered out. I am afraid you will find the weed seeds among the clover seed a greater detriment than the weeds in the hay. They certainly reduce the value of the seed. Cutting the crop for hay will do a lot towards killing out the weeds.

The Dairy

Kindness is a cheap supplement to the ration and produces big gains in milk flow.

Keep the calf pails as clean as the milk pails.

The cow giving the richest milk does not necessarily bring the biggest cream check. It is the total amount of fat produced that counts.

When the butter granules do not form after churning a reasonable time, try putting a small amount of table salt in the churn. A little warm water has the same effect of hastening the granules. Too much warm water makes soft butter.

Heavy milkers due to calve during July should be milked once or twice a day for a couple of weeks before calving, if the udder is distended. This attention may prevent the loss of a valuable cow from milk-fever, or injury to the udder, which makes a cow almost worthless for milking.

Memory is rather an uncertain thing to depend on to identify the calves that are taken away from their mothers and raised by hand. When the question of ownership or parentage is raised, it is much more convincing to have each calf marked with a metal tag fastened to a strap around the calf's neck. Records are half the value of a good herd.

Sheep Notes

Sheep become assets on thin, hilly land.

Don't expect to sell the increase of the flock for breeding stock until thoroughly experienced in breeding.

The smaller the flock the better the sheep will do. One sheep per acre is the limit and often that is too many.

Pretty soon the gadfly will emerge from manure piles and begin to torment the sheep. Be ready for it. Smear the sheeps' noses with tar.

Don't keep sheep and horses in the same field. Some of the sheep are almost sure to be hurt when the horses run.

Sheep detest odors in drinking water. If a tank is used for watering, clean it often.

Mix enough sulphur with the salt to give it a yellowish tinge. Keep the salt boxes filled all the time.

A long-range gun is one means of solving the dog problem and making sheep raising more profitable.

Sheep are now doing well. Wool never brought such prices.

Horse Sense

Baking-soda relieves the distress of colic by getting rid of the gas.

Poor teeth prevent a horse making full use of good feed. It may be necessary to file the teeth down in old horses, so the grain can be properly ground.

A mixture of equal parts of the tincture of iodine, turpentine and sulphuric ether, applied once a day for several days, is said to be death to splints which are forming.

As long as a horse can chew well, meal is a poor feed for him. It is eaten too fast and sticks in the horse's throat. Give the animal a chance to use his grinders. That is what they are for.

Maybe you think you can save time by feeding the horse enough in the morning to last all day. That is a good way to make a job for a horse doctor.

If the yearlings are slow to shed and seem to have little appetite, try doctoring them for worms. Mix three drams of powdered iron sulphate and three drams of gentian root. Use this dose twice a week if necessary.

Poultry

When birds drop over as if paralyzed, the trouble is heat prostration, caused by pressure on the brain.

To prevent this, provide protection from the sun and avoid overcrowding; keep bird cool and apply cold water to the head.

At this time of the year broody hens are in the majority and cause no little trouble to the attendant. While it is advisable for those who do not run incubators and brooders to set every broody during the entire summer, at the same time there will be many broodies that can not be utilized. How to rid them of the hatching fever has been the cause of many experiments by farmers and poultrymen.

It is to be regretted that some of these methods are extremely cruel and should not be allowed. In one instance noted recently a hen was tied by the leg with a piece of rope to a post; in the other instance the hen was being immersed in a pail of water. In both these cases the hens became excited, and the theory is that in this excited state they forget their broodiness. While that may be so to a certain extent, it is equally true that excitement often makes nervous, scary hens; and in the case of fat hens it is not uncommon to have them die from fright, or infect with some severe injury. A more humane treatment is to place them in separate coops without nests, or in a flock where they are kept outdoor the entire day and permitted to roost in a house only at night.

Kindness should be an order that is never violated.

Keep the summer chicks growing. Provide shade. Give the youngsters all the range possible. Exercise is the best tonic growing stock can have.

This is considered a good month for caponizing.

There is still a good market for young ducklings and soft roasting fowls.

If breeding is finished, the males are best removed from the pens after the molting season.

July is the month in which rats, minks, 'possums and weasels do their most deadly work. Be on the lookout. When their presence is discovered dig after them; give them no quarter.

Hogs

If you believe in good roads, pave the way over which the pig must travel to become pork.

A small pen built close to the sow's pen, with a hole through which the pigs can pass and eat grain by themselves, will encourage them to eat grain much sooner.

Alfalfa is one of the best pastures for growing pigs. Sweet clover is one of the earliest pasture crops on which pigs thrive almost as well as on alfalfa. Rape is a good forage crop which is ready six weeks after planting. It can be sowed in the corn at the time of the last cultivation.

Dead pigs at farrowing time result from the sows climbing over a piece of two by four in the door of the hog house. The remedy is apparent—take out the cross piece.

A small amount of soft coal for the hogs to eat is a good thing. Too much is constipating.

Marketing a sow that can be or has been bred, is at this time comparable to killing the goose that laid the golden egg. The meat supply of the country can be increased more quickly by means of the hog route than by any other.

Pork production is cheaper with grain and green forage crops than with grain alone. Some grain is necessary for fattening hogs on pasture. Clover and alfalfa rank among the best crops for swine pasture.

GIVE THE BOY HIS OWN ROOM

The Possession of a Comfortable Room Where He Can Keep His Treasures Will Do Much to Safeguard Your Boy in the Haven of His Home.

Why is it that the boy of the house is usually sentenced (I use that last word deliberately and I believe appropriately) to the least desirable, most uninviting room in the house, not infrequently two of them being packed in together for no reason than to save trouble caring for two rooms instead of one? Not only is the boy's room rather doubtfully located and of shoebox dimensions, but it has a sorry habit of being meagerly furnished or else crowded, being used as a sort of dumping ground for the cast-off furniture from the rest of the house. Anything seems good enough for Bill because, mother reasons, he hardly knows one piece of furniture from another; has no conception of good or bad taste, nor is he appreciative of beauty. Isn't he? Perhaps he couldn't express it in many words, but—oh, well, let's begin at the beginning.

The thing of first importance is that a chap should have a room of his own if possible. The kind of room and the location are secondary matters.

Some one has happily described one's own room as "a home within a home." It is more—a haven. The house may be seething, our loved ones may for the time misunderstand (and who so often misunderstood as the average boy?) but with closed door in our very own room we can breathe thankfully,

"I've shut my door and I am all alone,
Here in my room all fragrant with my better self.
* * * * * * *
Outside, the strife and struggle and the strain;
In here there's peace and quietude and strength."

and come out with new poise for the living of life among others. And that is what a separate room means to a boy, too, though he would scorn to express it so poetically.

With his own room the boy will have an opportunity to express his individuality. He should be allowed to hang up posters, pictures of sports heroes, pennants and banners, and the many other tremendous trifles in which boyhood revels. Nearly every lad has a collection of colored stones, coins, butterflies, or something. This collection he should be allowed to keep in his own room, where, safe from unsympathetic fingers, he may proudly keep it upon display upon a shelf or table or in a little cabinet. It is his room, remember, and he should be allowed to keep his treasures in it, provided they are sanitary and that he keeps them in reasonable order.

Pride in a room is the best incentive to orderliness. A boy cannot be expected to take pride in a shoddy or shabby room, where the furniture is totally unsuited or is of various woods and finishes and, therefore, unrelated. Did you ever know a boy who did not love to paint? If it is not possible to have matching furniture for his room, suggest to him that he first remove the quarreling finishes from the variegated articles with some commercial paint remover and then paint it all the same color. Pride? That boy will take a tremendous pride in his room. Just think of showing "the fellows" a room full of pretty furniture painted by himself!

To make order as easy as possible, the room should never be crowded. The essential pieces of furniture are a bed, single or in couch form if the room is small, a bureau or chiffonier, two easy chairs for himself and a possible guest, a desk, and a bookcase, if the youngster can be trusted not to get up and read in the middle of the night—as some have been known to do.

Rather than an ugly old carpet or a shoddy rug, place one or two small rugs upon the painted floor. If the room happens to be large he should be allowed to keep other things in it besides those mentioned, but always with the stipulation that he keep a reasonable amount of order. A room screen is fine for a fairly large room, as it can be made to partition off a corner for a study or den.

It does seem that most mothers cannot help being annoyed by their sons' tastes in "art." The treasured posters are eyesores, the worshipped field heroes are an abomination, the pennants are dust-catchers. But please, oh, please, don't throw these things away or bundle them away out of sight! They do mean so much to a boy, at least for a while. He will throw them away himself when they are outgrown. It is wise to give him really good pictures that he will like, such as Howard Pyle's colorful pirates, Remington's superb Indians and cowboys, or the inspiring picture of Sir Galahad. These are all well executed subjects after his own heart, and soon, by comparison he will see the tawdriness of his chosen prints. —R. S.

The Sunday School

INTERNATIONAL LESSON
JULY 15.

Lesson III. Hezekiah, The Faithful King—2 Chron. 30. Golden Text—Heb. 11. 6.

Verse 1-5. Invitation to the celebration of the passover. Hezekiah—Son and successor of Ahaz; the date of his accession in uncertain (2 Kings 18. 10, 13). Tentatively the years of Ahaz may be given as B. C. 735-728, those of Hezekiah B. C. 728-697. Israel—The people of the northern kingdom; Ephraim and Manasseh are representatives of the north. Passover—For the origin of this feast see last comment on this lesson. Throughout the Old Testament it appears as a festival of thanksgiving for Jehovah's goodness at the time of the exodus. Second month—The proper time was the fourteenth day of the first month, Nisan, but provision was made in the law for a celebration in the second month, by those who were unable to participate at the regular time (Num. 9. 9-12). During the first year of Hezekiah the feast could not be kept at the regular date because the temple was not ready (29, 17); moreover the priests were slow in purifying themselves. Dan to Beersheba—The limits of the undivided kingdom. Dan in the far north, Beersheba in the extreme south (1 Chron. 21. 2). Great numbers—All were under obligation to observe the feast, but according to the Chronicler only a limited number had kept the law.

6-9. The proclamation. Children of Israel—The context suggests that the author has in mind only the people of the north, whom he considers apostates (13. 5-12). Remnant—Might be interpreted as implying the fall of the northern kingdom in 722; but if the proclamation was sent in the first year of Hezekiah, and if he became king in 729, the reference can be only to the invasion of the north described in 2 Kings 15. 29; 1 Chron. 5. 26. Kings—Tiglath-pileser IV was king in 734; Shalmaneser V and Sargon were the conquerors of Samaria. Gracious—If they turn to Jehovah in repentance he will turn to them in compassion and restore the felicity of former times.

10-13. Results of proclamation. There was no general response in the north; only a few heeded the exhortation. One heart—There was a enthusiastic response in the south. Unleavened bread—The feast of passover and the feast of unleavened bread are here identified. Originally they were distinct: the passover originated as a nomadic feast celebrated in the spring, the feast of unleavened bread as an agricultural feast celebrated at the opening of the harvest. Later both became associated with the exodus.

From time to time during the summer go over young trees to guide their growth. If too many limbs are starting from a given point, they may be thinned to the required number. If a rank limb tends to fill the center or cross other limbs, it may be removed. If the strongest limbs all grow in the same direction, thus giving a one-sided tree, they may be pinched back, thus encouraging other limbs to start on the opposite side.

After the Lima bean vines have reached the top of the poles, they ought to be pinched off to insure stronger vines and a greater yield of beans.

If weeds get the upper hand of you it is good-bye garden!

Seed-bearing stops bloom. Therefore pick pansies, sweet peas, etc., regularly and often.

Watch the sweet peas closely for aphis. Spray with soap and water or some tobacco preparation.

See that the tomatoes are staked or kept off the ground. Some of the branches may be cut away. This will give larger fruits, but not so many.

Late celery should now be set in the field. Celery needs a fresh moist soil. To this end the land should be plowed and thoroughly worked down just before setting the plants. The beds should be wet down before the plants are taken up. Shear the tops and clip off long roots. If the weather is very hot and dry, water the plants as they are set.

In Orchard, Field and Garden.

If the strawberry bed is to bear fruit again next year it should be mowed and worked over soon after the fruiting season.

Any red rust on blackcap or blackberry plants? If so, dig out and burn the diseased canes, roots and all.

Too much hot sun causes picked blackberries to turn an undesirable reddish color. Hurry them into the packing-shed.

The spring-set strawberry bed needs cultivating regularly and often. Your standing sign should be: "Weeds not allowed here." Treat surplus runners the same as weeds—for weeds they are.

Some folks seem to think that a nice little fringe of growing sprouts about the base of an apple tree looks pretty. That may be their taste, but those sprouts are sucking life out of the tree. Out with them!

After a rain and before a hard crust forms, is the ideal time to harrow an orchard.

If there are any tent-caterpillars on your trees, give them a quick singeing with a torch.

A stony side-hill, sloping toward the north, taken out of an old cow pasture, is the best orchard we ever had.

Grafts need looking after. Are they all alive and well? See that no insect pest gets after them. They are very tender and lice are especially apt to trouble them.

Your Problems

Conducted by Mrs. Helen Law

Mothers and daughters of all ages are cordially invited to write to this department. Initials only will be published with each question and its answer as a means of identification, but full name and address must be given in each letter. Write on one side of paper only. Answers will be mailed direct if stamped and addressed envelope is enclosed.

Address all correspondence for this department to Mrs. Helen Law, 235 Woodbine Ave., Toronto.

May:—1. It is not good form to wear face veils in the evening. The only excuse for a veil at night is when one is motoring. 2. Since your friend has invited you to her party and asks you to bring a man with you, it would be quite proper to write to a man whom you know well and ask him to go. Word the note thus: My Dear —: Miss — is giving a little party next Friday evening and has asked me to bring a man with me. Would you care to go? If you can, let me hear as soon as possible, and stop for me that evening at 7.45 o'clock. Very sincerely, May—. 3. To clean a straw sailor hat try the following: Dissolve one teaspoonful oxalic acid crystals in one cupful boiling water, and, after brushing the hat thoroughly to remove all dust, lay it on a flat surface and scrub with this solution, using a small brush for the purpose. Work rapidly, beginning with the crown; rinse in cold water, wipe dry and place on a flat cloth in the sun to dry. Do not let the hat become thoroughly saturated with the water.

Gardener:—Try cayenne pepper to rid cabbage heads of worms. Sprinkle the cabbage as soon as the worms appear. A remedy for cutworms and onion grubs is to mix the seed with sulphur before planting. This may be used with seed corn also.

Mrs. C. L.:—To make an endless clothesline fasten two grooved wheels wherever you want your line and stretch a wire line around the wheel. As you hang up each piece of clothing you can turn the wheel and thus make room for the next piece directly in front of you. The clothes may be taken from the line by this same convenient method, which saves many steps and is also a boon in case of rain.

E. T.:—A widow when preparing for her second marriage should drop the name of her former husband and have her household linen marked with her maiden name. Linen procured after her marriage should be marked with the name of her second husband.

Frances:—The following are suggestions for your Sunday school picnic. You can have the usual races, some of them for the younger folks, others for the older persons. Fighting for the flag is a particularly timely game for the younger boys and girls. You will need about a dozen medium-sized cotton flags of the inexpensive kind. One flag at a time is placed upright in the ground and six girls or boys start in a race to obtain it. Give them some handicap. The boys can race with potato sacks, while the girls can race blindfolded or running backward; or the boys might race crawling on their hands and knees and the girls hopping on the right foot. Another way to race is to go as partners, each holding onto the opposite ends of a clothespin. Of course, the flags captured by each are retained. Ringing the Victory Bell is another good game. Form an arch of three cross poles, rising considerably above the heads of the company. Imbed the uprights in the earth and nail the crosspiece firmly on. Then decorate the arch with red, white and blue bunting and from the top bar hang a large bell. The game consists in hitting this bell with balls which are provided, each player being given three or more throws in a round. The tape race is fun. Have as many lengths of tape as there will be players and have all the tapes about the same number of feet—ten or twelve—then provide several pairs of sharp scissors. Attach all the tapes to a fence. Four or six players may contest at once, according to the pairs of scissors available. The contestants hold the loose ends of the tapes, which they draw out taut. At the signal each player begins to split his tape up the center line with the scissors, the player arriving at the end which is tied winning the race. After each set has tried, match the winners for the final decision. This would be suitable for the older guests. Another race consists in pushing four pebbles over a prescribed course with walking sticks. All four must be rolled at once, each in turn.

X. Y. Z.:—The engagement ring is put on over the wedding ring and thus guards it. The former is removed before the ceremony, leaving the finger free. Then the bride slips back the engagement ring at her first opportunity.

Y. B. I.:—To restore the color of black kid, mix ink with the white of an egg and apply with a soft sponge. To clean white kid, dip a clean white flannel cloth in a little ammonia and rub lightly on a cake of white soap. Rub the soiled parts gently, changing the cloth as soon as it becomes soiled. To polish tan shoes, wash the shoes clean with a sponge and warm water. Wipe with a dry cloth and let dry. Then rub freely with the inside of a banana peel. Wipe carefully with a dry cloth and polish with cotton flannel. Patent leather shoes should not be "polished" in the strict sense of the word. Apply a mixture of one part linseed oil to two parts cream to the shoes, rubbing it well in with a soft flannel cloth. This will keep the leather soft and it will not crack as readily.

Joe:—Even though you have not yet met the bride, the present should be sent to her. Wedding presents are never sent to the bridegroom.

Bedtime Stories

Tommy's Stamp Book.

When through my book of stamps I look,
What wondrous things I see!
It's dearer than the storybook
My mother reads to me.

With great delight ten times a day
I stop my play to glance
Upon these stamps of Paraguay,
Greece, Italy and France.

They beam on me in every hue
That in a stamp is seen—
In crimson, lavender and blue,
And cardinal and green.

I look upon the book with pride
To see its pages fill;
And yet I am not satisfied,
And shall not be until

The postman pauses in his tramp,
And in his outstretched hand
I see a letter with the stamp
They use in Fairyland.

The Fairy of the Roses.

Most people thought the old lady who lived in the house that stood all by itself was very queer and very cross, but Alline said she was cross only because she had rheumatism, and that if you could get her to tell a fairy story she would forget all about the pain, and be just as pleasant as anything.

"I'm going to her house now," said Alline, "for she promised she would tell me to-day about the fairies of the roses."

"Can you see that rose tree?" said the old lady, when Alline was comfortably seated on a stool beside her. "Well, it is owned by a fairy who, like the old woman who lived in a shoe, has more children than she knows what to do with. She is so dreadfully afraid of having anything happen to them that she has shut each one up tight in a rosebud. There they will stay until they grow big enough and strong enough to burst the buds open, and then each one will fly away."

"And where will they go?" asked Alline.

"That I cannot say," answered the old lady; "there are so many of them, and they choose such different places. They are also very fond of disguises—sometimes one might take them for butterflies, at other times for humming birds. Often, when you can't see them at all, you can find out just about where they are by listening."

"Oh," cried Alline, "what do they say?"

The old lady shook her head. "Who can tell what they say? If that were possible, mortals would perhaps be wiser than they are. You can often hear them either whispering among the leaves—though there are some who will tell you it is only the wind—or singing by the brook a little tinkling song."

While the old lady and Alline were talking, a sudden shower that had come up passed over, and the sun shone again in all its warm brightness. The birds began to sing, and in through the window darted a humming bird. It darted right out again; but not before the old lady and Alline had both seen it.

"Alline," the old lady said, "a bud on my rose tree looked this morning as if it might be pushed open soon. Go to the window and see if the fairy hasn't come out."

Alline ran to the window. "I see a great white rose," she said. "That little humming bird must have been the fairy. Oh, I'm so glad we both saw it!"

Sunlight for the Cellar.

There is a mistaken idea that a house is warmer if the cellar is not under the entire building. The argument is that there are no windows with crevices to let in the cold air. That may be true concerning the cracks next to the frames, but without doubt there will be dampness where the ground has not been excavated. Then the first-floor joists are nearer to the frost in the earth in the winter.

Set the first-story beams well up from the grade, not less than 24 inches from the soil. If there is a distance of 30 inches between it is still better.

Excavate for a basement beneath the whole house, and do not be afraid to provide sufficient windows. There is nothing quite so dingy as that dark and damp space under the house. The expenditure of a few dollars would have made it light and cheerful. Do not try to bar the sunlight.

The Paisley Advocate

PAISLEY, DEC. 4th, 1918

UNDERWOOD STORE BURNED

Mr. J. R. Laidlaw Lost His Whole Stock

Oddfellows' Hall and Public Library Also Consumed

Incendiarism Suspected

A very promising business outlook for Mr. J. R. Laidlaw, general merchant at Underwood, has been given a setback, temporarily at least, by an early morning fire which destroyed his store premises and everything contained in the building, on Thursday last.

The blaze was first noticed by Mr. Geo. Koppel, owner of the building, at about a quarter to five o'clock, and it had just then broken out in the entrance upstairs to the Oddfellows' Hall, which was at the top of an outside stairway at the south of the store. By the time Mr. Laidlaw had been called from his residence and the store key procured the fire had made great headway under pressure of the heavy wind that was blowing, and entrance could not be made to save anything.

Mr. Laidlaw had only recently purchased the business and had added considerably to the stock. He had already won a large trade from the people of the district who will greatly feel the inconvenience caused by even temporary suspension. As the proprietor has expressed his willingness to have a new building erected it is hoped that Mr. Laidlaw will re-open very soon. While the monetary loss will be a severe one to him, there is every assurance for the future should he decide to remain in Underwood.

Underwood Lodge of the I.O.O.F. had their lodge room upstairs, and all the regalia and fixtures were destroyed, which will mean a loss of fully $1,200.

The public library, which was accommodated in the rear of the upstairs is also a total loss. There were 2,360 volumes on the shelves.

The cause of the fire cannot be determined. While many consider it to be of incendiary origin, there is as yet no evidence to that effect. We hear it reported that an investigation is to be held.

BADGES FOR FOOD PRODUCTION SERVICE

The Organization of Resources Committee, representing the Ontario Government and Legislature in their plans for encouraging the production of food as a war-time service, has had prepared a Food Production Service Badge for awarding to children and others who have done good work during the past season. It offers the badge to War Production Clubs, Agricultural and Horticultural Societies, Sunday School Clubs, Resources Committee Branches, School Boards, Teachers, Women's Institutes, or any other group of responsible persons, at a fraction of its cost for distribution locally at public meetings. In the distribution of these badges the purposes are: To commemorate the splendid response made throughout Ontario to the Empire's call for increased production in the season of 1918; to stimulate community interest in local achievements; to recognize deserving effort in national service, and to encourage a continuance of the work next year and as long as the world's need of food is urgent. The badge may be awarded for other services besides gardening. Boys or girls who have helped materially in farm work during their holidays; those who have worked with their parents in a worth-while home garden scheme, or those who have raised poultry or produced pork, will also be entitled to the badge. The badge, a sample of which may be seen at this office, will be cherished in after years as a very interesting war-time souvenir.

WAR SAVINGS AND THRIFT STAMPS AT POST OFFICE

The Canadian Government began on Dec. 2nd the sale of War Savings and Thrift Stamps.

By this means not only will the Canadian Government, it is hoped, secure moneys that can be profitably expended in the reconstruction period, but the war savings plan offers to the small investor an absolutely safe security at an excellent rate of interest, being over 4½ per cent., compounded semi-annually. A War Savings Stamp is a stamp for which the Government will pay you $5.00 on Jan. 1st, 1924, and will cost you between $4.00 and $4.11, during 1919, depending upon the month in which it is purchased. A thrift stamp is a stamp costing 25 cents to be applied in payment for a War Saving Stamp. It does not earn interest. The purpose of its issue is to enable people to accumulate in small sums the amount necessary to pay for a War Savings Stamp. If you want to begin to save on the war savings plan take $4.00 to the post office and ask for a War Savings Certificate. You will get fuller information on application.

BRUCE TELEPHONE COMMISSIONER IS ELECTED VICE-PRESIDENT

At the annual meeting of Independent Telephone Companies held in Toronto a few days ago, one of the principal subjects discussed was that of securing an act providing that local telephone companies, which are to a certain extent competing with the Bell, may have connection with the latter for long distance business without payment of an annual levy. Under existing regulations the Bruce system would have to pay $300 a year for the privilege.

Mr. Archie McLean, manager of the Bruce system, was chosen as vice-president of the Independent Association, an honor which is a deserved compliment to his standing as telephone director.

TEACHERS MAY USE PROVINCIAL LIBRARY

Inspector Bald has received the following letter, which will be of much concern to teachers and students. The letter is self-explanatory:

Toronto, Ont., Nov. 8th, 1918

W. F. Bald, B.A., L.L.B.,
Public School Inspector,
Port Elgin, Ont.

Dear Sir—In the library of the Department of Education, Normal School Buildings, Toronto, there are thirty-five thousand books, many pamphlets, bulletins and reports on education, the leading British, American and Canadian educational journals, literary and scientific periodicals, newspapers, etc.

These have been selected to aid students-in-training in the Normal School, inspectors and teachers at work in the schools of the province and persons investigating problems in education. Every department of school work is represented, and new books are added from month to month.

A number of inspectors and teachers use the library frequently, but many others, I learn, are not aware that they may, on application, have books loaned for a period of two weeks, the Department paying the postage out and the borrowers the return postage.

On request, advice is given as to books that are especially helpful in teaching topics found to be difficult and books that contain a more comprehensive view of a subject than that given in the text-book. The resources of the library are at the service of yourself and your co-workers.

Yours faithfully,
D. J. Goggin,
Departmental Librarian

BRUCE TP. YOUNG MEN WIN DISTINCTIVE HONORS

O.A.C. Judging Team Beats America at Chicago

Ontario Agricultural College won premier honors last week at the International Live Stock Exhibition student judging contest at Chicago, making 3,865 points out of 5,000.

The O.A.C. team is composed of five fourth year students of whom three are from Bruce County and two from Bruce Tp., as the names show: R. E. Begg, Tiverton; C. F. McKenzie, 10th Bruce; C. Lamont, Mount Brydges; W. C. Caldwell, Carp; J. B. Matheson, Lucknow.

R. E. Begg won highest individual honors, with 801 points out of a possible 1,000, C. F. McKenzie third with 791, and C. Lamont fifth.

The competition is open to the American continent, and students from nine United States colleges took part. This is the fourth time the honor has come to the O.A.C. and the college students established a record by winning the honors for three years in succession in 1905, 1906 and 1907, receiving the handsome trophy which went to the team winning it for three years.

HIGH PRICES FOR YEARS, SAYS ARMOUR

J. Ogden Armour, of Chicago, made this statement the other day, on the outlook for food costs:

"I do not think food prices will decline much for four years. Provisions may not go any higher, but at the same time they are not likely to decline much for some time to come. There will be a big trade for the next four years. It is fortunate that we have good stocks, as Europe will need a lot. It looks to me as though prices for grains will not recede rapidly and the same applies to many other things, and it will be some years before values get down to the normal."

NO DEPARTMENTAL EXAMS IN JUNE

To enable schools to make up the loss of time occasioned by the influenza epidemic, Hon. Dr. H. J. Cody, Minister of Education, has stated that he had decided to circularize school boards, inspectors and teachers to the effect that it will not be necessary to hold any of the departmental examinations in June next, so that the second term of the school year will be longer than it has been for several years.

The Minister said he believed that with this provision and with the provisions made in the regulations for the conduct of those examinations, the ill effects on the school work of the interruptions that have occurred may be reasonably well overcome without encroaching on the holidays.

—He was a smart fellow, or at least he thought he was, and he was on a visit to a town in Lancashire, known locally as Monk's Town. On the road he met an old man, a native of the town, and thinking to have a joke at his expense said: "Hullo! Did you see a cart load of monkeys pass along here just now?" "No, laddie," replied the old man, "has tha fallen out?"

HEALTH TALK

SPANISH INFLUENZA OR GRIP

BY DR. LEE K. SMITH.

An old enemy is with us again, and whether we fight a German or a germ, we must put up a good fight, and not be afraid. The influenza runs a very brief course when the patient is careful, and if we keep the system in good condition and throw off the poisons which tend to accumulate within our bodies, we can escape the disease. Remember these three C's—a clean mouth, a clean skin, and clean bowels. To carry off poisons from the system and keep the bowels from daily doses of a pleasant laxative should be taken. Such a one is made of May-apple, leaves of aloe, root of jalap, and called Dr. Pierce's Pleasant Pellets. Hot lemonade should be used freely if attacked by a cold, and the patient should be put to bed after a hot mustard foot-bath.

To prevent the attack of bronchitis or pneumonia and to control the pain, Anuric tablets should be obtained at the drug store, and one given every two hours, with lemonade. The Anuric tablets were first discovered by Dr. Pierce, and, as they flush the bladder and cleanse the kidneys, they carry away much of the poisons and the uric acid.

It is important that broths, milk, buttermilk, ice-cream and simple diet be given regularly to strengthen the system and increase the vital resistance. The fever is diminished by the use of the Anuric tablets, but in addition, the forehead, arms and hands may be bathed with water (tepid) in which a tablespoonful of salsarsina has been dissolved in a quart. After an attack of grip or pneumonia build up and strengthen the system, obtain at the drug store a good iron tonic, called "Ironic" Tablets, or that well known herbal tonic, Dr. Pierce's Golden Medical Discovery.

CHAPLAIN'S STORY OF THE WAR

The lecture given in the town hall on Friday evening last by Capt. (Rev.) E. Appleyard, M.C., returned chaplain of the 31st Battalion, proved to be the best deliverance that we have yet heard here on the war. And even more vividly interesting than moving picture representations of the field operations was the lecturer's oral description of the scenes in Flanders. Without giving any details of the experience of the newly enlisted soldier, Capt. Appleyard took his audience on the overseas trip, which was made on the great ship, the Olympic, which took 7,000 soldiers aboard. An idea of the dimensions of the vessel was given by the statement that from upper to lowest there are twelve decks, and the main deck is so wide and long that the troops could be assembled in four distinct religious services at the same time, with a brass band leading the singing at each, without one interfering in the least with any of the others. Disembarking at Liverpool the boys were marched to the railway trains, their first notes of curiosity and astonishment at things as they are in the Old Land were expressed upon sight of the trains. The cars and engine are so much smaller than the Canadian ones that it was thought upon first sight the outfit would not be equal to the task of hauling a contingent of our army across the country at anything but a snail pace. This is where the boys got their first eye-opener to English efficiency, for they travelled along at sixty miles an hour without getting a jolt while starting, going or stopping. Early on the journey Canucks were noticed grouped about the engine at stopping places, giving voice to their admiration of its pulling powers. The speaker did not go to France at the same time as his battalion, and when he was sent over the channel he had to make many inquiries and put up with mysterious short delays before he could find the location of the 31st. Information on such matters was not to be obtained offhand six months or hour without getting a lions under which he travelled to his destination were such that he apparently did not know where he was going to at any time, but by stages he finally came up to the position sought. This was an evidence of the system by which military information was concealed throughout the whole campaign, to prevent leaks to the enemy information department. The conditions under which the soldier lived at the front were plainly depicted, and the Tommies eulogized for the way in which they carry themselves through it all. In spite of the naturally degrading and depressing influences of camp and trench life the boys retain their morale to a remarkable degree, moral and religious ideals dominating their actions under the stress of fighting work or the freedo mof the rest period. Song and music is everywhere a factor in their existence. The best of talent is found scattered among the tents, and a visit of the padre (common for chaplain) is always welcomed by a readiness to listen and take part in the service that is to be held in perhaps a very informal way. Some of the encampments were very interestingly described. At one position they were very comfortably and safely housed in extensive excavations deep down in the solid chalk formation, where there was no danger whatever from enemy fire. Prior to the famous and successful attack on Vimy Ridge the troops that were to take part in this big push were for months living in a swampy region, their tents set up around the willow bushes. Capt. Appleby's account of the great battle of Vimy Ridge was a thrilling feature of his lecture. The soldiers had been most thoroughly schooled and trained for the attack and every preparation made to ensure sweeping the enemy from their strong defences on the heights and in the villages. A part of the country in which the training was done was laid out like a great landscape map, and each platoon or section of men were assigned to certain movements and work, and all the plans of attack were realistically rehearsed over and over again. The details were worked out so minutely that every street in the villages was named on the map and familiarized to the mind and eye of the soldiers. The boys were all keyed up to a high pitch of expectation as the fateful day drew near for the culmination of all those plans. It turned out that on Easter morning, 1917, they were to go over the top and attempt to take the enemy's stronghold. The front to be assailed extended for a length of twenty miles. The Allies' big guns, stationed eight miles back, and the whole strength of the artillery lined up at intervals extending to near the infantry lines, were all trained to drop shells at exactly the same distance in front when the barrage opened. On the previous day they were marched up to the scene of action. That evening every officer was given the exact time from headquarters by telephone, and all set their watches, so that there should be perfect unity of action when the moment arrived. Promptly to the second the horizon they watched to the rear was illuminined by the first flash of the big guns, followed quickly by the first report and then a roar from the whole mass of artillery, and the hail of explosives began to fall on the barrage line, not one striking outside of a strip twenty-five miles. The story of going "over the top" that morning, and the advance of the men in four waves and the taking of their objectives was all well told by the speaker, but we find we cannot give it fully. He also related how the men had taken part in the religious service which had been held in the woods on the afternoon before the attack. The men are not a godless lot, he said. They went into that battle with a prayer in the heart for those at home.

The great part the Canadians have taken in the war, and the recognition won from the world was nicely shown in the incident of Capt. Appleyard's visit to the British fleet, when an admiral whom he met sent a special message to the troops.

The lecture was supplemented by an excellent programme of musical numbers. Solos were given by Miss Netta Johnston, Miss Edna Carter and Master Alan Shoemaker, a duet by Misses Netta and Nina Johnston. The entertainment concluded with songs of Britain and her colonies, the singers grouped on the stage in costume. The leading roles were taken by those above mentioned, with Miss Carter as Britannia. This was a very effective patriotic feature, and is an index of what the musical talent of Paisley is capable of producing for public entertainment.

A CRIPPLE FOR THREE YEARS

Helpless In Bed With Rheumatism Until He Took "FRUIT-A-TIVES".

MR. ALEXANDER MUNRO

R.R. No. 1, Lorne, Ont.

"For over three years, I was confined to bed with *Rheumatism*. During that time, I had treatment from a number of doctors, and tried nearly everything I saw advertised to cure Rheumatism, without receiving any benefit.

Finally, I decided to try 'Fruit-a-tives'". Before I had used half a box, I noticed an improvement; the pain was not so severe, and the swelling started to go down.

I continued taking this fruit medicine, improving all the time, and now I can walk about two miles and do light chores about the place".

ALEXANDER MUNRO.

50c. a box, 6 for $2.50, trial size 25c. At all dealers or sent postpaid on receipt of price by Fruit-a-tives Limited, Ottawa.

Stoves and Heaters

We Sell the **Sharples** Suction Feed **Separator**

OUR STOCK is complete, and it certainly will *pay you* to see our Stoves, which are the most modern in style and fuel saving qualities. We also claim you cannot buy the same stoves as we sell as cheap any place in the county. We are selling a lot of Stoves and we hope to sell you one if you need one. But whether you need one or not, come in and see our stock. We shall be glad to show you anything we have in the store.

The Sharples Skims Cream At Any Speed

The Composite Price, $42.50 — A combination home device for heating, cooking, baking. It has a high oven. Built to conserve, and guaranteed to give satisfaction.

Buck's Novelty Range Price, $76.00 — We guarantee to satisfy the most fastidious. It is perfectly adapted to the small kitchen. It has a high oven. A radical departure from the old standards.

Dogherty High Oven Price, $110.00 — Bakes perfectly with coal or wood. It is a beauty in appearance, and reliable in use.

Buck's Happy Tho't Price, $95.00 — The old reliable. We do not need to say anything about this stove. Ask anyone who has one.

Bucks' Brittania Price, $65.00 — A modern, handsome, low priced range, and absolutely guaranteed.

OUR LINE OF HEATERS is also complete, including *Perfection Oil Heaters, Oaks, Improved Quebec, Baseburners and FiReCo Heaters.*

Our FiReCo Heater Price, $38.00 — burns any kind of fuel. It has more than three times the radiating surface of the ordinary heater. A fuel saver. Will refund its cost in one winter. Holds fire for four days with hard coal and sixty hours with soft coal.

Stove Pipes. We make our own stove pipes out of good iron—iron such as cannot be bought to-day at any price. They are vastly superior to readymade ones, both in quality of iron and workmanship. See ours and compare them with others. We know what you will say.

Ford and Maxwell Service Station

We carry a full line of Ford Parts and Repairs

We aim to give up-to-date service to all car owners. With our experience in city garages we are in a position to do work that we can guarantee satisfactory. Motorists should call us up by either phone when they have trouble.

High Grade Oils, Gas and Accessories of all kinds.

Repairing at Reasonable Rates. All kinds of Vulcanizing done.

We are equipped to remove carbon by oxygen gas.

O. E. MILLER

Lieut. Rabt. C. Hosie, son of Rev. John Hosie, formerly pastor of Salem, Gillies Hill and Dobbinton Presbyterian churches. Lieut. Hosie recently won his commission on the field at Cambrai. He was a student at London Collegiate Institute, leaving school to enlist in the 135th Battalion, which went overseas more than two years ago.

ON THE HEEL OF THE HUNT OF THE HUNS

The last letter received from Signaller Elroy McKenzie tells of the last great days the Canadians had in chasing the Heinies out of Belgium.

Under date of Nov. 8th he says they had been moving forward every day since they started six days before, and then could scarcely keep up with the infantry as they pushed old Fritzie back mile on mile. The letter remained unfinished until Sunday, 10th Nov., when Elroy wrote: "I just got nicely started on this letter to you the other day when I was called out to take a long run. Since I started this letter we have moved up about 25 kilos. Had a very hard trip last night in the dark over terribly bad roads—slippery and rough. Slippery is no word to describe them. I will remember this trip for a long time to come. Will likely be moving again to-day or to-night. Slightly gassed last night, but O.K. now. Fritzie is now almost beyond the city of Mons, as you will be reading by the papers. My machine (motorcycle) sustained a slight casualty last night, having been wounded by a piece of shrapnel from one of Heine's shells. I was, however, not on board it at the time. I haven't seen Stewart yet, but I found out that his battery is only a short distance from here.

Talk about welcome! Say, these Belgian people are almost frantic with joy. Old women and men, young women and children, all want to embrace and kiss us. Everywhere we go they are ready to give us coffee, etc. Say, but it is great! I wish I had time to write you a good letter, but I promise you I will tell you all about these great days at the first chance I get to write."

FROM FAIR ITALY

30th October, 1918.
Ospedale di Campo,
Fona di Guerra, Italy

To Miss Alice Maxwell:

I suppose that you will be surprised to receive this card. I had the charge of distribution of the materials that we received from our precious Allies "America." I find your card with your address in the pocket of a shirt and I fill the desire of send you our thankful sentiments. I gave the shirt made by you to a brave soldier admitted from the field hospital and going back to the trenches for fight again. I am sure that you know in this moment (28th and 29th October, 1918) our splendid reprise on the Piave. I am very sorry that I can't write you as I would like, because it is too long time I am out of practice of English language. Of course I expect you'll excuse me. I am an officer in a field hospital since the start of the war. I and my friend officers in this hospital will be very pleased to hear some news from you, that we consider as a benefactress. Don't forget, may I ask, to send us some photos of your marvellous country. Good luck to the Allies, good luck to young America, good luck to Italy. Many thanks to you.

Yours faithfully,
Leuente Pietro Masi

Winter Term Opens Jan. 5th

ELLIOTT Business College

Yonge and Charles Sts., Toronto

This school has recently been asked to fill positions at $13, $14, $17 and $18 a week and $18 a month.

A course here is a sure, safe and quick route to good positions. Thousands have proved this. Write for catalogue. Do it to-day now.

W. J. ELLIOTT, Principal

The Farmers' Live Stock Shipping Club

Will pay for live hogs delivered at Paisley station, F.O.B. prices, less one per cent. government condemnation loss and operating expenses.

Desirable Village Property for Sale

LARGE frame house, with 5 acres of land. Good stable, hen house and hen yard. Hard and soft water. At garden lot. Known as the T. H. George property. D. DOUGLOP, prop.

—The revised Book of Praise of the Presbyterian Church of Canada has just been issued and from a literary point of view is an improvement upon the old, so far as modern literature is concerned. Justice has been done to American literature by the introduction of hymns by Whittier, Emerson, Longfellow, Holmes and Bryant. The book contains 135 psalm selections and 833 hymns, 355 of which are common to the new Methodist hymn book. It is published by the Oxford University Press and is neatly bound and clearly printed in pure Tudor English type.

CHOICE OF AWARD

Old Man's Peculiar Will Develops Good and Bad Traits of Nephews

By George Elmer Cobb.

"And I hereby bequeath and devise to my nephews, Ralph Davis and Jonas Greer, the house on Main Street and the house on Railroad street, my trustees to make the choice of awarding the same.

The lawyer read this exact from the will of old Peter Davis in a singsong tone. There was a long sigh of relief from Jonas Greer, and a pleased expression on the face of Ralph Davis. Good old Uncle Peter had not forgotten them, even if he had given a goodly portion of his worldly goods to charity.

"Further," the lawyer continued his reading, "the first one of said nephews making five thousand dollars, the same shall be received in full payment for the old homestead."

There was due speculation among the gossips of Brandon for a week after that, as to which of the fortunate heirs of old Peter Davis would receive the best property award.

The place on Main street was the choice of the two residences. The house was modern, the neighbors were of the best social set in the village, the street was paved. The Railroad street place held a neat but old-fashioned cottage. Main street was a broad tree-fringed thoroughfare, Railroad street had half of its area taken up by tracks, sidings, and freight houses. The Greers had no children. There were two pretty, curly headed tots in Ralph Davis' family.

After thinking and debating over the matter at the end of a week the trustees of the Davis estate awarded the Main street property to the Greers.

"It's a burning shame, Ralph!" said outspoken Mrs. Davis. "There is no right or justice to it. Everybody knows it, everybody is scandalized."

"Oh, we're property owners now, and shouldn't complain," reminded her husband in a pleasant way.

"But think of it—the Greers have no children, and we have. It is dangerous for them as near the railroad tracks. Besides that, this property isn't worth half as much as the Main street place."

"Well," rejoined Ralph, "I understand that John Moore, one of the trustees, is wearing a new diamond pin, and they say that Greer presented it to him. Let it go. When I look around and see how cosy you've made the place here, I feel as if it is a kind of palace."

"Oh, Ralph, you are so easily satisfied," sighed Mrs. Davis.

"That's because I've got what Greer can't scheme for and get."

"What's that?"

"You and the children," cried the big hearted fellow, and his wife returned his bouncing kiss with a proud and happy face.

"I suppose the next thing we know," she said, "Greer will scheme to get the fifty thousand dollar homestead for that five thousand dollars. He'll raise it among his friends."

"No, he can't do that," dissented Ralph. "He has to 'make' it. I'll let you into a secret, Madge, dear: I am going to work and scrimp and save to raise that money. The Greers won't. They are going in for society in their new home. Sort of look down on us back street folks. So, they spend all they get."

Ralph's loyal little wife had a good deal of humiliation to subdue for a time. Mrs. Greer began to take to herself a certain social importance. People who were cads ignored the back street home. The yards of the two houses adjoining at the rear. First Mrs. Greer pitied her humbler neighbor. Then she was indulgent. Finally she ignored her. Ralph worked hard. His life was centered in his home, and his sterling, steadfast faith in the future began to influence his wife. One day he came home in the middle of the day. This was an unusual thing for him. His wife looked alarmed and then curious, for her husband's cheery face was wreathed with smiles.

"Well, I reckon we'll have to move," he announced.

"Move! When? Why?" cried his bewildered helpmate with a gasp.

"Right away, and because our house here is sold."

"Sold!"

"That's right," smiled Ralph, and he acted and looked as if supremely satisfied with the arrangement. "Here is a little paper to sign," and the speaker produced an official looking document.

"But why sell it; who is buying it?" stammered the bewildered wife.

"The railroad company. If we hold back, the property will be condemned anyway, so we had better close the bargain. They are paying us a big price."

"But to tear up, when we are so nicely settled here!"

"As well as the Greers?" inquired Ralph archly.

"Yes, we are!" declared the staunch little woman. "It's been just delightful, and we have made it a real home."

"Well, the new one may suit you better," predicted the husband. "In fact, Madge, I have decided to buy the old homestead."

"Why, where, how can you get five thousand dollars?"

The railroad company are giving us twelve thousand dollars. It is three times the value of this place, but they must have it. That leaves us seven thousand dollars and what I've saved to begin a new life in grand style."

The delighted little woman broke down and cried for sheer joy.

About all the family did that evening was to scan the prospect before them and plan out the golden life offered ahead. The old Davis homestead was a regal place—a roomy, comfortable house with beautiful gardens and a small farm area behind it sufficient to pay the expenses of living.

"Here is a Little Paper to Sign."

The next morning Mrs. Greer met her neighbor on the street. The latter noticed that she scanned her last season's dress rather keenly. Then, when she heard that the Greers were giving a large party and she was not invited, Mrs. Davis realized that the upstart Greer family were ashamed of their supposedly humble friends of former times.

The whole town knew of what they called their good luck, one morning. The sale of the little house on Railroad street was the gossip of the village. Jonas Greer heard of it with a sense of indignation. He felt wronged. Then he suddenly recalled a certain scheme ending in a bribe, and kept his conclusion to himself.

Glum and sullen Mrs. Greer grew sharp voiced and thin over "the freak of chance" that had placed her despised neighbor in affluence. She suffered worse when a new humiliation faced her. The railroad people proceeded to build their noisy, smoke producing shops within fifty feet of the Greer residence.

In the meantime the social strivings of the Greers had led them to mortgage their home. Then came the crisis. They sold their equity in the place for a song, and went to live in a rented flat.

Ralph Davis had too good a heart to neglect a relative and he placed the Greers again on their feet in a substantial way. His pensioners, however, never failed to exploit "the advantage taken of them" by the whole souled fellow who understood how to enjoy prosperity because he had known adversity.

PLAN FOR NEXT YEAR'S SEED.

Select the Best Part of the Field and Give it Special Attention.

Of 400 farmers visited in Dundas County, Ontario, by the Commission of Conservation, during the summer of 1916, only three were found to be following a really systematic selection of their seed grain; only 23 per cent. were saving the best part or parts of their fields for seed. Practically all of the farmers visited stated that they cleaned their grain for seed, but it was found that 74 per cent. cleaned it only once through the fanning mill. It is quite plain that sufficient attention is not being paid to the seed grain. It has been shown, time after time, that, other things being equal, the best seed will produce the best crops. It is, therefore, surprising that not more than 23 per cent. of the farmers were found to be keeping their best grain for seed, and that 74 per cent. cleaned it only once through the mill. If the grain from the best part or parts of the fields is stored and then graded or fanned until all the small and inferior kernels are removed, the quality will be greatly improved. By improving the seed the net profit on a grain crop can be greatly increased, such action increasing the yield a little without increasing the cost of production.

It is not much trouble to keep apart the best portion of the crop for seed. It would even pay to give special care to a special lot or small field from which to obtain seed for the following season's crop. There is, perhaps, nothing on the farm that will give a more profitable return than the time spent in securing a supply of good seed. Plan now to save the choicest of this year's crop for next spring's seeding.

A Blind Editor.

Mr. John Whall has the distinction of being the only blind journalist in England. The son of a Crimean veteran, Mr. Whall had the misfortune of losing his eyesight when quite a child. After completing his education at a London college for the blind, he became organist at Hounslow Parish Church, a position which he held for nearly thirteen years. Turning his attention to writing, Mr. Whall, by means of the Braille system, was able to take up reporting on a weekly newspaper. In 1891 he was appointed editor of the Middlesex Chronicle.

Future of Rheims Cathedral.

Conversion of the battle-torn cathedral at Rheims into a Pantheon for the unknown dead of all the armies fighting in France for the common cause of democracy has been determined upon by the French Government. The plan is to be put into execution as soon as the war is over. It is proposed that the cathedral shall not be restored, but that the representatives of all the Allies shall place their battle flags within what remains of the historic edifice, which then shall be formally dedicated as a monument to the heroic dead.

About the House

Preserving Cherries.

Cherries are ripening and may be canned, preserved, made into jams, jellies or spiced. To can cherries wash the fruit thoroughly, then drain well. Sort the fruit over carefully, removing all blemishes and all soft cherries. Remove the stems and stones. Pack them into sterilized jars and cover with boiling water or a syrup made of sugar and water, using the formula: One cupful sugar, two and one-half cupfuls water. Place in a sauce pan and bring to a boil. Cook for five minutes. Place the rubbers and lids in position, partially fasten them, then place the jars in a hot water bath and process for thirty minutes after the boiling starts. Now remove, fasten the tops securely, invert to test for leaks, then label and store in a cool place.

Preserved Cherries.—Stem and stone the cherries. Weigh after stoning, allowing one-half pound of sugar to each pound of cherries. To each pound of sugar allow one-half cupful of water. Place in a saucepan and stir on it well dissolved. Bring to a boil and cook for five minutes, then add two pounds of prepared cherries. Cook after the boiling point is reached for twelve minutes, then fill into glass jars. Place the rubber and top in position and partially tighten; now place the jars in a hot water bath and process for ten minutes after the boiling starts.

Cherry Jam.—Three-quarters pound sugar, one pound stemmed and stoned cherries. Place in a saucepan and cook until thick. Fill into jelly glasses; allow the jam to cool, and then cover the glasses with parowax. Seal and store in the usual manner for jellies.

Cherry Jelly.—Cherries do not make good jelly, owing to the absence of pectin. This pectin may be added in form of apples. Peel one large lemon very thin, discarding the peel. Cut, peeled lemon in small pieces. Cut a sufficient number of apples in small pieces to measure three cupfuls, then add: Three pounds cherries, one quart water. Place in a saucepan and cook until soft enough to mash, strain in the usual manner for jellies and measure the juice, allowing an equal measure of sugar. Return the juice to the preserving kettle and boil ten minutes. Then add the sugar. Cook until it jellies when tried on a cold saucer, usually about eight or nine minutes. If a thermometer is used, cook until 221 degrees Fahrenheit is reached.

How to Preserve Eggs.

Eggs must be fresh and perfectly infertile; the shells must be clean and free from cracks. A single cracked egg may cause the whole batch to spoil. Get water glass solution from the drug store, dilut with nine parts of cool boiled water and place eggs in small crocks containing the water glass. The solution should cover the eggs to a depth of two inches above the topmost layer of eggs. Cover the crock and place in a cool place where it will not have to be moved about. Reace the water which evaporates with cool boiled water occasionally.

Limewater may be used in place of water glass. Make the solution with 2½ pounds of unslaked lime in five gallons of cool boiled water and use the clear liquid after the lime settles. Containers for eggs must be clean and should be scalded with hot water after washing.

Eggs preserved in water glass or limewater should be rinsed in clean, cold water and used immediately after taking them from the solution. They can be used for soft boiling up to November, frying until December, and after that until March for omelettes, scrambled and in cooking.

The Useful Tomato.

Outside of such staples as potatoes and beans there is probably no vegetable that is more prized and more generally used all the year around in one form or another than tomatoes.

Tomatoes grow easily, but they have an enemy that you must be on the watch for—a large green worm so nearly the color of the plant he feeds upon that it is hard to detect it in spite of its size. This must be knocked off and destroyed or sprayed with arsenate of lead.

Tomatoes can be used in more ways than any other vegetable. For canning one must choose perfect fruit in good condition. Dip them in hot water for a few minutes and then remove the skins, cut them up and place it, an aluminum or porcelain lined kettle and add a level teaspoonful of salt for each quart. Bring slowly to a boil, stirring frequently, and boil for at least half an hour.

If you are using the screw top type, immerse the jars, tops and rubbers in boiling water. Remove the jars one at a time, place a rubber around the neck and fill with the boiling hot tomatoes. Take the top of the jar from the boiling water, being careful not to touch the inside with the fingers for fear of introducing spores into the jar, and screw it on tightly. Invert the jar and let it stand in this position until cold. Have everything sterile that is put into the jar. When using a spoon, fork or cup with the tomatoes first immerse it in boiling water.

Another method of canning tomatoes is to take off the skins and drop the tomatoes, as nearly whole as possible into wide-mouth jars. Pack them in until the jar is full and add one level teaspoonful of salt to each quart. Put on the rubber and top and fix the spring to leave the top loose and allow the steam to escape during the boiling.

In the wash boiler or sterilizer set as many jars upon the false bottom as the boiler will conveniently hold and pour in enough cold or tepid water to come about two inches up on the jar. It is not necessary to have the jars compelly immersed during the boiling; the steam does the cooking. Put the top on the boiler and set it on the stove; bring to a boil and sterilize for one hour. Remove the top of the boiler, allow the steam to escape and press down the spring at the side of the jar. This will clamp on the top and prevent any outside air from getting in.

In the vast majority of cases this one sterilization is all the treatment that is necessary, but it is not always safe to rely on it.

As relishes and flavorings there are numerous ways in which tomatoes may be used. This year it is not recommended that the green tomatoes be used for chow-chow and other pickle combinations, as it is better to let everything mature and ripen so that the supply will go further to meet the great demand.

N. B.—A course in Domestic Science, complete in twenty-five lessons, will commence next week. If you clip out the lessons as they appear and paste in a scrap-book you will have the complete series for future reference.

PROTECTING WATER SUPPLY.

Catchment Areas Being Re-forested to Conserve the Run-off.

The beneficial effect of proper supervision, and particularly of maintaining forest growth, in water-works catchment areas, is being more fully recognized. A recent example is in the state of Pennsylvania, where the Commissioner of Forestry urged the planting of trees on those portions of their water-works catchment areas not useful for agriculture.

Favorable replies were received from one-half and of the remainder, over 100 had no land requiring planting. To those who replied favorably, all planting facilities were afforded, including the services of a forester, and seedlings were offered at bare cost of packing and shipping, about 50 cents per 1,000 seedlings delivered. Applications were made for a total of 440,100 young trees for use on about 230 acres.—L.G.D.

All He Was Fit For.

In an Irish court house recently an old man was called into the witness box, and being infirm and just a little near-sighted he went too far in more than one sense. Instead of going up the stairs that led to the box he mounted those that led to the bench.

The judge good-naturally said: "If it a judge you want to be, my man?"

"Ah, sure your honor," was the reply. "I'm an old man now, an' mebbe it's all I'm fit for!"

The Judge raised his spectacles.

Cabbage, mangels and Hubbard squash all make a good winter feed for poultry.

Thrift that brings Comfort instead of Sacrifice

THRIFT, the paramount national duty, applies to time as well as to money—to small personal outlay as well as to larger family expenditure. Applied to the daily shave, thrift means the use of a

GILLETTE SAFETY RAZOR

The Razor of National Service.

The Gillette reduces shaving time to five minutes or less—an actual saving of a week of working days a year! To the man who depends on the barber, it saves still more time, and from $25 to $50 or even more annually. This means the cost of one or several War Savings Certificates.

Moreover, there is not a man living with a beard to shave who cannot shave better with a Gillette if he will use it correctly—with the blade screwed down tight and a light Auto Stroke.

For the thousands of young men just reaching shaving age the Gillette Safety Razor is a source of good habits—not only thrift, but punctuality, personal neatness, and efficiency in little things. For yourself or your son, at home or Overseas, it is a splendid investment.

Gillette "Bulldogs", "Aristocrats" and Standard Sets cost $5.—Pocket Editions $3. to $5.—Combination Sets from $6.50 up. Send for Catalogue. 251

Gillette Safety Razor Co. of Canada, Limited,
Office and Factory: The Gillette Bldg., Montreal.

"PAROWAXED"

Is but another word for "insured" when it refers to jams and preserves. Molding and fermentation are impossible when the jars are securely sealed with

Parowax

PURE REFINED PARAFFINE

Parowax keeps the container air-tight. When you have the jars securely parowaxed your preserves will be the same when you open them as they were the day you put them up.

Best of all, Parowax is most convenient to use. Pour melted Parowax over the tops of jelly tumblers and they are made air-tight, dust and germ proof.

FOR THE LAUNDRY—See directions on Parowax labels for its use in valuable service in washing.

At grocery, department and general stores everywhere.

Don't PAINT YOUR SHOES FEED them with "NUGGET" Shoe Polish

"Nugget" does not put on a surface shine that disappears in an hour. "Nugget" feeds the leather.

Keeps your shoes soft, makes them waterproof and gives a brilliant shine that will last all day. Ask for "Nugget" at your dealers.

BLACK, TAN, TONEY RED, DARK BROWN. 10c. per tin.

"TAKE CARE OF YOUR SHOES."

The Real "War Bread" must contain the entire wheat grain—not the white flour center — but every particle of gluten and mineral salts—also the outer bran coat that is so useful in keeping the bowels healthy and active. **Shredded Wheat Biscuit** is the real "war bread" because it is 100 per cent. whole wheat prepared in a digestible form. Contains no yeast, baking powder, seasoning, or chemicals of any kind. Food conservation begins with Shredded Wheat Biscuit for breakfast and ends with Shredded Wheat Biscuit for supper. Delicious with sliced bananas, berries, or other fruits. Made in Canada.

HEAVY LOSS FROM BARN FIRES.

Hay, Improperly Cured, May Cause Spontaneous Combustion.

During the years 1912-1916 inclusive, no less than 5,200 barns were destroyed in Canada, with an aggregate loss of over $7,850,000. These, like the majority of fires, might have been avoided by the exercise of intelligent forethought and proper care. Investigation shows that the most prolific sources of barn fires are lightning and spontaneous combustion. Evidence gathered from all parts of Canada and the United States proves that rodded buildings are practically immune from lightning damage. The cost being a mere fraction of the possible loss in case of fire, it is of economic importance to the farmer that every barn should be efficiently protected by lightning rods.

While it is more difficult to arrive at conclusions with regard to fires caused by spontaneous combustion, it is generally held that such fires are of frequent occurrence. Owing to the excessive number of barns burned in Ontario during the summer of 1916, an investigation was undertaken by Prof. W. H. Day, Professor of Physics, Ontario Agricultural College, with a view to discovering the exact conditions favorable to spontaneous combustion in stored grasses. It was proved that large quantities of imperfectly cured hay were frequently stored in barns with little or no ventilation, and that the high temperatures reached during fermentation resulted in a number of fires. Farmers are not generally aware that the cells in hay continue their existence for some time after it is cut and, when the moist compressed mass is housed in close barns, a temperature of 132 deg. F. is quickly reached. Added to this, the heat from microscopic spores, germinating seeds and the heat of the sun upon the roof may raise the temperature of the mow to 212 deg. F., when charring commences. The carbon thus formed absorbs oxygen and the mass grows hotter, until, at 265 deg. F., visible combustion takes place. Bran, grain and silage may also ignite spontaneously under similar conditions. The remedy for spontaneous combustion is simple and easily applied. All hay should be perfectly dry before storage. In mixed grasses, special care should be given to the clover. Timothy may appear perfectly dry while the heavy stalks of clover may retain a large percentage of moisture. All barns should be provided with ample top ventilation. If these simple matters are given the attention they deserve, spontaneous combustion will cease to figure as a cause of barn fires in Canada.

The Danger Zone for Many Is Tea and Coffee Drinking

Some people find it wise to quit tea and coffee when their nerves begin to "act up."

The easy way nowadays is to switch to

Instant Postum

Nothing in pleasure is missed by the change, and greater comfort follows as the nerves rebuild.

Postum is economical to both health and purse.

"There's a Reason"

Combining Two Materials

A departure from absolutely straight lines is shown in this sketch. The material forming the skirt is cleverly draped and attached to the waist, giving a bouffant appearance at the hips and a narrowing effect at the ankles. The combination of plaid and plain gingham use in developing this dress is very fashionable. McCall Pattern No. 7832, Misses' Dress; two-piece skirt, suitable for small women. Pattern in 3 sizes; 16 to 20 years. Price, 20 cents.

This patterns may be obtained from your local McCall dealer, or from the McCall Co., 70 Bond St., Toronto, Dept. W.

WAR'S LESSONS.

This Time of Stress and Strain is Teaching Us Many Things.

When we are hearing so much of the horrors of war that we grow sick at heart, it is well to open our eyes to some of the good things that are coming out of all the stress and loss. First of all we are less self-centred, less self-indulgent. Nearly every one has forgotten his own petty ills and grievances in the sight of so much greater suffering.

Men and women are sacrificing pleasures and luxuries as they have seldom done before. More sacrifice of these things is nothing meritorious in itself, but when it is done for a worthy purpose it makes for character. It is remarkable how easy and simple we find it to do without many things now that we have undertaken it.

We are getting more democratic because of the war. Social lines merge in the one purpose to do one's level best for the country and for humanity. Little shams and purposeless poses are shamed into disappearing.

We are becoming more frugal, more appreciative of real values, more deeply conscious of the vulgarity and sinfulness of waste.

We are growing more efficient. We make many mistakes by the way, but we profit by them and are learning that if the world is to be saved it must be through useful, effective work. Even the children are assuming their share of responsibility.

ASIA MINOR.

Where Its Borders Lie is a Sort of Geographical Puzzle.

"Asia Minor" is a geographical term of vague extension. It puzzles any one to say exactly where it leaves off.

The name dates only from the fifth century, A.D., when Orosius used it evidently as a novelty. The Roman Empire knew no Asia Minor. Indeed, the Roman province of "Asia" was actually smaller than this Lesser Asia. The alternative name Anatolia (land of the sunrise or east) which has found favor with the Turks, is equally indeterminate.

"The Levant," which means the same thing as Anatolia (region of the rising sun), is even vaguer in its geographical scope. It includes Constantinople and everything anywhere near the eastern Mediterranean.

Few geographical names have incurred more unfavorable association. "Levantine" morals, particularly in the matter of honesty, are a byword, as might be expected from such a jumble of people. Our words "levanter" and "to levant," on the other hand, testify to the fact that dishonesty is not unknown even in the west. They originate from the disappearance of men who could not pay their gambling or other debts and were reported to have gone to the east.

Hardships of Alpini.

The Italian army maintained its captured outposts during the severe winter of 1916, often at elevations of from 7,000 to 12,000 feet, only by building huts for its men and sending them hot food in thirty-gallon thermos bottles hauled up by steel ropes.

STRENUOUS WORK SOON TELLS ON YOU

Business Men and Breadwinners the Victims of Nervous Exhaustion.

When worry is added to overwork men soon become the victims of nervous exhaustion—neurasthenia—the doctor calls it. Some have no reserve strength in their systems to bear the strain; others overtax what strength they have. If you find that you are nervous and not sure of yourself, that you sleep badly, and wake up tired and aching, your nerves are out of order. Other signs are inability to take proper interest in your work; your appetite is fickle; your back feels weak, and you are greatly depressed in spirits. One or more of these signs mean that you should take prompt steps to stop mischief by nourishing the nerves with the food they thrive on, namely the rich, red blood made by Dr. Williams' Pink Pills. These pills have cured thousands of cases of nervous disorders, including nervous prostration, neuralgia, St. Vitus dance and partial paralysis. Here is an example. Mr. P. H. Callan, a well known business man in Coleman, P.E.I., says: "I owe my present health, if not life itself, to Dr. Williams' Pink Pills. I had always been an active man, and when I began to run down in health paid little attention to it as I thought it only a temporary weakness. As time passed, however, I found myself growing worse, and consulted a doctor, who said that I was not only badly run down, but that my nervous system was badly shattered. I lost flesh, my appetite was poor, I slept badly and notwithstanding the doctor's treatment grew so weak that I had to leave my business and was confined to the house. Time went on and I was steadily growing weaker, and my friends were all greatly alarmed for my condition. In this condition I was strongly recommended to try Dr. Williams' Pink Pills, and as the doctor's medicine was not helping me I decided to do so. By the time I had used three boxes I could tell that they were helping me. When I had taken eight boxes of the pills I felt able to attend to my business again, and people were surprised to see me out. I continued the use of the pills until I had taken twelve boxes, by which time I was feeling as well as ever I did, and was being congratulated by all my friends on my full restoration to health. I feel now that if I had used Dr. Williams' Pink Pills at the outset I would not only have saved much money spent in doctor's bills, but would have had renewed health sooner. I cannot speak too highly of this medicine, and would recommend it to every man who feels weak, nervous or run down."

You can get these pills through any medicine dealer, or by mail at 50 cents a box, or six boxes for $2.50 from The Dr. Williams' Medicine Co., Brockville, Ont.

BEE-KEEPING IN 1918.

How to Prepare for a Maximum Honey Crop Next Year.

While a maximum production of honey is of pressing importance in this war-food year, yet increasing the bees for next season must not be neglected.

Roughly speaking, bees that are in the hives at the commencement of the honey-flow gather the crop, while the brood builds up the colony for next year, unless there is to be another important honey-flow. This brood is very valuable for forming nuclei, because these, started early with a laying queen, or ripe queen-cell, will build up into strong colonies before winter. Increasing in this way with brood from strong colonies during the honey flow is the basic principle upon which an apiary can be quickly built up while at the same time an almost full honey-crop is secured.

In newly-formed nuclei containing brood in all stages there is always more or less desertion of bees and consequent death of the young brood and sometimes chilling and death of the older brood even when the nuclei are skilfully made by an experienced apiarist. Further, queens may not be immediately obtainable, or they may be lost in introduction. Robbing of the newly-formed nuclei has also to be guarded against, but during the height of the honey-flow only carelessness will cause this; towards its end, however, the danger of robbing grows so great that it is difficult to maintain newly-formed nuclei even when strong. Desertion may be checked by stopping the entrance with grass; the bees will make their way out when the grass dries and shrinks in about two days, but care must be taken to avoid overcrowding the confined bees, which would lead to stifling, especially in hot weather. A good way to overcome the loss of young brood is to place the brood over a queen excluder a week before its removal from the parent hive. This may be done in the ordinary course of relieving congestion in the brood chamber as a means to discourage swarming, a frame or two of empty comb or of foundation being placed in the brood chamber when the brood is raised.

All of these risks may be greatly minimized as follows: Have all the queens' wings clipped (this is not essential), and when a colony of a strain that it is desired to propagate swarms, move the parent hive to a new stand, and place the swarm in an empty hive on the old stand, the queen having been picked off the ground and placed in the empty hive. The swarm will return to the new hive at the old stand. The field bees will now join the swarm, and the super should be transferred from the parent hive to the swarm which will produce the crop of honey. The colony, now depleted of bees but rich in brood, is divided a week later into three to six nuclei, each nucleus consisting of two or three frames containing brood and honey carrying two or three queen-cells containing queens soon to emerge with the adhering bees.

This method has the great advantage that it not only controls and satisfies the troublesome swarming instinct but it helps to secure the desired ends by natural means. The honey gatherers are segregated into a strong force, and the brood, being mostly capped, is not likely to get chilled; the bees desert neither it nor the queen-cells readily, and all trouble in raising and introducing queens is avoided. The bees in the newly-formed nuclei are in the post-swarming stage, when their instinct is to spread themselves over and incubate as much brood as possible, and especially the queen-cells.

The beginner should be warned not to divide the parent colony into too many weak nuclei, but this fault may be rectified in the autumn by uniting. The ideal conditions for building up nuclei are a slow honey-flow throughout August and early September. Fortunately these are supplied in most Canadian localities by goldenrods, asters and buckwheat.

Mismated queens should be replaced any time up to the first or second week in October, preferably not during the robbing season.—Experimental Farms Note.

ON VIMY RIDGE.

Dedicated to the Canadians who died at "Vimy Ridge," April 8, 1917.

O'er prairie homestead, by mountain peak,
Wherever men Honor and Glory seek,
With awe and reverence they will speak
Of Vimy Ridge.

Sons of the Maple Leaf, these side by side,
Met thrust with thrust their Nation's Pride,
They laughed at Death, and gloriously died
At Vimy Ridge.

What though a rude cross mark their grave,
Not a tablet in a cloistered nave,
If for their land their all they gave,
By Vimy Ridge.

Canadian people, do not weep, these are not dead
But merely sleep;
Though foreign clay their bones may keep
On Vimy Ridge.

Think that Mortal Flesh and Blood,
Could bind such Souls to earth for good.
They fly to Heaven as Heroes should
From Vimy Ridge.

Throughout Canada their names will roll,
Will stir to the depth the Empire's Soul,
While Bells in Heaven, their requiem toll
O'er Vimy Ridge.

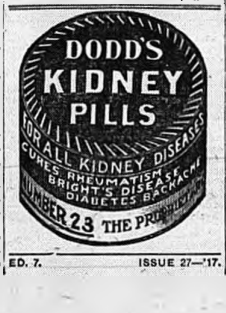
Easy For The Hen.



Mother to small son: "Bobby, dear, I hoped you would be unselfish enough to give little sister the largest piece of candy. Why, see, even old Biddy gives all the nice big dainties to the little chicks, and only keeps an occasional tiny one for herself."

Bobby thoughtfully watched the hen and chickens for a time, and then said: "Well, mamma, I would too, if it was worms."

Minard's Liniment Cures Distemper.

Dry fruits and sweet corn and other vegetables that may be preserved in this way. Save the cans for products that can be kept in no other way. Use bottles corked and sealed with paraffine for catsup and other liquid products.

Boring holes into the stumps of hard wood trees and filling these holes with equal parts of nitric and sulphuric acid will so soften the wood that it can be removed by ordinary picks. This has been demonstrated in Germany, and is the common treatment there of hard wood stumpage.

CANADA IS CALLING.

Canada is calling "Give us Men!"
Men to stand guard at the Gate—
Men to keep the nation great—
Men who tride not with Fate—
Loyal Men!

We've a heritage to hold, O my men!
Bought by sires in days of yore,
Who, when danger touched our shore,
Made the answering cannons roar—
"We are men!"

We'll be loyal to that trust now, as then;
Fling the old flag to the breeze—
Ours the freedom of the seas—
Humbly asking, on our knees,
"God make us men!"

—Kate Simpson-Hayes.

BABY'S OWN TABLETS OF GREAT VALUE

Mrs. J. A. Lagace, Ste. Perpetue, Que., writes:—"Baby's Own Tablets have been of great value to me and I would strongly recommend them to other mothers." Thousands of other mothers say the same thing. They have become convinced through actual use of the Tablets that nothing can equal them in regulating the bowels and stomach; driving out constipation and indigestion; breaking up colds and simple fevers; expelling worms and curing colic. The Tablets are sold by medicine dealers or by mail at 25 cents a box from The Dr. Williams' Medicine Co., Brockville, Ont.

DEATH PENALTY IN RUSSIA

National Sentiment is Opposed to Capital Punishment.

It is not at all surprising to those who know Russia that one of the first acts of the new Government was the abolition of the death penalty. Capital punishment is indeed as much against the national sentiment as against tradition in Russia, and as long ago as 1868 the late W. T. Stead declared that it was never inflicted without producing a feeling of shame among educated Russians.

The death penalty was abolished by the Empress Elizabeth in 1760, and though it was later revived, it was only in recent years, and especially after the rising of 1905, that it was carried out in other than exceptional circumstances. The number of executions then, however, quickly multiplied, and early in 1909 twenty-seven took place in one day.

Minard's Liniment Cures Diphtheria.

Wayside Food.

Not every green thing good to eat grows in a market-garden. To the initiated the field and roadside are always sufficient for a delightful salad. The most wholesome and deliciously flavored of these wild salad ingredients is the dandelion, that despised "weed" which we grub out of our lawns with such savage delight. A dandelion diet would be a little monotonous, but the young and tender shoots, either boiled as greens, or used with other things as a salad, are tip-top stuff.

Minard's Liniment Co., Limited.

Gents,—I cured a valuable hunting dog of mange with MINARD'S LINIMENT after several veterinaries had treated him without doing him any permanent good.

Yours, &c.,
WILFRID GAGNE.

Prop. of Grand Central Hotel,
Drummondville, Aug. 3, '04.

If We Lose.

At the end of a war which cost Germany only half a billion dollars, Bismarck extracted just double that amount from France in an indemnity. Germany kept an army in France until the last dollar was paid. Guess how big an indemnity the Kaiser will collect from you and me, England and France, if he wins this war? It has already cost him more than twenty times what his grandfather paid out in the Franco-Prussian war. On that basis we are already sure of twenty billions of indemnity.

Sore Eyes Granulated Eyelids, Eyes inflamed by exposure to Sun, Dust and Wind quickly relieved by Murine Eye Remedy. No Smarting, just Eye Comfort. At Your Druggist's 50c per Bottle. Murine Eye Salve in Tubes 25c. For Book of the Eye Free ask Druggists or Murine Eye Remedy Co., Chicago

Not an Acorn.

When James A. Garfield was president of Hiram College, a man brought up his son to be entered as a student. He wanted the boy to take a course shorter than the regular one.

"My son can never take all those studies," said the father. "He wants to get through more quickly. Can't you arrange it for him?"

"Oh, yes," said Mr. Garfield. "He can take a short course; it all depends on what you want to make of him. When God wants to make an oak He takes a hundred years, but He takes only two months to make a squash."

Make sure that your horse has every day pure, fresh water, such as you would be willing to drink yourself.

Minard's Liniment Cures Colds, Etc.

ROYAL YEAST
MAKES PERFECT BREAD

Some Peculiar Wills.

Among many curious wills may be reckoned that of the great Shakespeare, who bequeathed to his wife his second-best bed with the furniture, and that alone; whilst an old Provost of Eton left a sum of money sufficient to give every boy at Eton a half-sheep on February 22th of every year. Now-a-days, however, the threepenny-bit takes the place of the half-sheep.

Minard's Liniment Cures Garget in Cows

Just Like Real Kings.

One Indian Rajah's subjects number about half a million, and he rules over a state as big as England and Wales. He has his own flag and his own army and navy. These are maintained in an efficient state out of a revenue of $1,750,000 a year.

MONEY ORDERS.

PAY your out of town accounts by Dominion Express Money Orders. Five dollars costs three cents.

Don't let your dog be tortured by fleas in summer.

Little Irene marched into the room breathless. "O mother, don't scold me for being late for supper because I've had such a disappointment," she said. "A horse fell down and they said they were going to send for a horse doctor, so I waited and waited, and what do you think? It wasn't a horse doctor at all. It was only a man."

NEWSPAPERS FOR SALE

CANCER, TUMORS, LUMPS, ETC., internal and external, cured without pain by our home treatment. Write us before too late. Dr. Bellman Medical Co. Limited, Collingwood, Ont.

ANY CORN LIFTS OUT, DOESN'T HURT A BIT!

No foolishness! Lift your corns and calluses off with fingers—It's like magic!

Sore corns, hard corns, soft corns or any kind of a corn, can harmlessly be lifted right out with the fingers if you apply upon the corn a few drops of freezone, says a Cincinnati authority.

For little cost one can get a small bottle of freezone at any drug store, which will positively rid one's feet of every corn or callus without pain.

This simple drug dries the moment it is applied and does not even irritate the surrounding skin while applying it or afterwards.

This announcement will interest many of our readers. If your druggist hasn't any freezone tell him to surely get a small bottle for you from his wholesale drug house.

WOMAN SICK TWO YEARS

Could Do No Work. Now Strong as a Man.

Chicago, Ill.—"For about two years I suffered from a female trouble so I was unable to walk or do any of my own work. I read about Lydia E. Pinkham's Vegetable Compound in the newspapers and determined to try it. It brought almost immediate relief. My weakness has entirely disappeared and I never had better health. I weigh 165 pounds and am as strong as a man. I think money is well spent which purchases Lydia E. Pinkham's Vegetable Compound."—Mrs. Jos. O'BRYAN, 1765 Newport Ave., Chicago, Ill.

The success of Lydia E. Pinkham's Vegetable Compound, made from roots and herbs, is unparalleled. It may be used with perfect confidence by women who suffer from displacements, inflammation, ulceration, irregularities, periodic pains, backache, bearing-down feeling, flatulency, indigestion, dizziness, and nervous prostration. Lydia E. Pinkham's Vegetable Compound is the standard remedy for female ills.

BRUCE TP.

The news of the death of Mr. Rodrick MacKenzie came suddenly to l is home on the 10th con. Bruce, on Sunday, Dec. 1st. He came to Hamilton on his way home, and was visiting his daughter, who is teaching here, when he was taken ill. His two sons, Mr. Donald MacKenzie of Clifford, and Councillor Jas. MacKenzie, were called to Hamilton on Thursday. As he seemed to improve Mr. Jas. MacKenzie returned home, but he passed away Saturday evening. The remains were brought to Chatsworth, Grey Co., and buried in the family plot there on Tuesday, Dec. 3rd, at one o'clock. Mr. MacKenzie was born in Rosshire, Scotland, and came to Canada when a lad of 14 years, and made his home with his older brother at Chatsworth for a number of years. He leaves to mourn his loss a wife and family of seven children, four sons and three daughters: Donald MacKenzie, teacher, Clifford; David A. MacKenzie, B. S.A., Vermilion, Alta.; Chas F. MacKenzie, student, O.A.C., Guelph; Jas. MacKenzie, on the old home, 10th Bruce; Fanny C., teacher, Hamilton; Annie, nurse, Vermilion; Kate, at home. The deceased was a member of the Presbyterian church, and belonged to the Masonic order, also was one of the oldest members in the Underwood A.O.U.W. and Sons of Scotland lodges.

GRESHAM

Mr. Ed Smith caught a fine large eadie lately.

Our organist, Miss Currie, and Mrs McDougall are training the children for the Christmas tree to be held in the church here.

Mr. L. McLean Young was on the jury at Walkerton last week at the fall assizes.

Much sympathy is felt for Mr. J. R. Baldaw and Mr. Roppel in the great loss sustained by the burning of their store at Underwood.

We are pleased to see Misses Laura Nelson and Olive Foster home from the west, also Mrs. J. Hyde.

Mr. Cushman Smith, of North Bruce, was on a business trip here last week.

Mrs. Milne, of Paisley, is visiting at Mr. Alex Woods'.

Mr. Henry Dent, our esteemed home central operator, spent the week end at his home here.

Mr. Wm. Parker had Mr. Acton, of Greenock, cutting wood last week.

EBENEZER

Mrs. Wm. McKelvey, who has been in poor health for some time, is now confined to her bed. Mrs. McKelvey is one of the few remaining early settlers, and we sincerely hope that she may soon recover.

Rev. Mr. Garnham, a former pastor in the Arkwright circuit, will occupy the pulpit here next Sunday in the interest of the Dominion Alliance.

Mr. J. H. McFadden received word last Saturday morning of the death of his brother-in-law, Mr. D. McLean, of Port Arthur. The deceased was stricken with the flu some weeks ago, and never recovered from the effects of the dread disease.

Miss Olive Quigley has returned home from Greenock.

We are sorry to report Mrs. Frank Quigley on the sick list, but hope she may soon be around again.

SIXTH CON. BRUCE

Miss Olive Foster has returned from the west, accompanied by Mrs. Jos. Hyde.

Mr. Gaines has sold his farm on the 6th to Mr. Henry Crowe of Port Elgin.

Mrs. W. Woods has returned to her home in Tiverton, after spending a few weeks with her mother, Mrs. A. Colwell.

Mr. John A. McKay has arrived home from the west, but expects to go back in the spring.

Mr. Rich McGregor has been sawing wood on this line during the past week.

Mr. Jos. Foster, who has been ill, is improving nicely.

Mr. John Maurer has purchased a driver from Mr. J. D. McGillivray.

PINKERTON

Rev. R. M. Gale left on Friday for a short visit to his son, Rev. Jas. Gale, at Hyde Park.

Mr. Ferguson, of Stratford, preached in the Presbyterian church here on Sunday in the interests of the Lord's Day Alliance.

Miss MacIntyre, of Glamis, spent a few days with Mrs. Fitzsimmons, whose condition is much improved.

Mr. and Mrs. T. Cummins and Mrs. Elliott, of Molesworth, motored up and spent a few days at Mrs. Jas. Murray's.

Hughie Campbell, youngest son of Mr. and Mrs. Archie Campbell, fell and broke his arm while sleighriding on Saturday.

WILLOW CREEK

Mr. Cecil Wagner, of Toronto, is visiting friends here. He is a grandson of Mr. Fred Schnittker, sr.

Born—In Bruce Tp., on Nov. 28th, to Mr. and Mrs. Wm. Gottschalk, a daughter.

Mrs. Elton Bean, of Listowel, is staying with Mrs. Wm. Gottschalk for a week.

Most of the men here turned out to the fire at Underwood. The cause is unknown. Looks like a fire-bug.

ELORA ROAD NORTH

Mr. Roger Darroch is home from the west.

Mr. Mike Sparrow was over from Owen Sound for a few days.

Mr. Neil McArthur, sr., is not in good health at present. We hope he will soon be well again.

The Bell phone has been installed at Mr. Sam Rae's.

Mrs. John S. Campbell is visiting at Waterford.

Miss Jessie McMillan, of Toronto, is visiting here.

TARA

Mr. Geo. Allis, of Arkwright, had a narrow escape from serious injury on Wednesday night of last week in that village, when a horse in the church shed knocked him down and trampled him. His cries were heard by someone passing, and when help arrived he was unconscious and his face was covered with blood caused by a cut, which required three stitches. Mr. Allis was able to be around the next day, but his injuries are nevertheless painful.

Mystery surrounds the circumstances as to the injury to Mr. Wilbert Simpson, of the 10th con. Arran, who was returning home on the train Tuesday night from attending the fall assizes at Walkerton, where he was one of the jurymen. It is surmised that he went out on to the platform of the coach to see if the train were approaching Tara, and as the train swung around the curve at Arranvale he was thrown to the ground. He must have lain on the ground unconscious for nearly two hours, as it was nearly two o'clock in the morning before he was able to walk to the home of Mr. Sam Harwood near the track, to inform him of the accident and get assistance. He is suffering from injuries to his head and shoulders. He was taken to his home yesterday afternoon.

The death took place in Toronto on Saturday of Mr. Andrew C. Morran, a former well known and highly respected resident of Arran Township, and son of the late Thomas Morran. Deceased had been in failing health for the past two years from heart trouble. He was born in Arran Tp. in 1856. His father resided at Arran Lake for a number of years and operated a sawmill there, afterwards removing to Tara. The mill was afterwards operated by Mr. Andrew C. Morran. A few years ago the deceased moved to Toronto and was in the real estate business. He is survived by his wife and daughter, at home, also two brothers and four sisters—Thomas, in Arran Tp.; Richard, Owen Sound; Mrs. Wm. Morrow, Tara; Mrs. McNeill, Elderslie Tp.; Mrs. King, Chesley, and Mrs. A. C. King, Arran Tp. The remains were brought to Tara on Tuesday and the funeral took place from the home of Mr. Wm. Morrow that afternoon. Deceased was a member of the Orange Order, and that society conducted the funeral service. Interment took place in Tara cemetery.—Leader.

SECOND CON. ELDERSLIE

Miss Jean Keith, nurse-in-training at Woodstock, is spending a few weeks at the home of her parents here.

Mrs. N. McGregor, of the Canadian Soo, visited friends here last week.

Mr. and Mrs. W. J. Allen and family, with the exception of Elizabeth, have all been laid up with the flu, but are recovering again.

Geo. Hope has bought the Hope homestead back again from Henry Pegelo, and intends to follow the plow again.

Vernon Keith has resumed his bank duties again after being laid off a couple of weeks with the flu.

Mr. S. and Miss M. Patterson visited on Sunday with Gillies Hill friends.

Mrs. A. Lillico's many friends will be pleased to know that she is rapidly recovering strength after being laid off four months with a broken hip.

Children Cry
FOR FLETCHER'S
CASTORIA

LOYAT

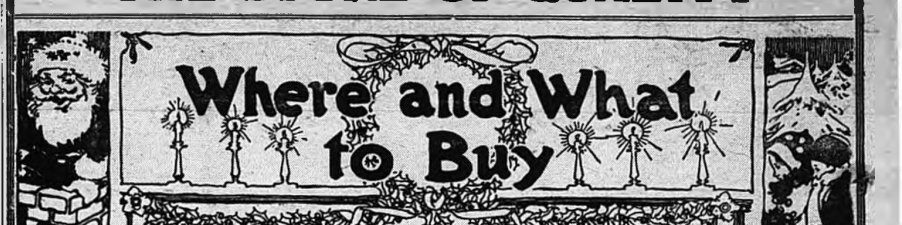
Mr. J. A. McKay has returned from a stay of three months in the west. He was at Keyes, Man., where this year's crop was rather light.

Mr. and Mrs. D. Woods, of Loyat, recently received word as to how their son, Pte. Thos. Woods, met his death in Flanders. The letter was written by a comrade, Pte. R. W. Clark. "You ask me about Tom," he writes. "I was there that night on the road up to Passchendale Ridge, at Ypres, on a working party, when we were shelled by the Germans. There were 14 casualties—five killed and nine wounded—and I am sorry to say your son was one of the killed. He was buried not far from there. He died a hero. I miss him very much, as he and I were quite chummy. I had known him for ten years. Am very sorry to have to tell you of his death, but know you will feel easier now. I know the grief that is felt by those who have lost one of their own. I have been in hospital in England for seven months. My nerves are no good, and am nearly blind of an eye, but am still cheery. If spared I hope to land on the shores of Canada again."

CASTORIA
For Infants and Children
In Use For Over 30 Years
Always bears the Signature of Chas. H. Fletcher

CARGILL

Mesdames Wm. and Karl Cliff have gone to join their husbands in Oshawa, who are employed in the McLaughlin plant in that town. We are sorry to lose them, as they were first-class citizens.



Mrs. J. Thornton and babe, of Toronto, are visiting at Mrs. Agnes Keyes'.

Mr. and Mrs. Roy Sparling have returned to their home in Norwich, after a two weeks' visit at Mr. H. Sparling's.

Mr. Ferguson, of Toronto, spoke to a union congregation in the Methodist church here on Sunday in the interests of the Lord's Day Alliance.

Messrs. Hunstein and Whitch have their store very prettily decorated for the Christmas season.

THE STORE OF QUALITY

"Peace on Earth, Good Will to Men."

AFTER four years of bloody war the Christmas bells will again ring out the glad tidings as of yore. Christmas of 1918 will go down in history's pages as the one after the war. The spirit of thanksgiving and giving will be greater than ever before.

Gifts Worth Giving. Articles Beautiful and Useful. Sure to be Appreciated

The Stock of Holiday Goods at Davison's Hardware

Makes it Easy to Solve the Puzzle, What to Give

Wouldn't it be just lovely to present **Mother** with that new **Oxford** or **Pandora Range?**

Any Lady would be delighted to receive a gift of **Silverware**—1847T Knives & Forks, Old Colony T Spoons, Berry Spoons, Cake Knives, Pie Knives, Casseroles, Pyrex Casseroles.

Father would appreciate a pair of warm Mitts or Gloves, a good Pocket Knife or Razor.

Hockey Sticks, Skates and Flashlights, for the **Boys.**

For the **Girls** we have Skates and Embroidery Scissors, Trays, etc.

For the **Family**—Carpet Sweepers, Perfection Oil Heaters.

For the **Young Man** we have Safety Razors, Skates and Pocket Knives, or a Dominion Tire for the automobile, Auto Chains. etc.

These are but a few selections. Come in and see our stock. Do your shopping early.

W. H. DAVISON

CANTIRE

The stock has all been housed, and the man who is alone on the farm, as most are, finds he is just as busy as ever.

Big Fourth Street, owing to the continued wet weather, has got in pretty bad shape. This is due to the heavy automobile traffic, and also to the big oil tank wagons which in a good many places have cut through to the mud. Now that the war is ended we will be expecting Mr. Hazard to get busy and put this road in passable condition.

Miss Jean Cameron has sold her farm, lot 21, to a Mr. Fisher of Sullivan, who gets possession next spring. The price paid was $[illegible]. The place at present is tenanted by Geo. Walpole, who is now looking for another place to rent.

Those who have been thanking their stars that they have escaped the flu are beginning to have another attack of nerves, as there are whole families on the eastern side of the township who are stricken with the malady.

Mrs. Angus Bell is spending a week with her son at Tara.

Miss Sara Eason spent part of last week with friends at Park Head.

Mr. Charlie Parker, of Chesley, has bought ten acres of bush from Andy Munro, and has a gang of men working there now. A shanty has been put up and the work is being done in true lumberman's style. The wood will be teamed to Chesley.

WALKERTON

Lieut. P. J. Maloney, M.C., a former principal of the Walkerton Business College, has returned from three years overseas fighting, and is in Toronto for a few days. Lieut. Maloney, who is a member of Lieut.-Col. P. J. Maloney of Cornwall, is a Peterboro boy. He enlisted from Walkerton early in 1915 with the Canadian Field Artillery, but upon arriving in England transferred to the Royal Flying Corps, and after receiving his commission went to France in January, 1916, as pilot of a scout plane. He won the Military Cross in November, 1917, when attacked by heavy odds he bagged two Hun planes in the one morning and was himself shot down and wounded. After convalescing he again took up his scout fighting in January, 1918. He has a good bag of enemy planes to his credit. Before returning to Canada Lieut. Maloney was attached to the Air Ministry in England.

Mr. Andy Johnston, Mayor of Walkerton, who has been running a barber shop in this town for the past twenty-three years, has sold the business to Mr. Clarence Kreuger, who takes possession on Monday next. Andy set up in the barbering business here just twenty-three years ago last Monday, and succeeded in working up one of the biggest trades in western Ontario. His extreme popularity is attested by the fact that for the past two years he has occupied the position of mayor of the town, being accorded the honor on both occasions by acclamation. He was District

AUCTION SALE—John H. McGillivray lot 19, con. 12, Bruce, will hold an auction sale of farm stock and implements on FRIDAY, DEC. 13, at one o'clock, sharp. Following is the list: HORSES—Mare rising 4 yrs supposed to be in foal, horse rising 4 yrs, driving horse 10 yrs, horse 6 yrs, colt rising 1 yr. CATTLE—Cow 5 yrs fresh calf at foot, cow 4 yrs fresh calf at foot, cow 3 yrs fresh calf at foot, cow 3 yrs due March 13, cow 5 yrs due April 20, cow 3 yrs due June 28, cow 5 yrs due May 1, heifer 2 yrs due April 1, 2 steers 2 yrs old, 2 heifers 1 yr old, 2 steers 1 yr old, 3 spring calves. HOGS—One purebred Tamworth sow due Dec. 29, 1 purebred Tamworth boar 20 months old, 1 purebred Tamworth sow 3 mos old, 1 sow due to pig Dec. 28, 1 sow due to pig Dec. 30, 1 sow due to pig Dec. 7, 1 sow due to pig Feb. 10, 4 pigs 3 months old, 5 pigs 2½ mos. old, 8 pigs 2 mos old. HAY—20 tons timothy hay, 10 tons clover hay. POULTRY—40 young hens, 1 turkey. GRAIN—800 bushels mixed wheat, oats and barley. IMPLEMENTS—1 Deering binder 6 ft. cut, 1 Deering mower 6 ft. cut, Deering rake 10 ft., set of iron harrows, gravel box, Massey-Harris disc drill, wagon, sleigh (Joe Seiffert's make), hay rack, fanning mill, set of 2000-lb. scales, Noxon disc harrow, Deering spreader, steel roller, No. 5 Verity plow, No. 10 Verity plow, top buggy, 1 set double harness, 1 set single harness, cream separator, churn.

No reserve, as the owner has sold his farm.

TERMS—$10 and under, cash; over that amount 12 months' credit will be given on furnishing approved joint notes bearing 6 per cent. interest.

R. C. PEARCE, Auct.

year for this region, and in the performance of his duties visited most of the towns and villages in this section of Ontario. As chairman of the Conservative Association of Walkerton he expects to attend the banquet given in Toronto this week to the Hon. Robert Rogers. Andy has as yet no plans for the future, but purleast a year.—Herald and Times. Times,

TURNER'S

Mrs. D. McKinnon and daughter of Paisley spent a few days visiting here.

The Grand Trunk has erected a new steel bridge at McArthur's sideroad.

Mrs. John Schenk has returned home after spending a few weeks with friends at Norwich.

Mr. Neil Muir lost a valuable horse last week.

There was a big crowd at Wm. Atkinson's sale last Friday. Everything sold well.

Mr. Ed. Forrester of Kincardine was visiting friends here last week.

THE ADVOCATE will be a most welcome gift to absent ones of your family, whether in Canada or away to the fighting front in France.

I. S. Cruickshank

—Mrs. D. McArthur is in Guelph and Toronto for a few days.

—Mr. W. H. Davison made a business trip to Toronto this week.

—Mrs. Burrows, of Mount Forest, is visiting at Mr. I. S. Cruickshanks'.

—Mrs. Buchanan, of Inkerman St., has gone to spend a few weeks in Toronto.

—Mrs. J. Shaw went to Toronto on Monday to spend a few weeks visiting in the city.

—Mr. and Mrs. J. J. Thompson, of Lockerby, have been visiting friends in Owen Sound.

—Mr. P. Neelands received word on Wednesday morning of the death of his brother, Andrew, at Sarnia.

—Dr. Halliday and his mother, of Walkerton, spent the week end at the home of his sister, Mrs. A. E. Pickard.

—Mr. and Mrs Wm. Campbell, who have been visiting at the home of his sister, Mrs. J. Sharpe, left for their home at Holland, Man., this week.

—The Women's Missionary Society of the Methodist church, Paisley, shipped over $200 worth of quilts and clothing to the Belgians this month.

—Mr. Jas. Hope is in Chesley for a few days on account of the serious illness of his brother Joe, who has an attack of pneumonia, following influenza.

—Mr. Geo. Munro, of Elora road south, has his left eye bandaged up, as the outcome of a little argument with a colt he was breaking in. The animal landed George one with its front foot, which, might have cut his head open, but only slightly damaged the optical region.

—Anniversary Services—Where? Baptist church, Paisley. When? Sunday, Dec. 15th, 1918. Who? F. P. Emmons, evangelist, pastor of Wiarton Baptist church. Do not fail to hear this orator. He will give us one of his noted lectures on Monday evening, entitled "Book of Books." We will also be entertained by some of the best local talent. We are asking for a free will offering at the lecture, and expect a hearty response.

Awarded the Military Medal

Roddie McLennan, of Paisley, who went overseas with the 95th Battalion as a signaller, was recently given sergeant's stripes and also awarded the military medal for valorous conduct. He is a son of Mr. and Mrs. Roderick McLennan. His friends will be glad to learn of his promotion and the honor he has won as an active soldier.

Surgical Operations

Mrs. Alex McArthur, of Ross St., went to Walkerton hospital last week and was operated upon on Thursday for a growth in the region of her shoulder. Dr. Lacey performed the operation assisted by Dr. Houston and Dr. Laird. Mrs. I. McFadden, of Greenock, underwent an operation the same day for the removal of gall stones. Both patients are reported to be doing nicely.

Wounded on Last Day of War

Mr. and Mrs. Thos. Bryce, of Victoria St., received word last week that their son, Pte. Wm. Bryce, had been wounded on Nov. 10th, the last day of fighting. A letter from himself, received on Tuesday of last week, brought the news to his home, the usual official cablegram not reaching here until Saturday. The wound was a hit on the elbow from a machine gun bullet, which did not badly shatter the arm. Pte. Bryce has been overseas nearly three years, having enlisted with the 124th battalion at Toronto in 1915. This is his second casualty, having been gassed over a year ago.

—See our fancy china before buying your Christmas gifts. F. Carter & Son.

—Big assortment of useful Xmas gifts at Hunstein & Wittich's, Cargill. We pay big prices for fowl.

—Knox church Sunday school entertainment will be held in the basement on Christmas night. Good programme and Christmas tree.

—Dr. Allen will be in his office on Saturday, 14th. Will those interested please make a note? While he may extend time until Monday do not depend on it.

Methodist Church Announcement

Regular church services at 11 a.m. and 7 p.m. Sunday school at 2.30 p.m.

Clothes for French Children

All finished work will be taken in next Saturday afternoon and evening, in the council chamber. Bale to be shipped the beginning of next week.

—Notice of Taxes—To receive the balance of Bruce Tp. taxes, I will be at McLean's hotel, Underwood, on Saturdays, Dec. 7th and 14th, from 9 a.m. to 12 o'clock noon. W. J. Kippen, collector.

A good program is being prepared, of songs, drills, recitations, dialogues, etc. Admission: 15c, ladies bringing boxes free. Funds to go to Red Cross and an organ for the school. R. C. Pearce, auct. Come and bring your friends. Everybody welcome. Doors open at 7 and program commencing at 8 o'clock.

CANADA

WAR-SAVINGS STAMPS

The Canadian Government offers interest-bearing War-Savings Stamps

Issue of 1919—Payable Jan. 1, 1924

ORDER-IN-COUNCIL P.C. No. 2462 authorizes the issue of War-Savings Stamps for the purpose of assisting in the financing of Government expenditures.

As Sir Thomas White, Minister of Finance, points out, W.-S. S. will provide "an excellent investment for small savings; and a strong incentive to every-day economy."

$5.00 for $4.00

Until January 31st, 1919, War-Savings Stamps will be sold by all Money-Order Post Offices, Banks, and other authorized Agencies, for $4.00 each, and on January 1st, 1924, Canada will pay $5.00 each for them.

Registration Against Loss

A Certificate is provided for the purchaser of a W.-S. S. On the certificate are spaces to which 16 W.-S. S. may be affixed. A certificate bearing one or more W.-S. S. may be registered at any Money-Order Post Office, fully protecting the owner against loss by fire, burglary or other cause.

The Certificate also shows the Cash Surrender Value of W.-S. S. at various dates before maturity.

W S S

SOLD WHEREVER THIS SIGN IS DISPLAYED

The "Flu" Again

Paisley is now and has been entirely free of influenza for several weeks past. Other towns, however, are experiencing a recurrence of the epidemic, though the disease is said to be of mild form. Nevertheless, there have been fatal cases, and others very dangerous. Rural districts from five to ten miles from Paisley are also suffering from its ravages. The Salem tea-meeting is postponed on that account.

To the House of Refuge

Mr. Geo. Storey, who has been of late years rapidly growing old, and become rather helpless in many respects, was a few days ago taken to the House of Refuge at Walkerton. Mr. Storey was in the implement business here for many years, and no agent ever gave his patrons a better deal than he did, with the result that he did not pile up much riches, and at 68 years of age he can no longer provide his own needs. It is to be hoped that he may enjoy the comforts afforded at the commodious county establishment for the balance of his days.

Won Banner Prize at Guelph

Archer Bros. had a string of entries in the White Wyandotte class at the Ontario Poultry Show at Guelph last week, and brought home a notable share of the best ribbons. They were awarded first for exhibition pen, which is the most coveted prize of the show, also third for pullet, fifth for hen, and ninth for cockerel. There were scores competing in each class, and in all 7,000 birds on exhibition. It was the greatest collection of birds yet seen at this big show, and Archer Bros. must be congratulated upon the standing their flock secured alongside the breedings of the most successful and famous poultrymen of Canada and the U.S.

Death of Miss Fisher

After a short illness Margaret McLaurin Fisher, one of Wingham's esteemed citizens, passed away on Wednesday, Dec. 4th, in the home in which she lived so long on Victoria St. She was born in Martintown, Glengarry Co., the daughter of John and Mary MacIntosh Fisher. Her early years were spent in Osgoode, Ottawa, London and St. Mary's. The family moved to Wingham in 1862, and throughout those years she won the love, confidence and esteem of all who knew her. She was a woman of sterling qualities, and one whose door was ever open to entertain those who came to it. For thirteen years she resided in Paisley, Bruce Co. Being a charter member of the Wingham Baptist church, she took an active interest in all church work. The only surviving member of the family is Mr. John Fisher, Regina, Sask.

Death of Murdoch McArthur

Another of the very few remaining pioneer settlers of this section has passed away. Mr. Murdoch McArthur, of con. 1, Saugeen, who died on Wednesday night of last week, was born in the Isle of Mull, Scotland, and about 1832 or 1833 came to Canada with his mother, five brothers and four sisters, all of whom predeceased him. The family lived in King Tp. for a couple of years and then came to this new country, all five brothers taking up homesteads in Bruce and Saugeen. The subject of this notice married Christy McArthur, who survives him, together with two sons and two daughters—Alexander, in Paisley; Mrs. Geo. McKillop, in Saugeen; Bella and John at home. The deceased was 88 years of age. The funeral on Friday was conducted by Rev. Dr. McDougall, of Queen Hill. Interment was made in the Lovat cemetery.

VILLAGE COUNCIL

Council met Thursday, 5th Dec. members all present except the reeve who was attending county council. On motion Mr. Logie presided. Minutes of last meeting were read and signed.

Communications were read: From the Dept. of Militia and Defence, re war trophy, saying that "all war trophies are for the present being pooled, and the question of their distribution will probably not be settled until some time after the conclusion of the war; from Headquarters Military Dist. No. 1, London, Ont., desiring that a roll of honor containing the names of the residents who have enlisted in units of the Canadian Expeditionary Force should be established, &c., and a copy in duplicate sent to the A. A. G., London, Ont; from the Bell Telephone Co., Owen Sound agency, stating that the company desired to erect four poles on Rowe St.; from Organization of Resources Committee, stating that if there is any real reason for complaint because of overcharges being made on the sale of articles of food the remedy was that the people should apply to the municipal authorities to inaugurate a committee of investigation to fix fair prices.

The tax collector brought several cases to the council's attention for tax adjustment.

Pearce—Forrester—That the tax on part of lot 20, w. Queen n., assessed to Mrs. Sinclair, be rebated, and that J. T. Kissack's dog tax be reduced to $3.—Carried.

Pearce—Forrester—That the clerk state to the Militia Dept. that this council is taking action re honor roll.—Carried.

Forrester—Skinner—That A. Ball's business tax be rebated to the extent of one-quarter thereof.—Carried.

Pearce—Skinner—That sanitation taxes be refunded as follows: W. Rolston, Zeke Greaves, P. Baker, D. McNeil, $1 each; and that E. Hart's business and sanitation taxes be rebated.—Carried.

Pearce—Skinner—That cheques be issued as follows: M. Leitch $62.50, Weighmaster $14.20, Electric Light Co. $47, Imp. scales $4.50, J. A. Flues $15.65, Sinclair Bros. $5.30, J. P. Fisher $42.65, G. T. R. $2.88, Jas. Brown [illegible] J. S. Dewar $168.09, Thos. Spar $4.50, John Trelford $2.60; and to collector re W. Bolston $1, Eze Greaves $1, P. Baker $1, D. McN. $1, E. Hart $4.41, A. Ball $6.44, Mrs. Sinclair &c., J. T. Kissack $2.—Carried.

Farms Changed Hands

Mr. Jas. Wilson, of con. 16, Greenock, has sold his property. Mr. Geo. Wrightson is the purchaser of lot 14, and Edgar Wilson bought west half of lot 14, con. 17. The 150 acres brought $7,700. Mr. Wilson is coming to live in Paisley in the spring, having bought the Methodist parsonage property. Mr. Ivan Neilly disposed of lot 6, con. 18, Greenock, to a Mr. McLaggan from Sullivan Tp., and has purchased the Bella McGregor farm, sold lot 18, con. 17, to Mr. John Metcalf for $5,300. Mr. J. J. Thompson, of Lockerby, sold his property to his cousin, Mr. Albert Thompson, of Hepworth. Lot 33, con. 10, Elderslie, the Jas. Irwin farm, has been bought from Mr. R. Lloyd by Mr. M. Thompson, of Chesley, for $3,000. The McCaffrey property, lot 17, con. 9, Elderslie has been bought by Mr. Robt. Alexander of the 4th con., for $3,300. Mr. Jas. Bennett has sold his farm of 160 acres, lot 30 and 31, con. B, Brant, to Mr. Alex Bain of Greenock, who takes possession in March. Mr. Albert Lowes sold his farm lot 7, con. 7, Elderslie, to Rivers Bros.

A Better Understanding

By Susan F. Hoyford

Mrs. Hopkins folded the shirt she had been ironing and sat down by the window to meditate. For the last twenty-four hours she had been thrilled with a daring and persistent desire, after thirty-five years working and saving to buy additional acres and swell the bank account at the Centre.

"If it hadn't been for the good wholesome victuals I've giv'n him all these years, he wouldn't have had the strength to raise them extra crops, an' I'm tired o' this sewin' anyway," she soliloquized, rocking vigorously the while. The thought of the two ten-dollar bills that her husband had brought in the night before, and put in he old pink china teapot, had called forth visions of a long-felt desire, and after half an hour of rocking and pleating the hem of her apron, she reached a full decision.

"It ain't right, my always working, an' I'm just goin' to take $20 and spend every cent," and to emphasize it, she arose and pushed the flatiron to the back of the stove.

Seated in the train next morning, Mrs. Hopkins's face wore a troubled look. There wasn't a thing in the house but a piece of apple pie, an' a little ham, and it's my bakin' day, too." Such thoughts kept racking her conscience all the morning, and, threading her way among the crowds, she thought of the homecoming at noon of Mr. Hopkins, to an empty house and larder.

Never before had she left home clandestinely to squander her husband's money; seldom had he ever crossed the threshold coming in from the farm at noon to find an unmade dinner, and her theories of independence, new-born, were forgotten.

Her first intention had been a great black fur that enclosed her from a shop window. It was just twenty dollars, and after a little hesitation and entered the store, only to change her mind and come out again.

"I'll get something that Amos can enjoy, too," she said to herself as the savory smell from a restaurant reminded her again of the cold dinner at home, and she turned toward a department store that displayed a window of beautiful place dresses.

"Sarah Whittle's boasting that she has th' only one in town, I guess we can have one, too, an' Amos will be pleased," she thought as she went in the door. There a great pester drew her attention and she paused to look at the dying soldier, his face transfigured with the glory of his sacrifice, and underneath the words: "Suppose it was your boy!" The query sent a shadow across her face, and then the same warm little glow came to her heart, that of late had often been there—her boy was safe—he would not suffer, and perhaps give his life in agony, it was some little comfort for the years that had been lonely, since his children prattle ceased one dreadful day.

True, there had been moments when she had even felt a pang of envy for those other mothers in the town that had sent their sons away so bravely and were so proud, but then she concluded, they had done their duty, the and Amos had always bought a Bond.

She started on to make her purchase, but something in those simple words arrested her.

"Suppose it were Dicky!" The thought appalled her, misty-eyed, as she saw the chubby face of that little boy of twenty years ago come running to her in his childish glee or woe; she remembered the day that he hammered his tiny finger, and the grimy hand that he had held up for her to heal. "Muvver, cure it, please," he stammered between the sobs.

The glass dome seemed suddenly childish and out of place, and for the first time that day she recalled a decision that did not trouble her.

As she alighted from the train that evening it was dark and no one in sight but the ticket agent and a dark figure in a buggy by the platform.

"Git right in, Marie, thought you'd be on this train," called a familiar voice.

"Oh, Amos!" she cried, getting in, then there was silence the rest of the way home, Mrs. Hopkins trying to find the best way of confessing her extravagant trip, and then would he understand, she wondered.

When they were in the kitchen she spoke:

"I was just plumb tired and cross yesterday, Amos, an' I thought I'd take $20 t'-day an' spend just foolish, then I sort of felt wrong, an' I paid it on a Victory Bond for—for Dicky," she concluded hastily, with a little choke. Suddenly an arm stole about her shoulders and a rough cheek was laid against her own.

"Most ev'ry man that same picture I see in th' bank to-day where I went to but th' money in, somehow it made me buy another bond, right off."

Mrs. Hopkins looked at the familiar objects about her in the homely, little kitchen and then at the man by her side, but still not trusting her voice for anything but commonplaces, she heatily turned to the stove and opened the draft.

"I declare," she said, "you ain't had a bite o' supper. I'll make some nice griddle cakes."

Ingram's Milkweed Cream

Two Sizes—50c and $1

Does the daily housework, the rubbing, the scrubbing, the washing, redden and roughen your hands until you despair of their appearance? Then use Ingram's Milkweed Cream. It is a soothing, cleansing cream with gently curative effect. It gives the hands softness and whiteness. It soothes irritation. Hasty pulls disappear. Callouses are banished. It gives you hands to be proud of.

The very next time your nose or forehead gets shiny just put on a light touch of Ingram's Velvet Complexion Face Powder (50c.). It blends perfectly with the complexion and conceals little blemishes. It is dainty and fragrant. There is a complete line of Ingram's toilet preparations, including items for the bath (25c.), at your druggist's.

A Picture with Each Purchase

Each time you buy a purchase of Ingram's Toilet Article or Perfume your druggist will give you, without charge, a large portrait of a well-known motion picture actress. Each time you get a different portrait so you can collect the entire set. 12

Ask your druggist.

F. Ingram Co., Windsor, Ont.

The By-Products of Autumn.

The fall and early winter months are busy ones for the housewife. While she is making things tidy and ship-shape for the cold stormy days that are coming there is little time for other things.

Yet in the days gone by grandma usually made various delectable sausages, cheese and the like from the by-products that are plentiful at this season of the year. To-day the woman who is willing to take the time and the trouble to make these attractive foods can command a good price for them.

In European markets many varieties of home-made sausages are displayed by the farmers' wives, and one must be real early at the stalls to be able to obtain even a small amount, so quickly are these goods purchased.

The secret of successful making of these delicacies lies chiefly in the blending, the spices and the seasoning, and with a little practice you can easily make the sausage like any variety that are sold to-day in the market and delicatessen stores.

For the casing use stout unbleached muslin. These cases may be made in various widths and lengths As, for example, take a piece of unbleached muslin, five inches wide and fifteen inches long. Make a casing of this by making a failed seam the length of the casing. The fifteen-inch length is about the right size, though the width may be run from five to twelve inches. This last is very large and does not make as nearly as an attractive package as the five, six, seven and eight inch ones.

The head, feet, tail, heart, kidney and liver may be used for sausages and scrapple.

Mode of Preparation

The meat must be put through a food chopper three times, using the medium fish knife. When packing the prepared sausages into the prepared casing, use either the handle of the potato masher or a similar piece of wood that is well rounded. Pack in the sausage very tightly. Tie the ends securely and then cook in a large kettle of boiling water for the required length of time. Hang up to drain and let dry, usually about four days to two weeks, in a cool, dry place. Then dip in melted paraffine, taking particular care that each part is thoroughly coated. This sausage may now be hung up in a cold place and kept until needed.

All sausages require something to keep them together—"a body"—as it is called. This is usually made from a cereal; oatmeal is the best for this purpose.

To prepare the oatmeal: place two quarts of water in a boiler and add one tablespoonful of salt, and when boiling add one pint of oatmeal. Stir occasionally and cook for one hour. Turn into a deep bowl and add the balance of the ingredients and mix thoroughly.

Seasonings

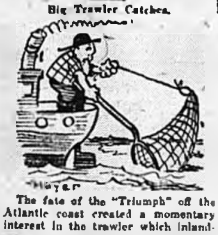
Wash and dry parsley tops, leaves of celery and then rub fine. Put through a fine sieve to remove the coarser pieces. Use a blended poultry seasoning with salt, white paper and red pepper.

Italian Sausage.—Two cloves of garlic, six medium-sized onions, two pounds of lean pork, one pound of fat pork. Put through a food chopper twice and then add the oatmeal, as cooked in the directions given above, together with two level tablespoonfuls of salt, two level tablespoonfuls of dried celery leaves, one level tablespoonful of poultry seasoning, one tablespoonful of red pepper, one teaspoonful of black pepper. Mix thoroughly and then pack very tightly into a five-inch casing. Plunge into boiling water and boil one and one-half hours. Then proceed as given for the final curing.

Head Cheese.—Wash thoroughly and cleanse one head, removing the brains and tongue and eyes. Place in a de- and cover with cold water. til meat will leave the bones. ve the head and boil the liquid in the kettle until it is reduced to one-half its former quantity. Remove the meat from the head and put into neat pieces. Add to the liquid with juice of two lemons, grated rind of one lemon, one tablespoonful of poultry seasoning, two tablespoonfuls of dried celery leaves, one tablespoonful of dried parsley leaves, two tablespoonfuls of salt, one tablespoonful of red pepper, one clove of garlic, minced very fine. Mix thoroughly and then pour into an oblong bread pan to mold. These pans may be cut in quarters for quick sales.

Pig Souse.—Soused pigs' feet, tails and tongues find ready sale if very nicely prepared and packed in all-glass jars. It is important to pack these products in all-glass jars, owing to the fact that when using jars that have metal tops the vinegar which has worked between the porcelain lining and the metal top, sets up a reaction that is extremely poisonous. Pack a dried red pepper pod in each jar. Cut a lemon in half, and then with a sharp knife cut into thin slices. Cook in boiling water until tender, then pack two or three pieces in each jar.

Cook the feet and tails until tender in just sufficient water to cover. Remove the feet and cool, then cut into desirable sizes. Boil the liquid until it is reduced to one-half its former quantity. Then add sufficient vinegar to taste. Pack the parts in the jars and fill with the prepared liquid, adding to each jar one teaspoonful of mixed pickling spice, two bay leaves. Adjust the rubbers and lids partially tighten the jars and then place in a hot water bath and process two and one-half hours. Seal securely. This product will keep until used.



Canned Tongue.—Wash and scrape the tongue, and then boil until tender in just sufficient water to cover. When the tongue is tender remove from the liquid and plunge into cold water to loosen the skin. Remove skin and then pack into jars, using the same seasoning as in the pig souse. Boil down the liquid to one-half its former quantity and add the vinegar to taste. Fill the jars to overflowing, and then adjust the rubber and lid and partially tighten. Process for two and one-half hours in hot water bath. Remove from bath, seal securely and then store in a cool, dry place. This product will keep until wanted.

Make a little meat go a long way.

Even a small quantity of meat goes far and becomes most nourishing and satisfying, if combined with BOVRIL.

Canada Food Board, Licence No. 18-443.

Big Trawler Catches.

The fate of the "Triumph" off the Atlantic coast created a momentary interest in the trawler which inland-ers hear little about but which is really one of the chief instruments in keeping the market well supplied with fish.

Steam trawlers are something of an innovation in Canadian fisheries. Five years ago there was only one on the Atlantic coast. Now there are five fishing out of Nova Scotia ports and between them they land an average of half a million pounds of fish weekly. As much as 250,000 pounds have been landed by one trawler in six days' fishing. There are three trawlers operating off the Pacific coast.

WHY WOOL IS WARMEST FABRIC

It Entraps Air in Small places and Forms an Excellent Insulator.

What is it in wool that gives it a reputation for warmth superior to that possessed by fibres of vegetable origin? Not merely the fact that wool is an animal fibre, but because it is so constructed as to entrap air in small spaces, thus forming an excellent insulator. Called upon to decide the relative efficiency of wool and cotton provided with a heavy nap by mechanical methods, an apparatus had to be constructed for the test. This device, as described in the Scientific American, consisted of a copper vessel heated electrically, provided with thermostatic control and surrounded by an atmosphere artificially maintained at the freezing temperature. The fabric under test was wrapped about the copper vessel where it acted as an insulator, and the amount of electrical energy required to maintain the contents of the vessel at body heat was a measure of the efficiency of the cloth in keeping a wearer warm.

As a result of a series of tests it was found that cotton can be provided with a nap such that it will have seven-eighths the heat-retaining capacity of wool.

In some recent analyses of cloth to determine the fibre composition it was found that strong cotton thread had been wound with short fibred wool and then woven. This cloth had all of the appearance of wool. Its warmth and "feel" together with the strength due to the cotton foundation. Now this cloth may become much more common and it is well to recognize that the combination is quite reasonable. Of course, it should not be sold as all wool or even as wool mixture, for that term may be so manipulated as to convey the wrong impression regarding the percentage of cotton present, but the short wool would make a poor fabric unaided by the cotton, while the wool adds much of real value if of short fibre or shoddy.

The war will continue to make it difficult for the world to clothe itself, for besides obstacles of production, there is an increased demand. An average of 6lb pounds of wool per soldier is said to be required each year, and a simple calculation will indicate what that means. It becomes attractive therefore to provide new fibres and great effort is being expended to this end.

In Memoriam.

Somewhere in France, where duty led,
He fills a patriot grave.
The lark sings high above his head,
Only the lark knows his hallowed bed,
Where lies our soldier brave.

Sacred the ground where a soldier sleeps,
Who came at his country's call.
Onward the tide of battle sweeps,
Only the lark o'er his bosom weeps,
Yet he gave to the world his all.

About Cloverdale, B. C., oat straw is reported as yielding a ton and a half per acre, and is selling at $6 per load.

WHEN IN DOUBT

Concerning the value of any Stocks or Shares in your possession, write us and we will give you the fullest information available without charge.

Don't run away with the idea that because a stock is inactive it is without value.

Our up to date information may save you needless worry and loss through premature sale.

"Give us your confidence and we will merit yours."

MONTREAL. - QUE.

To help the sugar shortage use Crown Brand or Lily White Corn Syrup—delicious, wholesome and economical alternatives for Sugar in Cooking and Preserving. Corn is grown in North America, while sugar must be brought across the seas in ships which are vitally needed for war purposes. Use all the syrup made from corn you wish, while the Food Board is urging stringent economy in the use of sugar.

Delicious for Making Desserts and on Cereals.

The Canada Food Board has issued a book of recipes and suggestions for using Corn Syrup. Write to the Food Board in Ottawa, for a copy, and in the meantime go to your grocer for a tin of LILY WHITE Corn Syrup or CROWN BRAND Corn Syrup and try some of the following recipes:

APPLE SAUCE

6 apples — 1 inch stick cinnamon
6 tablespoons Lily White Corn Syrup — 1/4 cup water

Wash pare, core, and slice apples. Put into sauce pan with water, syrup and cinnamon. Cook over a medium flame until soft.

CAKE WITHOUT SUGAR

1 cup shortening — 1 1/2 tablespoons baking powder
2 cups Lily White Corn Syrup — 1 teaspoon salt
3 eggs — 1 cup milk — 3 cups flour

Cream the shortening, add the syrup and the egg, and mix well. Add the milk. Sift the baking powder and flour together; add it slowly to the mixture and beat. Bake in a moderate oven, as a loaf or layer cake or small drop cakes. One-fourth cup of raisins added to the batter give more flavor and sweetness.

MARMALADE

1 grapefruit — 1 orange — 1 lemon
2 cups water — 10 cups Lily White Corn Syrup

Cut fruit in thin slices and allow to stand in water for 24 hours or overnight. Separate seeds and soak them in part of the water. Cook fruit until tender and add Corn Syrup. Continue cooking until jelly is obtained.

SAVE SUGAR

You know doctors order Corn Starch as a diet for invalids. We convert the corn starch into its "sugar" form, a most digestible form of sweetening.

Sold by Grocers everywhere in 2, 5, 10 and 20 lb. tins.

The Canada Starch Co., Limited, Montreal

The Mysterious Guests.

I had three friends. I asked one day
That they would dine with me;
But when they came I found that they
Were six, instead of three.

My good wife whispered, "We, at best,
But five can hope to dine.
Send one away." I did. The rest
Remaining numbered nine.

"Lloo will go," the second cried.
He left at once, and then,
Although to count but eight I tried,
There were remaining ten.

"Go call them back!" my wife implored;
"I fear the third may go,
And leave behind to share our board,
Perhaps a score or so."

The second one then straight returned;
As might have been expected,
He, with the ten, we quickly learned,
Eleven made.—Dejected.

We saw the first returning; he,
With all the rest, turned round,
And there, behold! were my friends
three,
Though six they still were found.

(For those of you who yet may find
My riddle too complex,
I'll say the friends I had in mind
Were "S" and "I" and "X.")

Foundations Laid by Boys and Girls.

On our farm we had a couple of steers that we were very choice of, because they were to be the team upon which we depended to do the work. Up to that time we never had a horse of our own, so that it was with a great deal of care that we watched the growth of our little steers.

It was a matter of untold grief then, that one of the steers should somehow break one of its hind legs. Away went our hopes for the coming team. For we were sure that the leg never could be made sound like the other. However, here was the chance my brother had been looking for. "We couldn't we set the leg and see if it will not grow together again?" This was Harry's way of meeting a bad situation and he and I went at it. We got some heavy splints, bound them to the broken limb and did our best to keep the steer quiet until the fracture knit. This it never did to very well. I suppose the steer did not stay very still; but we had quite a good deal of service from our little team after all, and the best of it was that it proved to be the first operation my brother ever performed. He did a great deal of such work afterward, for he studied to be a physician and surgeon, and a good one he was, too.

Setting the steer's leg was the foundation stone laid by my brother for his future life. All along when he was a boy he had the same knack of caring for the sick and injured members of the animal farm family. Accidents of all sorts happen on every farm, and it is well worth while for the boys and girls to develop their skill along the line of making the cows, sheep and horses well; for we may be sure that some time and some where there will be a call for help in this direction.

But the farm gives the young folks a chance to lay the foundation stones for other professions than medicine. A boy I know had a great love for the odd things that are to be picked up on most farms. He gathered together bushels of strange stones, deer horns, birds' nests and such things. I remember particularly a sprang stick he cut from a little sapling in the woods. It was quite the letter Z. Upstairs in the wagon house the lad had what we called his "stonearium," and to this he brought the choice and rare stones and other things he found while out around the place. To-day the boy, now a young man, is serving in the Medical Corps over in France.

This same boy was fine in taking pictures. He had a real good camera, not costly, but one that would do good work; and he got pictures of all the interesting places about the farm. Many of his little groups of cattle and sheep were mounted and some of them framed. He might have made a good success as a photographer. Still, he had no training whatever except what he got from the instruction book that came with the camera, and that given him by the great old teacher, experience, which no doubt was best of all.

One more farmer lad I have in mind put in his spare time on some slips in penmanship. While other boys were busy having a "good time," he was practicing with a pen. I do not know as I ever saw a better penman whose boyhood home was on the farm. The day came when he was given a fine position in one of the great government offices at the national capitol, and his work with the pen was always done just so neatly and accurately. To-day he is getting to be an old man, but he can outdo many a boy of the present day with his pen.

Many who have in similar ways given their spare hours to the acquiring of information along these lines have not left the farm, but are to-day the owners of fine places; and they are the best and most successful farmers we have. Great things are in store for every boy and girl who takes care of the odd moments that come on days that are rainy, and between spells on the farm.—E. L. Vincent.

Health

Avoiding Pneumonia.

Pneumonia is an infective process due to bacterial invasion and occurring with greatest frequency during the winter and spring months.

The influence of cold, which is that of shock due to the sudden reduction of the bodily temperature, produces a lowered resistance and temporarily renders the individual unusually susceptible to the infecting organisms which are ever present.

However, exposure to the elements is not alone to be guarded against. A condition of impaired vitality, also producing a lowered resistance to bacterial attack, similarly renders one more susceptible to the disease. Persons in a convalescent state may contract pneumonia following a degree of exposure to the weather or to direct infection that would not affect a healthy individual. Whooping cough and measles, for example, perhaps more than any other disease, predispose to broncho-pneumonia among children.

Faulty home conditions, overheated rooms in winter, overcrowding, too heavy bed clothing or wearing apparel indoors are largely responsible for the spreading of pneumonia, grip and other infective conditions of the nose, throat and lungs. With windows closed and usually no adequate and constant means of ventilation the air is stagnant and overheated and the skin and surface circulation of the blood is rendered oversensitive to the sudden and extreme changes of temperature so common in most temperate regions.

Having thus started with wrong conditions, a slight draught, either accidental or through intermittent attempts at ventilation, will often cause a chill and lower the resistance so that an acute cold develops.

Fresh air, if the body is not exposed to chill and consequent shock, is not to be feared. Indeed, the practice of outdoor sleeping is advocated by many physicians in the treatment of pneumonia. But after pneumonia has developed extreme measures should not be taken except upon the advice of one's physician.

A hot foot bath, lasting half an hour and a drink of hot lemonade—or, better still, hot linseed tea (one full ounce of whole flaxseed to a pint of boiling water, flavored with lemon peel or a few orice root)—will often break the force of such attacks and give the body a chance to summon up its reserves.

A severe chill, high temperature, pain in the side are warning signals. Call the doctor!

40,000 GREEKS PERISH

Old Men, Women and Children Starved in Macedonia.

The Greek Parliamentary Commission reports that 40,000 old men, women and children have died in Eastern Macedonia from famine and that also 100,000 were deported, of whom less than 12,000 are expected to return, as all the rest are thought to have succumbed to Bulgarian torture.

The persecution of the Greeks began before Greece entered the war. The Bulgarians conscripted children, sending them into Bulgaria.

A Composer's Escape.

Sibelius, the Finish composer, whose charming orchestral works are so popular, was placed on the Red Guards' "black-list" during the recent upheaval at Finland and condemned to be shot. At the time he was staying at his house near Helsingfors, and Red Guards were stationed outside to prevent his escape. Fortunately, the terrorists' "War Minister" happened to be an amateur cornet player, and when an appeal was made to him by friends of the composer he reprieved him as a brother artist and allowed him to leave Helsingfors for a safer locality.

It is not too soon to order seed corn for next spring's planting.

Every farmer should plan to put up ice this winter. Almost any kind of a house will serve for the purpose. The main thing is to provide drainage at the bottom, sawdust protection all round, and ventilation above.

SWITZERLAND'S WONDERFUL WORK

FOR THE BENEFIT OF RUINED BELGIUM

Money Raised, Houses Built and Community Interests Aroused to the Need of Prompt Action.

When Switzerland heard of the devastations which the ghastly and inexorable war had wrought in Belgium she was deeply moved. The account the inhabitants gave, flying from their mutilated towns, their ruined villages and their wasted land, deprived of shelter for their numerous families, aroused a deep feeling of commiseration and fraternal sympathy among the Swiss.

A unanimous and irresistible impulse induced them, as far as lay within their power, to share the cruel sufferings of these unfortunates and to offer to them the necessary funds for the reconstruction of their ruined homes. The whole of Belgium was animated by the ardent desire to build up their homes anew and to restore their country to its former prosperity, and any outside financial aid could not have come more opportunely. A committee composed of Swiss men of science, arts and politics was formed in Berne under the name of "Oeuvre Suisse" in Belgium Committee, in aid of the victims of the war, which raised the first funds.

A Benevolent Enterprise.

In August, 1916, a delegation of architects was sent to Belgium with the mission of making the work for the victims of the war widely known and of putting at their disposal the sums offered by some of their generous compatriots. The Political Office of Switzerland, section for foreign affairs, instructed its Consul General at Brussels to introduce the mission to the competent authorities in Belgium. From that moment the "Oeuvre Suisse" was able to set to work.

This benevolent undertaking has shown tangible results. At Louvain three houses have been built, one of which is situated on the old market place, facing the entrance of the University Library, where it will help to reconstitute the secular frame of the university and college buildings. At Lierre five houses have been rebuilt in the purest local style of this venerable Flemish city. At Malmes, at the corner of the two streets des Pierres et de l'Etuve, a house with the sign board "Ile de Pathmos" has been reconstructed with wooden gable, a remarkable specimen of the last buildings of this kind in Belgium. At La Dyle, the old town of beautiful chimes, the "Oeuvre Suisse" is also rebuilding a historical patrimonial house.

The "Oeuvre Suisse" has also constructed a certain number of farms, some of small, others of greater importance, at Bornhem, Mariekerke, Emblehem, Konigshoyckt, as well as the first home for a disabled soldier. All these are so many examples of good reconstructions, combining the improvement of agricultural style with the aesthetical traditions of local architecture.

It is in the province of Brabant, at Epeghem, that the first house for a victim of the war was constructed with the financial aid of the "Oeuvre Suisse." The plans for this house, a baker's establishment, have been carefully studied by a young Belgian architect, with the assistance of an agricultural expert of the State, and submitted for approval to the Provincial Consulting Committee, delegated by the Union of Belgian Towns and Communes. Other farms are being built at Humbeek, Rucken, Capelle-au-Bois and Hackendover.

Appeal to Swiss Generosity.

The Committee of the "Oeuvre Suisse," just before the end of the war, issued the following appeal to the Swiss people:

"Thousands of families live in far too small temporary shelters, which have become unhealthy, owing to the length of this interminable war. Placing their trust in the future, they wait with an endurance worthy of admiration for the generous and disinterested help of the nations and individuals spared from direct suffering through the war. The members of the Executive Committee of the "Oeuvre Suisse" have been able to convince themselves, on a recent journey to Belgium, that the first results obtained realize all their hopes, but that a considerable effort is more than ever necessary. New financial resources must be sent to sustain the inexhaustible confidence of this severely tried nation in order to help it rebuild its ruined hearths without losing faith and perseverance.

"The time for activity on a larger scale has therefore come. It is not only a feeling of pity which should induce us to help these victims, but a far higher sentiment—that of altruism, which inspires these deeds of Swiss democracy and makes us feel it our bounden duty to intervene with all the means at our disposal.

"We therefore make an urgent appeal to the generosity of our compatriots and of the foreigners in Switzerland, as well as abroad, feeling certain that they will hasten to support us in the heavy task we have undertaken.

"To reconstruct a house, inspired by the social sentiment which directs our effort, is to restore a family. To reconstruct a house according to the aesthetical principles which are the foundation of our program is to cause a whole country to be born anew in joy and beauty."

WHO PUT THE "CAN" IN CANADA?

Who put the "CAN" in CANADA?
The founders of the sturdy race:
Heroic in the wilderness
They bowed, in history, a place;
To make a home was all their plea,
Not caring what its name might be;
Their motto always was, "WE CAN"—
They never had to add the "T".

Who put the "CAN" in CANADA?
Her soldier sons who showed the way
To meet the heartless enemy
And keep the brutal foe at bay;
Her Volunteers, who did not wait
To reckon what the cost might be;
Roused by the Hunnish hymn of hate
They hurried, armed, across the sea.

Who put the "CAN" in CANADA?
Her school boys in their sturdy 'teens;
They left their books to study war,
Quit peaceful homes for martial scenes;
They could not rest in downy bed
While ruthless Might, with iron heel,
Made Europe's plain and hills blood-red—
Slew peaceful folk with fire and steel.

Who put the "CAN" in CANADA?
When food was scarce, munitions short?
Who said, "we'll make the land produce"
While peerless fighters hold the fort"?
The farmer and the farmer's son;
The tradesman, though unfit to fight;
The artisan and office-man
The anvil smote by day and night.

Who put the "CAN" in CANADA?
Who put the 'VIM' in Vimy Ridge?
Who got the sure-eye in Ficke—
'Mid raining shells built many a bridge?
Who put the "CAN" in Cannon balls
To hurl at freedom's enemy?
Who fights till Kaiserism falls?
Why, JACK CANUCK and Company.

Who put the "CAN" in CANADA?
When Haig cried out: Send men—MORE MEN!
Who said, "We're with you, heart and soul,
What we have done we'll do again!"
Twas youth and manhood, loyal, true,
That sprang to arms and made reply.
For homeland, kindred, skies of blue,
We'll do our duty though we die."

Who put the "CAN" in CANADA?
Her womanhood—strong, patient, brave
She offered mind and heart and life
The lives of friend and foe to save;
She died to selfishness and sham
That she might deathless service yield;
She lives within the nation's heart
Though slain upon the battlefield.

But can you "CAN" the haughty Hun?
And can you drive his legions back?
Faint hearts have said it can't be done,
While traitors try to block your track;
Ay, sy, but wait a few more days;
A few more battles we must win,
And Canada will help to blaze
The path to victory—and Berlin.

Montreal, October, 1918. E. L. Werry

Save Water Instead of Coal.

Temperature recommended by the Ontario Fuel Administration for working and living rooms, 64 F. (64 is the "optimum" temperature, or the degree of heat, at which science agrees man is at his best).

Temperature recommended for sleeping rooms, 50 F. or less.

"Make water warm you instead of burning an excessive amount of coal to do it," is the advice of the Ontario Fuel Administration in urging the importance of properly moistening the air in the home.

Dry air at 70 or 72 may feel cooler than moist air at 60 degrees, the Administration declares. Moist air holds the heat longer and saves coal.

There are ten per cent. more deaths at a given temperature if the relative humidity is blow 40 per cent. than if it is above 70 per cent.

Give the air a drink out of a pan instead of out of your skin. Evaporation from the skin renders one susceptible to colds, catarrh and other diseases of the respiratory organs.

As much, if not more, attention should be paid to the humidity reading as to the thermometer reading. A hygrometer, as well as a thermometer, should be in the home.

The Department urges every householder to follow these simple rules for humidifying air in the homes:

When the house is heated by stove, have a pan of water or a boiling kettle always on top.

If by warm air, see that the water retainer in the hot-air jacket of the furnace is always well filled. Place open pans of water near the registers.

In cases where steam or hot water systems are employed, provide humidifiers, or pans of water, for every radiator.

The average room may require a quart of water per day. Change water frequently.

Tourist: "To what do you attribute your great age? Oldest Inhabitant: "I can't say yet, sir. There are several of them patent medicine companies a-dickerin' with me."

"This chicken seems to be all dark meat." "Yes. We're conserving food at our house. Little throws away, you know. We raised that chicken on coffee-grounds."

THE WEEKLY SERMON

Unto him be glory in the church by Christ Jesus throughout all ages.—Ephesians, 3, 21.

The church is God's family. It consists of all those who love and believe in Jesus Christ, who are on His side against sin and the devil, and are striving to bring His Kingdom on earth. The very existence of God implies a recognition of Him and loyalty to His laws. God established His church when He made the children of Jacob His chosen people. Christ enlarged this church when, coming to redeem the world, He called all men unto Him. The apostles went out, by Christ's command, to proclaim the coming of the Kingdom, and to bring men into the church. And for 1900 years this church has been in the world as a visible proof of Christ's life and death and love.

Christ's kingdom is spiritual. "The Lord knoweth them that are His" (II Tim. 2-19). So we cannot place exact boundaries. But we know that He calls upon us to confess Him before men (St. Matt. x., 32), and those who do so confess Him are gathered into a visible body called the Church. This Church has many divisions, but it is really one body. To join it is therefore to accord with the will of Christ, and heart, soul in blessedness and strength. For the Church is the fold of Christ's sheep, and He stands at the door to welcome all who enter in.

Because Christ has established His Kingdom and asks you to come in. If you refuse you are disobedient to His call, and no one can become good who is disobedient to Christ. "But there are so many differing ways of joining the church. One branch asks this and another branch asks that." No matter what the form of initiation may be; the joining is the real thing, no matter what form is used. A confession of Christ as Saviour is implied in all the forms, and that is the real thing.

On he Lord's Side

First, When we join the church we take a stand on the Lord's side. The world is divided into two classes, those who are for Christ and those who are against Him; there is no neutral position. He who is not for Christ is against Him. It is not for us to judge others and say what will become of those who deny Christ; but we can and must judge ourselves and know that only as we acknowledge Jesus Christ as our Redeemer can we be saved.

It is a fine thing to take a stand in this matter of Christianity. It shows that we have a knowledge of our need and of the loving God who has prepared a way in which that need can be met. It shows our belief in righteousness. It proclaims our faith in brotherhood, for we are all one family in Christ. It proves that we are ready to battle for God's cause and to seek to bring the world from sin to goodness. Above all else it brings us into closer relationship with God, so that He is not a strange being vaguely feared, but a personal Friend with whom we have daily and hourly communion and fellowship. To "stand up for Jesus" is to accept our privilege as human beings and to learn the great lesson of eternal life here and hereafter.

Second. Christ promises His blessings through the Church. He may bless individuals, but His richest gifts come through His family, in which He has established special sources of help and comfort and service. What a help it is to know that we are all one in Him; to pray together, to work together, to study His Book together! What a meaning there is in these church buildings scattered throughout the land as they testify of a common Christ and a common faith and hope! As I see these churches wherever I go, in city and in country, I realize that bond which makes all the Lord's children one and causes to ascend to Him unceasing prayers and praises.

Entering a Common Service

Third. The: God's work may be wisely and well done we must unite in the doing of it. When I join the church I accept my share in the great task of bringing the world to Christ. United work is far more successful than work carried on by the individual. In business companies are formed and incorporated that the business may better succeed. Today similar trades are uniting in large bodies because they know their interests are common. So in God's work, with the mission which the Holy Spirit gives, we unite the individual Christians in a body, or, rather, Christ unites them, that the work of establishing the kingdom may be pushed forward. If Peter and John had each gone on his own way the apostolic work would have languished. But we find them members of a large body called the church (Acts vi., 2; Acts xv.), consulting together as to the work of the Master. To join the church is to enter into the common activity and is the part of every man who would avoid shirking and selfishness.

Fourth. But above all else, I think, the church stands for that nearness to Christ which He longs for us and which we need. The Bible calls the church Christ's Body (Col. i. 24), and in the Revelation the church is called "The Bride, the Lamb's Wife" (Rev. xxi, 9; see also St. John iii, 29). We come near to God in our daily life if we truly love Him, and we are drawn to Him by the joys and sorrows of our experience. But we are especially near to Him when, gathered together in His name, we can know that He is in our midst; when we feel the ties that bind our hearts in His love; when we sing and pray to the King whose hands are outstretched to welcome us. The knowledge that we are members of His household, even though we are alone and far removed from friends, makes us sure of His presence; the fact that we have confessed Him gives us courage to go forward, no matter how hard the journey or how fierce the battle.—Rev. F. W. Tomkins.

ALL ROUND THE GLOBE

Before Peace Came the War Was Literally World-Wide.

With the occupation of the Murman coast of the Arctic Ocean the Allies had drawn a war-girdle round the world. The Central Empires were surrounded in Europe, or, at least, they were during the first three and a half years of the war. But now there is a ring-fence of outer defence stretching from the Arctic to Africa, and from America to Japan and the Eastern coasts of Siberia. The armies of the Allies are to be found in Egypt and Palestine, in the Balkan Peninsula, in Mesopotamia, in the farther East, and now on the shores of the frozen Arctic, holding all the exits, and ready, if need be, to make a simultaneous movement to the great centre.

This wonderful extension of the armies of the Allied nations had been made possible only by the dominance of the British Fleet, by the command of the sea which Germany has so long coveted, but which has been the undisputed possession of Britain since Trafalgar, a possession ratified by the great battle of Jutland, which the insensate vanity of the Kaiser heralded as a victory for the German fleet!

Yet no nation could have used its predominant power more unselfishly for the common good of mankind than Britain has done. Her ports and coaling-stations have been open to all the world, and her ships have cleared the seas, even in the remotest East, of pirates and sea-robbers of all kinds, have charted every ocean, and made the sea the free highway of the nations.

The Pine.

The elm lets fall its leaves before
the frost,
The very oak grows shivering and
sere,
The trees are barren when the summer's lost,
But one tree keeps its goodness all
the year.

Green pine, unchanging as the days
go by,
Thou art thyself beneath whatever
sky.
My shelter from all winds, my own
strong pine,
Tis spring, 'tis summer, still while
thou art mine.

The Paisley Advocate

PAISLEY, DEC. 12th, 1918

GERMAN PEOPLE WILL HAVE TO PAY

Great Britain and her Allies are not softening their hearts towards the gloatings of Germany since the fighting has ended. The Teuton nation would now make us believe that the common people were in no way to blame for the outrageous war. They have thrown overboard the leaders they so faithfully followed while their armies were beating the world and there was every prospect of great fruits from victory. The Kaiser, Crown Prince, statesmen and generals who were making out the great plan of world conquest, have failed, so must suffer for their failure. Not severely enough—as the Anglo-Saxon has been for centuries—to fight for their own national freedom against autocratic oppression, the Teutons would now accept the freedom won for them by Britons and Frenchmen without a thank you. The Allies, however, are not to be deceived by the Boche now any more than throughout the four years of hostilities. The German nation must pay the full price of their stupendous but stupid campaign of militarism. Great Britain will demand of Germany forty billion dollars as reparation for the war for the Empire and its Dominions, which includes Canada. And the French claim will be infinitely larger than Great Britain's, while Belgium's restoration will also cost an immense amount.

This plan is only following the determined mind of the British, as expressed recently by Winston Churchill, which was as follows:

"For the third time in history the freedom of the world against a military tyranny has been preserved by the British navy—against Philip II of Spain, against Napoleon, and against Kaiser Wilhelm. Without it, not only should we have been lost, but all the world would have been cast back for centuries. Did we abuse our power? Did we misapply this enormous advantage? On the contrary, we were the only nation whose ports were open to the whole world, whose markets were unrestricted by any tariff, whose coastwise trade was not held as a national monopoly.

"Our British way of doing things is nowhere more admired than among the nations we have overthrown. Let us preserve our great and old renown as the first of free and liberal nations, as the birthplace of parliaments, as the pioneer of the popular government, and as the unfailing fountain of enlightened thought and humanitarian settlement.

"That does not mean we should give up the fruits of victory. Practically the whole German nation was guilty of the crime of an agressive war, conducted by brutal and bestial means. It is no use their pretending that their late government was solely to blame. They were all in it and must all suffer for it. Particular individuals against whom definite breaches of the laws of war on land and sea can be proven, or who can be proven to have treated prisoners with cruelty, should be brought to trial and punished as criminals, however highly placed.

"Alsace and Lorraine must be restored to France. Poland must be reconstituted a nation, with access to the sea, and Germany must give up her Polish 'provinces.' None of the German colonies will ever be restored to Germany, and none of the conquered parts of Turkey will ever be restored to Turkey.

"Reparation must be made by Germany to the utmost for the damage she has done. I cordially sympathize with those who say 'make them pay for the expenses of the war.' If the Allies have not claimed this it is for one reason only. It is not physically possible for them to do so. Reparation for damage alone will soon run into thousands of millions."

—There was one subject not discussed at the December session of Bruce County Council that should have been brought up in some form. We allude to the matter of soldiers' memorials. There will be the same general desire in Bruce as in many other, or, we might say, all counties, to have a monument of some appropriate form erected. Possibly no incorporated village or town will be satisfied without its own monument to the brave citizens who fell in Flanders. In Grey county council there was discussion hinging on whether there should be county or community memorials, or whether they should have both. The matter was left for the January session, local municipalities in the meantime bringing it before their respective councils and people at or before nomination day.

—Kincardine Reporter: If you believed that conscription was right, are you not as good a Liberal as the man who believed it was wrong? You can just bet you are, and if the latter bunch want to be the Liberal party of Canada they will become the minority Liberal party.

A PRACTICAL FARMER SPEAKS

Dear Mr. Editor:

In your last issue under the heading, "Farm Crop Queries," I notice advice given I presume by Professor Henry G. Bell, which I think could be very much improved upon, and with your permission I would like to make a couple of suggestions for the benefit of C. H. Mr. Bell apparently would plow this red clay in the spring. I will admit that if you can get clay turned over early enough in the spring to allow it to get well frozen after the plowing is done, you can get a good enough seed bed by working it down when dry enough, but I would very much prefer plowing all clay, if heavy, in the fall, and allow the frost to mellow it. In this way one has very little difficulty in getting an ideal seed bed, besides getting your seed in early, which is worth some consideration.

I notice that he also advises using lime to correct sourness in the soil. This is all very good, but would not some tile drains in this sour land correct said sourness, not only for one or two seasons, but for all time, and be a great deal cheaper in the end than making an application of lime (which is both costly and scarce) every few years. We have no fault to find with the use of fertilizers, but think that a good application of barnyard manure beats all the manufactured articles.

A Reader

SANTA CLAUS will make his headquarters at **McArthur's Bookstore** for the first after-the-war Christmas. We have as usual aimed to meet the demands and expectations of the little people first in the stock we have been putting in. We have

Sleighs, Waggons, Rocking Horses and Dolls

A PIONEER MOTHER GONE

In the person of Mrs. Wm. Tully, who passed away in Chesley on Sunday, Dec. 1st, another good old pioneer mother has been called home. The maiden name of deceased was Susan Falconer. She was born near Ingersoll, and at the age of twelve came came from that town to the 4th con. of Elderslie in 1855 and was, therefore, amongst the early settlers of that township. She was married in the year 1860 to the late William Tully, who predeceased her six years. They lived on lot 16, con. 3, Elderslie, until 1911, when they moved to Paisley where Mr. Tully died the following year. In 1914 Mrs. Tully and two of her unmarried daughters moved to Chesley. Mrs. Tully was an amiable, kind-hearted, motherly woman, always anxious about the welfare of others. She had been a member of the Presbyterian church for many years and was a constant attendant at the church services. Deceased leaves a family of six daughters, the two sons, John and Robert, having passed away before their mother. The daughters are: Mrs. Wilson, of Mount Brydges; Mrs. Harvey, of Hamilton; Mrs. Calley, of Blanchard, N.D.; Susan, at home; Aggie, teaching in Hamilton; and Etta, a nurse in Hamilton. A brother of the late Mrs. Tully, R. W. Falconer, lives in Blanchard, N.D., and a sister, Mrs. I. Franklin, in Glenside, Sask.

Our Paper Supply Was Delayed

We know that our readers would find the inside of last week's Advocate to be ancient literature, and not very interesting. To dish up such a rehash was not our intention. The G.T.R. failed to deliver our bundles as usual, so we were obliged to use just what paper we could scrape up for the issue. We trust that we may not be forced to resort to such a supply again.

—Allan Donald, a progressive farmer of Derby Township, has installed the hydro lighting at his farm between Tara and Owen Sound at a cost of $400. The lighting bill will be about $5 per month.

CARD OF THANKS

Mrs. Murdoch McArthur and family desire to thank their neighbors and friends for the kindness extended to them during the illness of the late Mr. McArthur, and sympathy expressed since his death.

Successor to Dr. Morrison.

HOW TO FIGHT SPANISH INFLUENZA
BY DR. L. W. BOWERS.

Avoid crowds, coughs and cowards, but fear neither germs nor Germans! Keep the system in good order, take plenty of exercise in the fresh air and practice cleanliness. Remember a clean mouth, a clean skin, and clean bowels are a protecting armour against disease. To keep the liver and bowels regular and to carry away the poisons within, it is best to take a vegetable pill every other day, made up of May-apple, aloes, jalap, and sugar-coated, to be had in most drug stores, known as Dr. Pierce's Pleasant Pellets. If there is a sudden onset of what appears like a hard cold, one should go to bed, wrap warm, take a hot mustard foot-bath and drink copiously of hot lemonade. If pain develops in head or back, ask the druggist for Anuric (anti-uric) tablets. These will flush the bladder and kidneys and carry off poisonous germs. To control the pains and aches take one Anuric tablet every two hours, with frequent drinks of lemonade. The pneumonia appears in a most treacherous way, when the influenza victim is apparently recovering and anxious to leave his bed. In recovering from a bad attack of influenza or pneumonia the system should be built up with a good herbal tonic, such as Dr. Pierce's Golden Medical Discovery, made without alcohol from the roots and barks of American forest trees, or his Irontie (iron tonic) tablets, which can be obtained at most drug stores, or send 10c. to Dr. Pierce's Invalids' Hotel, Buffalo, N. Y., for trial package.

COUNTY COUNCIL

The December session of the county council of the County of Bruce was held at Walkerton, opening on December 3rd.

The statement of the county treasurer was presented early in the session, showing receipts and expenditures for the year up to Nov. 30th. This showed a total expenditure for the eleven months of $193,143.31. This of course, is very largely in excess of the annual expenditure. The chief items were for patriotic grants $99,674.18, and on county highways $28,861.51. Deducting these two items brings the expenditure down materially and about on par with that of pre-war days. The other main items were public schools $14,507.46, and on maturing debentures $3,125.48. There are still considerable amounts to be paid during December for patriotic grants, on county highways and debentures, but this will largely account for the heavy tax rate this year and shows where most of the taxes went. A communication was read from the Canadian Patriotic Fund chairman, saying they did not expect to have to ask this county for further funds, and warmly praising the county as one of the banner counties in the Dominion in the matter of contributions for patriotic purposes.

It was decided to petition the Legislature to repeal the Ontario War Tax Act and the Moratorium Act. Both of these were considered war measures only, and the war being over they should be repealed.

The County Highways Committee and Superintendent presented their reports. The committee report they found it very difficult to get as much work done on the county highways as they desired owing to the great trouble in getting labor and machinery. They had done what they could with the resources at hand and hoped now the war was over that the situation would materially improve, and that next year considerable progress could be made. The discussion on this report took up much of the time of the council as the roads to be comprised in the system were again discussed. Mr Phelan had a strong delegation present to protest against the dropping of part of the 5th sideroad of Greenock from the system, and Mr. Craig of Amabel made a determined fight against dropping a road in Amabel from the system, but the committee after going over the whole situation recommended dropping these two roads and the council agreed with the committee. A by-law was passed changing the description of the roads and adding the parts in towns and villages which it is agreed to have placed on the system since the original by-law was passed. This by-law must be confirmed by the Lieut.-Governor before it becomes effective.

The Warden in his report congratulated the county on the very successful termination of the war, and expressed his appreciation of being warden of a county that had so nobly done its full share in every way in the good cause. He also expressed the deep sympathy of himself and the county with those who mourn through the war.

Capt. Coles, Judge Greig, Judge Klein and Messrs. D. Robertson and Lay were a delegation asking for a grant to the Canadian Navy League to assist the men and the orphans and widows of men of the mercantile marine, pointing out that the whole Allied cause had depended on these men and nothing had yet been done for them. Council decided that a grant of $20,000 should be made, this being at about the rate of 50c a head of Bruce's population. This grant is to be provided for next year.

John Niven, Lucknow, and Peter Akewauge, Cape Croker, were recommended for the appointment as county constables.

Council decided to ask that the Durham road, the Elora road, the Saugeen road and the 30th sideroad from Allenford to Hanover be assumed by the Department as provincial county highways.

The usual large number of committee reports of the work done since June session, and a large number of accounts closing up business for the year were attended to.

A record was made with the work, and no time was lost with the result that council was able to adjourn on Thursday instead of, as usual, on Friday.

P. A. MALCOMSON,
County Clerk

THE LAST HOURS OF WAR

Pte. R. S. Martin wrote from Belgium Nov. 13th, to his parents, Mr. and Mrs. Wm. Martin, Arran, to let them know he was O.K. when the armistice was on. He says "Our battalion was in at the finish and it sure was a great time waiting for that last hour or two to finish. We had caught up with the Boche and were under machine gun fire from about 9 to 11, and were hoping to keep clear of those little pills until it finished. There were only four or five hit. When 11 o'clock came a Hun officer appeared on a white horse and the Huns waved white flags. Then we knew for sure the war had started for a time at least, and rumor was right for once. We sure have had a boo time for the last month or so. The civilians have been left in the towns and villages and there is always a great welcome. Everything is ours for the asking, and for the first day or two they wouldn't let us pay for anything. I have had a real bed to sleep in this last while. Have just had a letter from Bill, and he was at the school for N.C.O.s. Was speaking to Ed a few days ago. There has just been a few explosions within a mile of here —probably an ammunition dump or something like that. The old lady is so startled she jumped out of her clogs and she wants to know if the war isn't finished yet. They tell us a lot about the big retreat of the early days of the war. My address is now H. Q. instead of B. Co., as I am in charge of the battalion Lewis guns now, and attached to headquarters. I got the pair of gloves Bill Grant sent, and they are nice."

Stoves and Heaters

We Sell the **Sharples** Suction Feed **Separator**

OUR STOCK is complete, and it certainly will *pay you* to see our Stoves, which are the most modern in style and fuel saving qualities. We also claim you cannot buy the same stoves as we sell as cheap any place in the county. We are selling a lot of Stoves and we hope to sell you one if you need one. But whether you need one or not, come in and see our stock. We shall be glad to show you anything we have in the store.

The Sharples Skims Cream At Any Speed

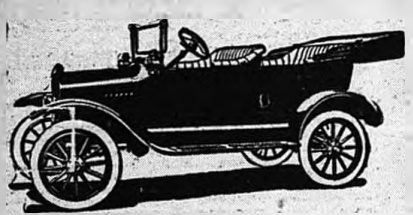
The Composite Price, $42.50 — A combination home device for heating, cooking, baking. It has a high oven. Built to conserve, and guaranteed to give satisfaction.

Buck's Novelty Range Price, $76.00 — We guarantee to satisfy the most fastidious. It is perfectly adapted to the small kitchen. It has a high oven. A radical departure from the old standards.

Dogherty High Oven Price, $110.00 — Bakes perfectly with coal or wood. It is a beauty in appearance, and reliable in use.

Buck's Happy Tho't Price, $95.00 — The old reliable. We do not need to say anything about this stove. Ask anyone who has one.

Bucks' Brittania Price, $65.00 — A modern, handsome, low priced range, and absolutely guaranteed.



OUR LINE OF HEATERS is also complete, including *Perfection Oil Heaters, Oaks, Improved Quebec, Baseburners and FiReCo Heaters.*

Our FiReCo Heater Price, $38.00 — burns any kind of fuel. It has more than three times the radiating surface of the ordinary heater. A fuel saver. Will reduce its cost in one winter. Holds fire for four days with hard coal and a day hours with soft coal.

Stove Pipes. We make our own stove pipes out of good iron—iron such as cannot be bought to-day at any price. They are vastly superior to readymade ones, both in quality of iron and workmanship. See ours and compare them with others. We know what you will say.

Children Cry FOR FLETCHER'S CASTORIA

NEW CANADIAN NOVEL—"THE COW PUNCHER"

An English reviewer recently in reviewing the poems of Robert J. C. Stead, said that while Canada's troops had done nobly in the war, such writers as Stead were doing a no less valuable service in building up a genuine national literature. The reader who is wise enough to obtain a copy of "The Cow Puncher," Mr. Stead's latest novel, will agree with the English reviewer. It is a genuine contribution to the national wealth of Canada, made by a writer whose intimate knowledge of the west particularly qualifies him for such a service.

Since Robert Stead wrote his famous poem on the death of Kitchener all who profess to be informed on current literature have been more or less conversant with his work. His collection, "Kitchener and Other Poems," published last fall, was a best seller, and is still in considerable demand. The English edition is reported to have been a big success in Great Britain. His previous novel, "The Homesteaders," has been so continuously sold out on the Canadian market that a new edition has just been issued in Canada.

"The Cow Puncher" promises to add to a reputation already well established. It is not merely a novel: it is an event in the literary life of the country. Dr. W. T. Allison, professor of English, and well known literateur, declares that it is the biggest thing in a literary way that ever came out of the prairie country. It is very pleasant reading, and there is a unique vein of humor and philosophy which has caused it to be called the David Harum of Canada. But "The Cow Puncher" is by no means literary pastime. Its note is in keeping with the serious business of the times, and in its closing chapters it rises to a patriotic level not excelled by any present writer.

It is not our purpose here to outline the plot of "The Cow Puncher." You will enjoy it more to read it in the author's own words. The book is published in Canada by the Musson Book Co., of Toronto, and in the United States by Harper & Brothers. It is attractively illustrated by Arthur Heming, one of Canada's most successful artists.

Farms Less Fertile Than 40 Years Ago.

Canada has about 28,000,000 acres in field crops of which probably 20,000,000 acres are in the three Western Provinces. Is the fertility of the soil being kept up, is it being exhausted, is it being increased? To get an answer, the Commission of Conservation carried out a survey of 2,245 farms. We asked questions of 2,245 farmers located all over Canada. We took them in groups of about thirty or forty—in all about 60 groups, from British Columbia to Prince Edward Island. On this point, we made a definite enquiry of the farmer as to whether the fertility of his farm was being maintained or was deteriorating.

Here is the answer: 30 per cent. of them reported about the same yield per acre as 20 years ago, 40 per cent. reported some increase in yield, and 30 per cent reported some decrease. That is to say, the land, as used by 30 per cent. of all the men reporting, was poorer in its power to produce crops, than it was 20 years before. From Manitoba, 32 per cent. of the farmers reported about the same yield per acre as 10 years before; not one man reported an increase; and 46 per cent. reported some decrease. That is a summary of the answers to the question when put under an intelligently conducted survey.

We want in Canada more serious and intelligently conducted surveys of our conditions in order that we may acquire real knowledge of facts as they are. Then we can come to conclusions and plan our course of action to deal with the facts discovered and properly interpreted. In the West, the lure of land was for a time similar to the lure of the Yukon; and the lure of the Yukon in the main led on to disappointed men, deteriorated health, and parts of the Yukon left with less material substance that could be called wealth than it had before. There is some excuse for the pioneers taking more than one generation's share of the fertility stored in soil by the beneficence of nature during long ages of preparation. In the pioneer days they needed and had some right to more than their share of this store of natural wealth while making the place ready for occupation; but, after that first need is satisfied, it becomes their duty to make the place more fertile while in their hands.

The history of other countries and other farmers sheds light on our problems; and we may be instructed, to our great advantage, by their experience. In central New York, wheat growing was followed successfully for 40 years. During 20 years more the success was doubtful. Then it became definitely unprofitable. With a climate favorable for agriculture and propitious for crop-growing, it took 40 years of exclusive grain growing to make that system unprofitable, and 20 years more to compel the farmers to stop that sort of practice. Ohio, Indiana, Illinois, Iowa and other Western States either have or are making similar history. I have gone over them and talked to the old men; from 80 bushels of wheat to the acre they came down to 14.

We can afford to take a lesson from even our enemy. Germany is a country with a soil which on the whole is not naturally very fertile. Within about 30 years she has been able to effect an increase of about 30 per cent, in the yields per acre of her crops.

On the other hand, over large areas of Canada our methods of farming are exhausting the fertility of our farms to some extent, and there is danger that the fertility of considerable areas will be reduced below the point of profitable farming.—Dr. J. W. Robertson, Chairman of Lands Committee, Commission of Conservation.

Poultry

When goslings over six weeks of age are to be fattened they can be fed three times per day with a ration of one part corn meal and one part bran. Geese which have been pastured through the summer can be fattened on a ration composed entirely of corn meal. This should be given over a period of four or five weeks, depending upon the condition of the birds when the forcing begins.

Sometimes young geese are marketed as "green geese." Then the fattening process begins when the long wing feathers have developed until they reach the tail. The birds can be penned up and fed the following ration with good results: Four parts corn meal and one part beef scrap, given three times per day. A sprinkle of salt added to the wet mash is good for the birds and acts as an appetizer.

Ducks fatten well on the mash composed of one part corn meal and two parts bran. About five per cent. of beef scrap and a little fine grit should be added to the mash to bring the best results. Green food should be given occasionally to help in keeping the digestive system in good order.

In fattening both ducks and geese the principle is to increase the amount of food consumed and reduce the exercise. Sanitary conditions in the yards and pens are very necessary. The profit in fattening either ducks and geese can be determined by comparing the cost of good quality corn with the price that will be received for the ducks. At the present price of feed it requires more than the usual amount of skill to fatten the birds at a profit, but underfed birds never pay so it is undoubtedly best to give the geese and ducks a certain amount of fattening and then endeavor to place them on a market where quality stock is appreciated.

Lime in Old Plaster.

When a ceiling falls, as they sometimes do, there is the slight consolation that the old plaster can be used to advantage in the garden.

Crushed limestone spread over the soil is beneficial; it is slow in its action, but is beneficial just the same, accomplishing the same result as burnt lime, but requiring more time to do it. So it is with old plaster, which is slower in its action than lime but in time produces the same result.

If old plaster is to be had do not neglect to work it into the garden, breaking up the lumps as fine as possible.

Next spring after the garden has been limed with the old plaster a lot of decayed leaves may be worked in. Sheep manure should be applied liberally to the growing crops and the abundant crops will more than pay for the trouble.

The Sahara Desert is three times as large as the Mediterranean Sea.

When I see a farm of poor soil I know just how the farmer looks. When I see a careless, shiftless, improvident farmer in town I can tell that the soil on his farm is poor; he is surely a poor soil farmer. The thrifty, enterprising farmer, who steps lively and wastes no time, can be counted on as a good soil farmer, and the soil of his farm will be found to be good. Naturally, soil may be good or bad, but finally it will be whatever it is made by what I call a good soil or poor soil farmer.

Doing Over the Old Barn.

For a moment when I came in sight of the place I did not recognize it, so changed was it in appearance. The buildings did not look like they used to; the fences were different, and the fields had been arranged on a new and more economical plan for saving time and lessening labor.

But the barn was the outstanding feature of the place. The old barn had stood in the midst of a low, wet place, quite a distance from the house. The man who owned the place before it changed hands must have travelled many miles every day to do the chores.

This old barn was taken down and the solid timbers moved away to a site 200 feet from the house. Such of the old sills, beams and other timbers as were of the right size and length were worked over for the new frame. The woods afforded logs for what more heavy timbers were needed, as well as for the siding. These siding boards were all surfaced, so that they could be painted. Some of the old siding was used in the new barn, although much of it was worn very thin by the weather. A basement was put under the new barn, with a thirty-foot shed attached. The whole was given a fine coat of red paint, and trimmed with white. It looks fine now, and it is as good as it looks.

Inside are some devices to save time and strength. Stairs lead from the basement to the first floor and up to the scaffolds. Good swing stanchions make it comfortable for the cows and easier for the men folks. Feed carriers and litter carriers lessen the labor necessary to feed the stock and clean the barn. A drilled well near-by affords water. Altogether, it is a good, labor-saving barn.—E. L. V.

FUNNY FOLD-UPS

CUT OUT AND FOLD ON DOTTED LINES

To Keep Chickens at Home.

A yard surrounded by a five foot fence will under most conditions keep chickens at home. If the hens show a tendency to fly over such a fence the flight feathers of one wing should be clipped. A fence made of woven wire is preferable to a fence made of board or other material. A board should not be used at the top of a wire fence, as this gives the hens a visible place to alight and tends to teach them to fly over. The larger the yard which can be provided the more contented the hens will be. It not only gives them greater opportunity to exercise but often makes it possible to maintain a sod on the yard, which is advisable.

Seed corn selected at husking time should be stored where it will thoroughly dry out before winter. The ears should not touch each other during the drying process. The ears can be suspended in a well ventilated shed or attic. Seed corn that is thoroughly dry will not be injured by freezing.

MOTHER-WISDOM

One Speck of Dirt Too Small to See May Bring Disease to You and Your Child.

They are worth every ounce of the wisest love and utmost care we can give them, these priceless little ones from Heaven.

By Helen Johnson Keyes.

How much knowledge and wisdom go into the making of a good mother!

Constantly I am surprised by discovering new things which a good mother should know and do. The truth is, there is scarcely any knowledge, scarcely any skill which cannot be used directly in bringing up children.

Two strong children went from home one summer to visit an aunt. Two days after their arrival they were taken violently ill with cramps and vomiting. After a week of illness they recovered, with the help of a doctor, and by following his very wise counsel to go without food entirely for twenty-four hours and then to begin with the very lightest diet. After a week, however, one of them fell ill again in just the same way. The doctor happened to be brother-in-law of the aunt and he quietly made an investigation of her kitchen, for he had often been called into this household to cure cases of acute indigestion and ptomaine poisoning. Before very long he found the explanation of those many illnesses: There were saucers of left-overs which had been standing uncovered evidently for more than twenty-four hours; yesterday's milk was beginning to sour in the pantry; a loaf of bread which had not been put away in an air-tight box was coated with mold. The doctor's imagination pictured a dish of scalloped fish made from some scraps of canned salmon left-overs, some inside cuts of that moldy loaf, plus the souring milk. In his fancy he saw every one of the family ill after that feast and being a man who believed in preventing illness, if he had a chance, instead of waiting for it to develop and then curing it, he took the left-overs and the milk and the bread and pitched them out into the place where such things belong.

Now this article is not intended to discourage thrift, it is just a reminder of those tiny disease-carrying organisms, bacteria, yeasts and molds, which develop in foods if these are exposed to slow heat, dampness and air. When foods "spoil" bacteria yeast or molds are spoiling them.

There are hundreds of varieties of bacteria, many of which are useful, even necessary to life. I am now speaking about the poisonous bacteria which breed in foods, dust and dirt, and which cause more death among children and among grown-ups when the children need than has ever been put on record. Twenty-thousand of these bacteria might scarcely cover the head of a pin, none the less, they have the power to bring desolation into families, robbing parents of children and children of parents.

Milk rapidly develops great colonies of bacteria as soon as it is left standing in a warm condition. That is why I insist that when baby's bottle has been warmed for a feeling what is left in it must be thrown away, not kept for the next feeding. Many a fatal case of diarrhoea has resulted from the practice of warming baby's bottle twice or more. (This of course, does not refer to warming once after pasteurization.) Ice cream which has melted into a warm fluid and is then refrozen is very dangerous, for freezing does not kill bacteria; it only checks their farther development. Many epidemics of indigestion which have swept through villages after a party or picnic have been due to the fact that the ice cream eaten was refrozen in this way. Other bacteria develop in meat, fish and in canned goods which are allowed to stand in the cans after they are opened. These are ptomaines. To see one's child suffer, from ptomaine poisoning and understand the cause would surely cure any mother of carelessness with left-overs.

Yeasts are familiar to us in kindly form, massed together in great multitudes in the cakes which make our bread light, but even they may become unwholesome, when, for instance, they ferment fruit juices.

Mold, unlike bacteria and yeast spores, is visible and spreads a sickly green danger-signal over the food it is poisoning.

It is the duty of very farm mother to control the growth of these organisms. The difficulty or impossibility of getting ice on farms makes the problem harder but it must be faced and conquered or we shall have continually-recurring cases of indigestion, followed by chronic sickliness and occasional unnecessary deaths. Foods require to be used up almost at once unless they can be kept very cold and covered.

The utensils used in preparing and keeping foods must be of the kind which contain no insanitary cracks and crevices where crumbs and drops may lodge and grow old, breeding poisons. The baby-bottle with the wide mouth ought to be the model for all milk-containers.

The housewife should wear tub dresses and wash them so frequently that they are clean. Her hands and nails must be spotless when she cooks and even so, should not be used as tasting implements. Our mouth always contain the germs of diseases which most of the time fail to develop their deadly possibilities within us because certain curative forces are at work in our bodies destroying their power; but transferred from our mouths into food and thus into other people's stomachs, they may produce the disease of which they are seeds, the curative forces being absent or weak in the systems of the victims who eat them.

Rats, mice and even pet animals should be rigorously kept out of the kitchen. They are carriers of disease germs.

So much has been said and written about the nasty fly, its foul habits and its power to infect the food and the bodies of the babies, children, and grown-ups on which it alights that one may indeed say that no woman is a good mother who does not screen them out of her house and use every method of driving them from the neighborhood and from her children. They are the great carriers of typhoid.

Dust is not dangerous in itself, it is dangerous because in it grow death-dealing bacteria. A mother must know how to sweep so as to collect the dust and destroy it, not merely to scatter it. She must diligently scrub floors and corners with soap and water and expose her rooms, particularly her kitchen and pantries, to bright, direct sunlight.

After food has been cleanly prepared and served it must be cleanly eaten. Children should be obliged always to wash their hands and to scrub and clean their nails before coming to the table. Most bacteria are conveyed from the hands to the mouth and thus eaten. Children put their hands without dainty scruple, in and on everything. Dirt crowds under their nails and may contain bacteria, which lodging on their food and passing into their digestive tracts are likely to cause cramps, nausea and all the symptoms of indigestion.

A child-specialist once said to me that if all children in Canada were forced to wash their faces, hands and nails before eating there would be a truly amazing fall in the death rate.

GOOD HEALTH QUESTION BOX

By Andrew F. Currier, M.D.

Dr. Currier will answer all signed letters pertaining to Health. If your question is of general interest it will be answered through these columns; if not, it will be answered personally if stamped, addressed envelope is enclosed. Dr. Currier will not prescribe for individual cases or make diagnosis. Address Dr. Andrew F. Currier, care of Wilson Publishing Co., 73 Adelaide St. West, Toronto.

Measures for Preventing Infectious Diseases.

Armed with the facts in regard to the nature of infectious diseases we are in a position to eliminate them to a certain extent. This must come about, first by keeping the body in so fine a condition for its daily work that it will be able to offer successful resistance to the great army of disease germs ever lying in wait to attack it. A good engineer never overlooks the requirements of his machine, he gives it pure water, good coal, good draught; he keeps it clean and well oiled, he is constantly on the look-out for weak spots and when he finds them he remedies them at once, if he can. In this way he gets the maximum of efficiency from his engine. Precisely in the same way if one would keep off disease he must have proper food, exercise, sleep, clothing, recreations and everything else which will enable his physical organism to work smoothly. There are also extra precautions which he might take but in the majority of cases does not. He can take better care of his skin, which is one of the avenues for the elimination of poisons, by more frequent and thorough bathing and scrubbing, especially with warm water and plenty of soap. He can be more particular about the functions of his bowels and bladder which are identically as important to his well-being as sewers to a city. He can accustom himself to deep breathing, flooding his blood current with oxygen and getting rid of poisonous carbon compounds. It is from the want of this vital oxygen that so many people are dying to-day of pneumonia. Furthermore if it is true that germs are so omnipresent and so malevolent, so abundant in the mouth and nose and so prone to migrate from this base to the parts of the body which are more vulnerable, the neglect is inexcusable if they are not destroyed before they have had an opportunity to accumulate and move on. In other words the daily toilet of the mouth and nose with suitable sprays, atomizers and mouth washes is as important as, is even more important than the use of the tooth brush. Good atomizers are easy to get and there are many combinations of antiseptics which will efficiently disinfect the upper air passages, destroy germs and prevent much of the sickness which is now so prevalent. Menthol, eucalyptol, thymol, lysol, boric acid, carbolic acid, salicylic acid and many other antiseptics are available and should be used freely especially in the presence of such epidemics as we are now confronted with. Children should be taught the disinfection of the nose and mouth from their earliest years and if this habit is carried through life it will not only make life more comfortable but in many cases, it will greatly prolong it.

Questions and Answers.

X.—1—My twelve year old daughter has symptoms of goitre. Could you suggest something which will keep it from enlarging?

2—Are acid fruits, including tomatoes, useful for one who is bilious?

Answer—1—If your child has goitre, the proper thing would be to place her under the care of a physician who understands the treatment of that disease. If you care to read my article on goitre, send stamped, self-addressed envelope and you will receive it.

2—I do not know that the acid fruits have any particular relation to biliousness. Drugs, like mercury and ipecac and a few others, are useful in the treatment of biliousness, but one should take them under the direction of a physician.

G. E. N.—I am told that if two cakes of yeast are eaten each day for several months, it will cause reduction of enlarged glands and will also increase the weight. What is your opinion as to this?

Answer—My opinion would be that it would be an undesirable form of treatment, and the constant fermentation and gas which it would produce in the stomach, would be most annoying and uncomfortable.

F. C.—I am troubled with corns. Will you kindly advise me in regard to their care and cause?

Answer—If you will send stamped, self-addressed envelope, I will send you my article on corns.

E. S.—My baby is 18 months old, has hiccoughs everyday. Seems bright and well otherwise. Please tell me what I can do for him.

Answer—If the phrenic nerve is slightly compressed, it will usually stop hiccough. This nerve passes down on either side of the neck, and could be compressed by passing the fingers gently, but firmly, along each side of the neck.

The Dairy

Cabbages furnish a great, succulent food for dairy cows but usually they are worth so much for human food that it would be impracticable to feed them to the cows. Cabbage should be fed rather sparingly. It will not do to give a cow all the cabbage she wants to eat, especially at first, because it will taint the milk and the cow will not do well, but a comparatively small feed of cabbage in the morning to take the place of roots or of corn silage would be very beneficial. They are not only a good food but their succulency assists digestion and a cow would eat more dry food and digest it better by including cabbage as a portion of the ration.

If you would attempt to feed a cow nearly an entire ration of cabbages you would be very likely to get extremely poor results because of the large percentage of water. There would be so little dry matter and food nutriments in the cabbage that a cow couldn't eat enough to produce a good flow of milk, for any considerable length of time. That, I imagine, is the reason why some people have had poor results with cabbage. You get the same results with beet tops. People harvest their beets and then they turn the cows into the beet field and if there are plenty of beet tops they think they don't need hay or grain, but they make a sad mistake. It would be much better to haul the beet tops up and feed a small feed in the morning together with hay and grain, and the same principle will hold true with cabbage, but rest assured that if cabbages are properly fed to dairy cows they will not dry them up but, on the contrary, they will stimulate the flow of milk.

Save Wood Ashes.

Save the ashes from wood fires. Store them in boxes or barrels in a dry place until spring, when they should be spread over the garden for their high fertilizing value.

Recruiting Officer: "But what would a boy like you do in the Army?" Lad: "Don't you need a caddie to carry your swords and things?"

Do not apply paint to concrete work before the concrete has hardened, as paint retards the setting of the concrete.

The entries which have just closed for The Toronto Fat Stock Show to be held at the Union Stock Yards, December 5th and 6th, indicate a splendid display of finished live stock. This, despite the fact that the management have discontinued the offering of premiums for female cattle in the hope that animals suitable for breeding purposes will be kept on the farm for that purpose. It will be well worth anyone's time to take in this show and also to be present at the Auction Sale of Prize Winners which is attended by buyers from all over America.

Muskrat Coat

Loose box coat effect, with convertible collar. Extra well made. Length 48". A popular seller. $120

MEDICINE FOR LOGS

Chemicals Used to Preserve Timber Against Ravages of Insects.

Wood, being a vegetable structure, is liable to decay. But if properly "doped" with some preservative chemical it may be rendered almost decay proof--which, when the matter is brought down to dots, means proof against devouring insects and destructive fungi.

Creosote is one of the chemicals commonly used for this purpose. But, whether this or another, the most up-to-date method adopted is to saturate logs with the preservative stuff by pumping the latter into their intimate structure.

The preservative, under pressure, is forced into the pores and interstices of the logs through a rubber pipe to which is attached a contrivance that shows on a dial the exact amount of pressure used.

Britain Thinking of Million Dead.

Talking to the British Pilgrims Society in London, James M. Beck marvelled at the restraint of the British people in the hours of their success, and diagnoses it by saying:

"Britain's feeling is that of a Judge in a criminal court, facing a prisoner convicted of a foul murder, with the Judge putting on his black cap to pronounce sentence. That is the spirit of Britain to-day. She is thinking of her million dead."

The average man feels that those who have the most right to celebrate can never come home.

Thousands of undernourished people have found that

Grape-Nuts

food—a scientific blend of nourishing cereals—helps wonderfully in building health and happiness.

Needs no Sugar

Chronology of the Great War

1914.

July 23.—Austrian ultimatum to Serbia.

July 25.—Serbia accepts all Austria's terms, except that Austrian officials conduct murder enquiry in Serbia.

Aug. 1.—Germany declares war on Russia.

Aug. 2.—Germans enter Luxembourg and invade French territory.

Aug. 2.—Germany demands passage through Belgium.

Aug. 4.—England sends ultimatum to Germany demanding observance of Belgian neutrality. Germany rejects ultimatum, and makes attack on Liege. England declares war.

Aug. 5.—British troops land in France and Belgium.

Aug. 12.—England declares war on Austria.

Aug. 20.—Germans enter Brussels.

Aug. 23.—Germans enter Namur and attack Mons.

Aug. 24.—British begin retreat from Mons.

Aug. 27.—Louvain burned by Germans.

Sept. 2.—Germans are within thirty miles of Paris, and seat of French Government is transferred to Bordeaux.

Sept. 5—Battle of Marne begins.

Sept. 20 — Germans bombard Rheims.

Oct. 9—Antwerp occupied by the Germans.

Oct. 19—First battle of Ypres begins.

Oct. 29—Turkey begins war on Russia.

Nov. 1—German naval victory at Coronel, off Chili.

Nov. 10—The commerce raider Emden destroyed by the Australian cruiser Sydney.

Dec. 8—British naval victory off Falkland Islands.

Dec. 16—German cruisers bombard Scarborough and Hartlepool, 150 civilians killed.

Dec. 18—Egypt proclaimed a British protectorate.

1915.

Feb. 20—Allied fleets bombard Dardanelles.

March 12—British capture Neuve Chapelle.

March 22—Przemysl captured by Russians.

April 22—Second battle of Ypres.

April 24—Battle of St. Julien.

April 25—Germans first use poison gas in attacking.

May 7—Lusitania torpedoed.

May 9—Battle of Festubert.

May 23—Italy declares war on Austria.

May 31—Zeppelin raid on London.

July 8—South-West Africa (German) surrenders to General Botha.

Aug. 5—Germans occupy Warsaw.

Aug. 21—Italy declares war on Turkey.

Oct. 12—Germans execute Nurse Cavell.

Oct. 15—Great Britain declares war on Bulgaria.

Oct. 19—Italy declares war on Bulgaria.

Nov. 24—Greece yields to the demands of the allies.

Dec. 15—Sir Douglas Haig succeeded Sir John French as commander of the British forces.

1916.

Feb. 21—Germans begin attack on Verdun.

March 8—Portugal declares war on Germany.

April 3—Battle of St. Eloi.

April 29—Kut surrendered to the Turks.

May 31—Naval battle off Jutland.

June 5—Lord Kitchener drowned on H.M.S. Hampshire.

Aug. 21—Turkey and Bulgaria declare war on Roumania.

Dec. 21—Death of the Austrian Emperor Franz Joseph.

Dec. 29—Admiral Beatty succeeds Sir John Jellicoe in command of the British High Seas Fleet.

1917.

Feb. 2—United States breaks off diplomatic relations with Germany.

Feb. 25—British retake Kut.

March 11—Bagdad taken by the British.

March 14—China severs relations with Germany.

April 6—U.S. Congress formally passes resolution declaring war on Germany.

April 9—Vimy Ridge taken by Canadians.

April 10—Brazil severs relations with Germany.

April 16—Workingmen's and Soldiers' Delegates take control in Russia.

June 7—British take Messines Ridge.

June 29—Greece breaks relations with the Central Powers.

July 14—Michaelis succeeds Von Bethmann Holweg.

July 22—Army of Crown Prince repulsed all along the line.

July 23—Russian troops demoralized.

Aug. 7—British Admiralty reconstructed. Canadian troops make further gains at Lens.

Aug. 10—Gen. Haig's men capture practically all German positions east and southeast of Ypres.

Aug. 12—Greece now at war with Germany, Austria, Turkey and Bulgaria.

Sept. 1—French strike shroud blow on Aisne front.

Sept. 11—Kornilloff starts civil war in Russia.

Sept. 14—Great battle raging on the Menin.

Sept. 16—Kerensky declares Russian republic.

Sept. 19—Argentine breaks relations with Germany.

Sept. 29—Belo Psaha seized in Paris as enemy.

Sept. 30—Great British offensive in Flanders begun.

Oct. 6—Peru breaks diplomatic relations with Germany.

Oct. 7—Uruguay breaks diplomatic relations with Germany.

Oct. 12—Von Capelle resigns as result of mutiny in German fleet.

Oct. 20—Four Zeppelins destroyed when returning from England.

Oct. 21—Russian fleet escapes from Moon Sound without loss.

Nov. 6—Canadians take Passchendaele.

Nov. 8—Revolution in Petrograd. Kerensky flees.

Nov. 20—Russian revolutionists offer separate peace to Germany.

Dec. 1 to 4—Pierce fighting round Cambrai.

Dec. 10—French and British troops take up positions on the Italian front.

Dec. 11—British capture Jerusalem.

Dec. 17—Bolshewiki sign armistice with the Central Powers.

1918.

Feb. 23—British troops enter Jericho.

Mar. 7—Due to the defection of Russia, Roumania is forced to sign peace treaty with Central Powers.

Mar. 20—Gen. Foch appointed generalissimo of allied forces.

April 1 to 7—Terrific fighting on the Somme.

April 12—Battle of Lys.

April 23—British naval forces raid Ostend and Zeebrugge.

April 25—Battle of the Somme renewed.

April 26—Battle of Kemmel Hill.

May 29—Germans launch last great attempt to advance on Paris.

May 30—Germans retake Soissons.

June 5—German advance halted.

June 12 to 14—Battle of Oise.

June 24-25—Italians rout the Austrians on the Piave.

July 22—Germans forced to retreat across the Marne.

July 29—Fere-en-Tardenois recaptured by the allies.

Aug. 3—French again occupy Soissons.

Aug. 7—Foch raised to rank of Marshal of France.

Aug. 9—British troops, under Haig, launch successful offensive. Germans in full retreat.

Aug. 27—Roye captured by the French.

Aug. 30—Bapaume taken by the allies.

Sept. 1—British pursue Germans through the Lys valley.

Sept. 13—Americans wipe out St. Mihiel salient.

Sept. 18—British break through the Hindenburg line.

Sept. 23—British rout the Turks in Palestine.

Oct. 1—Allies capture Roulers.

Oct. 1—Bulgaria capitulates to the terms of the allies.

Oct. 4—Germans abandon Lens.

Oct. 9—Canadians capture Cambrai.

Oct. 17—British secure Lille.

Oct. 18—British sailors occupy Ostend.

Oct. 31—Turkey surrenders to the British.

Nov. 1—Italians' huge drive of Austrians out of Italy.

Nov. 2—Austria surrenders to the Italians.

Nov. 2—British take Valenciennes.

Nov. 6—Germany seeks peace terms from the allies.

Nov. 7—Marshal Foch hands his terms to the German emissaries and grants them 72 hours' time limit for reply.

KNOW YOUR SYMPTOMS!

Medical Terms Everyone Should Know—Some Latin Phrases.

There are several medical terms one should know about. For instance, if your examiner tells you that you are suffering from dementia praecox, you smile affably, and say, "Thank you, doctor." Would you be quite so cheerful if you knew that the Latin phrase meant chronic delusional insanity? Here are a few ordinary terms you should know:

Prosthesis—The addition of an artificial part to supply a defect of body, as appliances to take place of lost hand.

Atrophy—Wasting away, withering, as of injured limb.

Flexion—Bending, as limbering up stiff wrist through exercise, massage, etc.

Lesion—Damage, injury, as "nerve lesion."

Functional—Affecting the working of an organ only, not affecting the organ itself.

Myoptic—Defective sight; short-sighted.

Anaesthesia—Insensibility to feeling; thus: "Pronounced anaesthesia calf of leg."

Amnesia—Loss of memory.

Aphasia—Loss of speech.

Neurasthenia—Nervous debility, nervous exhaustion.

Neurosis—Functional derangement due to disorders of nervous system. For instance, "War neurosis."

Orthopaedics—Cure of deformities of the body Not confined to leg cases.

Disorientated—A mental state, confusion as to place, time, date, etc.

Neuropathic tendency — Constitutionally abnormal conditions perhaps made evident by, but not primarily due to, war.

WANTED Two men and Two men make from $10 to ten dollars a day, selling our line of Washing, Cleaning and Counter Soaps, three in each package, sells for twenty-five cents, you make 12½ cents. Reply quickly to secure territory, and sealed fifteen cents for sample and terms.

Obeying the request of the Government about conservation of wool, many smart women have found rayon in an entire satin dress. Here is an excellent model to be developed in satin or velvet. McCall Pattern No. 8613, Ladies' Dress. In 6 sizes, 34 to 44 bust. Price, 25 cents.

These patterns may be obtained from your local McCall dealer or from the McCall Co., 70 Bond St., Toronto, Dept. W.

Minard's Liniment Cures Colds, &c.

Tommy (after operation)—"What with sister 'ere, an' them lilies, I thought I was in 'eaven, when I first came round, till I seed Bill yonder in the next bed!"

Minard's Liniment Co., Limited.

Gentlemen,—Last winter I received great benefit from the use of MINARD'S LINIMENT in a severe attack of LaGrippe, and I have frequently proved it to be very effective in cases of Inflammation.

Yours,
W. A. HUTCHINSON.

"If we are not responsible for the thoughts that pass our doors, we are at least responsible for those we admit and entertain."—Charles B. Newcomb.

Minard's Liniment Cures Distemper.

When you mend the lace curtains paste tissue paper under the rents and stitch back and forth on the machine. This will fill in neatly and securely.

The world's sheep stocks have decreased by 54,000,000 since the war began.

ANOTHER HUN TRICK

Heedlessness Shown by Firing Upon Refugees in Church.

Instances of German mistreatment of the civil population of villages in France which were taken by the British-American armies are numerous, but perhaps none shows the cold and calculated heartlessness of the Hun more than the following story, which was related to the correspondent by one of the inhabitants of the little town of St. Souplet, near St. Quentin.

An attack by the English and American forces was impending. The Germans expected it and informed the population that if they gathered in the local church and put up a white sheet as a flag, they would be spared by the advancing allied troops. They did so. The Germans soon were driven out by the English and Americans. When they reached a point of vantage, however, they turned their guns on the church. Several persons were killed and many wounded.

The Germans had thought to make the British and Americans believe it was the allied artillery and not their own, that had bombarded the church. When the allied troops entered the village they found the church shattered, the occupants terrified, and many of their number lying prostrate on the floor, dead or wounded.

MONEY ORDERS

It is always safe to send a Dominion Express Money Order. Five Dollars costs three cents.

An Ancient Loaf.

The discovery in Sweden of a loaf of bread made from pea flour in the time of the Vikings has disclosed the fact that peas were cultivated in Europe more than 1,000 years ago.

Minard's Liniment Cures Diphtheria.

The Cause of Heart Trouble

Faulty digestion causes the generation of gases in the stomach which inflate and press down on the heart and interfere with its regular action, causing faintness and pain. 15 to 30 drops of Mother Seigel's Curative Syrup after meals sets digestion right, which allows the heart to beat full and regular.

SECOND CON. ELDERSLIE

Cadets H. and C. McGregor, of Calgary, visited recently at the home of their uncle and aunt here, Mr. and Mrs. A McGregor.

Rev. C. Cameron, one of the pioneer teachers at S. S. No. 12, was a caller at the school one day last week.

Miss Leona Maxwell, Mr. and Mrs. Cody, and Messrs. Ed and Joe Pruder were victims of the flu during the past week.

In a letter to his parents dated from England on Nov. 16th, Gnr. A. Lillico stated that he expected to sail for Canada in a few days. Archie will likely fall heir to the largest slice of Christmas turkey this year.

Messrs. H. Schmidt and E. Pihol both installed gasoline engines pumping water.

[illegible] has purchased lot 16, [illegible], and intends moving [illegible] March 1st.

[illegible] Pepper, trained nurse of [illegible], visiting friends here.

[illegible] Robt. Jelkins attended [illegible] of their niece, Miss K. [illegible] Glenwood.

[illegible] Lillico, barrister, of Toronto, has decided to locate at Swastika, New Ontario. His many friends here wish him success.

Mrs. (Dr.) Struthers and little son Gilchrist went to Galt last week to await the arrival of Dr. Struthers, missionary of Honan, China, who is expected home from France.

A. Dawson has improved the mill yard by putting a good covering of gravel on the driveway.

Mr. and Mrs. J. B. Allen visited Paisley friends one day last week.

Miss Dina Addison is spending a couple of weeks visiting her brother here, Mr. Geo. Addison.

Messrs. D. Walks J. McCullough and J. B. Allen attended the Forward Movement Presbytery meeting in Paisley last week.

Messrs. Thos. and Leonard Lamont, of Toronto, are visiting friends here.

The annual telephone meeting will be held at S. S. No. 12 on Dec. 26th. A full attendance of the members is requested.

Miss Jessie Young is suffering from an attack of the flu.

Messrs. W. I. and Jas. Allen are attending the fat stock show in Toronto.

Adrew Green has purchased lot 10, con. 3, from Pete Catto.

Mrs. Axion, of Mitchell, visited last week at the home of her brother, Rich. McGill.

Owing to the flu epidemic the 2nd con. S. S. has been closed for the balance of the year, and will re-open on Jan. 5th.

So far municipal affairs are quiet in this section, but the names of Minto Jackson and J. B. Allen are mentioned as candidates if a vacancy should occur. Both are well-to-do farmers, and either one could uphold the welfare of this side of the Tp.

A telegram received here last Saturday stated the death from flu of Mrs. Gillies Campbell, of Fort William. Mr. Campbell was a resident of this concession for a number of years and will have the sympathy of many friends here in his sad bereavement.

CARGILL

Word was received last week that Mrs. Wat Clark of Southampton had passed away a victim of the Spanish influenza. The late Mrs. Clark moved from here with her husband and children on the lake shore town a few years ago and was well and favorably known here. Besides the bereaved husband she leaves several small children to mourn her loss. To them we extend deepest sympathy.

Mrs. Wm. Clark, who has been confined to her bed for the past two weeks or so, is improving.

Mrs. Monahan, of St. Marys, visited friends here last week.

The condition of our townsman, Mr. Wm. Monahan, does not show any improvement. We hope he may soon take a turn for the better.

A number of our citizens turned out last Wednesday night to welcome Sergt. J. J. Clancy and Sergt. Fred Anderson back to the old town. Both boys went over with the 160th Battalion and are glad to be back on this side of the pond again. They both look well.

In a letter from Pte. Harold Grice, received on Saturday, he says he expects to leave France in January and to land home in February. He don't care how he comes back, even if it is in a tub, as long as he gets back to old Canada again.

Mrs. Ed Noble received word on Wednesday that her brother, Pte. Black, had been killed in action. Coming so near the end of hostilities it makes the loss of this hero more sad. Black belonged to an American battalion.

CASTORIA

For Infants and Children

In Use For Over 30 Years

Always bears the Signature of Chas. H. Fletcher

BURGOYNE

Mr. Wm. Atkinson is busy threshing clover up and down the lines.

S. S. No. 7 Saugeen and Arran has secured the shield in the rural school fair for the last three years in succession, and consequently are the proud possessors of said shield. Miss Felicia Wallace is the teacher.

Mr. Wm. Reany had the misfortune to fall and fracture a bone in his hip on Saturday last. Owing to his advanced age—92 years—in all probability the bone may not heal.

A quiet wedding took place here last week when Mr Irving Grieve and Miss Maggie McAndrew were hitched up double. We wish the young couple every success and happiness.

Burgoyne Presbyterians presented their pastor, Rev. Mr. Strachan, with a horse, harness and blankets on Friday of last week.

COULD NOT STOP THE HEADACHES

Until She Tried "Fruit-a-tives" —Made From Fruit Juices

112 Cosburg St., St. John, N.B.

"I feel I must tell you of the great benefit I have received from your wonderful medicine, 'Fruit-a-tives'.

I have been a sufferer for many years from *Violent Headaches*, and could get no permanent relief.

A friend advised me to take 'Fruit-a-tives' and I did so with great success; and now I am entirely free of Headaches, thanks to your splendid medicine".

MRS. ALEXANDER SHAW.

50c. a box, 6 for $2.50, trial size 25c. At all dealers or sent on receipt of price, postpaid, by Fruit-a-tives Limited, Ottawa.

GLAMIS

The Red Cross Society purpose holding their annual meeting on Tuesday, the 17th. Reports of the year's work will be read. Tea will be served at the close and a collection taken.

Mrs. John Groves (nee Annie Currie), of Kerrobert, Sask., is visiting at the home of her father, Mr. Neil Currie, on the 2nd.

Miss Mina Cunningham left on Tuesday for Oakville, where she expects to remain for some time.

Miss Bell McGregor is spending a few days with friends in the village.

Mr. Short, of Saskatchewan, is visiting his daughter, Mrs. Robt. McLennan.

We are sorry to report the serious illness of Mrs. Alex McSween with influenza and pneumonia.

Mr. Cameron, of Tiverton, Sundayed at Mr. Kirktown's.

Mrs. Dan Cameron, of Kincardine Tp., is visiting her sister, Mrs. Jas. Thomson.

The funeral of the late Mrs. Fitzsimmons, of Pinkerton, passed through Glamis on Saturday to Tiverton cemetery.

Nurse Margaret McKinnon, of Grace Hospital, Toronto, who is spending some time on the 10th of Kincardine is nursing Mrs. McSween.

PINKERTON

Mrs. (Rev.) R. M. Gale is visiting at the home of her son, Mr. John Gale, at Alma.

On Thursday morning the sad news of the death of Mrs. Walter Clark of Southampton, and formerly of Pinkerton, was received by friends here. The deceased was sick only a short time with Spanish influenza when she succumbed. The sympathy of all goes out to the bereaved husband and five children, four of whom are down with the disease.

Mr. and Mrs. H. G. Clark attended the funeral of the late Mrs. Walter Clark of Southampton.

Death again visited our village and claimed as its victim Mrs. N. Fitzsimmons, who died on Thursday after a two weeks' illness. The late Mrs. Fitzsimmons has been a resident of the village for a number of years, her husband having predeceased her about fifteen years ago. The funeral was held on Saturday, interment being made at Inverhuron.

Miss McLean, a sister, and Mrs. Cummings, a niece, of the late Mrs. Fitzsimmons, attended the funeral on Saturday.

Bert Elphick is the new Land employed at the grist mill.

TURNER'S

Miss Bell, of the Soo, is visiting with her friend here.

Mr. Geo. Garnes, of New Westminster, who is here on a visit, has been calling on many of his old friends.

Dunblane Presbyterian Sunday school are to purchase a Victory Bond.

The G.T.R. carpenters, who have been working here for a few weeks, have gone to Palmerston.

Children Cry FOR FLETCHER'S CASTORIA

BRUCE TP. COUNCIL

Buy your Xmas Candy and Fruit here

Where we carry a full line. Also a good assortment of *Fresh Nuts. Fresh Eating Figs in 10, 15, 20 cent packages:*

Christmas Fruit Cake, 40c pouud

All other lines of Baking (now without substitutes) always on hand.

Have you tried our **Homemade Candy?** Watch our win-window and buy Candy that is pure and cheaper. Only 35c a lb.

Do not forget to add a box of **Neilson's Chocolates** when you buy *her* gift.

D. H. COOPER - Baker and Confectioner

Christmas Specials

Perhaps the nicest line of Xmas goods we have is an assortment of

French Ivory

in Trays, Hand Mirrors, Pin Holders, Nail Files, Cuticle Knives, Bonnet Brushes, etc.

Kodaks and Cameras

Make one of the nicest gifts. We have on hand a number of different styles of these.

Perfumes

Are always in demand. We have them in packages from 25c to $3.50, also in bulk.

The above mentioned are a few of our leading lines, but we have our usual stock of Toilet Goods besides.

MORE'S DRUG STORE

SUBSCRIPTION RATES

$1.50 per annum in advance. To United States subscribers $2.00 per year in advance.

ADVERTISING RATES

Legal and other casual advertisements 10c per nonpariel line for first insertion, 5c per line for each subsequent insertion.

Advertisements of Strayed, Farms for Sale or to Rent, and similar, $3 for first three weeks and 25c for each subsequent insertion.

Advertisements without specific directions will be inserted till forbidden and charged accordingly. Transient display advts. charged by the inch. Rates on application.

Advertisements in the local columns are charged 10c per line for first insertion, and 5c per line for each subsequent insertion. This includes announcements for church or school entertainments, garden parties &c. No notice less than 25c. Reading advertisers 5c per line, no adv. less than 25. Set in black faced type, price and a half.

—For Rent—Flat for years occupied by Dr. Allen. Apply to P. B. Mare.

—Pianos, Organs, Sewing Machines, Edison Phonographs, records and small instruments. F. McKinnon.

—Fresh Salmon Trout at P. Oltsher's butcher shop.

—Good brick house on Goldie St. to rent or for sale. J. C. Gibson.

—Marriage licenses issued and money to loan. T. H. George.

—A large range of Kosey House Slippers for every foot. F. Carter & Son.

—Fresh frozen salmon and cod, tasty and good. Also trout and herring in brine. S. F. Ballachey.

—Full line of fine engagement and wedding rings at I. Shoemaker's jewellery store.

—Highest prices paid for hides and sheepskins. H. E. McGregor, Butcher, Steele Block.

—Get your fowl in by Friday, if possible. It must reach the market in time for Christmas. S. F. Ballachey.

—Highest price for beef hides, horse hides, calfskins, sheepskins, tallow, &c. P. Oltsher, Paisley Meat Market.

Telephone Fees

Bruce Telephone fees are due on Dec. 31st. Please pay at office. R. Fullerton.

—Knox church Sunday school entertainment will be held in the basement on Christmas night. Good programme and Christmas tree.

—For Sale—The cottage dwelling next to the Belmoral hotel. Freshly painted and re-papered. Apply to Neil McAllister.

—Our store will be open in the evenings till Christmas. Make your selections as early as possible. S. F. Ballachey.

—For Sale—Five Shorthorn bulls, aged from 5 to 14 months. Prices from $150 up. J. Scott, Port Elgin, R. No. 1, Bruce phone.

—For Sale—A large and comfortable frame house with good stable, on ½ acre of good garden land, on Water St. N. McArthur, prop.

Bruce Telephone Hours for Christmas

The Paisley Central will be closed on Christmas day from 11 a.m. to 1 p.m., and from 5.30 to 7 in the evening.

—For Sale or Rent—House on Victoria St., suitable for retired farmer, also for rent, the premises lately occupied by the Standard Bank. Apply to D. Forrester.

—See our fancy china before buying your Christmas gifts. F. Carter & Son.

—E. Stevenson's quick healing salve is the best made. We have a choice line of tobaccos and cigars, stationery and school supplies. Agent for daily papers and magazines. Give us a call.

—Flour, Feed, Seeds, Grain—We keep a full stock of Five Roses and Stark's high grade flours, bran, shorts, Royal Purple calf meal, poultry foods and tonics. Always in the market for coarse grains. Morning delivery only. W. Stark.

For a

Winter Suit or Overcoat

You can make a very satisfactory choice from our goods in stock, or the samples we have. Prices are reasonable, our styles up-to-date, and workmanship guaranteed.

I. S. Cruickshank

—Mr. H. Reed is visiting his son Bert in Guelph.

—Mr. and Mrs. J. A. Logie are visiting friends in Guelph.

—Paisley school pupils raised $13 for the National Sanitarium Association by the sale of Christmas seals.

—Rev. R. M. Gale, of Pinkerton, has received a call from Knox church, Harwich, near Chatham. The stipend is $1350 and manse.

—Mr. Mel McArthur was home over Sunday, accompanied by his friend, Mr. Bert Cudney, of Hamilton.

—Christmas services will be held in the Church of the Ascension on Sunday night, Dec. 22nd. Come and worship the Prince of Peace.

—Knox church choir presented one of their members, Miss Mary Buchanan of Goldie St. (now Mrs. G. Ruthven) with a nice packet of silverware on the eve of her marriage.

—The auto chains advertised for in The Advocate were found and left at this office. This is only one instance of the result of advertising lost and found articles lately. It pays to use The Advocate columns for such purposes.

—Mr. and Mrs. H. B. Putnam received a letter from their son Lawrence R. on Tuesday, in which he states that he was on the march from Mons to Germany, at the head of a platoon, having been promoted to sergeant.

—Mrs. McGregor, of Kincardine, has bought from Mr. Wm. Dryden of Greenock, the house on Victoria St. south, which has been occupied by the latter's mother. Mrs. Dryden has moved to the Mills property across the street.

—Mr. D. Thomson was in Southampton on Saturday attending the funeral of his great-granddaughter, Blanche Carey, who died suddenly from convulsions caused by teething. The child's father has been overseas and supposed to be on the way home.

—Five deaths in Chesley, others in the neighborhood, and almost every family on some of the concession lines on the east side of Elderslie, indicates the last outbreak of the epidemic of influenza to be more serious than when Paisley was under the ban a few weeks ago.

—A typographical error in last week's issue made information as to a couple of farm sales rather hazy. Mr. Ivan Neilly, who sold his farm on con. 18, Greenock, bought the Bella McGregor farm on con. 6, Bruce. Mr. Alfred Osborne sold lot 8, con. 17, Greenock, to Mr. John Metcalf.

—Nurse Mary Fletcher, who has been on leave from overseas and visiting at the home of her mother on Inkerman St. for some time, was on Monday advised by wire to report at St. Johns, N.B., immediately, and left here by the afternoon train on Monday for that port. Her ship sails on Thursday. Later—While on the way to the seaboard Miss Fletcher was instructed to go to Daviaville, so has been given hospital work in Canada and will not likely have to go overseas again.

Village Taxes All Paid

Collector H. B. Putnam had practically all the taxes gathered in by the 13th, which is something new for this burg. The total of the roll is $11,602.39.

Pte. Jack Beaton Home

Without any advance notice whatever, Pte. Jack Beaton arrived home on Tuesday night, having come overseas on the Olympic with about 5,000 others. Jack was in France from March to August of this year, but at Amiens was sent back to England on account of illness from asthma. He enlisted with the 160th.

Got Some of the Big Money for Choice Beef

Mr. J. H. Turner, of Elderslie, went down to the fat stock show at Toronto, and sold a steer of 13 months at the fancy price of 23½c. per lb. We understand that the animal weighed 1015 lbs., which brings the value up to $238.42. Mr. A. Cormack got 19c a lb. for one of his shipment of steers. The top price paid for the prize steer at the show was 60c per lb.

An Old Timer Here

Mr. Robt. Arnel, of Thessalon, is down on a visit among old friends here, at the home of his nephew, Mr. And. Porter, of Greenock. Mr. Arnel is an old-time resident of Paisley. He came here in the early sixties of last century and had a shoemaking shop for a number of years. He was one of the citizens who expectantly waited for the first issue of The Advocate to be turned out by the first publisher, Mr. Goldie, in 1863.

Another Soldier Home

Pte. Jas. McDonald, youngest son of Mr. Chas. McDonald, 10th Bruce, arrived here on Monday. Pte. McDonald was working at St. Thomas in January, 1915, when he enlisted with the 33rd Batt. at London. He was in the fighting line for 22 months before being wounded in March last at Arras, shrapnel striking him in the back. He has recovered well from the injuries, and will enjoy a visit at his old home until having to report at London on Jan. 3rd. His brother, Pte. Alex McDonald, is still in hospital at Birmingham, England, and will not be able to come home for some time yet.

$5.00 for $4.00

GIVE War-Savings Stamps

As Christmas Gifts

BUY a War-Savings Stamp for $4.00 and affix it to space No. 1 of the Certificate that will be given you. Fill in the name of the one to whom you wish to make this Christmas Gift—the most desirable of Gifts, for it may well mark the commencement of habits of Thrift, the stepping stone to Success.

The Certificate

In offering your gift you could say, "If you invest your savings regularly in War-Savings Stamps, you will soon fill this certificate, which becomes Canada's pledge to pay you $50 on the first day of 1924."

"With every 25 cents you save you can buy a THRIFT Stamp, 16 of which on a Thrift Card will be exchanged for a W.-S. S."

"An excellent investment for small savings; and a strong incentive to every-day economy."

SIR THOMAS WHITE
Minister of Finance

FOR SALE AT
Money-Order Post Offices, Banks and Wherever the W.-S.S. sign is displayed.

A Trio of Weddings

Dan Cupid has apparently been conducting an active campaign in a sector of north-west Elderslie since hostilities ceased in Europe, as there have been three weddings during the past week. All the events were quietly consummated, and the particulars will be found in another column The Advocate joins in the chorus of good wishes to all.

Sales of Clothing for French Children Shipped from Paisley W.P.L.

74 baby dresses, 26 paire bootees, 12 baby jackets, 56 girls' dresses (8 and 10 years), 108 girls' princess slips (6 and 10 years), 74 pairs girls' drawers (6, 8 and 10 years), 50 girls' underskirts (6 and 8 years), 24 boys' shirts (10 years), 24 pair boys' drawers (10 years), 1 quilt, 1 parcel second-hand child's clothing. Donated by Knox Church class—1 quilt.

At Winter Fair

Messrs. J. M. Hopper, W. T. Hopper, D. Darroch, jr., John McDougall, John McDermid, Gemmel Hood, Chris Parker, sr., John Scott and Archer Bros. from Paisley and vicinity were down to the big winter fair at Guelph last week. The show was the best yet held there, but was greatly interfered with and the attendance reduced by the prevalence of influenza throughout the province and in the city.

Knit Amputation Socks

A request from Red Cross headquarters for a supply of amputation socks, to be shipped latter part of January. Yarn and cut goods will be given out as usual next Saturday, but not during the following two weeks. Nearly 500 garments for French children were handed in last week, for which the Patriotic League wish to thank all who contributed. Directions for knitting amputation socks: Use coarse needles. Cast on 72 stitches. Rib 2, purl 2, plain for 4 inches. Knit plain 8½ inches. To decrease for end: 1st row, knit 5, decrease (slip 1, knit 1, pull slipped stitch over); repeat to end of row. 2nd, 3rd, 4th rows, knit plain. 5th row, knit 4, decrease; repeat to end of row. 6th, 7th rows, knit plain. 8th row, knit 22, decrease; repeat to end of row. 9th, 11th, 13th rows, knit plain. 10th, 12th, 14th rows, knit 1, decrease; repeat to end of rows. This should leave 11 or 12 stitches. Finish off as for sock.

Reception to Returned Soldier

Pte. John Dobson, one of the four soldier sons of Mrs. Thomas Dobson, arrived home from overseas last week, and on Friday evening was tendered a rousing public reception in the town hall by the citizens of the village. Although organized on short notice, there was a large attendance of ladies and gentlemen. Mr. S. Ballachey was appointed chairman of the gathering. Pte. Dobson was heartily cheered as he entered the hall and took a seat at the front. Short speeches were made by Rev. Diehl, Neilson and Little, Messrs. I. Shoemaker, A. Pearce, D. McKerracher, D. McKenzie. Patriotic songs were sung by the crowd. Pte. Dobson is in very good health and spirits, considering the suffering and strain he experienced through the loss of the lower part of one of his legs. The limb was so badly shattered below the knee that it was left hanging by a shred, and without waiting for surgical assistance he completed the amputation with his own knife and dressed the wound. That was at the battle of Arras in March last.

To Receive Soldiers Arriving Home from Overseas

Following the hurry-up reception that was accorded to Pte. Dobson on Friday, such action has been taken as every soldier arriving from overseas will insure a reception for each and every soldier arriving from overseas, provided there is knowledge of his coming. The matter was talked over on Friday night, and then decided that the local branch of the Preparedness League should take the work in hand. The League held a meeting on Monday evening, at which plans were formulated. A committee was appointed to find out when soldiers are returning to Paisley station and to meet them on arrival of trains, viz.: W. R. Bennett, H. McKerracher, D. McArthur, J. H. Steele, S. Ballachey, I. Shoemaker, Jas. Caulter and H. B. Putnam. Another committee, composed of Thos. Muir, J. H. Steele and G. L. Carter, are to wait upon the ladies of the Patriotic League and the War Sale Committee, to confer as to providing funds for reception purposes. A suggestion was made that each soldier resident of Paisley should be presented with a medal of some description, and the cost of such is to be ascertained and considered. Any committees of the surrounding district may co-operate with Paisley. Reeve Steele is president of the Paisley Preparedness League, and G. L. Carter is secretary. Other members of League not mentioned are Jas. Cavill, Jas. McGill, S. F. Ballachey, Geo. Craig, Geo. Welsford.

Paisley Brick and Tile Yards

During the war the building trades were all under a period of depression complicated with very high cost of production. Paisley brick and tile yards felt these conditions as did larger concerns. Only a fraction of the building that might have been done with labor available at normal price was undertaken during the past four years, so that there was little demand for brick. Now that the war is past, there are prospects for a revival of all plans for buildings, and with the general prosperity that prevails, the probability is that there will be a much greater volume of building done in rural districts in the next few years than at any previous time in the history of this part of Ontario. R. Bell & Son of the Paisley Brick and Tile Yards, are preparing to fill all demands for products of their plant. Mr. Reg. Bell, who has just received his discharge from the R.A.F., is the junior partner in the firm, and will take an active part in the work and management of the yards. Bell & Son have a crew of men working in the bush, cutting fuel, and other necessary preparations are being fully made to operate to full capacity during the coming season. As we have noted before the clay banks of Paisley locality are a great natural resource for the brick-making industry, and we hope to see a large plant manufacturing for the outside trade at no distant date. The products of Bell & Son's yards have a splendid reputation, being second to none of that class of brick, and we may expect them to be able to get a share of the orders from centres where such is not available.

Court Saugeen, C.O.F. No. 88

MEETS in Putnam's Hall on the third Monday evening of each month, at 8 o'clock. Sojourning brethern are welcome.

D. Passmore, C.R.
E. Tooze, R.S.

Soils and Crops

By Agronomus.

This Department is for the use of our farm readers who want the advice of an expert on any question regarding soil, seed, crops, etc. If your question is of sufficient general interest, it will be answered through this column. If stamped and addressed envelope is enclosed with your letter, a personal answer will be mailed to you. Address Agronomist, care of Wilson Publishing Co., Ltd., 73 Adelaide St. W., Toronto.

Saving Farm Manure.

A skyscraper could be built every month of the year by the farmers of Ontario with the money lost through the poor handling of barnyard manures. Probably this loss amounts to $18,000,000 a year.

The price of fertilizers at the present time gives deep significance to this great waste. Every ton of barnyard manure can be conservatively figured to be worth at least $4.00 per ton, according to present quotations on nitrogen, potash and phosphates.

Another factor that emphasizes the importance of conserving the manure pile is the prevailing food values. Never before has there been so great a world shortage of food. It will be some years before agriculture can replenish the world's larder. During that time farmers should capitalize their manure piles.

The two suggestions that we have heard time and again are: 1. "Spread that manure immediately after it is made," or 2, "Build a tight manure pit." We have been told that leaching is the cause of the loss, we have heard the pathetic tale of the dark brown liquid which floats down the stream, etc.

The fact of the matter is, that for ninety-five per cent. of the farmers it is a most impractical proposition to draw manure out each day. Moreover, the experience of farmers in this province, especially on the lighter soils will bear me out when I say it has not been proved that the application of fresh manure is advisable. All farmers will admit that were it possible they would rather have the rotted manure, provided they were assured that it had lost none of its value.

The rarity of the cement pit in the province, disregarding for a moment its value and necessity, proves that most of the farmers in Ontario have thought they could not afford to bother with it. We are struck with the fact that specially constructed costly manure pits are not known to the Chinese and are rare in Europe where the conservation of manure is imperative; where it has become a necessity, a matter of life and death, to save every particle of manure.

As has been true with many other scientific facts, the impractical suggestions for their application have hidden the fundamental facts concerning the keeping of manure. I have heard hundreds of farmers in the province say, "What's the use. I have no cement pit, I cannot draw it out, I cannot prevent the waste."

Let us consider bottom facts. We have just finished filling a silo. There was a time when corn was cut, and left in an open barnyard and fed. The weathering and rotting caused a loss in feeding value so that soon afterward it was arranged to put the corn under cover. But the experience of men proved that much of the corn was still wasted and it did not keep till the following spring, so the stack silo was developed. The reasoning was something like this: If we can pickle this corn, preserve it through the winter, we can have feed throughout the year. The corn was tramped and tightly packed. The outside rotted forming a complete shell around the inside which pickled and preserved.

Then, the bacteriologist came to explain. He said that there were two kinds of decay. There were germs which lived in the presence of air, needed air for their development. When these germs attacked a substance they rotted it, they burned it up. Then, there was this other group of germs which could not live in the presence of air. These germs were the "pickling" germs. If you arranged to put a substance in a container or packed it so that air could not reach it, these pickling germs would get busy, and produce the conditions by which the material would be preserved.

Here are facts we note every day: If meat is placed in a jar and surrounded with pickling germs and the air is excluded, it will keep. If we leave it exposed to the air and to the rotting germs, it will decay, and finally disappear.

What would you think of the farmer who threw his corn out into the barnyard and expected to have feed for his cattle next spring and summer? What should you think of the farmer who throws his manure out into the barnyard without any further attention and expects to have feed for his soil next spring and summer? The facts are the same.

We cannot afford to build silos for our manure, but we can build stack silos of manure. We can tramp it each day as we spread it on heaps which are constructed as a stack silo, at least six feet high, with almost perpendicular sides. We can keep it moist, keep the air out of it and never let it dry out. In doing this we will not allow the undesirable germs to take the place of the pickling germs.

There will be no leaching in the compact pile any more than there will be leaching from a stack silo. Of course, the outside of the heap will rot and there will be some loss but this will form the shell, the wall around the precious stuff on the inside. Thus, we have reached the first suggestion.

I have seen many men water a dry manure heap to rot it. I have known men who have manure pits to water the manure which had become dry in the pit. There is no simpler way to throw your money into the air. When the "rotting" germs in their work in a loose dry manure heap, the nitrogen salts are finally formed wherever air is abundant. These salts are easily dissolved in water. A rain washes these salts, not down to the stream, but down into the centre of that manure heap where there is no air and where the "pickling" germs are doing business.

When this happens these nitrogen salts are broken up so that the nitrogen is released from the pile as a gas. The great loss from the manure pile which is exposed to the elements is not leaching into the ditches and creeks, but leaching into the air. One-third the nitrogen in the manure heap is probably lost annually in the alternate wetting and drying of the manure heap. This loss can occur in the open cement pit, as well, if the manure is allowed to become dry, while in covered pits the loss is just as great if the farmer plays the water hose on the manure pile after it has become very dry. The manure pile must be kept continuously moist.

If excessive bedding is used, the water should be applied as the manure is stacked just as you do with dry silage. Thus, we can understand why it is advisable to keep manure covered. This need not be an expensive cover. If it leaks a little, so much the better, it will keep the manure moist. A cover for the manure like the typical covered barnyard shed in which cattle are fed, is excellent but perhaps too expensive. The ordinary farmer can build such a sped roof to his barn with very little expense.

The entire matter may be summed up as follows: If the farmers of Ontario want to save at least ninety per cent. of the eighteen million dollar loss in Ontario each year and convert it into food, there are these simple things to remember: Pack your manure tightly by tramping or by allowing the stock to tramp it, keep it moist and never let it dry out, and keep it well covered.

Poultry

Would you please tell me what to do for my chickens? They swing their heads and make a noise like pip. They started to do so this week. What is the cause of it? They appear to be healthy.

Chickens have the pip because a cold forces them to breathe through the mouth until the air dries the tongue and makes it hard and scaly. Sometimes the clogging of the nostrils may be due to digestive troubles and a poor circulation due to a general run-down condition of the bird. The dry tongue should be moistened twice a day with a mixture of equal parts of glycerine and water but the scale should not be picked off. Some breeders recommend using equal parts of glycerine and water with twenty grains of chlorate of potash added to each ounce of the solution.

The pip usually results from some disease of the respiratory organs and the prevention of such troubles is important. It can be largely done by keeping the house clean and dry and free from draughts and also by protecting the birds from cold winds and storms. Probably the birds swing their heads in an effort to dislodge what they think is causing their discomfort; which is the hard scaly condition of the tongue. The best remedy for pip is prevention, and consists in building up the vitality of the flock and treating the slightest cold promptly before it spreads among the flock. A bird showing signs of a cold cap often be cured by rubbing the head with camphorated vaseline. Then isolate the bird and place permanganate of potash in the drinking water for a few days to assist in preventing contagion.

Babies and pianos would make less noise if grown people would let them alone.

A quickly made glue is obtained by rubbing a little piece of cold boiled potato on a sheet of paper with the finger.

FUNNY FOLD-UPS

CUT OUT AND FOLD ON DOTTED LINES

Horse Sense

The colt should be taken away from the mare when between five and six months of age. In order that the weaning may be accomplished with the minimum of discomfort for both colt and dam, commence the process gradually. Allow it to suckle for a short time twice daily for a week or so, then once daily for another week, at the end of which time it should be weaned entirely. The dam will then be secreting no large quantity of milk, but she should receive some special attention for a time. Feed dry, non-heating foods, which will tend to check the milk flow. Draw the milk from the udder only often enough to prevent inflammation from setting in. If it can be arranged a complete rest for the mare until she has dried up entirely is desirable. But if she must perform work, avoid getting her hot.

A good grain ration is composed of one-fourth corn, one-fourth bran and one-half oats, or one-fourth corn, three-eighths bran and three-eighths oats. Crushed oats are to be preferred to whole oats.

When the nights become cold and frosty the young colt should be sheltered each night, but allow it its liberty again the following morning. It never pays to confine a colt unnecessarily, as it needs lots of exercise, fresh air and plenty of good feed in order to develop bone and muscle and to grow into a large shapely animal. Half of a horse's growth is made during the first twelve or fifteen months of its life, hence during this period the aim should be to secure a uniform and proper development of all the parts of the young animal. Keep the colt in a thrifty, growing condition every day during its first winter. Feed liberally; it is costly economy to stunt the colt by stingy feeding. The growing colt should never be in high flesh, however, but just in good growing condition. By good management an ordinary colt can be made to grow as large as either dam or sire. Feeding colts is like feeding any other class of stock: Good judgment must be exercised by the feeder at all times.

The Dairy

Study up a system of ventilation for the dairy barn if it has none. The cows need fresh air to keep them healthy. The milk is better if the barn is ventilated and as free as possible from odor. Everything that conserves the health of dairy cattle should command the attention of dairymen as there is nothing more discouraging to peace of mind and profits than a sick cow. The cattle with plenty of fresh air develop a vigorous condition that helps them to resist disease and produce quantities of milk.

Stock raisers should get together and decide what breed is best suited to their locality and then stick to that breed.

A bull with a good beef form and a marked tendency to early maturity is a prime requisite in producing baby beef.

Roughage is an important item in the calf's ration. At two to three weeks of age a calf should have all the good clean hay it will eat. With skim milk and alfalfa hay little grain will be needed.

Storing Farm Machines.

Shade trees and fence corners are not good places in which to store farm machinery for the winter. Storing machinery in such places merely decreases its life of uselessness. Machinery experts say that the life of any machine is lengthened by protection from winter, by frequent oilling and by prompt attention to repairs. Farm machines, therefore, should be stored in the fall where they can be overhauled and put in shape for the next season's use before the time for such use arrives.

GOOD HEALTH QUESTION BOX

By Andrew F. Currier, M.D.

Dr. Currier will answer all signed letters pertaining to Health. If your question is of general interest it will be answered through these columns; if not, it will be answered personally if stamped, addressed envelope is enclosed. Dr. Currier will not prescribe for individual cases or make diagnosis. Address Dr. Andrew F. Currier, care of Wilson Publishing Co., 73 Adelaide St. West, Toronto.

Treatment of Ulcer of the Stomach.

Three symptoms are almost always present with gastric ulcer, pain, vomiting and haemorrhage. The pain is constant in some cases and intermittent in others, it may be worse just after eating or an hour or two later. Sometimes it is worse when one stands up, sometimes when one sits down or bends over. It is often very severe and may be felt at the pit of the stomach or in the middle of the back and it is intensified by pressure over or upon the stomach.

Vomiting sometimes occurs from half an hour to two hours after eating or drinking and blood may be mingled with the digested food. Blood is the positive evidence, or one of them, of ulcer of the stomach and is present in half the cases either in the substance vomited or the stools. Bleeding may be provoked by excitement or any unusual exertion. Heartburn and constipation are also common symptoms though the appetite may be good. Rest is the most effective means of treatment, that is one must not only remain in bed several weeks, but the stomach must be kept empty and free from motion and the work of digestion. Digestion means the preparation of gastric juice and this juice is often very sour, when ulcer is present, from an excess of hydrochloric acid, indeed this may be the principal cause of the ulcer. Proper nutrient injections should be given to the patient every six hours, the rectum being first irrigated with warm, but very weak salt water. To relieve pain cold applications may be made to the pit of the stomach especially if haemorrhage has occurred. Pieces of ice may be taken by mouth but nothing else in the shape of food or drink. Suitable remedies may be introduced into the stomach through a stomach tube for the relief of pain or in attempts to heal the ulcer, such remedies including bismuth, alum and nitrate of silver, while the acidity of the stomach may be neutralized by solutions of magnesia or bicarbonate of soda. Surgical measures are not infrequently resorted to especially if the ulcer has perforated and haemorrhage or peritonitis has taken place. Such an operation should be attempted by a surgeon of great skill and good judgment. In the great majority of cases surgical help will not be needed but there are none in which watchfulness and care can be dispensed with for the condition is always an important one and may quite unexpectedly become serious.

Questions and Answers

X. Y. Z.—Is there any cure for Bright's Disease with high blood pressure?

Answer—Your questions will be answered in the article on Bright's Disease, which you may have by sending stamped, self addressed envelope.

A Reader—1—Is an operation for rupture and varicocele considered dangerous?

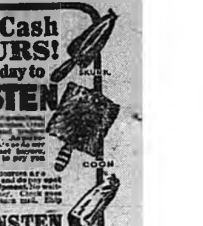
2—Does it render a person weaker in any way?

3—How long would it take to do such an operation?

Answer—1—It is seldom, when done by a competent surgeon.

2—It should make one stronger, rather than weaker.

3—A good surgeon will do such an operation in about an hour.



Mrs. J. S.—After having experienced two serious operations, I am still in great trouble and apparently suffering from acid indigestion in a very exaggerated form. I would be very glad if you would tell me what I could do to relieve this condition.

Answer—It is not a good plan to try to relieve one who is apparently as sick as you are, and whom one has never seen, by means of a letter. The best that I can do, is to suggest that, in cases such as I suppose yours to be, a very simple diet; occasional irrigation of the stomach; and the constant use of an alkali (like bicarbonate of soda) have very often proved helpful.

The demand for food, both in this country and abroad promises to be very large for several years to come, and the outlook for good prices should encourage widely and more thorough cultivation of the soil.

GIVE USEFUL GIFTS

EVERYBODY prefers a gift that is really useful, to some pretty but purposeless novelty. So that it is easy to be patriotic and comply with the Government's earnest plea—Give *Useful* Gifts.

This applies equally whether you are buying the gift for yourself—as a "treat" after the harvesting—for your friend or relative who may be "over there" for months yet, or for the folks here at home.

The GILLETTE Safety Razor
THE USEFUL GIFT

If it were only the custom to tell your friends what you would appreciate as a gift, how many more men would own a Gillette—a really useful gift that constantly reminds the person to whom it is given of the giver's thoughtfulness—day after day, for at least the few minutes occupied by the most pleasant of shaves.

Make all your gifts USEFUL, with the Gillette heading the list where men are concerned. For men who already own a Gillette, the gift of a few packets of blades never fails to win appreciation.

Your jeweler, druggist and hardware dealer is showing Gillette Sets at five dollars. Christmas mails for Europe will soon close.

WHAT SOLDIERS WANT.

A suggestion to those who are sending gifts to soldiers overseas comes from Lt.-Col. (Canon) Frederick George Scott, Senior Chaplain of the First Division, in a cable received by friends in Montreal. He says "The men want playing cards and chewing tobacco."

"Ever-lastingly Good"

KING AND QUEEN OF THE BELGIANS

TWO HEROIC FIGURES IN THE WAR'S DRAMA

Albert and Elizabeth, Undaunted in the Hour of Defeat and Glorious in the Day of Vindication.

A. Lemonnier, the famous outlaw of "L'Independance Belge," has written the following on Albert, King of the Belgians, and his Queen:

"In the course of this long and terrible war there have stood out two figures of almost legendary worth and heroic appeal—the King and Queen of the Belgians. Grandson of Leopold I., the founder of the Belgian dynasty, King Albert has inherited from his grandfather his calm nerves, his love of work, his sagacity and foresight. At the same time he is characteristically a man of his period, i.e., simple in living and democratic by habit.

"He is the ideal of the democratic King—the first citizen of the state, who takes his citizenship seriously and conscientiously. All the multiple problems in which Belgium is concerned, industrial and social alike, have been his life study; he has always studied them at first hand, preferring to go into matters for himself, as he did, for instance, in the colonial question, when he crossed the Belgian Congo from Lake Tanganyika, on the east, to Boma on the west.

A Royal Physician.

"With such character and tastes King Albert was not likely to choose for his wife a princess of a powerful and wealthy house. He married the Princess Elizabeth in Bavaria. She was the daughter of a savant, who had made himself, by study and work, one of the first oculists of Europe, who put his science and skill to the daily service of the unfortunate. Princess Elizabeth shared her father's labors and had charge of his clinic. Never were a wedded pair more suited to each other.

"In 1913 King Albert paid his visit to the Kaiser, and it was then, at Potsdam, in November, that the Kaiser spoke openly of war with France as inevitable and not far distant. It was on that occasion, too, that he tried to persuade King Albert that his interest lay in ranking himself alongside Germany. Never did Germany believe that Belgium would resist.

"Yet on the receipt of the revolting ultimatum addressed by Germany to Belgium on August 2, 1914, there was not an instant's hesitation. From Belgian King and people there came the unanimous answer: 'Honor above all!' Before the Chamber and Senate, united in historic session, the King declared, pale with emotion but with firm voice: 'I have faith in our destiny; a nation that defends itself compels respect; such a country never perishes.'

"Next day he issued a proclamation to his troops: 'Soldiers, Remember, as you face the enemy, that you are fighting for liberty and for your imperilled Motherland. I am leaving Brussels to put myself at your head.'

"From his headquarters at Louvain the King followed with anxious pride the heroic defence of Liege. He shrank from no risk. He went to the advance posts and into the trenches.

"As he was of tall stature, he was a likely target for the enemy. One day a colonel said to him: 'Sire, if you were a simple soldier I would scold you.' 'Scold away!' said the King, laughingly. 'Sire,' replied the colonel, this time severely, 'I do so'd you,' and the King obeyed, heading down into the shelter of the trench.

"At Waelhem a shell burst near him; he did not wink an eyelash.

"The army fell back into Antwerp. There the Queen had been staying with her children, busy with the organization and superintendence of the hospitals. When the Zeppelins sought to bomb the palace she took away her children and confided them to Lord Curzon in London, afterward returning to her post beside the King, with whom she shared the dangers of the siege.

"Then came the fall of Antwerp and the retreat. The enemy had crossed the Scheldt; there was danger of the roads being cut off, but eventually the royal couple succeeded in reaching Ostend, and thence, still accompanying the army, across the Yser.

"It was at this moment that the King issued that manly proclamation:

"'Soldiers, in the positions where I have stationed you let your eyes be turned only frontward. Look upon him as a traitor who utters the word retreat.'

"How valiantly the Belgian army responded to the appeal is a matter of history. It clung with the energy of despair to the little remaining patch of the Motherland and brought the German march on Calais to an abrupt halt, amid that region of marshes and clinging mud.

"During all this terrible period the Queen remained among the troops, dividing her time between the education of her children and the management of a huge hospital.

"Finally has come the resumption of the offensive, with its glorious results. The liberation of Belgium is proceeding rapidly before our eyes. King Albert and his Queen have set foot in Ostend while German shells were falling, and amid the enthusiastic welcome of its inhabitants.

"A few days hence King Albert and Queen Elizabeth will make their entry into Brussels. What an event it will be! It will be a delirium of joy; it will be a spectacle beyond imagination or description. It will be a unique celebration—that of the liberation of a heroic nation!"

ITALY'S WAR EFFORT

Won War Against Austria Despite Big Odds.

The Italian troops were well on their way into the Trentino when the armistice halted the allied armies on their many battle fronts. The dream of a century of the Italian people—the redemption of their lost domains in the north—was being realized by the force of arms when the German-Austrian collapse made it sure that the Trentino, like Alsace-Lorraine, would be returned by the peace terms to the mother race.

The Austrian government in its latest official census admitted that the Trentino was Italian by 370,000 out of its 386,000 population. The whole district had retained the Latin culture in spite of the efforts to Germanize it in language and customs. Attempts at rebellion had been put down ruthlessly by the Austrian masters. Seeds of dissension sowed by the Austrians had caused estrangement between the Italian irredentists and the Jugo-Slavs, whose interests since have proved to be parallel.

The Italians had fought not only against superior Austrian forces, but against the physical difficulties presented in the mountainous districts of the frontier. In three years of fighting under the most difficult conditions the Italians took from their hereditary enemies prisoners numbering 1,489 officers and 109,956 enlisted men. Italian engineers built 2,050 kilometres of road and swung 1,500 kilometres of cable from cliff to cliff for the transportation of troops and ammunitions.

Italy has called to arms little fewer than 5,500,000 men, of these she has lost 1,500,000. In recent fighting on the Austrian front Italy had at her disposal only fifty-four divisions to oppose the seventy divisions of the enemy. In addition Italy sent forces into France, Albania, Macedonia and Palestine, which, it is said, were greater than the French, British and American forces sent to aid Italy.

Italy did all this at a time when she was not well prepared for war in her industries and natural resources. She especially lacked coal.

The Trentino with the Italian occupation could not be much more Italian in spirit than under the Austrian rule. Trent is a city of 30,000 inhabitants, is twiceally Italian in customs and architecture. Such is the condition in Riva, on Lake Garda, and other important towns in the district. The rural districts, too, are almost completely Italian in language and spirit.

It is one of the anomalies of history that such a province could remain so long under an alien yoke. It was highly prized by the Hansburgs for its military possibilities. A mountain wedge protecting into Italy, as one Italian writer expressed it, "an enormous foot shod with mountains upon the neck of Italy."

Some people learn of the harmful effects of tea and coffee by reading. Others find out through experience. In either case it's a good idea to adopt

INSTANT POSTUM

A delicious drink made from the finest cereals, harmless and nourishing. Made in the cup, instantly. Saves sugar and fuel.

ISSUE No. 45—'18

Seaweed Fodder.

French chemists have discovered that certain seaweeds common on the coast of Brittany are composed of the same basic materials as oats, and in almost equal proportions. They therefore tried feeding the dried seaweed to horses, for the first eight days as a substitute for half the usual quantity of oats, and then for sixteen days as a complete substitute for the oat ration. The experiment was tried first on three horses suffering from lymphangitis. At the end of twenty-four days the horses had gained six per cent. in weight and were apparently well, whereas three other sick horses that were fed on oats, hay and straw were still suffering from lymphangitis. The experiment was next conducted on two lots of twenty cavalry horses. Ten of them received the ordinary diet, while the rest received two pounds of seaweed in place of two pounds of oats. At the end of two months it was found that those that had been fed on seaweed had each gained about twenty-five pounds, the others had gained barely four pounds. As a result of the experiment French veterinarians believe that it may be possible to utilize great quantities of seaweed in place of the two hundred million pounds of oats that are imported in ordinary times. It is possible, too, that ways may be found to use seaweed as food for human beings.

MONEY ORDERS.

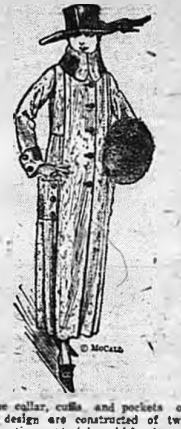
Send a Dominion Express Money Order. They are payable everywhere.

Camouflaged Verse.

A surprising sign of German ingenuity was found lately by an English officer on the body of a dead German. It is a New Year card of good wishes carried about by the poor fellow for many a month. On the reverse is a print of Lady Butler's "Charge of the Scots Greys at Waterloo." But the beturnkins of our men have been adroitly changed to the spiked helmets, the German "pickelhauben," and in place of the British Standard flies the German flag. All the rest is correct, man for man, and horse for horse. Joy-bells decorate the frame. And lo! a fine German cavalry charge is before us.

Almost seventy per cent. of all the sugar consumed in this country is used in the households. So it is up to the women to make the sugar go around.

To prevent lamp glasses cracking put them into cold water, bring them to a boil, and let them cool gently. Then see that they are perfectly dried and polished.



As soon as we find a well-balanced ration that produces good results, we should stick to it; for changes in the line of feeding are often expensive and produce heavy losses.

Minard's Liniment Cures Garget in Cows

The Weekly Fashions

What could be more pleasingly simple than this little empire dress? The deep yoke opens in the centre-back as far as the skirt portion and no opening is required in the skirt. McCall Pattern No. 8646, Girl's Empire Dress. In 6 sizes, 4 to 14 years. Price, 20 cents.

The collar, cuffs and pockets of this design are constructed of two contrasting materials, which gives a novel effect. McCall Pattern No. 8607, Ladies' Coat. In 6 sizes, 34 to 44 bust. Price, 25 cents.

These patterns may be obtained from your local McCall dealer, or from the McCall Co., 70 Bond St., Toronto, Dept. W.

NEW TRAVELLING REGULATIONS.

Persons Embarking at U.S. Seaports Must Procure Permission Before Leaving Canada.

Under an order issued by the Secretary of State, Washington, effective November 11th, 1918, all persons going from Canada to foreign destinations by way of United States seaports must procure permission for embarkation before leaving Canada.

Such permission must be arranged for either by executing declaration and procuring vise on pass ri before one of the American Consul in Canada, or by making formal application before any of the United States immigration officers located in Canada upon forms furnished by the said officers.

In order to allow sufficient time for investigation, transmission of papers to Washington, etc., applications should be filed either with the Consul or the Immigration Officer at least 17 days prior to the date of proposed departure.

The State Department invites special attention of prospective travellers to the fact that unless they have obtained vise by an American Consul, the said Department must decide whether or not departure from an American port will be allowed, such decision being based upon the application submitted through the immigration officers.'. Passengers are accordingly warned not to proceed to the port of embarkation until they are in possession of either the Consular vise, or proper certificate from the U.S. Immigration authorities showing that permit for departure has been granted.

The foregoing applies to all persons not citizens of the United States, and it is effective regarding all destinations, including Mexico, U.S. insular possessions, etc., but not including Bermuda.

United States citizens seeking to proceed to foreign points are required to have passports issued by the State Department, applications for same being obtainable from the various American Consuls.

Minard's Liniment Cures Colds, &c.

Never keep an unlabeled bottle of medicine around the house. Throw it out. Some one may make a serious mistake.

Turn medicines out of the side opposite the label to keep directions plain.

Hymn for the Peace.

Lord of the Universe,
Brother and Friend,
We are Thy warriors
World without end.
In Thy Name conquerors,
Shod with Thy peace,
Crowned with Thy clemency,
War now shall cease.

Servant, Deliverer,
Thine was the power—
Bitter the agony,
Dark was the hour;
Brave hearts that trusted Thee
Met Thee in death;
Thee we give praise for them
While we have breath.

Speak to the nations, Lord;
Join us in one;
Grant in our Canada
Thy will be done.
Wisdom and equity
Give us, and love,
Take Thou our offerings—
Olive and dove.

Military Force of Habit.

He held her tightly in his khaki clad arms till she wondered at his silence and gently murmured: "Do you love me, my hero?"

"Yes," he sighed.

"Yes, what?" she softly queried.

"Yes, sir."

Minard's Liniment Cures Diphtheria.

Potatoes should be thoroughly dry and free of dirt before they are stored in the bin.

As soon as linen shows a thin place darn neatly, as this will prevent a break, and a patch is never pleasing on table linen.

"The country which will be the most prosperous for at least ten years after the war is the country which has the most live stock."—Hon. T. A. Crerar.

Rheumatic Pains

Are relieved in a few days by taking 30 drops of Mother Seigel's Syrup after meals and on retiring. It dissolves the lime and acid accumulation in the muscles and joints so these deposits can be expelled, thus relieving pain and soreness. Seigel's Syrup, also known as "Extract of Roots," contains no dope nor other strong drugs to kill or mask the pain of rheumatism or lumbago, it removes the cause. 50c. a bottle at druggists.

WHEN NEURALGIA ATTACKS NERVES

Sloan's Liniment scatters the congestion and relieves pain

A little, applied without rubbing, will penetrate immediately and rest and soothe the nerves.

Sloan's Liniment is very effective in allaying external pains, strains, bruises, aches, stiff joints, sore muscles, lumbago, neuritis, sciatica, rheumatic twinges.

Keep a big bottle always on hand for family use. Made in Canada. Druggists everywhere.

Sloan's Liniment Kills Pain

30c., 60c., $1.20.

A Wonderful Old Man.

Little Elizabeth was sitting on her grandpapa's knee one day, when she suddenly blurted out, after a long and interested scrutiny of his wrinkles:

"Grandpa, were you in the Ark?"

"Certainly not, my dear!" was the astonished reply.

"Then why weren't you drowned?"

Minard's Liniment Cures Distemper.

All wool-growers, in preparing their product for market, must consider the man who is doing the buying, if the name of Canadian wool is to become properly famous in the wool world.

JOHN J. HERNAN, - Manager

The Paisley Advocate

PAISLEY, DEC. 19th, 1918

BAPTIST ANNIVERSARY

On Sunday last there was a good attendance at the special anniversary services in the Baptist church. The preacher of the day, Rev. Mr. Kinman, of Wiarton, is a versatile exponent of the gospel and delivered impressive evangelistic sermons. In the evening he absolved his hearers to look to the heavens for their ideals instead of keeping their eyes wholly fixed on earthly things. The Christians of to-day, he said, care a great deal for themselves, are starving their souls, struggling by their own efforts to get into heaven, instead of accepting the salvation offered by the sacrifice that was made complete over nineteen hundred years ago.

The choir was assisted by Miss E. McInnes, who also sang a solo, and Miss Davison, who took the solo parts in the anthem.

"The Book of Books" was the subject of a most instructive as well as interesting lecture given by Rev. Mr. Emmon on Monday evening. The speaker stated that the object of the lecture is to increase interest in the Book, and offset the general neglect of reading it. If properly understood and appreciated newspapers must take second place to the volume of Holy Writ. Illuminating references were made to other Bibles. Why the Turks are so bloodthirsty and cruel a people, he said, is because their only book in home and school is the Koran. The teacher sits with long switch in hand and pipe in his mouth, ruling his pupils in the most harsh way. One particular thing they are taught is that the more Christians they can kill the more glory they win. The Buddhist bible contains one of the most awful religions. With the Hindoos the missionary has a hard struggle because the men of that religion being well versed in the tenets of their faith through study of their book. Going into the history of the Bible, the speaker told that it was the work of forty writers who lived at forty different times covering a long period of from 1400 to 1900 years. At the present time the Bible is a cheap book and perhaps this fact cheapens it in the estimation of the people. If it were more generally read and all were better acquainted with its teachings we would have a better country and better cities. At one time men could go to the stake and suffer death by fire or other ways of torture because they had imbibed the truth of the Word, although they had to secret and guard their one treasured copy. The Bible is a most complete library in itself, and all other volumes you may put on the shelves cannot compare with it. The 66 books it is comprised of include five books of law, 12 of history, 5 of poetry, and 17 of prophecy. Altogether it is the most interesting collection of books in the world. From the first chapter of Genesis there is more to be learned about the creation of the earth than science can tell. The forty writers of forty different ages speak and teach of but one God. There are no contradictions. In the religion of China there are 31,331 gods, and India has 300,000,000 gods. Our Bible is full of the very best literature of all classes, —stories of travel, war and military adventure, other stories of human adventure, and love stories, which make it the most interesting book in the world, and best of all, there is the Great Story of the love of God and of Christ for the human race. That is but a brief and cursory resume of the lecture, which from opening to closing word held the audience throughout.

The chair was occupied by Mr. A. R. Pirkard, who, in his short address, expressed the pleasure he felt at coming to reside in Paisley, so near his old home at Glamis, and paid a compliment to the character of the business men and citizens of our town. The choir rendered special music, and solos were sung by Miss Davison, Miss Edna Cutter and Mr. Art Pfaff.

The offerings of Sunday and Monday evening were quite liberal, amounting to over $100.

VILLAGE COUNCIL

Council met on 14th Dec., members all present except Mr. Logie. Minutes of last meeting were read and approved.

Communications read: From the Dept. of Finance, Ottawa, re enemy debts and claims; from the Bell Telephone Co., stating its desire to erect four poles on Rowe St.; from tax collector, stating collections to date to be $10,000; from Canadian Fire Underwriters' Association, warning against frozen hydrants; from B.O.H., annual report as follows: "If it had not been for the epidemic of Spanish influenza, the condition of health of our village for the past year would have been very favorable indeed. The influenza began to spread in our village during the first week in October and continued with us during the remainder of the month, although the height of its severity was over after the first two weeks. There were about one hundred cases, some of a very severe nature and many of a light variety. There was but one death; this resulted from pneumonia following influenza. Innoculation with the influenza vaccine as a preventative measure was administered in 25 cases, with good results, as none of those vaccinated took the disease, although in some cases they were exposed to other members of the family who were sick with the disease. We have been quite free from other contagious diseases. There was but one case of typhoid fever. Our water supply is good, and the general sanitary condition of our village is favorable. (Sgd.) H. E. Gage, M.O.H."

By-law 682 providing for the municipal nominations and elections for 1919, was read a first time.

By-law 683, providing for an extension of the time for the return of the collector's roll, was read a first time.

John H. Maurer applied for an increase re scavenging.

The attention of the council was directed to the non-delivery of the weigh scales shipped from Hamilton after repairs.

Pearce—Skinner—That the local agent of the G.T.R. be notified in writing regarding the unreasonable delay in the delivery of parts of the weigh scales, and that unless delivery is made within three days, of the missing parts, the same will be purchased and damages in full claimed of the company.—Carried.

Skinner—Forrester—That John A. Elwes be rebated Dr. Boyd's business and sanitation taxes paid by him under protest.—Carried.

Forrester—Skinner—That D. Sutherland be tendered, without prejudice, $12.50 in payment of his salary as caretaker of cemetery, 1918.—Carried.

Forrester—Pearce—That by-laws 682 and 683 be now read a second and third time, passed and executed.—Carried.

Orders for payment were issued as follows: The clerk $160, H. S. & Milne $21.99, W. H. Davison $47.33, fire brigade $11.50, M. Leitch $62.50, J. H. Maurer $35, the clerk $6.90, T. F. Pearce $4.40, G.T.R. $2.50, Ecom. M. F. Ins. Co. $45, D. Sutherland $12.50

Children Cry
FOR FLETCHER'S
CASTORIA

The Late John McInnes

In the death of Mr. John McInnes, of 10th con. Bruce, on Dec. 8th, there passed away one who has been a prominent figure in the life of the township. The deceased was a native of the Island of Colonsay, Scotland. He emigrated with his father to Canada 60 years ago. They lived near Toronto for three years, and then came up and homesteaded on lot 36, con. 10, Bruce, where both father and son lived for the balance of their days. Like many more of our first Scotch settlers Mr. McInnes had a love for life on the water, and he sailed on the Great Lakes for a number of seasons, but later followed farming exclusively. Taking an active interest in public affairs, he eventually was called upon to fill municipal positions, first as township councillor, then as deputy-reeve, also two years as county commissioner. In politics he was a Liberal, and in religion a Baptist. He married Christena Sinclair, who survives him, with five of a family—John, Donald; and Mac at home, Mrs. Howard Norris of Goldstone, and Tena in Toronto. Deceased took a stroke of paralysis about two months ago, which was the cause of his death. He was 78 years of age. The funeral took place on Tuesday afternoon of last week, and was conducted by Rev. Mr. Dichl, in the absence of the Baptist pastor. Interment was made in Rusk's cemetery in Elderslie.

Desirable Village Property For Sale

THE HYDE property on Isabernah St. Paisley, comfortable brick house, good stable and garage, on one acre of first-class garden land, with a number of bearing fruit trees. Hard and soft water. Apply to T. H. GEORGE or MRS. C. B. IRWIN.

FARM FOR SALE

SPANISH INFLUENZA
Do Not Fear When Fighting a German or a Germ!
By Dr. M. COOK.

The cool fighter always wins and so there is no need to become panic-stricken. Avoid fear and crowds. Exercise in the fresh air and practice the three C's: A Clean Mouth, a Clean Skin and Clean Bowels. To carry off the poisons that accumulate within the body and to ward off an attack of the influenza bacillus, take a good liver regulator to move the bowels. Such a one is made up of May-apple, leaves of aloe, root of jalap, and is to be had at any drug store, and called "Pleasant Purgative Pellets."

If a bad cold develops, go to bed, wrap up well, drink freely of hot lemonade and take a hot mustard foot-bath. Have the bedroom warm but well ventilated. Obtain at the nearest drug store "Anuric Tablets" to flush the kidneys and control the pains and aches. Take an "Anuric" tablet every two hours, together with copious drinks of lemonade. If a true case of influenza, the food should be simple, such as broths, milk, buttermilk and ice-cream; but it is important that food be given regularly in order to keep up patient's strength and vitality. After the acute attack has passed, which is generally from three to seven days, the system should be built up by the use of a good iron tonic, such as "Ironic" tablets, to be obtained at some drug stores, or that well known blood-maker and herbal tonic made from roots and barks of forest trees—sold everywhere as Dr. Pierce's Golden Medical Discovery.

THE HOSPITAL FOR SICK CHILDREN, TORONTO

War Laid Heavy Hand on Children's Charity

Dear Mr. Editor :—

The annual report of the Hospital for Sick Children, Toronto, marks a new record, despite the heavy handicap the war placed upon its work.

The task of ministering to the suffering youngsters of this province was no light one in view of the Hospital's splendid response to the national call. 25 doctors and 43 nurses from its forces have seen service overseas.

Yet the number of patients treated is 5,028, or 1,308 more than last year. Of these in-patients, 759 were from 266 places outside of Toronto.

The tireless efforts of the staff made possible also a reduction in the average length of stay necessary for the little patients from 24 days in 1914 to 14 this year.

These results show that the Hospital has again paid to the children rich dividends of health upon the invested kindness of its supporters.

There has been careful stewardship of the funds entrusted to the Hospital. There has been saving—almost scrimping—in every direction except where it would prevent the Hospital's soothing the suffering or shortening the sickness of one child. The daily cost of operation was held at the lowest point which would still allow the children entrusted to the Hospital to get the best medicine and the best of care.

And yet so high has risen the cost of every item in the Hospital's budget—in labor, in fuel, in food, and above all, in medical supplies—that the minimum expense of taking care of one child for one day has risen from $2.34 back in 1914 to $3.21½ in 1918. Of that, $1.66¾—the amount per patient per day that the official Government grants do not cover—must come from voluntary contributions.

During the past four years debts were incurred to the extent of $100,000, which the trustees felt assured would be wiped out by the public as soon as the war drew to its close, and those heavy demands cease which have been made upon the generosity of the loyal people of this province. The time has now come when it is necessary to make known the Hospital's dire need of financial assistance.

If this 43rd Christmas appeal fails to rally the friends of this charity to its support, it will be necessary to mortgage its land, buildings and plant. By the bounty of the late John Ross Robertson that property has just been cleared of debt for the first time since it began its ministry of healing mercy. Little children have lost a big-hearted friend, and the province a noble benefactor. It is for the public to decide whether his life work shall be shadowed with a mortgage within less than a year of his passing.

What think you?

Send your answer as soon as possible to the Secretary-Treasurer, Hospital for Sick Children, College St., Toronto. Meanwhile the charity will "carry on" trusting in your sure post.

IRVING E. ROBERTSON,
Chairman of Appeal Committee

COUNTY BRIDGE COLLAPSED

The new cement arch bridge on con. 15 and 16, Normanby, which was constructed last summer by Contractors Clarke and Cole, of Owen Sound, collapsed on Saturday, the 7th inst., about 1 o'clock p.m. The arched span was 70 feet, and was built according to plans and specifications prepared by Mr. Robert McDowall, of Owen Sound, an outstanding land surveyor and civil engineer. The foundation, which was of a bottomless nature, was thought unfit for a base of concrete alone, so piling 32 feet long was secured and 18 of those were driven for each abutment. Those piles had still touched nothing that felt like a bottom, but Engineer McDowall thought they would hold the bridge. Shortly after the completion of the formation of the arch a crack appeared at each of the four corners but so long as the false-bents were underneath, it did not get any worse. On Wednesday, Dec. 4, however, Messrs. Clarke and Cole began it began to become apparent that it to remove the false work, and then was all false work. Large cracks began to appear at different places and it didn't look good to drive over. Slowly but surely something was giving way; the crown was out of her now; she was bowing her head in the centre; and on Saturday at noon she took the final dive. It is too bad. It was a nice compact little structure but apparently not the style of bridge suited to such a foundation, as the end pressure was so great that, having no banks, the abutments spread with the above result.

GIFT SUGGESTIONS

This Wonderful Christmas

Has there ever been a Christmas so full of meaning—with its promise of a world forever safe and free?

A Special Christmas Bargain

Took Law Into Own Hands

A soldier's wife from Allenford was brought to Walkerton on Tuesday, charged with throwing acid in a man's face to disfigure him. The woman, who is the mother of four or five children, claims that the man persistently bothered her and she took this means of getting rid of him. Bail was arranged at $2,000, the defendant going surety for $1,000 and two citizens of Allenford the balance, and she returned home on the next train. Her husband went overseas with the 160th Batt.—Telescope.

DIED

Smart—At Chesley, on Dec. 11th, Mary Ann Keith, beloved wife of Peter Smart, aged 74 years and 1 month.

PRESS ADVERTISING SOLD VICTORY BONDS

Before the war, bond buyers were "marked men." In number they were 40,000 in March, 1917—this is shown by the number of purchasers of the Government War Loan of that date. But in the autumn of the same year their number increased twenty times to 820,000! This was the number purchasing the Victory Loan, 1917. Last month—November, 1918—over 1,000,000 persons purchased the Victory Loan, 1918!

These wonderful results were accomplished by Press Advertising.

Before the war one-half of one per cent. of our people bought bonds. Now quite twelve and one-half per cent. of our people are bond buyers!

Before the stupendous amount of $676,000,000 worth of bonds could be sold to our Canadian people in three weeks a most thorough and exhaustive campaign of education was carried through by advertising in the public press. The power of the printed word never had a more convincing demonstration.

By means of the printed word, through the medium of advertisements in the press of our country, the Canadian people were made to know what bonds are, the nature of their security their attractiveness as an investment, and why the Government had to sell bonds.

Every point and feature of Victory Bonds was illustrated and described before and during the campaign—in advertisements. No argument was overlooked. No selling point was neglected.

The result is that Canadians today are a nation of bondholders.

They know what a convenient, safe and profitable form of investment bonds are. Instead of one man in two hundred owning bonds, now one Canadian in eight—men, women and children—owns a Government Security.

The Minister of Finance acknowledges this. His own words are: "The wonderful success of the Loan was due in large measure to their (the press of Canada) splendid and untiring efforts during the whole of the campaign."

Mr. E. R. Wood, Chairman of Dominion Executive Committee having oversight of the campaign to raise Victory Loan, 1918, said, "... The press publicity campaign . . . will rank as one of the most remarkable and efficient publicity campaigns ever undertaken in any country," and Mr. J. H. Gundy, Vice-Chairman of the same committee, said, "I have been selling bonds for a long time, but I never found it so easy to sell them as on this time. The reason is the splendid work the press has done. I take off my hat to the press of Canada."

The success of Victory Loan, 1918, and the knowledge which Canadians now possess of bonds are a straight challenge to the man who doubts the power of the printed word, in the form of advertisements, to sell goods—and this applies not to bonds alone, but to the goods you are interested in selling.

DADDY!

By Bayard D. York

Lorry Phelps gave the box containing his picture puzzle of England a parting kick and proceeded down stairs by way of the banisters—a forbidden but exhilarating achievement.

He wished someone would tell him why his aunts would not buy him any real playthings—like a locomotive or an automobile or a wheelbarrow such as Ted Millar had. Daddy would if he were here.

He went into the prim darkened parlor and stopped in front of a photograph of a keen-faced man of some thirty-five years.

"That's my daddy!" he said to an imaginary companion.—"He's a major now. He's fighting Germans. By jiminy! but I bet the Germans run when they see my daddy coming!"

He remembered the day, but little more than a year past, when in the house where he and daddy and mother had lived his father had taken him in those great strong arms of his and told him gently that mother had gone away to Scotland to be an angel. It had been a lonesome house then just as Aunt Eunice's house was lonesome now.

"I wish my daddy would come back," he said to the photograph.

He walked slowly out into the dining-room. It must be about supper-time—anyway, he was hungry. Why didn't Aunt Kate and Aunt Eunice come back from that Red Cross meeting?

He decided to pretend that there were some cookies on the table, though he knew well enough there were none. Then he stopped in mild surprise. Due to some unusual oversight a tumbler of jelly had been left on the table, set in the exact centre of the rosebud tablecloth. And there was a spoon beside it.

Maybe his aunts had meant him to have some, if he became hungry while they were away. Yes, the more he thought about it the more sure he became that they did. Else why had they left the spoon here?

He dipped the spoon deeply and raised it to his mouth. My, but peach jelly is good when a boy is hungry.

It was only after he had taken a second spoonful that he noticed the wavering lines of jelly on the tablecloth. How pretty they looked! He believed he could write his name that way.

Forthwith he dipped the spoon again and began. It took several attempts, but at length he succeeded in writing in legible characters—

LORRY PHELPS.

Wouldn't his aunts be pleased to find that he had remembered his writing lesson so well! At least Aunt Kate would. He was not so sure about Aunt Eunice—he never took things the way he expected her to.

On second thought he was not so sure that Aunt Kate would be pleased either. Aunts are queer people—not like a mother. Perhaps he had better erase it.

With the sleeve of his white blouse he rubbed the tablecloth slowly and painstakingly until there seemed to be no trace of the writing lesson left. It did not occur to him to note the effect upon his sleeve.

He thought he heard his aunts coming now. Some vague sense of discretion prompted him to go back to his room and busy himself with his picture puzzle. He was trying to fit the southwestern corner of Yorkshire into the middle part of Lancashire when Aunt Eunice's sharp voice called him downstairs.

Her thin features were set in an uncompromising frown. As was usual upon important occasions her hands were clasped at her waist. Aunt Kate—as was also usual upon important occasions—blended inconspicuously into the background.

"Lorry!" said Aunt Eunice, "did you touch the jelly? Mercy, child, look at your sleeve! Kate Phelps, look at this boy's sleeve."

Kate Phelps had intended to put in a word or two to soften the coming punishment but the sight of that sticky sleeve silenced her good intentions—as something or other usually did.

"I—I thought—" Lorry began, eyeing the sleeve in surprise and wonder.

"Don't say another word," exclaimed Aunt Eunice. "You have been a bad child. You will count beans until suppertime."

"Oh, please, please, Aunt Eunice! I'd rather you would whip me. I didn't mean to be—"

"You will count beans," she repeated crisply. "Kate, bring the dish and the beans. It is strange how one child can keep a household stupefied the whole time."

"Counting beans" was an ordeal from which Lorry shrank. It consisted in sitting in an uncomfortable chair with two dishes in front of him while he transferred beans, one at a time, from one dish to the other until his arms and shoulders ached.

He felt the injustice of his punishment to-night, for he had not meant to do anything that he ought not, and he took the situation with bad grace. Which explains why he was in bed when "Uncle" Jim called at half-past seven. The man was not Lorry's uncle at all—he was Major Phelps's closest friend. He had never had any children of his own.

"I had a letter from Sam to-day," Lorry heard him say. "He asked me to come over and see Lorry. He isn't in bed already, is he?"

"He's being punished," said Aunt Eunice.

"Well, I've got a little toy here. I'll run up for a minute—"

"Leave it with me and I'll give it to him in the morning."

"Oh—you think he's asleep?"

"Very likely."

"I'm not asleep, Uncle Jim," Lorry called out.

There was a moment of silence. Then Uncle Jim chuckled.

"I must see the little rascal," he said. "I'm writing back to Sam to-night."

Without waiting for the refusal which probably would have come in a moment, he ascended the stairs. He came in on tiptoe.

"Probably the chap's asleep," he said poking a finger into the bedclothes.

Lorry giggled.

"Don't you tickle me, Uncle Jim," he cried. "You knew I wasn't asleep, didn't you?"

"Well, I did suspect you weren't," Uncle Jim remarked. "I have a letter from your daddy."

"I got a letter from daddy one day —all my own," said Lorry proudly. "Only Aunt Eunice wouldn't let me keep it. She says it ought to be preserved. Do you think so?"

"Well—er—maybe. Now, let's have a little light and take a squint at this fire-engine. It's a big red fellow, with real rubber tires, and it winds up and goes around in a circle. (To be continued.)

A HUMAN ANTHILL

In Southern Tunisia, a French Possession in Africa.

France, in Europe, is a small country. Yet, in other quarters, it covers a large part of the globe. If you will glance at a map of Africa, you will find that nearly half of that continent is of French ownership.

The bulk of tropical Africa is French, including the great Sahara desert. Morocco belongs to France; so likewise does Tunisia—though war-like border tribes perpetually threaten or indulge in hostilities.

Tunisia is one of the least known regions of the world to the every-day traveler, it is also one of the littlest, so that the inhabitants largely dwell in caves dug underground, or in houses built especially to be heat-proof, or even in hillside caverns.

In southern Tunisia is a mountain of considerable size called Douirat, which once upon a time was an active volcano. Bubbles of volcanic gases made it a veritable honeycomb of caves, which in these days are inhabited. In fact, the whole mountain is a city—a human anthill, densely populated.

Four-year-old Charlotte was having trouble with her English, but she had entirely passed her difficulties on one point. "I see how it is now, mother," she said the other day. "Hens act and lay, and people sit and lie, don't they, mother?"

New Zealand's winter comes in our midsummer, and last July was one of the severest winter months in the history of the Island commonwealth. Nearly half a million sheep were lost as a consequence of the storms that prevailed then.

ABOUT THE HOUSEHOLD

Selecting Kitchen Utensils.

Often time is lost and fuel is wasted as a result of choosing the wrong kind of kitchen utensils. They should be durable, have a smooth finish, be easily cleaned and suited to the purpose for which they are intended.

Tin makes a satisfactory utensil for most quick baking processes, as it is light in weight and heat and cools rapidly. The best grade is the heavy block tin. Pure tin is soft and pliable, and consequently iron or steel are often used as a foundation. If this foundation material is exposed by scraping or scratching the utensil, rust will attack the iron.

Enamel, agate, and granite ware are made on iron or steel foundations. Should the enamelling material become chipped, the iron body soon will rust. Often utensils of inferior quality are sold as bargains, and soon chip and rust. The pure-white and the blue-and-white enamel wares are not suited for cooking processes where great heat is necessary. The gray and brown varieties are much more durable.

Aluminum is attractive and of light weight. There is no danger of chipping or rusting this material. It is very desirable for many processes of cooking, as it heats rapidly.

Iron is used for processes of cookery where a high temperature is necessary. It is durable if kept dry and free from rust. When not in use it should be coated with saltless grease to protect it.

Earthenware is used for long, slow cooking or baking processes. The lids of earthen baking dishes should fit tight to keep in all moisture and heat.

Cooking utensils made of glass are attractive, easily cleaned, and sanitary. Such utensils have been proved successful for baking processes when made of a material which can be subjected to high temperatures with no injurious effects.

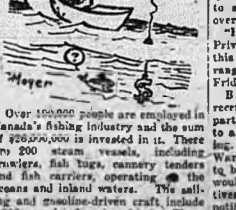
Utensils should never be bought until needed. When selecting cooking utensils, choose articles with smooth-finished rims and made of one piece of metal. Avoid seams and useless curves, as well as dirt-catching handles. A heat-resisting wood makes the best handle.

Recipes for Cool Days.

Chicken Curry—Add two cups cold chopped chicken to two cups white sauce; season with one teaspoon curry powder, heat thoroughly, and dish into the rice. Mushrooms and a little celery top, chopped fine, may be used instead of curry powder. Stock in which the chicken has been cooked may be used instead of white sauce in preparing this dish. Thicken the stock as for chicken gravy, season to taste, and add chopped chicken.

Sweet-Sour Stew—This may be made of meat, or merely a meat bone to produce a good stock is equally nice. If meat is used, select a cheap cut of beef. Cut into pieces of proper size for serving; put over the fire in sufficient water to cover well, and cook until tender. Remove the meat, and add an extra pint of water, one-half cup vinegar, two tablespoons sugar, salt to season, and two or three whole pepper-corns if they are at hand. Peel and cut into rather thin slices enough potatoes to make one cup, enough turnips and carrots to make one-half cup each; a sweet pepper from which the seeds and inner skin have been removed is cut into thin slices or rounds, and added with the other vegetables, also one-cup finely shredded white cabbage and, if liked, a medium-sized onion, sliced thin. Cook until the vegetables are tender. This will require about half an hour. A few minutes before time to serve, add the meat and let it heat in the stew. Serve very hot. This is fine on a cold day.

Canada Meat—Use pound cooked beans, one-half pound cheese, bread crumbs, salt. Put beans through the meat grinder. Add the cheese and enough bread crumbs to make the mixture sufficiently stiff to form into roll. Bake in moderate oven, basting occasionally with tomato juice.



Cottage Cheese Sausage—One cup cottage cheese, one cup dry bread crumbs or one-half cup cold cooked rice, one-half cup bread crumbs, one-fourth cup peanut butter or two tablespoons savory fat, one-fourth cup coarsely chopped peanut meat, one-half teaspoon powdered sage, one-half teaspoon thyme, one tablespoon milk, one teaspoon salt, one-fourth teaspoon pepper, one-third teaspoon soda, one tablespoon finely chopped onion. The bread crumbs may be made from left-over corn, barley, or other quick breads. Cook the onion in the fat until tender but not brown. Dissolve the soda in the milk and work into the cheese. Mix all other dry ingredients thoroughly with the bread crumbs. Blend peanut butter and onion with the cheese, and mix with them the bread crumbs. Form into flat cakes, dust with bread crumbs or cornmeal, and fry a delicate brown in a little fat in a hot frying pan.

Sausage Rolls—These baked rolls are very appetizing and are easily prepared. Make a baking-powder biscuit dough roll; roll out in a sheet about half an inch in thickness, and cut into small squares. Have ready any good sausage mixture—pork, beef, or a mixture of left-over meats, well seasoned. Form into small cakes, place a cake in the centre of each small square of the dough, bring the ends in the top and press together firmly; place in a buttered baking tin, the edges not touching, and bake for about twenty minutes. Serve hot, with or without gravy.

Bean Loaf—Two cups lima beans, one cup dry bread crumbs, four tablespoons peanut butter, two tablespoons grated onion, one tablespoon dripping, one tablespoon dried celery leaves or poultry seasoning, two teaspoons salt, one-fourth teaspoon pepper, one cup rice stock or other liquid. Wash and soak the beans over-night, then cook in boiling water till soft—about forty-five minutes. Drain, and when cool chop coarsely. Add crumbs mixed with seasonings and peanut butter, then add liquid and fat. Put into a greased bread pan and bake in a moderate oven thirty minutes.

This yields eight servings.

Figure It Out.

Over 150,000 people are employed in Canada's fishing industry and the sum of $20,000,000 is invested in it. There are 200 steam vessels, including trawlers, fish tugs, cannery tenders and fish carriers, operating on the oceans and inland waters. The sailing and gasoline-driven craft include 1,500 vessels of various kinds. There are over 27,000 sail and row boats and 11,000 motor boats employed in fishing. In the salmon canning industry of British Columbia, over $3,000,000 is invested in cannery plants. The investments in nets, traps, lines, smoke houses, etc., run into millions. No less than $3,000,000 are invested in freezers and ice-houses and $2,250,000 in fishing piers and wharves.

The Sugar Question.

Shall we face the sugar shortage in Canada honorably and courageously? Or are we going on quietly hoarding even if only a little in every home? Manufacturers, confectioners and public eating places are doing their share well. Soldiers and munitions workers want sugar more than the persons doing ordinary work. Let them have it. It must come from the private homes; there only is there hoarding, however slight in every individual case. Don't be mean for the sake of a sweet tooth.

Canadian restaurants are not permitted to give their customers all the sugar they ask for. Manufacturers and confectioners have also been put upon strict sugar rations, and could not well get below their present minimum. Why should people at home expect to get it? When all the people in private homes get down to the level of restaurants and sugar manufacturers, the shortage will be fully met. Two pounds a month—the limit—means 2 spoonfuls a day.

Confectioners are often accused of using much sugar. The fact is they take only about 5 per cent. of Canada's total consumption—about 12,000 tons a year out of nearly 300,000 tons. Real saving in sugar must come from the remaining 283,000 tons, most of which is used in the 1,500,000 homes in the Dominion. If each of these honestly cuts the sugar consumption to the 2 pounds a month for every person allowed by the Food Board, there would be no sugar difficulty. It is plain now which foot the boot is on.

THE LAST CEREMONY

Organizing a Soldier's Funeral Described by an Officer.

I was signing a seemingly interminable number of forms when the quarter-bloke, who had been talking to someone over the 'phone, came over to me.

"Hospital notified headquarters, sir, Private Webb, of B Company, died this morning from pneumonia. Arrangements to be made for funeral on Friday."

B Company was composed of raw recruits, and they cannot take their part in the rendering of the last honor to a departed comrade without training. I had to get busy. First the War Office and the Records Office had to be notified, the latter of which would pass the news on to the relatives. The chaplain also had to be notified, and the attendance of a band and gun-carriage to be arranged for. From the batmen, storekeepers, etc., I was able to secure enough men to form a firing party, old soldiers all of them, no longer fit for active service.

When the hour of the funeral came the men were ready. They formed up outside the hospital, those who wished first going in to take a last look at their comrade.

The coffin, covered by the Union Jack, was carried out and placed gently on the gun-carriage. Then began the dull beat of the muffled drums, the wailing of the "Dead March," and the procession moved off, the men of other companies who had gathered to watch standing at the salute. In front walked the band, then came the gun-carriage, the firing party on either side, then the men of the company, lifting their feet to the slow time, their heads bent, their arms reversed, and last the officers.

Past headquarters, where the guard turned out and presented arms, and so on to the last resting-place. There the chaplain waiting, took his place at the head, intoning in a subdued voice until the grave was reached.

The firing party took their places, the muzzles of the rifles downward, their hands crossed on the butts, their bent head resting on the hands. As the coffin began to disappear the rifles were reversed, pointing upwards across the grave. The "Last Post" rang out, and the rifles three times volleyed.

The funeral was over. Out-side the cemetery the ranks formed again; the band struck up a lively quick-step.

Parker's will do it—

By cleaning or dyeing—restore any articles to their former appearance and return them to you, good as new.

Send anything from household draperies down to the finest of delicate fabrics. We pay postage or express charges one way.

For the BOYS & GIRLS

The Grand Army of Good Fellows.

Once upon a time the little people in the woods decided to go to war. They had been reading the papers and the two-legged folk left about when they came picnicking, and, as Grandfather Rabbit explained, "It was the thing to do!"

"But whom shall we fight?" asked little Tommy Squirrel.

"You can't have a war without an enemy!" This puzzled old man Rabbit for a long time, but he never let on.

"That comes later. Didn't Lord Kitchener himself say, 'In times of peace prepare for war'!" he announced sternly.

"This'll bring us into trouble," Johnny Owl closed one eye and shook his head backward and forward.

"We have nothing to do with the ways of men."

But Grandfather Rabbit stood on a tree stump and talked so long and loudly about the glories of battle that no one listened to Johnny Owl, and they were all for war at the earliest possible moment.

"The first thing to do is to choose a general!" he concluded, "and, as this war was my idea, I think I ought to be it!"

Loud cheers greeted his modest remark, and Tommy Squirrel jumped up and made a fervent speech unanimously electing Jonathan T. Rabbit as commander-in-chief of the Grand Army of Good-Wood Fellows.

"With such a brave soul at our head victory is already assured!" he shouted waving his paws as he had seen the pictured human creatures in the newspapers do.

Tommy was launching into another patriotic outburst when old man Rabbit touched him gently on the arm.

"Not at the head," he whispered earnestly, "change it to tail. That's old stuff having generals at the head Nowadays they do it the other way."

"With this brave soul at our tail," Tommy corrected hastily, "who will dare to face us!"

Jonathan smiled in a pleased fashion and closed his eyes as Tommy proceeded with his speech.

Several others of the company did the same, but they all woke up at the end, clapped loudly and war was declared on the spot.

Next day training began in earnest. All the little rabbits were set to digging trenches all the way around that particular little wood.

Jonathan had some good ideals, you must admit, and sitting upon his tree stump with a quill behind his ear directed the whole proceeding.

The Squirrels were all decorated with maple leaves and dubbed major in the observation corps.

They scanned the country for signs of the enemy from their treetops and reported every few minutes to General Jonathan.

All the birds who had not flown South at once enlisted in the aviation section; even Johnny Owl agreed, with his family, to attend to the night watch.

The Woodpeckers being expert drillers were all made drill masters, and all the Rabbits who refused to dig trenches were placed in the signal corps.

You have no idea how convenient long ears are for wigwagging, and Jonathan worked out the most satisfactory code.

The Tortoises, being armored, were immediately impressed into the infantry and, as they were more protected behind than before, Jonathan insisted upon their marching backward. It was a little awkward at first, but they persevered and soon got the hang of it.

The Skunks were, of course, placed in the gas division; the Porcupines in the artillery, and with a satisfied sigh General Jonathan declared his army in readiness.

They were so delighted, all the little wood soldiers, that they forgot all about not having any enemy.

And lines my heart and heels! one night about 5 o'clock the enemy came, sure enough—three of him.

The majors in the observation corps sighted him first and chattered the news from tree to tree till it reached old General Jonathan Rabbit, who immediately wigwagged the news to all the rest of the army.

The tortoise infantry fell in backward, the gas corps went at the very head and after them, bristling with bravery, came the Porcupine artillery, and last of all, peering cautiously to the left and the right, the commander-in-chief himself.

Overhead the aviators circled making such a to-do that the enemy looked up and before he could save himself had tumbled headlong into the trenches.

There really were three—but in a war you always speak of the enemy as him. You understand?

Before he could pick himself up the gas division got busy. Ugh! Then the artillery let fly and the tortoises advanced backward.

It wasn't much of a battle, 'cause the enemy was so choked and taken aback that he retreated faster than the army could advance.

General Jonathan got out of breath, so he called halt, and they did.

It was a glorious victory, and that's a fact, and those three robber foxes never did come back. It took them a whole hour to pull the porcupine quills out o' their hides, and they're still feeling the effects of the poison gas!

Ring Out, Wild Bells.

Ring out, ye bells! Proclaim to all the earth,
That Tyranny is dead! Ring out the birth
Of endless peace. Clasp hands across the sea,
England, America. Let unity
And love eternal tell
That all is well.

Ring out, ye bells of France and Italy!
Shout with your brazen tongues: "The world is free!"
Great is the price you paid; great the reward.
Guide now the plowshare. Sheathe your valiant sword.
Let fruitful vineyards tell
That all is well.

Ye murdered Belgian bells your tongues are mute,
But high your hearts, your spirit resolute.
Call forth your trembling children from their caves,
Show where their dauntless banner ever waves
Triumphant. Let it tell
That all is well.

Sweet poppy bells that guard the tired dead,
Wave gently where those buried heroes bled.
Nay, wake them not, they are asleep with God,
But whisper kindly through the sheltering sod:
Sleep, sleep, for all is well.
All, all is well.

Vilda Sauvage Gwens, in the N.Y. Times.

Chickadee.

There's a hush on the frosty furrow
where the frozen loam lifts black,
And a film on the brown hare's burrow, unmarred by a seeking track
And over the leafless uplands comes
echoing clear to me
A voice from the edge of winter:
"Chickadee-dee-dee! Chickadee!"

The fox has slunk from the bracken
with the flag of his tail dropped low,
And the whining hound winds slacken
at the first soft swirl of snow;
But still from the wind-blown whiteness comes cheerily back to me
A gay little voice from the pine top:
"Chickadee-dee-dee! Chickadee!"

O little gray Puck undaunted when
the fields lie white and still,
May ever my pans be haunted by
your voice at my window sill;
The cheerlest note of winter comes
rollicking oft to me
Like the voice of a song-struck sunbeam:
"Chickadee-dee-dee! Chickadee!"

The Sea Kings.

Since the Golden Hind went round the
Horn and circled a world unknown,
Wherever the tides of God have beat,
and the winds of God have blown,
From the sunrise seas to the sundown seas, by the storm with the
spindrift whirled,
The sons of men who sailed with
Drake have ruled the water world.

And whether they sail from Plymouth
Hoe, or out of the Golden Gate,
They are brothers in blood linked
heart to heart, and to a resistless
fate;
For the quenchless ardor to rule the
seas, which time can never slake,
Makes the same blood race through
the nation's veins that throbbed
from the heart of Drake.

And all the way out of Trafalgar,
down into Manilla Bay,
The Anglo-Saxon has sailed and
fought, and struggled and won his
way,
And wherever the tides of God may
beat, and the winds of God may
blow,
It will be to-morrow as 'tis to-day,
and 'twas in the long ago.

A moment of courtesy will take a man as far as a whole afternoon of apology.

ITALY PERFORMED MIRACLE IN WAR

FOOD SHORTAGE CAUSED REAL AND CONSTANT SUFFERING

Mountain Fighting Under Rigorous Weather Conditions Taxed Endurance to the Utmost.

The blood and treasure of Italy were freely spent in the successful effort to put Austria-Hungary out of the war, says Dr. Ferraro, Director Italian Bureau of Public Information While Italy's efforts were not confined to the Austrian front, her contribution to the Allied success was greater here than in the other places where her troops fought the battle for civilization. Her financial and industrial efforts have been equal to her military effort, and in all these directions Italy has not lagged behind her allies. That the nature and extent of these efforts may be better known by the American public, I wish to review these briefly.

In considering Italy's military contributions, let me emphasize the fact that her soldiers have not confined their fighting to their own soil. Like those of her allies, they have gone far afield. They contributed largely to the glorious victory on the Balkan front. A large contingent in France first gave powerful aid in the defence of Rheims, then took part in the advance of the Allied forces.

Italy Had 5,500,000 Under Arms.

Since the beginning of the war Italy has called to the colors little less than 5,500,000 men and has suffered a loss of almost 1,500,000 of them. Of that loss nearly 250,000 died in battle and 100,000 from disease. Over 550,000 are totally incapacitated, either by blindness, loss of limb or tuberculosis. At the present moment the strength of the Italian army is 4,625,000, including the class of men born in 1900, who have been called to the colors recently. It may be said then, that the nation's manpower has suffered a permanent loss of nearly a million.

But, serious as is this loss, Italy has inflicted an even greater punishment upon the foe. In Austrian prisoners alone she has taken approximately a million. The Austrian loss in killed and wounded is, of course, unknown to us, but even the most conservative estimates make it far greater than ours. In the June offensive on the Piave alone over 200,000 Austrian dead were left on the field.

Fighting Under Extreme Difficulties.

Aside from their achievements in other theatres of the war, Italy's soldiers have fought through fifteen furious offensives on the Isonzo and the Piave, inflicting terrible losses on the foe in each. These campaigns were carried on in mountainous regions and under rigorous weather conditions that taxed to the utmost the genius of the military engineers and the endurance of the troops. The foe, when hostilities opened, was entrenched in carefully prepared and seemingly impregnable positions, backed by a network of military roads and railroads. On the Italian side were deep gorges, unscalable cliffs, almost impassable glaciers, passes filled with snow and commanded by Austrian guns. There were no suitable roads or bridges. The surmounting of these difficulties has challenged the admiration of the engineering world.

More than 2,500 miles of roads have been constructed on the mountains of Italy and of Albania, and 1,000 miles of aerial cable railroads (Teleferiche) have been built to carry food, ammunition and guns over deep ravines.

Economic Difficulties.

The magnitude of this military effort can be fully appreciated only when one takes into consideration the economic structure of the nation and the nature and number of its population. One must remember that out of 36,000,000 inhabitants in Italy at the beginning of the war only 17,000,000 were male. This seemingly disproportion is caused by emigration, which is largely composed of male adults. Out of those 17,000,000 only 9,000,000 were adults economically productive. Consequently the subtraction of the mobilized forces has had an acute reaction on the economic life of the nation. It is estimated that on an average only 100 adults remained in each town or village to provide in each case for some 320 children below the age of fifteen.

Furthermore, the traditions of Italian family life render the work of their women an economic factor of less importance than in some other countries, though it has been utilized to the utmost and is becoming more available as old traditions give way to war's necessity.

Suffered More Than Other Fighters.

Italy got no help from colonial contingents. On the contrary, the scarcity of native troops in Italy's colonies compelled the Government to re-enforce them with troops from the mother country. Nor has help come to Italy through the co-operation of workmen of neutral or Allied countries. Italy, on the other hand, sent a large contingent of skilled workmen to France, thus allowing her to release valued elements for war. Furthermore, nearly 500,000 of our male adults residing in America gave to this nation direct contribution to her economic and military efforts.

And yet Italy, lacking labor and industrial development, lacking almost entirely coal and raw materials, has by a miracle of energy been able to create almost from nothing a powerful organization of war industries.

The very act of entering the war cut off Italy from one of the sources of supply of manufactured products. It is not necessary here to enlarge upon the well known fact that Italian markets were largely under the domination of Germany and Austria. That is a situation that is as well known to Canadians as it is and was distasteful to Italians. And it might be said in passing that it is a situation that must be guarded against by Allied co-operation and sympathetic economic relationship now that peace has come.

The first national loan yielded about $200,000,000, and it seemed a great struggle, but the one in October, 1917, yielded about $1,200,000,000.

It must be remembered, too, that labor shortage has meant a food shortage. It has established a vicious circle. Our fighters and industrial workers have accomplished their work while forced to endure a regime of restricted diet that has meant real and continuous suffering such as probably is not to be found anywhere among the other belligerent peoples.

THE WEEKLY SERMON

The voice of thy brother's blood crieth unto me from the ground.—Genesis, iv., 10.

For four years the souls of men have been on trial. Potencies of heroism splendid and unsuspected have been revealed. Victory is a more acid test of soul fibre than adversity. Are we stalwart enough to resist the surge of sentimentalism and stand four square to the demand of righteousness? Eternal right and unspeakable wrong have been battling for the mastery of mankind.

Germany's Motto

Bismarck formulated the vitalizing principle of German nationality when he proclaimed that the founders of governments was not the voice of the people but "blood and iron." This philosophy of the tiger has borne fruit after its kind. The Teutonic nations launched a carnival of ferocity. They chose their own time for war, stopped at no barrier of either law or mercy, swept a whole continent within the tide of blood—not the flood of soldiers only but the blood of women and children also and of the helpless poor. Against this assault of the rights of man no German protest was uttered. Leaders of thought and teachers of religion elaborated defences for its most abhorrent villanies. The common people glorier in them. The Lusitania was sunk and a medal was struck and the school children given a holiday. Nurse Cavell was judicially murdered and her executioner lamented that he had not "three or four old English women to shoot." Relief ships and hospitals were bombed and the Red Cross was used as a cloak for murderous plotters who were accredited diplomats to neutral nations. Motherhood was made a horror in the war song, and the ethics of the barnyard were substituted for the sanctities of the home as a domestic policy. These things were not the excesses due to the exceptional conditions of war but the normal products of be Prussian Kultur.

The German government has changed its clothes. It has doffed the war helmet and donned the liberty cap. Has it changed its heart? The men who are at its head voted for the war, participated in its conduct, defended and applauded its method until the hour of doom sounded, and before they are given a voice in the counsels of peace or a place in the family of nations let them prove that they have not organized a form of rule which will enable a liberalized Germany to evade responsibility for the crimes of imperialized Germany.

A chief problem of the Peace Conference is not geographical, the running of frontier lines upon the map; nor commercial, the establishing of equitable trade relations among the nations; nor diplomatic, the adjusting of political balances of power; but it is ethical, the demonstration to the vanquished that they have not merely been overthrown by superior military force but are overwhelmed by a self-evoked spiritual catastrophe, that the principles which they avowed and for which they fought are an abomination to the civilized world, that "every pathway that is stained with the blood of their own brothers leads to the wilderness," that reparation for the wrongs which they have wreaked cannot be made by the payment of money and the cession of territory, and that until they avow penitence for the evil they have wrought and bring forth fruits meet for repentance the penalty is moral isolation.

Keep Faith With Our Dead

Only thus can Germany be regenerated. Only thus can a true brotherhood of the nations be established. Only thus can the "federation of the world" be realized. Only thus can the cry of blood be hushed which rises from ravaged Belgium, defiled France, desolated Serbia, martyred Armenia and decimated Britain. Only thus can we keep faith with our dead.—Rev. Howard Duffield.

HOW I PRUNE MY FRUIT TREES

By E. I. Farrington.

I have always been obliged to economise on labor and so have had to disobey many of the rules laid down by expert horticulturists on the proper method and time of pruning my fruit trees.

Undoubtedly March and April are the best pruning months, but I am obliged to do the work when opportunity offers. Usually I find more time in the early and middle winter months than I do just preceding the rush of spring work. I therefore take advantage of any fine days to trim and prune my orchard.

In this climate it is desirable to keep the heads of the bearing trees open to admit the sunlight freely. This aim I purposely keep in mind all the time I am at work upon the trees. Wherever I find limbs that cross and rub each other I first remove one or both of such limbs. Dead wood and branches that show signs of blight are also taken out at the first cutting. Two other types of branches are undesirable; the first of these is the shoots that stick up straight in the air, and the other is parallel limbs. As many of such branches are taken out as the tree ought to have removed.

This brings up another matter wherein my practice differs from that of many of my neighbors. They usually permit their trees to go unpruned for a number of seasons and then they take out a very large quantity of wood at a single pruning. My practice is quite the opposite; I do some pruning in each tree every year. I think this practice is less likely to throw the trees out of balance and discourage fruit bearing until the trees can recover. I have a few old trees, however, that were in bad shape and with these I did some heavy trimming with the idea of getting them back into bearing condition. This resulted in the growth of a considerable number of water sprouts and these have been kept down each season since, we did heavy pruning. My own experience and what I have heard other fruit growers say, lead me to think that this is a good program to follow with the old trees as the heavy cutting starts a new vigorous growth which is kept under control by subsequent annual pruning.

In common with most careful fruit growers I make the cuts as nearly parallel with the trunk or main branch of the tree as possible. Where a large limb is removed I first saw it off some distance from the trunk, making an under cut so as to prevent the stripping of the bark when the limb falls. The remaining stub is afterwards severed by making a parallel cut as stated above.

There has been a great deal of argument among us farmers as to the advantage of painting the wounds. I took occasion to look this point up as carefully as I could and found that the practice was a questionable one to follow. A bulletin from the New York Experiment Station at Geneva gives some interesting conclusions from experiments conducted there. Many materials, including white lead, white zinc, yellow ochre, coal tar, shellac and carbolineum, were used in those experiments, but not a single one was found to be of any benefit. In every case untreated wounds made as quick recovery as did those that were treated. In most instances the supposedly helpful covering injured the exposed tissues and actually retarded healing. Moreover, wounds kept from drying by some of these protective materials healed no more rapidly than those exposed to the air. Of the different materials mentioned above, white lead, white zinc and shellac caused little or no injury, but they did no good. It was decided that no gain whatever accrued from the treating of small wounds and that there was a possible advantage in the case of larger wounds in keeping out disease germs until the healing had been completed.

As I have a great deal of faith in the work of this station, I naturally accepted this advice and discontinued the painting of the wounds when pruning. The saving in labor was certainly worth while. I believe that many of the bad spots in trees caused from decays starting where cuts have been made could have been avoided if more care had been taken in making smooth clean cuts. This is the reason why I use sharp tools.

We occasionally have a winter when the young trees are damaged by the mice and rabbits girdling the trunks. This damage occurs when these animals are cut off from their usual food supplies by heavy snows and ice. I cover such wounds first with a coating of grafting wax and then some clay over which I wrap a piece of cloth to keep the material in place. While many fruit growers mention bridge grafting where trees have been completely girdled, I have not found the practice at all satisfactory, as it is very seldom that a tree will survive a mound of this character.

It Pays To Work.

Would you work industriously if you didn't have to? Would you work as earnestly and diligently as you do now?

Maybe not, indeed the chances are that you would knock off as soon as you learned that you didn't have to work any more if you didn't want to.

And of what use would you then be to the world, to society, to yourself?

Time would soon begin to hang heavily, and you would turn hither and thither in search of rest and entertainment.

Just here is where Satan would get his work in. He knows his business, and he attends to it. He wouldn't allow you to want and wait very long, but would take you into some high place and show you just lots of nice things, any or all of which you could have.

And with that suavity of manner, and clever palaver for which he is so famous, he would squint your conscience, and lead you to think that you had been wrong in your notions as to what was right and proper for you to do.

Busy men and women—busy about matters and things necessary to the comfort and welfare of themselves, their families, and their neighbors—rarely go wrong. And it is among these that you find the happiest, most contented, most useful people.

Fish Meal as a Live Stock Food.

In these days anything that will increase the available quantities of cattle food without decreasing the quality is of immense value. Experiments have proven that this is possible with fish meal, a food stuff that as yet is little known in this country but which is used extensively in Europe. Fish meal should not be confounded with "fish scrap," "guano", or "pomace" or other forms of fish by-products used as fertilizers. The fish meal used is more carefully treated and includes, or should include, only fresh, sound fish, or fish offal. The value of fish meal as a cattle food is explicitly set forth in four-page pamphlet No. 17, issued by the Department of Agriculture, Ottawa, and which can be had free on application to the Publications Branch. Results of experiments made at the Central Experimental Farm show that fish meal, where available, is a suitable concentrate for cattle, sheep and for hogs; that fish meal contains 55% to 60% of protein, and over 15% phosphate of lime; that if of good quality and properly fed with other meals and with roughages, it is palatable, wholesome, and a good feed for young growing stock and also for milk production; and that if given a fair trial and used in proper proportions it should become one of the most popular and profitable protein supplements for swine feeding.

Instead of boiling beetroots, roast them in the oven. The flavor will be much improved.

MANY AIRMEN WILL QUIT

Royal Air Force Reduced Greatly in Near Future.

Of the six hundred officers of the R.A.F. who are at present on duty in Canada, it is possible that less than one hundred will remain on duty, and that in the near future the remainder will leave the corps to resume civil life. Flying is now optional for cadets, and those who have finished their course are sent home on indefinite leave. This state, however, could not last much longer, as the number of cadets is rapidly increasing.

The mechanics are in a different position. Under the terms of agreement they may be held until six months after the end of the war. So long as a number of pilots continue flying it is necessary to maintain a complete staff of mechanics. "Apparently the Air Council in England is not yet in a position to issue orders for demobilization," said an officer. Possibility of an aerial mail service in Canada is being discussed. The office staff will be the last to demobilize.

A New Motor Fuel

The scarcity and high cost of gasoline and the restrictions on its use for private purposes in many European countries have led to experiments with several substitutes. In England they are using coal gas, but the containers for it are awkward in appearance and given to leaking. In Norway acetylene gas has been tried with some success. A Norwegian captain has adapted it to motor boat propulsion; his invention is said to be a decided improvement over similar devices. Water drops through a tube on the carbide, and the gas that forms is led to the carburetor, where it is purified and driven to the motor. The cost averages twenty-once cents a horse-power hour, which is not cheap; but over there price no longer enters into the matter. The demand for the new device is already considerable, for the company that manufactures it has several thousand orders. For the time being the new system can be adapted only to benzine motors, but the inventor is working on an improvement that will make it possible to use it in connection with petroleum motors too.

Can Tell Germans By Their Walk.

German prisoners were at work in the distance, building a light railway under military supervision. It was impossible to distinguish their costumes, so far away, from the British, but "I can identify them by their walk," said an onlooker. And he was right. There is something of the modified goose step in the tread of a German soldier. Perhaps the heavy military top boots are responsible At any rate, as the men came down the line with trucks every one who had been nominated as German proved to be a captive soldier.

WALKERTON

Some county councillors had a laugh at the expense of a well-known Irish member of our county parliament here, who by the way, likes a joke pretty well himself. He had arranged with a deputation of his ratepayers to come in on Thursday and wait on the council when the good roads schedule was being discussed. Then he discovered that Thursday would be altogether too late, and there was nothing to do but to call each and every member of the deputation up on the phone an tell them to come Wednesday instead. It was some job, but he went down to his hotel and tackled it. After he had been at the phone half an hour another councillor saw a chance for a joke and got on a private phone in another part of the house. "Hello, Steve," said the wag, "this is central office. Your bill is already $8.50. How much longer are you going to talk?" Shades of St. Patrick! Eight dollars and a half! Our Irish friend waxed indignant at the prospect of having such a crimp put in his roll, and could be seen shaking his fist at the phone. The chap at the other phone held up his end fine, while the crowd who could hear both ends of the conversation rocked with mirth. —Telescope.

A joint meeting of the Bruce and Grey Publishers' Association was held in the Town Hall, Walkerton, on Thursday last, at which the following scribes were present: J. J. Hunter of the Kincardine Reporter, E. Roy Sayles of the Port Elgin Times, D. McKenzie of the Paisley Advocate, E. E. Shortt of the Southampton Beacon, Geo. H. Mitchell of the Hanover Post, Wm. Irwin of the Durham Chronicle, C. Ramage of the Durham Review, Mr. Routledge of the Markdale Standard, L. A. Redy of the Walkerton Telescope, and J. L. Wesley of the Bruce Herald and Times. That there are many problems that are worrying the publishers was evidenced by the scantily clothed, thread-bare appearance of some of these molders of public opinion, and while the boys weren't just barbed like hedges, yet they can't rush up those old suits much more without running the risk of everything being rent asunder like a divorce suit. The manufacturers of raw paper are holding the publishers up by the throat, and after they get through paying paper bills many haven't enough to make decent Sunday school collection for their kids. Hence the outlook for any of them becoming rich "money bags" is so compromising that all of them would no doubt sell their chances for a good smoke. In fact some of them are commencing to amass about the only kind of silver they will ever have—silvery locks. Henry Ford, who wants to die poor, has, after looking about for the quickest method to accomplish this purpose, decided to publish a weekly paper. On the principle that misery likes company, the members of the Grey Press Association met with the Bruce publishers in their annual weep last week.

The December Court Sessions, which were scheduled to be held before Judge Klein and a jury at Walkerton on Tuesday last, were called off, owing to the only case on the docket, that of McKay vs. Bland, being settled out of court. Of 48 jurors summoned, the court officials were able to advise 38 by phone and otherwise not to attend, leaving only ten that could not be reached in time, and who arrived here as per schedule ready to do their duty without fear or favor. This ten got their mileage and one day's pay, but what the officials were able to save in stopping the others from getting next to the cash was a good-sized item. The action, which was to have been tried, was the outgrowth of some $300 hush money, which the plaintiff, Norman A. McKay, a farmer of Kincardine Tp., alleges to have paid Bland to settle an offence McKay had committed by feeding a couple of old horses he had killed to his hogs, without first boiling the meat. The medical health officer of the township being sick and, it seems practically dying, Bland claims to have been instructed to investigate this affair. He is alleged to have informed McKay that he would be liable to $5000 if he took the hogs to an abattoir, and advised him to kill and not market them. As McKay felt that his offence was a serious one he sought to get it settled quietly, and after seeing Bland several times with a view to getting a settlement effected, paid him $300 for this purpose. Afterwards becoming suspicious that he had been stung McKay interviewed Lawyer Klein at Walkerton, and an action was undertaken for the recovery of the money. Bland admitted getting the cash, and insisted that he had been appointed to look into the matter, and that McKay had come and offered him the $300 to keep it quiet and that he foolishly took it. Bland, on his examination here, said he had paid this money over to another party, but would not say who it was. It was finally settled by McKay being paid back his money and interest on it from the time he had paid it over and $200 damages and costs.—Herald and Times.

Information Wanted

FOR the purpose of compiling a complete record and honor roll for Bruce Tp., the parents or friends of all Bruce Tp. boys serving in the overseas forces during this war are requested to furnish the following data: Name of soldier, parents' name, date of joining, whether by enlistment or under the M. S. Act, if killed in action, wounded or gassed, date and battle, number of battalion, residence when joining; has he received any special decoration, if so, what? served in what force—infantry, artillery, navy or aviation.

J. G. McKAY, Clerk Bruce Tp.
North Bruce R. R. No. 1
Dec. 16, 1918.

He returned on Monday accompanied by Mrs. Tufford, who had been spending some weeks with her parents.

NO MORE NERVOUS HEADACHES

Since the Trial "FRUIT-A-TIVES", The Famous Fruit-Medicine.

MISS ANNIE WARD

112 Hazen St., St. John, N.B.

"It is with pleasure that I write to tell you of the great benefit I received from the use of your medicine, 'Fruit-a-tives'. I was a great sufferer for many years from *Nervous Headaches and Constipation*. I tried everything, consulted doctors; but nothing seemed to help me until I tried 'Fruit-a-tives'.

After I had taken several boxes, I was completely relieved of these troubles and have been unusually well ever since."

Miss ANNIE WARD.

'Fruit-a-tives' is fresh fruit juices, concentrated and increased in strength, combined with finest tonics, and is a positive and reliable remedy for Headaches and Constipation.

50c. a box, 6 for $2.50, trial size 25c. At all dealers or Fruit-a-tives Limited, Ottawa.

CANTIRE

Mr. D. A. McIntyre in this week attending the annual meeting of the Farmers Co-operative Co. and the U. F. O. which meets in Toronto, as a delegate from Cantire Club.

The homes of James Muir, Peter McAllister and Stewart Muir have been visited by the flu, and neighbors have had to turn in and do the chores.

Announcements of the wedding of Miss Henrietta McIntyre, of Regina, to Mr. S. F. Dunlop, B.S.A., have been received by friends here. Miss McIntyre was well and favorably known in this community. The Cantire scribe joins in wishing Mr. and Mrs. Dunlop a long, prosperous voyage over life's sea.

This community was shocked on Thursday last on learning that Manny Becker, of Chesley, had succumbed to an attack of pneumonia following influenza. The deceased had been for a number of years cream gatherer for the Chesley creamery, and was very popular on all the routes. Manny's parents live in Bentinck Tp., but for many seasons he has been in the employ of Lackner & Son. A brother has been killed in France a few months ago, and it was only on account of being physically unfit that he was unable to take part in the great struggle for world freedom.

In these times of labor scarcity farmers are becoming accustomed to making some kind of a shift in the hope that it will be better next year. For some time back they have been scratching their heads and wondering how they are going to get their blacksmithing done at the present rate. It looks like a tie-up with every second smiddy going into garage work, and no new men learning the trade, and the ones who are nobly doing their best to meet the demands on them shortening their lives by overwork. It looks as though the farmer would have to do more of his own tinkering. In pioneer days when it wasn't convenient to go to town the handy man who had some knowledge of tools was a very valuable asset to any community. It is said of one of Elderslie's old timers who had become somewhat of an expert in these lines that, to use his own words, he could do anything but put an eye in an ox. Whether a worthy successor can be found for this man in the present day we do not know, but it looks as though the day of the handy man is coming again.

GLAMIS

Miss Laura Cunningham, who spent a month visiting friends in Hamilton, London, Toronto, Kitchener, returned on Thursday.

Mrs. McSween, who was so seriously ill with influenza, was taken to Walkerton hospital on Wednesday night and the reports received every day are encouraging.

Rev. J. E. McCauley, of Goderich, spent a few days with friends on the 10th of Kincardine.

Mr. and Mrs. Thos. Montgomery, of Markdale, are visiting the latter's parents, Mr. and Mrs. Kirkstown. They have purchased the old Sinclair farm near Tiverton from Mr. John McLean who bought it a few years ago.

Rev. Mr. King, of Toronto, occupied the pulpit of the Baptist church on Sunday. He will preach next Sunday also.

Mrs. Maclntyre and daughter Sara returned on Monday from Toronto, where they spent a month visiting friends.

Word was received of the death on Friday last of the Rev. J. Campbell Tibb, who died at the residence of his brother in Toronto. Mrs. Tibb predeceased him a short time ago. Rev. Mr. Tibb was well known here, having been pastor of St. Paul's church a few years ago. He was in his 68th year.

Mr. L. Tufford, of Beamsville, spent the week end at W. J. McKeeman's

THE STORE OF QUALITY

"Peace on Earth, Good Will to Men."

AFTER four years of bloody war the Christmas bells will again ring out the glad tidings as of yore. Christmas of 1918 will go down in history's pages as the one after the war. The spirit of thanksgiving and giving will be greater than ever before.

Gifts Worth Giving. Articles Beautiful and Useful. Sure to be Appreciated

NEW DEMOBILIZATION PLAN

Men Returned for Discharge Will Stay at Depots Till Discharged

New demobilization arrangements have about been completed by the Dominion authorities whereby men returned to Canada for discharge will be held two or three days at their depot headquarters before they are permitted to return home, will have their papers all made out and will be given their discharges before they leave the depot. This will make it unnecessary for them to return to London. At the present these men are given leave to visit their homes for two weeks and then return to the depots for discharge and in this way a considerable delay takes place in their

—The fish hatchery has been a busy spot for the last couple of weeks. Supt. McDougall secured about four million trout eggs from Wiarton to supplement the eight million secured here, but owing to the water being warmer than what was best suited for the spawn a large number, some two million eggs, were spoiled, and a large staff was necessary to pick out the spoiled eggs. The water is now about the right temperature and fewer eggs are being spoiled.—Southampton Bereon.

Teachers Home

Miss Ethel Kennedy from Orillia, Miss Mary Kerr from Waterdown, Miss Prudence Kerr from Dutton, Misses Mildred Johnston and Jennie McLennan from Toronto, Miss Elizabeth McKennan from Clifford, Miss Ethel Barnett from Port Elgin.

Died in Alberta

The sad news comes from the west of the death of Mrs. W. H. D. Ariss, a former Paisley girl who had many friends here. The deceased was the only daughter of Mr. and Mrs. Alex Leask, now of Calgary. She had been married about three years and had no children. Heart trouble was the cause of death. Besides her parents Mrs. Ariss is survived by four brothers, who are all in the armies overseas.

Corp. Jas. Patterson Returned

Another Paisley soldier to arrive home on Monday night was Corp. Jas. Patterson, who went overseas as a sergeant in the 160th. In England he was transferred to the 1st Engineers, and he crossed to France with that corps this year. At the end of six months active service he was taken ill with pleurisy, and had been in hospital from Aug. 1st until very shortly before hostilities ceased. Corp. Patterson was in the livery business here when the call for men came.

Woman as School Trustee

Mrs. Wm. Allen, who was elected as a member of the Moosejaw School Board this month, is very well known here, and was visiting friends in Paisley and vicinity last summer, while down from the west as representative to the Women's Council at Ottawa. Mrs. Allen was endorsed by the trades and labor council, and polled the largest individual vote ever received by any municipal candidate in that city at any time.

Male Teacher as Principal

Paisley School Board have engaged Mr. Kehoe, of Stratford, as principal for the ensuing year, Miss Blacklock having decided not to remain longer than the one term. Mr. Kehoe has all the necessary qualifications, is a teacher of some experience, is very highly recommended as a teacher and a man, and his record as a student shows him to be of marked ability. Miss Blacklock won golden opinions for her excellent work while at the head of the staff, and the Board would have been glad to retain her, had she been willing to continue to fill the position.

Received His Discharge

Pte. Norman McLeod, who arrived home from overseas about six months ago, but has been under treatment in Toronto hospitals, arrived back from the city last week in civilian clothes, having received his discharge. It will be remembered that Norman lost his right arm in France. The stump has had to be so closely trimmed by subsequent operations that it will be impossible for him to make use of an artificial limb at present, but when the wound has been toughened it is expected that the substitute limb can be attached.

Two Young Women Die of the Flu

We have to record this week two very sad deaths, both being young women who contracted influenza while absent from home in the same city. Miss Jennie E. May Carr, the 17-year-old daughter of Mr. Alex Carr, who recently moved from the 14th con. of Greenock to Walkerton, had been employed at the O.A.C. in Guelph for about two years. A week ago Saturday she came home sick with the prevailing malady, an attack of pneumonia following, to which she succumbed on Sunday night. The funeral took place on Monday, burial being made in the family plot in Purdy's cemetery. The deceased is very highly spoken of by her friends, and will be mourned by all who knew her. Another family similarly bereaved is that of Mr. and Mrs. Robt. Mewhinney, of 6th Bruce. Their eldest daughter, Marie, went to Guelph on a visit a few days ago, contracted the flu and died there from pneumonia on Monday evening. The remains were brought up on Tuesday noon train, and the funeral took place from the station to Lovat cemetery.

CHRISTMAS, 1918

The President, Directors and Officers of

THE ROYAL BANK OF CANADA

desire to offer to the Customers and Friends of the Bank Best Wishes for a Happy Christmas and a Prosperous New Year.

Pte. Norval Kyle, M.M., Is Home

After being in service for nearly three years, and having been in the fighting line for sixteen months, Pte. Norval Kyle, son of Mrs. F. Purdy, arrived home on Monday night. Norval enlisted with the 61st infantry battalion, Winnipeg, and went overseas in March, 1916. At Lens, in June, 1917, he won the military medal for distinguished service, when he was filling a post as battalion runner or scout guide, taking parties in to the place of operations and delivering messages, and the signal honor was bestowed upon him for making several hazardous trips back with messages when the attack was on. On Oct. 27th, 1917, he was wounded at Passchendaele, a machine gun bullet penetrating his body, entering the right upper breast and passing out just below the shoulder blade. Since then he has been in England, after recovering being on the training staff. He had been promoted to sergeant, but reverted to rank again to get on the reserve just shortly before the armistice was declared. Norval was a bank clerk before enlisting, having been on the Standard staff at several branches.

Municipal Affairs

Next Monday is nomination day, yet there is very little stir in municipal matters either in town or in the adjacent townships. Whether it is due to unseasonably mild weather lulling the electorate into a non-contentious state of mind, or whether they apply the new "war-is-over" attitude to home politics, or whether it is abject indifference to the minor affairs of state, it is difficult to define, but there is little interest being manifested by the ratepayers as to the selection of councils for 1919. It is quite possible that the offices in some municipalities may have to go begging for men to fill them instead of a large field of candidates being out hustling for votes. In Paisley there is no sound of a melee. The present council are not gripping tight to the office railings, neither are there any aspirants clamoring for the honors. In Elderslie about half the people met with say there will be an election likely, while others do not think so. The parties who most probably would be candidates are not doing any big push yet. Something may happen at the nomination meeting to wake up the electorate. In Saugeen there is bound to be a change in the receivship, as Mr. Gilbert Christie has announced that he is retiring. Bruce township may have an all-round contest, or may not. There is nothing definite known as to Reeve Johnson's intentions. It is rumored that he may stay in the field in the hope that the wardenship might come to him soon. As he is chairman of the road and bridge committee, there may be good grounds for this hope. In the event of his being a candidate again, deputy-reeve Dobson may challenge the way. For deputy-reeve there are at least two aspiring, viz., Councillors Baker and McNeill. Three new men mentioned for councillors are S. Haney, John Cumming and Mord. Avis. Greenock will mix it up generally, according to rumors. Reeve Phelan is again to be opposed by Mr. McNab, and there will be new blood out for council. Brant nomination may be a peace occassion, or an armistice for a year.

MRS. PETER SMART

Mrs. Peter Smart, a good old pioneer mother, passed to her eternal rest on Dec. 11th, 1918. Deceased, who maiden name was Mary Ann Kelt, was born in November, 1844, near Brechin, in Forfarshire, Scotland. At the age of nine she came with her parents to Canada and they settled near Hamilton. A year later they moved to a farm on the 4th con. of Minto, Wellington County. She was married in 1866 to Peter Smart, and they lived for 16 years in Minto Tp. Thirty-three years ago they moved to the township Brant and Elderslie, and to Chesley in October this year. Deceased leaves a family of five sons and seven daughters as follows:—Charles and Mrs. M. A. Brattland, of Perdue, Sask.; James, of Regina; Mrs. Chas. Graham, of Vanscoy, Sask.; Mrs. Jas. Rae, of 14th con. Brant; John, of Paisley; Mrs. John McIntyre, of 4th con. Elderslie; Wm. on the old homestead; Jean, Bessie and Elizabeth and Gordon, at home. Besides she is survived by two sisters Mrs. Henderson of Guelph, and Mrs. John Prain of Harriston. The late Mrs. Smart had been a member of Geneva church for many years, and was always in her place in the services when able to attend, and she was a woman of many beautiful traits of character, among which were her hospitality and interest in the happiness of others. Truly a good mother has been called home, leaving behind her the record of a life well lived for God and humanity.—Enterprise.

Soils and Crops

By Agronomist.

This Department is for the use of our farm readers who want the advice of an expert on any question regarding soil, seed, crops, etc. If your question is of sufficient general interest, it will be answered through this column. If stamped and addressed envelope is enclosed with your letter, a complete answer will be mailed to you. Address Agronomist, care of Wilson Publishing Co., Ltd., 73 Adelaide St. W., Toronto.

Selection For Eggs.

—The selection of the stock for egg production this season is a problem that requires careful consideration. In the cities and towns of Canada there have been undoubtedly a great many more chickens raised than ever before, but in many of the country districts conditions are the direct reverse of this. Many farmers who in former years raised from two to three hundred chickens, this year, on account of the scarcity and high price of feed, have raised practically none, so that despite the increased production in the urban localities, there appears to be a decided shortage in the pullet crop.

The extremely high prices that are ruling for all meat foods are causing and will continue to cause people to use more eggs. The result of this increased demand for eggs will be that more and more people will want to secure pullets for winter egg production, and there will be a great temptation to keep over anything and everything that looks like a pullet.

The need to keep up production is very apparent—so apparent in fact that not one pullet that is capable of profitable production should be slaughtered. At the same time it would be well to remember that word, profitable. There will be undoubtedly a strong demand for all the new laid eggs that can be produced, but that is no reason why poultrymen should produce eggs if they cost more than they will bring.

Unless careful culling is followed, there will not be profitable production. To ensure the most profitable production, birds must lay in the winter, pullets must be properly matured before cold weather sets in. This means that chicks of the general purpose breeds such as Rocks and Wyandottes should be hatched not later than May th- fifteenth and Leghorns and similar breeds not later than June the first, and only bred-to-lay strains should be used.

A chick which has had a set-back will never make as good a maiture bird as one that has not, so that it is not only important to get the chicks hatched early but also to push them right along from the start and get them into winter quarters early.

Cull the hens closely. Do not keep over a lot of old wasters. It is rarely that a hen over two years old—especially in the heavier breeds—will produce eggs profitably.

In order to lay well, a bird must have a sound body. It must be vigorous and healthy. This is indicated by bright, clear eyes, a well-set body, a comparatively active disposition and a good circulation.

A laying hen uses up the surplus fat in the body. Especially, it removes the fat from the skin so that a bird of a yellow skinned variety that has been laying heavily will have laid almost all the color out of her system. These color changes occur in the following order. First, the color goes out of the skin around the vent, so that it may be taken as a pretty safe guide that a bird with a yellow vent is not laying.

The eye-rings, that is the inner edges of the eyelids, bleach out a trifle more slowly than the vent. The earlobes of white-lobed birds bleach out a little more slowly than the eye-ring, so that a bleached lobe means a little heavier or longer production than a bleached vent or eye-ring.

The color goes out of the beak beginning at the base and gradually disappears until it finally leaves the nib. The lower mandible bleaches faster than the upper but may be used as a guide when the upper is obscured by horn or black.

The shanks are the slowest to bleach out and hence indicate a much longer period of production than do the other parts.

After the hen ceases to lay the color comes back in the same order, first to the vent, last to the shanks.

A hen that has been laying has a large, moist, dilated vent, and the whole abdomen is so dilated that the pelvic bones are wide spread and the keel is forced down away from the pelvic arches so as to give large capacity. Thin, pliable skin as well as pliability of the abdominal parts are indicative of heavy production.

Cull the flock closely and early so as to get them well settled before winter and feed a good, generous ration. The following ration and method of feeding have given satisfaction:

Scratch feed composed of two parts corn, one part feed wheat and one part oats, is fed in a deep litter morning and brooding: Dry mash of two parts bran, two parts shorts, two parts cornmeal, half part gluten, half part oil cake and one part fine beefscrap in hoppers all the time. Green feed: Roots, mangels preferred, or sprouted oats at noon; also cut green cut bone in the proportion of a half ounce per hen per day or moist mash, or these may be fed alternately.

When sour milk is available a supply is kept constantly before the flock and the green bone may be omitted. Grit, oyster shell, charcoal and beefscrap are also kept in hoppers, and a supply of water is at hand.

The Period of Oestrum During Which To Breed Sows.

The period of oestrum or heat in the sow appears in the neighborhood of every twenty-one days, with the normal animal in good breeding condition. The sow remains in heat from one to five days. The effect of delaying the boar's services until the period of heat is almost over, has long been a subject for discussion with the hog-man. Such practice, it is claimed, invariably results in large of litters than would be the case were the sow bred during the first day. As a physiological explanation of the foregoing, it is claimed that during the latter part of the period a much larger number of ova are presented for fertilization by the male element, with the resultant increase in the size of the embryo litter.

With horses and cattle, the generally accepted practice, particularly with the former class of stock, is to delay breeding until the period is well advanced. Likelihood of conception would thereby seem to be increased, due, no doubt, to the fact that the female functions have had time to take place properly, that the female is usually more receptive to male attention and allowing a reasonable length of time to elapse after the usual advertisement of oestrum.

With the sow the same probability of conception by delayed breeding is heightened, for the foregoing reason. That a larger litter should be expected, is by no means so sure, the claims of many expert breeders to the contrary. The size, vigor, and numbers of the litter may be far more certainly controlled by the condition of the boar and sow at the time of breeding. Such, at least, would be indicated by the results noted from the large herd of breed sows kept at the Experimental Farm at Ottawa. Here, the general practice is to breed on the second day, using, where necessary, the breeding crate. During the winter of 1917-18, however, several groups of sows were bred, by allowing a boar to run with each lot. Besides obviating much labor in hand-breeding reluctant individuals and reducing to a minimum the number of "missed sows"—the size and vigor of the resultant litters left little to be desired.

In brief, to the man who keeps only a few sows, and who makes use of a neighboring boar, breed on the second day, depending, of course, on the sow's individual peculiarities. See that she is in rising condition—not fat, not thin, but in fair flesh and gaining every day. If the sows have been on fall grass, use a little grain before breeding. If the sows have been irregular in heat, this will tend to bring them in for breeding regularly and within a few days of one another. Use judgment in breeding the weaned sow. If she is much run down from nursing her litter and bred in this condition a few days after weaning, a disappointing second litter will in most cases result.

If no boar is kept, try to select the services of one, not too heavily used, reasonably well fed and shown all, well-exercised. The thin boar, or the over-fat individual, frequently are both getters of small litters, no matter when they serve the sow.

To the man who allows his boar to run with the sows, good results may be expected, even if the boar does not show much scientific knowledge, provided the herd is well-exercised, housed in dry quarters and sufficiently well fed to ensure gain in weight and provided further that the sow is removed, temporarily, from the group as soon as properly served. Emphasis, too, must not be neglected with reference to the desirable effect on breeding stock of green feed in summer, and succulent foods, roots closer, hay or ensilage in winter.

Poultry

Ten rules for success:—

1.—Improve your poultry stock.

2.—Keep one of the general-purpose breeds, such as the Plymouth Rock, Wyandottes, Orpington, or Rhode Island Red.

3.—Provide one clean, dry, vermin-free nest for every four or five hens.

4.—Conclude all hatching by May 15 and sell or confine male birds during the remainder of the summer.

5.—Gather eggs once daily during ordinary time, and twice daily during hot or rainy weather.

6.—In summer, place eggs as soon as gathered in a cool, dry room.

7.—Use all small and dirty eggs at home.

8.—Market eggs frequently, twice a week, if possible, during the summer.

9.—In taking eggs to market, protect them from the sun's rays.

10.—In selling, insist that the transaction be on a "loss-off" basis; for, if care has been given the eggs, this system will yield money to the producer.

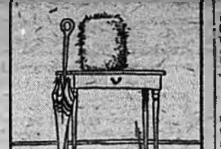
Care of House Plants.

As a rule house plants suffer most for want of light where the temperature is high. As far as possible flowering plants should have an eastern or southern window.

Many plants will remain in a semi-dormant state in a temperature of 40 degrees for months, with but little light in locations where they would soon die if the temperature was raised to 68 or 70 degrees.

Palms, rubber plants, aspidistras and other plants kept standing in the middle of rooms and in halls, entirely out of direct light, no matter how carefully cared for, soon begin to show unhealthy signs and unless placed in the light nothing will save them.

Excess water must be removed from saucers, otherwise the soil will become sour and the plants die. All smooth leaved plants should be sponged to remove the dust and allow the foliage to "breathe."



The receptive mind is one of the best gifts of God.—R. B. Ince.

Ill Health Spells Poverty and Misery: We Must Prevent It.

Helen Johnson Keyes

Is there something mistaken about the methods we use in teaching our boys and girls health and hygiene? According to the statutes the subject must form part of the school curriculum, yet how little is really learned?

The truth is, very few children will kindle to enthusiasm over such subjects as, "how to be well," "what are germs?" "clean milk," or "the unspeakable fly." We must attack the subject in a different way, if we want to get their interest.

Instead of lecturing to them on "How to be Well," why not show them that if they want to be good-looking, bright, and competent, they must have health; that health means popularity and power? Let them understand that fresh air is good for the complexion, that exercise gives strength and ease to the figure, that a good digestion means a clear skin, an agreeable disposition, and an active mind. After they have been made to feel that health is worth while, because it gives power, then we may tell them how air, exercise, and nutrition act on the body. We have related health and health-habits to something which interests them.

Almost any person, particularly a young girl, will resent being told that she ought to take more baths in order to be cleaner, but if she is reminded that she will be prettier for frequent bathing and if the boy is told that he will play better ball for having frequent cold showers or sponges or plunges, they will feel that it is worth while to test the suggestion. The girl's mind will leap to dreams of influence and admiration, which every normal girl desires, the boy will see himself out-stripping his mates in muscle and general capacity. And the dreams will come true: Cleanliness does produce beauty and strength and when our daughters and sons have learned that this is so, then it will be the moment to teach them why it is so, what the pores are and what they do!

Ill health spells poverty; if they want a bank account and the respect of the community, they must have the power which health confers. Why does the government, we might ask them, distribute free medicines and treatment to maintain health among animals? Because the sickness of animals means enormous loss of wealth to the nation. Loss of health among human beings means even greater loss of wealth to the nation and, in addition, great personal suffering and the humiliation of families. The reason why the government has not enforced health among them as it has among brutes is because they are self-governing creatures and are supposed to keep themselves well without government intervention.

The following very suggestive table, computed carefully by men who have studied the facts, gives in dollars the value to his country of an individual according to his age:

0- 5	$1,500
5-10	2,300
10-15	2,500
15-20	3,000
20-25	5,000
25-30	7,500
30-35	7,000
35-40	6,000
40-45	5,000
45-50	5,000
50-55	4,500
55-60	4,500
60-65	2,000
65-70	1,000
70	1,000

If a club of young people were given the task of collecting the statistics of deaths from preventable diseases in the district or county during a year and then of multiplying each age-group by the number of deaths which have occurred within it, those young people would have a new appreciation of the commercial value of health, their own importance and the importance of their neighbors to national prosperity. Health would assume a totally new significance.

A school club whose members were set the task of collecting certain health statistics among the pupils, reporting, perhaps, to a physician, would learn more about health and hygiene in one term that text books could teach them in several terms, because they would perceive the relation between well-being and success.

Suppose the club made a school census of the following facts:

(1) Children who breathe through their mouths.

(2) Children whose appearance, habits, and way of reading indicate defect in eye-sight.

(3) Children whose ears run and whose reply to questions indicate faulty hearing.

(4) Children suffering from constant toothache and indigestion.

(5) Children abnormally restless, nervous and unruly.

Suppose a table of comparative marks were made out between these and thoroughly normal children, would not the result be a new respect for health and a new idea of the importance of it in relation to study and attainments in later life?

An honor roll should be formed within this club of children who slept with open windows, brushed their teeth twice a day, took baths at least twice a week, ate less than a certain amount of candy and drank a certain amount of milk.

With the school spirit thus aroused, the homes and the community could scarcely escape the contagion of enthusiasm. The application of cleanliness to the dairy, to the stable, to refuse, would become necessary as matters of social decency and public opinion. People would demand these things of their neighbors, seeing the importance of them to their own survival in healthy prosperity. Health would be associated in the minds of the community with power and success, ill health with dirt, failure, poverty and social disfavor.

To the hard-hearted, dirt, failure and poverty might remain just repulsive or ridiculous but to the finer-spirited they would be so pitiful as to call for assistance and so, through sympathy, this element in the community would gradually be relieved and done away with. Germs would be starved because no filth would remain for them to feed upon—neither the filth of decaying teeth nor that of milk from dirty stables. Contagious diseases would be isolated, so that the loss to the community from illness should be as small as possible.

This method takes into account the way our minds are made, requiring to see the relation of what we learn to the way we live. Before the lesson becomes interesting or seizes our attention. If mothers can succeed in making sanitation, cleanliness and health, interesting to our children, they will certainly fall into line.

GOOD HEALTH QUESTION BOX

By Andrew F. Currier, M.D

Dr. Currier will answer all signed letters pertaining to Health. If your question is of general interest it will be answered through these columns. If not, it will be answered personally if stamped, addressed envelope is enclosed. Dr. Currier will not prescribe for individual cases or make diagnosis. Address Dr. Andrew F. Currier, care of Wilson Publishing Co., 73 Adelaide St. West, Toronto.

Treatment of Burns, Including the Ambrine Treatment.

The objects sought in the treatment of burns are the relief of pain, the overcoming of shock, and the restraining and limitation of reaction and of congestion and inflammation of the internal organs.

If burns are slight the principal object seems to be to protect them from the irritating effects of the air.

After being as carefully cleansed as may be possible or necessary, they should be covered with olive oil, or a mixture of linseed oil and lime water, or thickly powdered with zinc and bismuth.

Or when these substances are not available a covering of molasses, flour or white lead may be used.

It is well to spread these substances upon gauze or cheese-cloth and then cover the surface with absorbent cotton securely applied.

The fluid in blisters may be withdrawn through punctures but the skin must not be broken, if possible.

The dressings must not be renewed more frequently than is essential for cleanliness and healing and great care must be taken in removing them for the process is extremely painful and will retard healing unless done so as to avoid irritation.

To prevent extensive scarring and contraction skin grafting may be required in severe burns.

In burns resulting from the action of acids, alkalies like bismuth or bicarbonate of soda, or chalk must be applied as promptly as possible.

If an acid like carbolic acid has been swallowed, plaster scraped from the wall or flour or white of egg or milk may be used.

If the burn has been produced by caustic alkali vinegar or some other mild acid should be used as an antidote.

The diet must be extremely simple for a few days after burns have been received because the digestive organs are incompetent to do much work.

Thirst is usually intense and may be relieved with ice and water and with sedative drugs if necessary.

The bowels must be kept open and frequently this can best be done by enemata.

During the war burns were frequent and severe in connection with the barbarous and diabolical practices of the Germans.

This has led to what is known as the ambrine treatment of burns which, with its modifications has been an inestimable boon to the injured.

Ambrine treatment is described in Penhallow's Military Surgery as introduced by Dr. Berthe de Sanford. Ambrine being a secret proprietory preparation consisting of paraffine, as a base, combined with certain resins. It is of a muddy brown color and as a dressing is not friable nor elastic and forms a tough, protective layer to a burned surface. It is applied in a atomizer and is a painless dressing even on a fresh burn.

Healing under this dressing takes place quickly without contractures and with soft scars.

Sellman and Reiter whose experience in the treatment of burns in connection with the work of iron furnaces has been very extensive, found the application of ordinary melted paraffine as a dressing too painful and they were able to completely obviate this by spraying the burned surface with liquid vaseline, covering this with a film of absorbent cotton and then painting with a coat of melted paraffine.

Keen's method of treating extensive burns consists in first giving a hypodermic of morphine, then a hypodermic of salt solution and a hot rectal enema of the same with application of heat to the feet.

In half an hour, if the patient is not reacting well, he is to be placed in a hot bath of salt solution or boric acid solution without removing his clothing.

Half an hour later he is to be placed in a room at 110 degrees F., his clothing removed and such dressings applied as may be deemed suitable.

Question and Answers.

C. C. R.—I have an enlargement in the centre of my neck, but without pain. Am I developing a goitre?

Answer—I should think it probable that this was the case. Send stamped self-addressed envelope for my article on this subject.

Horse Sense

Winter Care of the Horse.

It is often claimed that the winter care of horses is much more important than at any other season of the year. In spring, summer, and fall, they are worked every day, and are fed regularly, and liberally watered. They are cleaned at regular intervals, and the labor in the open air tends to keep them healthy and vigorous. In winter when team work is not needed, the horses are often neglected, some days going without being cleaned, and perhaps going for a week or more with no more exercise than they get while being led to water. Many stables are not properly ventilated. The air is breathed over and over again, and becomes noxious in a short time. Under such care and treatment horses soon become debilitated.

A cold stable is to be shunned as much as a badly ventilated one. Horse should not be kept in a dark stable, or where they are constantly compelled to face the light. The best way is to have the light admitted into the stable behind the horses. When they are not frequently driven or worked they should have a yard or field where they may exercise. The stalls should be well littered with straw, and the droppings removed at least once a day. In the winter there is no excuse for not cleaning the horses every day. Our experience has been that a coarse brush is better than anything else for removing dirt from the skin without annoying the animal.

There is much diversity of opinion as to the best winter feed for horses. If they are heavily grained, and also fed hay, they will prove costly animals by spring, unless they have performed profitable work during a portion of the time. Horses that are kept fat by feeding plenty of grain will not prove as efficient as those which have been kept on less grain. Only as much grain should be fed in winter as to keep the animal in good spirits and fair flesh.

We have observed that horses will eat too much hay if given the opportunity. If there is good clean oat straw it may be fed to horses in winter if accompanied with a proper allowance of grain. However, several weeks before the opening of spring, hay should be fed, instead of oat straw.

While stable blanketing in winter has many advocates, we have never favored the practice. The only time we use blankets is after the horse returns heated from a trip in the cold weather, or if the animal is sick. A horse with proper food and stabling can withstand more cold with less inconvenience, and is less likely to take cold from the omission to blanket while waiting at the road, than if accustomed to constant blanketing in the stable.

There is no rule to lay down in the matter of shoeing. Every horse owner should use his own judgment. But when it is found necessary to protect the foot or to prevent the horse from slipping when the roads are icy, not a moment should be lost to have the horse properly shod.

Keep a Bee.

Sugar is to be short for perhaps several years after the war. There is one way of greatly diminishing the shortage. Plenty of sweet lies untouched in the flowers. If thousands of Canadians would begin the keeping of bees, this country and the world would be better off; and that branch of country life is as interesting as it is valuable.

WHAT SOLDIERS WANT.

A suggestion to those who are sending gifts to soldiers overseas comes from Lt.-Col. (Canon) Frederick George Scott, Senior Chaplain of the First Division, in a cable received by friends in Montreal. He says "The men want playing cards and chewing tobacco."

"Ever-lasting-ly Good"

THE NIGHTMARE PARAPET

A GRIMLY REALISTIC PICTURE OF WAR AS IT IS

British Soldier As He Lies in Hospital Tell of Two Things That Haunt His Brain.

Going over the top, being shelled to blazes in a trench—those are not the memories that haunt me most as I lie here, though I've had a full-sized man's share of both, and am not greedy for more.

A smell and a stream. They are the two things I find it most difficult to forget.

We were in the line. The trench sides, disintegrated by days of rain, were continually falling in. The trench itself was almost knee-deep in liquid mud. Behind, there was a disreputable crop of little wooden crosses, leaning drunkenly in all directions, many of them splintered, but reaching gragglingly almost to the parados in front there was a tangled mass of rusty wire, with things hanging on to it like a devil's ghastly mockery of a washing-day. Beyond that, ten yards of shell-churned, offensive mud; then a stagnant, green-scummed channel, on the further bank of which the blonde beast had built a kind of parapet that was surely the outcome of a nightmare. It was built of the dead —German dead.

A Cellar Mystery.

The second memory belongs to the end one of a little row of cellars. There had been a row of houses there —once. Forty-eight hours before, German troops had been there. Just behind there was a German burial-ground, which, now and again, German shells were ploughing up. We had been marching for thirteen hours. The cellars were to be our billets for a few hours more. We threw ourselves on to the floor, and tried to sleep, but could not. There was a stench in the place that made us wish to get out. There was a pile of earth near the doorway over which we had to walk when we entered. We kept eyeing this.

At length a batman got a spade, and the first thing he brought to light was a yard-long tress of hair. Beneath the earth was the body of a girl. What hellish deed had been committed in the cellar we could only guess.

We started off to our new line, down a hillside, the whole of which was pocked with shell-craters, each crater a bog. It was pitch dark. First one man would slip and stick, and his thigh boots would have to be sacrificed before he could be extricated; then another, and another, until in one company nineteen men were picking their floundering way along in their stockinged feet, and the stench underfoot was a compound of melted snow and mud. Fatal to strike a light, to speak above a whisper.

Stream as a Trench.

We reached our trench. Trench? Just the shallow bed of a stream, the water still running. Not many yards away, on the slope of the hill on the other side was the enemy line. When day came every man had to crouch down, thigh deep in water and mud. Bent double, else he would offer a fair target, until his back ached excruciatingly, though his legs seemed dead. Then trench-mortar shells and bombs began to come over to us, and men began to roll over and bite their lips lest a cry carry the news to the German. And there, head and shoulders propped up so that they would not drown, they had to stay until darkness came again. Certain death to attempt succour in the light of day, save the little first-aid that we could render. Our doctor, who had been left behind, tried to make his way across the open to us. We buried him that night.

Time seemed to have feet of lead. My watch was stopped. I asked a corporal the time. The question was passed along in whispers until it reached a man who possessed a timekeeper.

"Nine o'clock."

Only two hours had passed since daybreak! It seemed two weeks! Another ten hours before a man could stand upright!

Welcome Relief.

Mortar shells and bombs continued to fall. It was impossible to hit back. Night came at last. A fresh company came to relieve us. Those of us who were unwounded began the task of getting the wounded and the dead across the logs and up the hill.

I shall never forget the stream. It was Hades—a bitterly cold Hades, a terribly wet Hades, but a real Hades for all that.

Over 100,000,000 People in Europe Face Starvation

Reliable Experimental Station tests show that Fertilizers have increased yields of grain, potatoes, etc., 25% to 130%.

The 1917 Report of the Board of Agriculture, England, records the fact that in a general report from English farmers who undertook to grow more food, 40% of the farmers made special mention of the great service rendered by fertilizers.

You can help stave off famine and make profit yourself by preparing to fertilize your spring crops, and to top-dress your fall wheat next spring.

NEW CANADIAN INDUSTRY.

Making of Handkerchiefs in the Dominion Developed in Wartime.

The manufacture of handkerchiefs is now being undertaken in Canada. The absence of supplies in imported handkerchiefs, formerly secured from Great Britain, Ireland and Switzerland, has made possible the development of an extensive trade during wartime. Supplies of linen cloth and yarn have been reduced to the vanishing point by the prohibition of export from Great Britain. One concern has been started in Ontario, the only one in Canada turning out handkerchiefs exclusively. While starting on a comparatively small scale, a market has been secured for the entire output of 500 dozen handkerchiefs a day. Supplies of lawn and nainsook used in the manufacture of the goods are being secured from textile mills.

About thirty-five per cent. of the handkerchiefs being turned out are of khaki color, for which a steady demand is being experienced for the militia forces. Equipment consists of sewing machines, an embroidery machine and an electrically driven mangle.

Imports of cotton handkerchiefs for 1916 were placed at $625,903, of which $544,384 came from Great Britain. Switzerland ranks second as the source of the handkerchiefs used in Canada. Imports of cotton handkerchiefs from all sources in 1915 were valued at $480,453, compared with $650,616 in 1914 and $322,632 in 1913. Imports of linen handkerchiefs show a value of $239,585 for 1916, of which $232,285 came from Great Britain.

Women doctors have been of the greatest service to the country. Not only have they released men for medical service at the front, but have actually carried on base hospitals as efficiently as men.—Sir Watson Cheyne.

Lakefield, Que., Oct. 9, 1907.

Canada's Dairy Products.

There are about 3,500 cheese and butter factories in Canada, and over 220,000 dairy farmers supply these with milk and cream. The total value of the output of these factories in 1916 was upward of 90,000,000. The grand aggregate of dairy products in Canada—cheese, creamery butter, whole milk sold for consumption, output of condenseries, dairy butter made and milk consumed on the farm—is estimated at $200,000,000.

Minard's Liniment Cures Colds, &c.

General Sir Edmund Allenby was born in 1861 and was the son of Mr. Hynman Allenby, of Felixstowe. He was born at Brachenhurst, near Southwell, his mother's home.

Tea or coffee stains of long standing can be taken out by applying a little glycerine, after washing once; a second washing will entirely remove the stain.

Our enemies made this war a war of engineering and science. We accepted the challenge, and there is no point in which we have not beaten them.—A. J. Balfour.

ROYAL YEAST

Has been Canada's favorite yeast for over a quarter of a century. Bread baked with Royal Yeast will keep fresh and moist longer than that made with any other, so that a full week's supply can easily be made at one baking, and the last loaf will be just as good as the first.

BRITISH SOLDIERS TORTURED

Prisoners Forced to Work Behind the Firing Line.

Fresh evidence of the ferocious treatment of British prisoners of war, captured during the 1918 offensive by Germans is contained in a further report by Justice Younger's committee. Much sworn evidence is given that prisoners behind the firing line were half starved and over-worked, were brutally treated and were forced to slep shelterless and were unable to change their clothing. A number actually died of starvation. The report shows that the Germans transferred to East Prussia and German Poland prisoners who were no longer fit to work behind the lines on the western front.

A witness from Hallaburg, East Prussia, said he saw over 200 prisoners arrive in camp there. There were two trains containing mostly stretcher cases. All were raving for something to eat. Some of them found tub refuse which they devoured. Their clothing was torn and they said they had no proper food nor medical treatment. They could hardly ever wash and the dirt was thick on their hands and faces. They looked like skeletons.

Minard's Liniment Cures Garget in Cows.

The Hospital for Sick Children

TORONTO

War Laid Heavy Hand on Children's Charity.

Dear Mr. Editor:—

The annual report of the Hospital for Sick Children, Toronto, marks a new record, despite the heavy handicap the war placed upon its work.

The task of ministering to the suffering youngsters of this province was no light one in view of the Hospital's splendid response to the national call. 25 doctors and 43 nurses from its forces have seen service overseas.

Yet the number of patients treated is 5,048, or 1,208 more than last year. Of these in-patients, 759 were from 268 places outside of Toronto.

The tireless efforts of the staff made possible also a reduction in the average length of stay necessary for the little patients from 24 days in 1914 to 16 this year.

These results show that the Hospital has again paid to the children rich dividends of health upon the invested kindness of its supporters.

There has been careful stewardship of the funds entrusted to the Hospital. There has been saving—almost scrimping—in every direction except where it would prevent the Hospital's soothing the suffering or shortening the sickness of one child. The daily cost of operation was held at the lowest point which would still allow the children entrusted to the Hospital to get the best medicine and the best of care.

And yet so high has risen the cost of every item in the Hospital's budget—in labor, in fuel, in food, and, above all, in medical supplies—that the minimum expense of taking care of one child for one day has risen from $2.34 back in 1914 to $3.21⅝ in 1918. Of that, $1.46⅝—the amount per patient per day that the official Government grants do not cover—must come from voluntary contributions.

During the past four years debts were incurred to the extent of $100,000, which the Trustees felt assured would be wiped out by the public as soon as the war drew to its close, and those heavy demands cease which have been made upon the generosity of the loyal people of this province. The time has now come when it is necessary to make known the Hospital's dire need of financial assistance.

If this 43rd Christmas appeal fails to rally the friends of this Charity to its support, it will be necessary to mortgage its land, buildings and plant. By the bounty of the late John Ross Robertson that property has just been cleared of debt for the first time since it began its ministry of healing mercy. Little children have lost a big hearted friend, and the province a noble benefactor. It is for the public to decide whether his life-work shall be shadowed with a mortgage within less than a year of his passing.

What think you?

Send your answer as soon as possible to the Secretary-Treasurer, Hospital for Sick Children, College Street, Toronto. Meanwhile the Charity will "Carry on," trusting in your support.

IRVING E. ROBERTSON,
Chairman of Appeal Committee.

Minard's Liniment Cures Garget in Cows.

Rolls or biscuits may be freshened by placing them in a paper bag, twisting the top of the bag together, dipping it in cold water and placing in a hot oven for a few minutes. When taken out the rolls will be as light and hot as when first baked, and are far more wholesome.

Minard's Liniment Cures Distemper.

What is the use of supposing that the Germans have repented? What is the use of supposing that they are sorry for what they have done? All they are sorry for is that it has not succeeded.—Mr. Churchill.

MONEY ORDERS.

The safe way to send money by mail is by Dominion Express Money Order.

Marshal Foch recently gave Mr. Lloyd George his photograph inscribed with the words—"To the great Prime Minister who drove away the clouds from a very stormy sky."

These patterns may be obtained from your local McCall dealer, or from the McCall Co., 70 Bond St., Toronto, Dept. W.

The Paisley Advocate

PAISLEY, DEC. 25th, 1918

TARIFF CHANGES WANTED

The United Farmers of Ontario are out to break up the old national policy tariff of the manufacturers, and introduce a policy that is to their mind more of a national one. At the convention of the farmers' delegates in Toronto last week the following tariff changes were enthusiastically advocated :

That agricultural implements, farm machinery, vehicles, fertilizers, coal, lumber, cement, illuminating fuel and lubricating oils be placed on the free list, and that all raw materials and machinery used in their manufacture also be placed on the free list.

That all tariff concessions granted to other countries be immediately extended to Great Britain.

That all corporations engaged in the manufacture of products protected by the customs tariff be obliged to publish annually comprehensive and accurate statements of their earnings.

That every claim for tariff protection by any industry should be heard publicly before a special committee of parliament.

The farmers propose to make up the revenues lost by these tariff reductions in the following manner :

By a direct tax on unimproved land values, including all natural resources.

By a gradual personal income tax.

By a graduated inheritance tax on large estates.

By a graduated income tax on the profits of corporations.

While the tariff changes were being considered one delegate said :

"Don't stir up the manufacturers."

"We don't give that for the manufacturers," exclaimed President Halbert, snapping his fingers. A storm of cheers greeted this.

WINTER SCHEDULE ON THE BRANCH LINES

Last winter quite a few G.T.R. trains were taken off the branch lines in Ontario, and it is rumored that it will be done again this winter. Before it is done it is to be hoped that the manner of doing it will be well considered.

One train each way per day constituted the winter service last year on the four lines radiating from Palmerston to Kincardine, Southampton, Wiarton and Durham. At present there are two trains daily each way over these lines, and there is a strong feeling that last year the wrong train was cancelled.

Take the Durham as an example, for the cases of Kincardine, Southampton and Wiarton lines are identical with that of Durham. The present G.T.R. train service between Toronto and Durham is as follows :

M. & E., 6.50, 4.15 p.m., Arr. Dur. 12.05, 9.15 p.m. Ret. lve. Dur. 7.05 a.m., 3.50 p.m. Arr. Tor., 11.55 a.m., 9.45 p.m. Fr., $3.45. Ret., $5.75. 100 miles.

With the present service the return trip between Toronto and Durham can be spent in one day, and the same is true as regards any of the towns on the four branch lines that run in different directions from Palmerston. But the complaint is that last year the wrong trains were taken off those branch lines—the morning trains leaving Toronto were cancelled. The result was that business men in all towns on the four branch lines beyond Palmerston could not make the trip to Toronto and back in one day. They could not do it in two days, but had to make it a three-day journey. A business man leaving Durham for any other of scores of towns on those four branch lines) was forced last winter to leave home in the afternoon and reach Toronto at 9.45 p.m., too late to do business that night, nor could he do business early enough to catch the train at 6.50 next morning. There being no other train he had to stay over until the third morning before he could return home. Strong protests are being made against a return to this plan.

Toronto, it is contended, has less need of a direct daily return service with all these towns than all these towns have for a direct daily return service with Toronto. Commercial travellers do no make the direct trip from Toronto to one town and back the same day, but are out all week from place to place. Is it not, therefore, in the interests of either the city or the scores of towns served by the four branch lines beyond Palmerston that the wrong train should be taken off this year as was done last winter. —Toronto Star.

—The war ended on the 11th hour, of the 11th day, of the 11th month. Turning to the 11th verse, of the 11th chapter, of the 11th book of the Bible, you will find this : "Wherefore the Lord said unto Solomon, Forasmuch as this is done on thee, and thou hast not kept my covenant and my statutes, which I have commanded thee, I will surely rend the Kingdom from thee, and will give it to thy servant." Look it up.

—The road between Bruce and Grey County which it was hoped would be designated as a county road by the two counties concerned, and which was the object of a meeting of committees of the two counties some time ago, is still a bone of contention and may remain so for some time. A portion of the county line in the southern end is the part that is not agreeable to the Bruce fathers, and which the men of Grey insist shall be included in the general arrangement. The Grey council are still willing to meet the Bruce representatives and another meeting between them will likely be held next year.—Owen Sound Sun.

Send THE ADVOCATE to the absent member of the family or to the distant friend. It is as good as a letter from home and is a weekly visitor. You can better imagine how the home paper is appreciated when you are absent yourself and a copy is forwarded to you.

GREENOCK COURCIL

McNab's Hotel, Cheapside
Dec. 16th, 1918

Council met as per adjournment, all members present, the reeve in the chair. Minutes of last meeting were read and adopted.

The following accounts were presented for payment : Wm. Wesley & Son, part printing contract, $150 ; A. Lang, insp. sheep worried by dogs, $2.90 ; Jos. C. Kramer, 15 8-inch cement tile, $1.20 ; J. G. Moore, drawing tile, gravelling and putting in 3 culverts, $7 ; J. J. Dangerfield, 264 ft. w. ash plank at $25 per M, $6.60 ; F. Bester, drawing gravel on s. l. 15, $3.75 ; Ella Cunningham, postage for clerk, $4 ; Municipal World, election supplies, assessment and collectors' rolls and blank forms, $19.24 ; S. Pollock, work at bridge $1.50, 2 days' coal work $2.50, drawing timber $2.50, telephone to reeve 30c—$7 ; Geo. Smith, cutting brush on con. 16, $21 ; Dr. F. Houston, M.D., salary as M. O. H. $50, convention expenses $12.—$62 ; M. H. Gillies, M.D., salary as assistant M.O.H., $50 ; Wm. Rankin, grading boundary fence and Greenock, Bruce to pay half, $30 ; Wm. Rankin, grading on N. St. to Paisley, $8 to be charged to Eldersl e, $12 ; Wm. Rankin, filling abutments at North St. arch, $15.40 ; A. Fraser, culvert on con. 8, $5 ; J. Coumans, postage for treasurer, $10 ; H. Thompson, board of Jos. Hehn while grading Kinloss boys, $2.80 ; Jos. Hehn, balance account operating grader and putting in culvert, $64.15 ; Jas. S. Dewar, tile acct. less $11.12, $98.90 ; Hugh Watt, part payment on 3 cement bridges on con. 16, $500 ; Thos. Metcalf, insp. Watt contract 18 days at $3, $54 ; Jos. Young, pulling willows on con. 7, $13 ; Col. Schnitzler, deepening ditch on townline, Brant to pay half, $12.50 ; A. McFarlane, putting in two culverts on con. 8, $12 ; W. Cearson, 1 day road work overcharged, $1.25 ; T. Fullerton, repairing culvert on side line 10, $1.50 ; Jas. Quinlan, winter road through fields, $2 ; D. Phelan, council meetings $20, com. work, postage and telephone $67.93—$87.93 ; Jas. D. Campbell, council meetings $20.60, com. work $21.75—$42.35 ; —Thos. Sawyer, council meetings $22.30, com. work $23 —$45.03 ; Thos. Symon, council meetings $23.60, com. work $11.50—$35.10 ; G. W. Gilchrist, council meetings $22.20, com. work $20.50—$52.20 ; M. Schuster, attending Aug. and Dec. meetings $5, stationery 70c, half yr. salary as treas. $50—$55.70 ; Thos. H. Purdy, half yr. salary as clerk, $100 ; M. McNab, room for selecting jurors $1, council meeting $2—$3.

Gilchrist—Sawyer—That the foregoing accts. being found correct, be paid and that the reeve and treas. be instructed to sign cheeks for same.—Carried.

Checks were issued as follows :D. Pinkerton, grant to Agricultural Society, $40 ; Geo. McBain, grant for 70 rods wire fence on s. l. 15, con. 12, $17.50 ; Norman Robertson—County rate $1470.59, county municipal equivalent $135.17, Provincial war tax $1096.85—$1673.61 ; J. G. MacKay, Bruce telephone tax, $912.25.

The engineer's report on the survey of the Culross and Greenock bdy. was read and laid over.

Symon—Gilchrist—That this council go into committee of the whole for the purpose of considering the tenders for the building of the Symon bridge.—Carried.

The following tenders were received : Watt Bros., cement work at $6.70 per cubic yd.; Wm. Wittman, cement work at $6.49 per cubic yd.; Wm. Coumans, wood work of bridge, council to furnish paint, $2649 ; J. J. Cassidy, cement work of bridge, $7.50 per cubic yd. and wood work of bridge at $2650.

Sawyer—Campbell—That the tender of Wm. Wittman for cement work at $6.49 per yd. be accepted, and that the tender of J. J. Cassidy for the wood work at $2600 be accepted.—Carried.

Symon—Gilchrist—That the clerk be instructed to draft a by-law for the purpose of fixing the place of nomination meeting, for providing polling booths and appointing deputy returning officers and poll clerks for the ensuing municipal elections.—Carried.

By-law No. 578 was drafted and read a first time, fixing nomination meeting at Chepstow on Monday, Dec. 30th, at one o'clock. Polling booths as follows : Div. No. 1, Forresters' Hall, Div. 2 school hall, Div. 3 McNab's hall, Div. 4 Hunstein's shop, Div. 5 Foresters' hall, Div. 6 school No. 8, Div. 7 McFarlane's shop, Div. 8 school No. 4.

Deputy returning officers and poll clerks : Div. No. 1, J. J. Cassidy, Robt. Chartreau ; Div. 2, J. G. Carter, G. L. White ; Div. 3, Thos. Mullin, Jas. Graf ; Div. 4, Jas. Clancy, P. Brockelbank ; Div. 5, A. E. Knox, J. Clark ; Div. 6, Wm. Dryden, Wm. Stewart ; Div. 7, W. Pitherton, J. B. McCormick ; Div. 8, D. McDonald, Fred Young.

Gilchrist—Symon—That by-law No. 578 be now read a second and third time and finally passed.—Carried.

By-law duly read and finally passed.

Campbell—Sawyer—That this council do now adjourn sine die.—Carried.

Thos. H. Purdy, Clerk

Children Cry
FOR FLETCHER'S
CASTORIA

Will Mark Graves

The Imperial War Graves Commission describing its plan for the maintenance of war cemeteries abroad, proposes the erection of headstones of a uniform design which are to replace temporary wooden crosses. They will be 30 inches high and 15 inches wide. At the eastern end of the cemetery a great altar stone will be raised with broad steps. Each headstone will bear the badge of the soldier's regiment or other unit in metal, and a cross and an inscription bearing his name, rank, regiment, date of his death and next of kin will be permitted.

GROW MORE THAN EVER

Grow more than ever, is the advice the Rochester Democrat and Chronicle gives the farmers of the State of New York. It says : In making preparation for next year's farming operations, too much emphasis cannot be placed upon the imperative necessity for increasing largely the agricultural crops of the country. Large as was the 1918 crop of wheat and corn, it must be greatly increased in the coming productive season. Even with the world's peace restored, immense quantities of foodstuffs must be produced to feed the great Allied and American armies. Conservative official estimates indicate that under the most favorable circumstances from one to two years will be required for the repatriation of these soldiers. Owing to the systematic destruction of farm lands and machinery in France, Belgium and other countries within the active war zone, little can be expected there in the way of food production. In the meantime, America must contribute largely to the feeding of these sorely oppressed peoples. The appeal will come home strongly to the sturdy and resourceful American agriculturist. But it is a large order. Even with greatly enlarged production the efforts of the farmers and stock growers must be supplemented by the most strict economy and avoidance of waste by consumers at home.

—Vastly cheaper than gasoline and possessing many advantages over that product, "Liberty" fuel has been invented by officers of the war department and is now being produced in large quantities. The fuel is odorless, tasteless, and non-corrosive. It leaves less residue of carbon than gasoline ; requires less air or oxygen for combustion and develops greater horse power.

To Avoid and Relieve Influenza

BY DR. FRANKLIN DUANE.

Many people have been frightened by what they have read or heard of influenza. The most you fear the disease the surer you are to get it. Go right about your business and forget it. As the disease is spread principally by coughing, there remembering and refraining from coughing, unless there is a real necessity for it, many health authorities have advised that everyone wear a gauze, which is daily washed and saturated with a one to five hundred solution of zinc sulphate to water, and then dried before wearing over the nose and mouth. You should avoid crowds, common drinking cups and public towels. Keep your strength up by taking lots of exercise in the open air and plenty of nourishing food.

If you have any of such symptoms as chilliness, nasal obstructions, flushed face, headache, feverish nose, restlessness, weakness, or irritability, don't give up work at once and go to bed. This will save your strength to help overcome the disease. Put yourself in bed at the first sign of illness. Thoroughly loosen the bowels with some such mild and non-irritating physic as Dr. Pierce's Pleasant Pellets. Drink plenty of hot lemonade and then cover up well with plenty of blankets so as to get the fever reduced take a dose of two Anuric Tablets every four hours, followed by drinking at least a glass or two of hot water. Anuric Tablets help quickly to relieve the soreness of the muscles and bones from which most pa tients complain and help the kidneys flush out the poisons.

To relieve nasal obstructions and stimulate a discharge from the nose, probably nothing is better than such a mild, soothing, antiseptic wash as Dr. Sage's Catarrh Remedy. It will give great relief. Employed as a gargle, in same strength as made up for use in the nose, and as best no one can be, it gives soreness and dryness in the throat.

Influenza weakens the patient's resistance to disease, and pneumonia or bronchitis and pneumonia developing. To combat this tendency and fortify the people's strength (suits that he keep in bed at least two days. Probably nothing will at this stage hasten the recovery and strengthen the patient more than an enemic tablet called "Iron-ic" or that well known herbal tonic, Dr. Pierce's Golden Medical Discovery, which has been used by thousands in the past two generations.

FARM FOR SALE

LOT No. 4, Con. A, Eldersle, property of the late W. J. Watson, containing 95 acres—about 60 acres cleared and the balance in bush. Clay loam soil. Barn 40 ft. by 60 ft., stone foundation, cement stable, log house. Well watered. All seeded down but about 16 acres. About 3 miles from Paisley. Apply to And. Watson, or David S. Watson, executors.

THE AFTERMATH

The second phase of the Smith-Baker case was aired in Tara on Wednesday. Mr. Oswald Baker was charged with having on the 6th day of July last assaulted the wife of Mrs. Smith at Allenford with the intent to commit an indictable offence. The evidence of Mrs. Smith was to the effect that Baker came to her door on the evening of the 1st of July, and that she threw about a pint of lye on him and that on this occasion he dropped his pocket book containing his military papers which she found next morning outside her door, and that on the 4th of July in the evening Baker had again entered her house and demanded his military papers. She refused to give them up and that he had taken hold of her arms and threatened her unless she gave them up, which she refused to do and then Baker left. In the last portion of her evidence she admitted having thrown lye on him on two occasions, and had pulled his hair. There was no suggestion of moral wrong doing. Baker withheld his evidence which will be heard at the trial to be held at Walkerton in the near future. In the meantime Baker has been given bail. The case was heard before magistrates McDonald and Grant.—Leader.

GOING STRONG

The Family Herald and Weekly Star of Montreal is having the best year in its history. Their subscriptions for the month of November exceeded by almost 200 per cent. the same month of any previous year. December will also be a record-breaker. The Family Herald publishers are perfecting plans for elaborate improvements. The public should not confuse that great weekly with a small daily paper of somewhat similar name now in liquidation. There is no fear of such a thing happening with The Family Herald. The word "Family" should not be omitted in the address of that paper. We are informed that their offer of a War Album free to all who subscribe still remains good, but the demand is so great that it may have to be withdrawn soon. The Family Herald is big value and the Album is most attractive, so it is no wonder they are securing thousands of new subscribers.

BORN

Carr—In the Bruce Co. hospital, on Dec. 15th, to Mr. and Mrs. Alex Carr, of Walkerton, a daughter.

Sturgeon—In Bruce Tp., on Dec. 16th, to Mr. and Mrs. Mulligan Sturgeon, a son—stillborn.

DIED

McKinnon—In Chesley, on Dec. 11th, Mary Ellen Jackson, beloved wife of J. J. McKinnon, in her 32nd year.

Easton—In Arran, on Dec. 16th, to Mr. and Mrs. R. C. Fenton, a daughter—Edith Cavell.

McKinnon—In Bruce Tp., on Dec. 21st, Allen McKinnon, 8th con., aged 92 years.

Holmes—In Arran Tp., on Dec. 16th, Amanda McInnis, beloved wife of John Holmes, aged 57 years and 13 days.

PURDY'S CHURCH CELEBRATES FIFTIETH ANNIVERSARY
1869—1919

On Sunday, Dec. 1st, 1918, the congregation of what is known as Purdy's Methodist church, situated on concession 14 of the township of Greenock, County of Bruce, celebrated the fiftieth year or jubilee anniversary of the building of their church. Three services were held at which the Rev. W. J. Fiddis, of Cayuga, a former pastor, preached to good congregations, and was well received.

This occasion quite naturally points our memories back over the years that have gone and the many changes that have taken place, and the question arises, "How did this church come to be here? It must have a history. What is it?"

The earliest settlers in this neighborhood came in the fall of the land sale of 1854, located and some of them built their shanties purposing to few out a home for themselves in what was known as the "Queen's Bush." In the spring of 1855 quite a number of families moved in and undertook the pioneer work of turning the forests into fruitful fields. The toiler of the soil was followed closely by the pioneer missionary, who occasionally called on his way at a settler's cabin, held a service, passed along, and in this way the seeds of truth were sown and the tender plant of grace in the heart of men was watered. However, these sturdy pioneers like Abraham realized that a home could not be a home without an altar where man can meet and hold fellowship with his Creator. During the summer of 1861, the late Rev. Geo. Watson, a primitive Methodist missionary, whose home was about two miles west of Walkerton, came through the bush on horseback and called at the home of the late Adam Purdy, lot 15, con. 14, Greenock. Here he arranged to hold a service on the following Sunday morning. This developed into a fortnightly appointment on the Sunday morning, which continued for seven years under the guidance of Revs. Geo. Watson, Thos. Foster and David Gilbert, assisted by Messrs. Williams, Wilson and Schemehorn, Episcopal Methodist missionaries from Armow, in Kincardine township, each of whom came in occasionally. During the term of Geo. Watson, one Sunday morning before the time for his service he was out taking a walk and on his return he said, "I believe there will some day be a Methodist church here."

Log Church in 1868

Time passed on and one day during the winter of 1867 and 68 the late Owen Webb and Adam Purdy were talking, and the question of a church was introduced and they arranged that a meeting would be called at the home of Adam Purdy to see what would be done. The result was that by spring the pine logs were hewn and hauled to the site, at the north-east corner of lot 15, con. 14, and here on the 8th day of April, 1868, in the face of a severe snow storm the log walls of the present church were erected. We cannot tell who all were at the raising, but there were Anglicans, Presbyterians, Baptists and Methodists. There was union in those days, everyone being anxious to help in the making of the House of Worship.

The cornerman held an important place in those days and of these we believe John Cameron, who attended the jubilee services, is the sole survivor. The late Owen Webb, a Baptist, was the second, the late James McKee was a third, and probably the fourth was Adam Purdy, while the late Jonathan Metcalf had the oxen to haul in the logs as required.

During the season of 1868 the shingle blocks were cut the shingles split and shaved and finally placed on the roof. The late Wm. Geary of Pinkerton, then living on lot 11, con. 12, made the sash and helped finish off the inside, the ceiling being half-inch pine just as it came from the saw, the cracks in walls being chinked and plastered outside and in.

The pulpit consisted of a small table together with a chair for the minister. These were brought from near Ottawa by a Mrs. Patterson, a former resident of lot 16, con. 14, who on moving away disposed of her surplus furniture to Mrs. Purdy who loaned these to the church. The chair now belongs to Mrs. Jos. Purdy, while the table was given to Mrs. A. Groves, a granddaughter of Mrs. Purdy's.

The pews were somewhat old-fashioned, but quite substantial being made of small basswood logs split through the centre, thenafour holes bored in the round side with an auger, into which feet or legs made from a small sapling were tightly driven, and then cut off to the proper height with an ax or adz, and it was then ready for use. These seats gave good service for six years.

The heating system is still the same. The old box stove, which was second hand fifty years ago, still gives good service. The lighting system was a marvel and would be quite a curiosity in a city church to-day. The old tallow candles, in the old tin candlesticks, hung from nails driven into the pine logs, gave excellent service and the light of the Gospel shone out as brightly as under the electric system of the present day.

"'Tis the same old way, the same old way,
There is just one road to Jesus.
By the way of the Cross of Calvary,
We must travel the same old way."

The church was completed and opened for service during the summer or fall of 1868 by the late Rev. David Gilbert, the pastor then on the charge and the occasion was just as important and as joyful as the opening or dedication of Solomon's temple, only on a smaller scale.

In the fall of 1874 improvements were made, by wainscotting and plastering the walls and ceiling, also seating, platform and railing were put in and the candles changed for lamps. The late Wm. Cox, then of Brant, was the contractor, assisted by Wm. Kerry.

Some years later siding was placed on the outside walls, painted and new shingles put on the roof.

In 1906 an up-to-date enclosed shed was put up to replace the old open one.

In 1914 the interior was papered and painted, giving it a pleasant appearance.

The Social Side

This is the outward history, as it were, but above and beyond all this there is another history. There is a social side to the history, and one of the great events of the early days was an old time tea-meeting under the auspices of the Baptist people, held somewhere about the early seventies. This was a great success. Just think of bringing a melodeon from David H. Rowands, two and a half miles south of Glamis, a distance of five miles, just to give a better tone to the entertainment. The choir was fine, and the meeting was a great success for every family was represented, and the church had the honor of perhaps being the first one in the county to have an organ, even if it was but temporary for a special occasion, but the event is not forgotten even yet.

Why was the church built? That men might have an altar, a meeting place where they could commune with the Father, and here we enter the larger history of the church, the moulding and uplifting of man. Many faithful men labored here as pastors or assistants during these years, giving their best for the people.

The Pioneer Missionaries

From the year 1861 to 1884, the time of the union of the different branches of the Methodist church, the work was carried on under the Primitive Methodists, with the minister living on the Durham Road, about a mile and three quarters west of Walkerton, near what was called the Bethel church, the old site of which is marked by a little cemetery. Baird's school, on the 6th con. of Brant, and Ebenezer, a little church on the 10th of Brant, a mile or so east of the gravel, were two other appointments, and for a number of years a fifth place, known as Harrington's, some two or three miles south of Walkerton. This gives an idea of the work of the pioneer missionary in working a circuit like this, but they were in the work not for ease or pleasure, but for the uplifting of mankind. Of the fifteen or more men who worked here during those early years, the Rev. Geo. Watson served the longest, first as the pioneer of all, and then a few years later being back for another term of two or three years. He was loved and esteemed by all. Others who labored in those years were: Thos. Foster, David Gilbert, Mr. Auger, Thos. Dudley, Mr. Cowling, A. Sims, Mr. Nixon, T. G. Scott, Mr. Weatherell, Mr. Rowe, Chas. Matteely, Thos. Crompton, John Garner and J. Stonehouse. Some of these were students sent out as assistants, but all were faithful men. Then there were the local preachers, men who devoted a good deal of time to the work among them—the late Samuel Hoar, Wm. Cox, Wm. Anstett and John Watson, now of Chesley, and Jos. Purdy.

In the year 1884 union came and this made a change in the circuit, reducing the limits to Eden Grove, Cargill, Glamis and Purdy's, Glamis joining in with Purdy's a few years ago. During this period the following ministers have labored with us: Jabez Wass, Thos. R. Fydell, J. J. Noble, Mr. Parker, H. Berry, D. Sharp, J. W. Sanderson, R. L. Ockley, M. C. Peart, J. Truax, W. A. Fortune, J. E. Kay, W. H. Stern, W. J. Fiddes, W. C. Almack, H. B. Storey and H. D. Tyler, our present pastor. Mr. Parker died while on the circuit and his term was filled by J. Truax, then a student. All these men labored and held forth the word of life in the little log church, and who can measure or estimate the influence and the power that has gone forth during those years in ever widening circles, to Canada's remotest bounds.

The Sunday School

Another part of the history is the Sunday school work. Somewhere in the early seventies a Sunday school was organized with the late Adam Purdy as superintendent. This was a union school, and was carried on for a number of years. There were no lesson helps, leaves or Sunday papers in those days. Just the Bible, and a portion of a chapter was chosen usually a week ahead for the lesson. The superintendent would read this, and the teachers explained as best they could, and thus the seeds of truth were sown. After a number of years for some reason the school closed.

Again about the nineties another Sunday school was organized and kept up for some years. Then about the year 1903 another start was made and the work still goes on, trying to install principles of truth and righteousness in young and old.

Another branch of work that has gone hand in hand with all the others was the week night prayer meeting. This began in the very early days of the church when the tallow candle gave light, and no matter how busy the season these pioneers could find time for this service. And during a great part of the life history of this church these meetings have been kept up and have proved to be a source of strength not only to the church work as a whole, but especially to those who have taken an interest in them.

And now as we look back over these fifty years that are past and gone, we take courage and go forward to make more history.

Our Children's Health—Or Unhealth?

Here are a few extracts from the report of a physician on conditions as he found them in a certain State to the south of us. Do these conditions also prevail in our own fair land? I am afraid they do. This is what he says:

"Not to bring up a child in the way he should go, physically, mentally and morally, is a terrible sin of omission.

"That the physical condition of our children is deplorable appears in the statistics of every medical inspection that has been published.

"Who are we that seventy per cent. of our school child.en should have rotten teeth? Who are we that thousands of our children are born of diseased parents? Who are we that thousands of our children, on account of vicious environment and wicked neglect, are allowed to be diseased and reflective? Who are we, that because of forcing bad air, bad food and bad sanitation upon our children they take on tuberculosis and die in early life?

"Ignorance is not our excuse and we are not ignorant. On the contrary, we know, but we seem not to understand, and certainly are not sufficiently practical to make use of our knowledge.

"Nowhere is there greater disobedience of the laws of inheritance and the laws of health than in rural districts. There, mating is wholly, entirely and absolutely haphazard. And there laws of health and well-being are largely ignored. In cities, the condition is a wee bit better, for there disease is less, tuberculosis is perhaps less, and the death rate, leaving out accidental deaths, is less. In cities, people more thoroughly separate themselves from their sewage and the bath is more in evidence. Adenoids and defects of the nose and throat are more prevalent in the country than in cities, and this despite the purer country air. It still may be said the reason country air is so pure is because the farmer keeps the bad air inside.

"As in the city schools, we also find in those of the country the larger proportion of children are neglected. Bad teeth prevail to such a degree that we express surprise when a good set is found. Coughs, colds and catarrh get every child one or two times every school term, and some suffer through every day of the year.

"Cases of catarrh, weak and watery eyes, and running ears are found, many dating from the time the helpless youngsters had measles or scarlet rash. Emaciation from actual starvation is not occasional. In one rural school of twenty-seven pupils, I found seven anemic, emaciated children, and five of them were actually starving. One little wizened girl had had one bitter cake with molasses for breakfast, and in her dinner basket for lunch were one soggy biscuit and one apple. All of twenty-seven pupils in the school needed medical attention. There was not a child that did not have two or more decayed teeth. Every child had suffered from one or more attacks of so-called 'cold' during the winter, and sixteen said they had had colds ever since school opened in the fall."

The rest of the description of the school and teacher kept me awake nights for a week, so I omit it to save your feelings. This is bad enough. Also his description of a primary room he visited in a city school where a consumptive teacher had stopped up the ventilation system because she was chilly.

The doctor draws the conclusion from his experience with parents that medical inspection and care of children must be made compulsory, just as was found necessary in the matter of education. Why not? Surely good health in our coming citizens is of as great importance as education. In fact, there can be little education without good health back of it, for diseased body means also a weakened mind.

Your child and my child may be getting proper care. But are our neighbors'? Their tubercular children are a menace to ours. Isn't it our right to see that they are taken care of?—D.H.

Helping Our Returned Men.

Writing on "Invisible Wounds" Capt. Arthur H. Samuels, says that the greater percentage of soldiers passing through reconstruction centres are suffering from internal rather than outward surgical injuries. Injuries, men who are suffering from shell shock, for instance. They look fit. "It will be difficult," he says, "in many instances for the business man eager to open his door to the returned fighter to understand way man who look hale and hearty enough will be unable to go into certain jobs involving heavy indoor work. They must not be passed by because their sacrifices are not obvious." No small part of the keen intuition that knows how to sympathize by silence and unobtrusive helpfulness and that it is so absolutely necessary in the great work of helping these men to "find themselves" rests with the women of every community. If the returned man becomes discouraged and outcassed after leaving the reconstruction centres the fault will be found to rest almost invariably with the women who have sympathized in unwise rather than helpful ways. Open commiseration is often nothing less than refined cruelty and is never the best sort of help. Thus there is added another phase to women's war work, study of the best ways of helping unobtrusively.

Breakfast Cereals.

This is now an appropriate time to add the breakfast cereal to the morning menu. The body for the next nine months will require considerable more starches, sugars and fats to maintain sufficient heat and energy. An ideal manner of supplying this need will be found in the breakfast cereal and milk.

Table for Proportions

One cupful of oatmeal to four cupfuls of water; cook for 3 hours.

One cupful of rolled oats to three cupfuls of water; cook for 2 hours.

One cupful of farina to four cupfuls of water; cook for 2 hours.

One cupful of cracked wheat to five cupfuls of water; cook for 3 hours.

One cupful of hominy to six cupfuls of water; cook for 3 hours.

One cupful of cornmeal to four cupfuls of water; cook for 3 hours.

One cupful of barley to five cupfuls of water; cook for 4 hours.

One cupful of barley meal to four cupfuls of water; cook for 3 hours.

One cupful of rice to five cupfuls of water; cook for 3 hours.

One cupful of rye meal to four cupfuls of water; cook for 3 hours.

For variety add any of the following:

One-half cupful of seeded and chopped raisins.

One-half cupful of seeded and chopped dates.

One-half cupful of seeded and chopped prunes.

One-half cupful of peanuts put through the food chopper.

Three tablespoonfuls of peanut butter.

Try serving cereals with the following in place of sugar: Place one-half cupful of syrup in a small pitcher and add two tablespoonfuls of butter. Heat until very hot, stirring frequently until creamy.

Full allos mean big winter milk.

DADDY!

By Bayard D. York

Uncle Jim didn't jump for him and tickle him or swing him 'way up, as he usually did. He just said, "Hello, Lorry!" in a sort of weak solemn voice, and his aunts both stopped suddenly when they saw him coming—just as if something was the matter.

Uncle Jim tried to smile, but it was not a really and truly smile.

"Well, Lorry," he said, "want to take a little trip with me?"

"You bet!" cried Lorry. "When?"

"Right now. There's taxi waiting for us outside. We're going to Montreal."

On the way to the station Lorry looked up shyly.

"I'd like to come and live with you, Uncle Jim," he said. Till daddy comes home, you know."

"Would you?" cried the man, with a little break in his voice. "Well, you wouldn't like it any better than I would."

Uncle Jim didn't say much after that until they were on the train.

"Maybe we could fix it," he said, suddenly then. "About your coming to live with me, I mean."

When they reached Montreal Uncle Jim led the way into the lunch-room.

"Maybe you'd like an orange," he suggested. "A cup of coffee," he added to the waitress. "And have it strong."

"Aunt Eunice says strong coffee isn't good for you," Lorry observed.

"Probably she's right," said Uncle Jim, pouring the cream with a hand that was not entirely steady. "But you see I haven't got my strength all back yet."

After they had finished at the lunch-counter they wandered around near the station for a little while. Uncle Jim did not say very much. It all seemed very queer to Lorry—and not a bit like Uncle Jim. And the queerest part came when, pretty soon, they got on a train that was going back.

"Why, we didn't do anything!" said Lorry. "What did we come for?"

Uncle Jim did not hear apparently. He seemed to be looking for someone.

"Let's go on into the next car," he said. "There aren't so many people in there."

Indeed, there were very few people in the next car. Near the middle of the car a lady with a big hat was reading a magazine, and just behind her, almost hidden by the hat, sat a soldier. In spite of the hat Lorry saw the soldier right away.

He was not a very impressive-looking soldier. His officer's uniform was not bright and new the way Lorry supposed uniforms always were. The man's shoulders were thin and stooped and he held his head rather queerly on one side.

And then Lorry saw his face!

With a big jump he leaped forward, knocking the lady's hat far over one ear.

"Daddy—daddy!" he shouted.

The officer opened his lips to speak—but the words seemed to stick in his throat. Then Lorry felt the big arms catch him and hold him tight, as they had used to do so long, long ago.

"Lorry—my boy!"

The lady adjusted her hat and turned with an irritated frown—but suddenly her face softened and she turned quickly back to her magazine.

Major Phelps moved a little and held out a hand to the other man.

"Hello, Jim!"

"Hello, Sam!"

"It's a good old Canada, Jim."

"Mighty good, Sam!"

Lorry caught the thin hand that Uncle Jim had released and held it tightly in his two chubby ones.

"Daddy—my daddy!" he said softly.

The train began to pull out.

After a while Lorry moved a bit.

"Dabby!" he cried. "Will you buy me a new fire-engine? The one Uncle Jim gave me is broken."

The thin face broke into a smile.

"I'll buy you two, if you want them!" said the officer.

"Oh, goody! And will you play with me sometimes. Aunts don't know how to play the way daddies do!"

"Yes—I'll play with you. I won't be good for anything else for a while."

"Will you? Honest?"

"Honest!"

"Oh!"

It was a big word, with a world of meaning in it. Uncle Jim, in the seat behind, blew his nose and gazed out of the window at the passing brown woods.

(The End.)

IN FULL MARCHING ORDER

A Soldier's Vivid Description of An Army March.

Was just thinking I have often spoken of marching, and I will give you an account of a march with full marching order, as you might like to have an idea of what it means. These marches, however, are not all as bad as I'll paint this one.

First, we are warned to fall in at X o'clock, in full marching order. Let me tell you what "Full marching order" is. The skeleton equipment, that on which the various articles fasten, consists of a wide, heavy, webbed, canvas belt with two shoulder straps; in the front, attached to the strap, are the cartridge pouches, holding 120 rounds of ammunition; on the belt on right side are the bayonet, entrenching tool handle and haversack; the last containing your shaving outfit, cleansing and eating utensils, etc.; one the right side is the water bottle. Then comes the real load: the pack, a canvas valise slung on the back by straps round your shoulders. It carries a greatcoat, sweater coat, extra underwear, socks, handkerchiefs, round sheet and housewife. Then add to that the box respirator, or gas mask, on the chest, entrenching tool at back on belt and your rifle, and you are ready. The "fall in" always entails a seemingly unnecessary amount of standing around in platoons, which is rather trying. While standing, a good way of easing the load is to place muzzle of rifle under the pack, butt on the ground, and let your shoulders down. You have only then to keep the pack balanced. At last we get the word and start off. One's sensations and fibres of mild torture experienced are so varied that I'll describe them to you.

First of all, we march at east, that is to say, one may chat with his pal on left or right, sling the rifle, instead of carrying it at a slope, and smoke, although it is bad policy to smoke, you need all your wind. One period is usually three-quarters of an hour with a ten minute rest after.

The first five or ten minutes all goes well; you trot along humming or chatting, making more or less humorous comments on the various, and what seem to us, peculiar houses and vehicles, etc., which we see on the way. We have apparently forgotten that we are human pack mules. Soon, however, one begins to realize he is carrying something. You feel a heavy or choking sensation, like an attack of indigestion as though your lungs are being squeezed slightly. But that is a trifle, you think. You straighten up, take a deep breath and it is forgotten. In a minute or two the right shoulder begins to ache a little with the heavy backward pull on it. You shift your rifle to the left shoulder—that's easier for the right, but soon the left starts to keep company and you cannot shift any weight anywhere else.

Then you slip a hand behind you and underneath the pack, raising it and shifting the weight to your arm. This is a great relief, but only momentary as the strain on the arm is too great, and one lets the pack down again. Next commences across the back of the neck and reaching into both shoulders a dull, heavy pain. This steadily grows worse. Another way of easing yourself is to slip a thumb under each set of shoulder straps and raising the whole equipment a little. But, as you can imagine, you can only hold it for a very short time.

From this time on it is a series of various changes and shiftings of weights, none of which relieve you only to the extent of lessening it in one and increasing it in another.

Do has reached now that dull state in which he has but one desire, and that—to lie down and get off that awful burden, anywhere, anyplace. But the man in front of you; you can through moisture-dimmed eyes see his legs, the heels of his boots seem to be coming back to you but never getting any closer; he is plodding along, and through your mind runs the thought: "He is carrying the same load, full of that same pain. If he can keep up, I can," and still your legs monotonously forge ahead. I can't explain it, but you are in a state of semi-consciousness like one walking in his sleep. Then you try to think of something pleasant. In my case I try to picture myself at home, and you may not believe it, but it helps a lot. Some chaps have fallen out, but you plod along. To fall out means the extra exertion of stepping out of the ranks; your legs do not seem capable of changing direction so you stay in your place praying for the welcome words of command: "Fall out!"

Perhaps one chap with a little more "pep" left in him informs us that we have ten minutes to go before the rest period. That ten minutes magnifies itself into an eternity of time, in your mind, but here's where the old thought of mine so often comes in: "There's an end to all things, and so will be to this march."

When the time is up you stagger out to the right and let yourself down, lying so that the pack forms a back rest and also so that the weight is all taken off your back and shoulders. Then for a moment the sudden flow of blood sends sharp, shooting pains around the cords of the neck, but that is over and oh the blessed relief then. In a moment you feel fit enough to reach for a cigarette. A drink would taste all right, but it is not wise, as you have another walk ahead of you, to take one.

The ten minutes rest pass and you pull yourself on your knees, then to your feet and step into your section of fours.

Then comes another spell of it a little worse as you start out tired, but you know that at the end is an hour's rest for dinner, so you "Carry on."

I want to say this, not that I'm in the infantry, not at all, for I've seen very little. Here's what I mean: Of all the units in France the difference in corps, etc., the rank and file of the infantry have the most hardships, hardest work and absolutely the least comfort, whether in or out of the line, and are lowest in grade of units. The most credit is due to them for outside of fighting, which all do, they, as I said, endure the most.

The aviators fly so many hours per day and go way back of the line to a comfortable billet and lots to eat, with things ready for them. The artillery have greater chance for sleeping places and for carrying grub. The infantry throw their load off their back and probably dig a hole in the side of a trench at night and eat out of their mess tin, which they are lucky enough to have.

Im not complaining for I've not experienced much of it, just enough to realize that this branch of the service deserves what they won't get—the most credit after the war.

STORY OF THE PINK-TAILED TANK

A BRITISH LAND SHIP ON THE WESTERN FRONT

When His Majesty's Ship "Here We Are" Amused the Tommies and Terrified the Enemy.

Lumbering, rolling, dipping heavily into shell holes, heaving clumsily out of them, moving with a motion that can best be described as something between that of a half-sunken ship and a hamstrung toad, came His Majesty's land ship "Here We Are." Such was the appearance of a British tank that a writer in the Cornhill Magazine describes. It dipped its nose and slid headfirst into a huge shell crater in ludicrous likeness to a squat bull pup sitting back on his haunches as he dragged into a hole, and then as the Here We Are's face and gun-port eyes and bent-elbow driving gear appeared above the crater rim it still more ridiculously resembled an amazed toad emerging from a rain barrel. Fifty yards in its wake a line of men followed to pick up the pieces and the prisoners.

The monster waddled on, lurched, checked and steadied itself with its nose poised over a deep hole, halted and backed away, and edged nervously round the rim of the hole. It reached the barbed-wire entanglements and waddled through, bursting them apart and trailing them in long tangles behind it, or trampling them calmly under the churning cater-pillar bands. The infantry pushed on after it almost without casualties, for the tank was drawing a hurricane of machine gun bullets that beat and rattled on its armored sides like hail on a windowpane. It waddled indifferently through the storm and, crawling carefully across the German trench, halted halfway over and sprinkled bullets up and down its length to port and starboard for a minute, hitched itself over, steered straight for a fire-streaming machine gun embrasure, squirted a jet of lead into the loopholes, butted at the emplacement once or twice, got a grip with its upward-sloping caterpillar band, climbed jerkily until it reared on end like a frightened colt, ground its driving bands round and round, and fell forward on its face. Then it crawled out of the wreckage, crunching over splintered beams and concrete, halting every now and then to spray bullets on any German who showed himself, and turning aside to nose over any suspicious looking enemy before it plodded on in search of more trenches.

The infantry followed, rounding up groups of prisoners who crawled, white-faced and frightened, from dug-outs and trench corners. Suddenly a trench wall gave way and the starboard side of the Here We Are sank below the port. After a pause the bands began once more to revolve and to clank out behind them first a cloud of dust and clots of earth and then a mangled debris of clothing and trench-made furniture. On the ground above, the infantry stood shrieking with laughter while the Here We Are pawed out and hoofed behind it into the naked light of day a splintered bedstead, a chewed-up blanket or two, the legs, back and seat of a red velvet armchair, a torn gray coat and a forlorn and muddy pair of pink pyjamas tangled up in a field boot.

When the drivers got their grip again and the Here We Are rolled unsteadily forward and up the farther side of the hole, one of the soldiers dragged a long branch from the debris, slid it up one leg and down the other of the pink pyjamas, tied the boot by its laces to the tip and thrust the root into a convenient crevice in the storm of the tank. So bedizened, she rolled her triumphant way up over the captured redoubt and down the other side, with the boot tip bobbing and jerking and swaying at the end of her pink tail.

Using Up Straw Fibre.

Experiments are being carried on in Italy by a Milan company for the manufacture of bagging, packing material, cushion fillings, mattresses, twine and rope from straw fibre of barley, wheat or rice, according to the strength of the material wanted.

Ex-Empress Eugenie of France, widow of Napoleon III., has lived to see the day she prayed for—the fall of the Hohenzollerns.

Cambric was invented by a native of Cambrai, named Batiste; hence our name for the article, and the French one, "batiste," for the same material.

Use more soup

Put in plenty of vegetables and rice or barley. Even with poor stock delicious soups can be made by adding a dash of

BOVRIL

Canada Food Board, License No. 15-143

Food Control Corner

Get Government Feed.

Government feed at reasonable prices may be secured by farmers and live stock men through the Feed Division of the Live Stock Branch of the Department of Agriculture, Ottawa, which has established reserves at different distributing centres as follows:

Re cleaned elevator screenings $56.00 per ton, 1.C.L. car load lots, Fort William. There is an export embargo on this class of feed.

Feed corn $1.40 per bushel, f.o.b. Tiffin, Ont.

Linseed oil cake meal $64.00 per ton, Toronto, and $66.00 per ton, f.o.b. Montreal in car load lots, packed in 200 pound sacks.

It would be well for farmers to get together and order car load lots of above feeds before winter conditions affect transportation. Address orders for corn, screenings and oil cake meal to the Feed Division, Live Stock Branch, Ottawa.

Bran and shorts upon which there is an absolute export embargo, are sold through the regular trade at fixed prices of $31.00 per ton for bran and $36.00 per ton for shorts, Fort William, plus freights and $42.00 per ton net cash, Montreal, including sacks in each case. Freight will be deducted or added to this price according to distance east or west of Montreal respectively.

There is also a supply of dried beet pulp or sugar beet meal accumulated at the sugar refineries in Western Ontario, selling at $35.00 per ton f.o.b. Chatham, Wallaceburg and Kitchener, plus a charge of $5.00 per ton for bags, which amount is refunded on return of bags. Farmers within a reasonable radius of these points should look into the advantages of this feed, as it is desirable to use it up in Canada.

The existence of large grain-stocks in Siberia is reported.

Recruiting Officer (examining man for the Army)—"How is it you are so small my man?" Three feet six—I was brought up on shortbread and condensed milk."

FOR CHRISTMAS!

Muskrat Coat

Loose box coat effect, with convertible collar. Extra well made. Length 45". A popular seller. $120

French Seal

Splendid coats that look well and wear better than any other seal. Special price $112.

Persian Lamb and Mink

Two of our specialties in which we offer exceptional values.

OPINIONS ON WORLD PROBLEMS

BY CHAS. M. RICE, B.A., LL.B., DENVER, COLORADO.

GREAT BRITAIN'S WAR LOSSES

The years of war cost Great Britain the lives of 658,905 of her gallant, courageous sons, and left the scars of battle upon the bodies of 2,049,991 more. In all, her casualties number 2,650,891, and these men were the pick of the nation.

This was the stupendous price she paid because of her fidelity to a treaty, and to an unwritten understanding with France. Her signature was pledged to Belgium, her bare word to France. Behind word and signature she put all she had of blood and treasure.

* * * *

We are wont to speak of America's unselfishness and to think that we stand aloof and alone in our disinterested devotion to the cause of humanity. And yet there were days when we were told that America's interests demanded our participation, and when the Zimmerman letter to the German Minister in Mexico was urged as proof that American territory was at stake in the war, and they were considered among the arguments that impelled us to enter the struggle. But the fact lessens no whit the importance of the higher impulses that inspired our effort.

"Nor should the fact that Great Britain had interests at stake and territory to guard minimize the splendid truth that she did not hesitate when Belgium and France were threatened, but, without calculation of cost, threw herself unreadyinto the strife and played her full part grandly to the bitter end.

* * * *

At times men found fault with the fact that Great Britain was dissipating her energy in far-scattered fields —in Egypt, in Mesopotamia, Palestine and in Macedonia.

But the truth, now known, shows how little she gave to these adventures as compared with what she gave to the all-important Western theatre. Her casualties on all fields of warfare, other than those of France and Flanders, numbered only 320,000; or less than eleven per cent. of the total. And who shall say that this was too high a price in comparison for victories that freed the people of those lands from the accursed rule of the Turk and the Hun? Armenia, Syria, Palestine and the Bedouin tribes arise to-day to bless Great Britain for her liberating sword.

America was prepared in spirit to spend greatly for the cause of humanity. Her sons would have died in numbers equal to those of Great Britain and France had occasion demanded the sacrifice. But from such losses we were spared, and this should make hearts tender and sympathy overflow when we think of those who paid without murmuring the greater price.

The above figures do not represent Britain's total loss, for many are disabled and incapacitated from disease and ill-treatment in enemy prison camps, but we have no means to estimate the number of such at present, for with the advances in scientific healing and hygiene, recoveries reduce the permanent losses to one-third or more.

* * * *

The Empire's war debts, including eight and a half billion dollar loans to allies, amount close to forty billions.

The human loss on Canada will be fully as great as that of the U. S., and Australasia suffered equally with Canada from an equally small population. The heavy drain, however, was upon England and Scotland, closer to the scene and with a much greater population to draw on.

When France's list is made up it will be found that she, too, suffered severely. In the first years of the war France was the chief sufferer, but in the latter years of the war Great Britain bore the greater burden on the Western field.

* * * *

Great Britain did not seek the encounter, it was forced upon her and she did everything possible to stave off the horror.

Great Britain and France shouldered the chief burden of the war, and to them it is an actuality, not an ideal ism, that must be fared at the peace table. They must have guarantees against a recurrence, and as far as possible, amends for their losses. Territory has been taken from the enemy and his allies and it is not going to be restored. The demands upon Germany at the peace table will be overwhelming.

THE LENINE-TROTZKY PLOT

The Bolsheviki are in control in Berlin, apparently. The announced organization of a Workmen's and Soldiers' Government follows in close parallel the type created by Lenine and Trotzky in Russia.

An Executive Council has been created that exercises autocratic control. It recognizes only one class—the working class. The so-call bourgeoisie have no rights and no representation. They are to be dispossessed without hearing and can live only as they become the serfs of the Bolshevik regime.

It will fall a convention to draft a constitution for the new state that will not be a convention of the people, but of a faction of the people—that faction which believes in Bolshevist ideas. It will be a packed convention, at once the devil's tool of its fanatical leaders as was the Rundersrat of the Kaiser and his associated princelings.

* * * *

Autocracy attempted to use Bolshevism in Russia; it may attempt to use it in Germany. But we make a great mistake if we suppose that Bolshevism is merely the ally of autocracy and not a movement with its own distinct and dangerous aims. The truth is that Bolshevism has used autocracy and any other instrumentality that proved available for its purpose.

The Lenine-Trotzky plot is aimed at the revolutionary overthrow of the existing order of things. The systems of government, of society, and of industry that obtain in the organized communities of the world are its objectives. Lenine and Trotzky care nothing for Russia as Russia. The great Slav autocracy merely furnished them fertile soil in which to sow and grow their harvest of anarchy. They have no more liking for republics than for monarchies.

Their whole scheme is to take advantage of any circumstances that will enable them to arouse discontent to frenzy; their whole purpose is to tear down the structure of civilization.

* * * *

They will not find a fertile field in Great Britain, or in France, or in the United States. And the continued immunity of these countries from Bolshevist disturbances lies in avoiding the conditions that are favorable to it. The great need is for a wise liberalism politically, socially and industrially; the great danger is the tendency of those who lack vision to become reactionary. The world faces within the next few years the alternative of evolution or revolution. Evolution means orderly, considered readjustment and reconstruction. Revolution mean chaos. The man who shuts his eyes to these facts to-day, who belittles the need of reconstruction or who sees in reconstruction merely a program for making America a more efficient competitor in the world's markets, is little less dangerous than the Bolshevik.

Bolshevism must be checked, but it must not be checked by a return to political or industrial autocracy. That would be running to the devil for deliverance from Hell.

* * * *

The cure for Bolshevism is enlightened democracy in policies and industry. Bolshevism is merely unenlightened and intoxicated democracy running amuck. We must not allow Lenine and Trotzky to frighten us into restoring a Czar in Russia and a Kaiser in Germany, nor yet into turning back and damming the tide of social progress in free countries. It is our task now to prove that democracy we have preached and fought for is a remedy for the world's ills. It is a harder task than preaching and fighting for it, but if we cannot carry it through it would be better that we had never lifted a voice or drawn the sword.

PICKED OUT THE FACTORIES

Work of British Airmen in Bombing German Cities.

One of a party of recently repatriated prisoners of war from Germany, where he had passed nearly eighteen months, was narrating in London some of his experiences in various Mannheim hospitals, one of which was Mannheim.

"Yes," he said, "I was in Mannheim during two night raids. It was during the latter part of 1917. Oh, they had the wind up all right, even then. We wondered what was happening when we first heard the sirens and guns start. Our orderlies just vanished. There was a big chemical factory not far from our camp. Several bombs must have hit it fair and square. In the morning when we looked out there was not much of it left.

"No nothing came to us either time. Frits noticed that his hospital camp was a safe spot, and built a barracks next door, and put down a gun-testing station on the other side.

"It was wonderful how our fellows managed to pick out the factories. The town itself was not damaged at all. When we left Mannheim we marched right through the town, and though I saw several factories in ruins, I didnt see a single private house that had been hit."

Some contrast, this, to the air raids on London and Paris, when not a single military objective was touched, but, on the contrary, rows of poor people's houses blown to pieces.

There was another man—a Colchesterman—who had been in Essen during the raids on Krupps. He spoke of the frenzied panic that prevailed, and told how a mob of Germans—men and women—rushed into the hospital where the wounded prisoners were lying. They broke into the wards and fiercely threatened the English. "Cursed swine-dogs, they called us, because they fancied our airmen."

His comrade, in the next cot, they actually pulled out on the floor, and, jumping on the helpless man, permanently injured his spine.

He who does not resolve to-day will be much less disposed to resolve to-morrow.

Remnants of cereal breakfast foods may often be utilized to make palatable dishes, to thicken soups or other foods, and in similar ways.

ENTERED CITY BY OLD JAFFA GATE

KAISER WAS TOO PROUD TO USE IT AND HAD IT CLOSED

General Allenby's Proclamation to Inhabitants Made From Old Steps of David's Tower.

The following letter (which was written without any idea of publication) gives an interesting picture of Jerusalem as it strikes the British soldier. It was recently addressed by a sergeant to his family at home:

The Jaffa Gate, at which we began our tour with a Y.M.C.A. guide, is closed, as an entrance to the city was made for the Kaiser, this "gentleman" being too proud to pass through the old gate. When General Allenby entered the city he had the old gate opened, not desiring to enter the same way as the Hun. On the left of the gateway is a clock and tower. The tower itself is built of stone brought from Solomon's Temple.

David's Tower is a most interesting building, also known as the citadel of Herod. It was here (from an older tower on the same site) that David stood watching and fell in love with Bathsheba. Thus the name David's Tower. On the steps leading up to the tower General Allenby read the proclamation to the inhabitants.

Jews' Wailing Wall.

We then passed down David's street, very narrow and dirty. Unlike most streets it is a series of broad steps leading down the temple area. After walking for about five minutes we reached the Jews' Wailing Wall. This is the nearest approach the Jews have to the temple area. Many Jews were there praying, and our presence did not make any difference to their worship. Between the crevices in the wall are thousands of nails, forced in by the Jews, as an oath to God, saying, "As the nails hold, so I hold to Thee, my God."

Leaving the Wailing Wall we entered the temple area, a spot most sacred to the Moslems. Here we came to Mosque El-Aska, and before entering we had to remove our boots so as to avoid the beautiful carpet being soiled. The size and beauty of this place is beyond description. The beams of the roof were brought from Solomon's temple, beautiful massive cedar wood. The dome is simply lovely, and is some of the most wonderful work of human hands I have ever seen. Just underneath and slightly to one side of the dome we were shown a niche in the wall where Christ is supposed to have stood and prayed.

We now crossed over to the place where Abraham was going to offer up his son. The spot is marked by a rock called Abraham's Rock, and over it is a beautiful mosque. The dome of this mosque is simply marvelous, and the whole place is built of beautiful stones. The rock itself is railed in with iron screenwork made by the French 800 years ago.

Many Sacred Places.

The dome, called after Saladin, is supported by marble pillars, supposed to have been brought from Solomon's Temple (they are solid green marble). Underneath this building is a small cave, the alleged praying-place of Abraham, Solomon and David. A few paces away from the large mosque is a very small one, and underneath the centre of its dome is a black marble slab, supposed to be Solomon's Judgment Seat; and even to this day certain sects of people use this place to settle a big question.

There are also very large vaults hewn out of the rock under our feet used for the storage of water in Solomon's time, partly for washing away the blood after making sacrifices. On each side of this mount are very old churches, and the Mahommedans believe the scales of justice will be hung under these on the Judgment Day.

The guide then pointed out the Garden of Gethsemane, also the place of the Betrayal, and higher up on the Mount of Olives the place where Christ wept over Jerusalem. Near here we were shown where the Golden Gates were bricked up; it was through these gates that Christ rode from the Mount of Olivas to the temple, and there found the money-changers, etc.

We next saw the Gate Beautiful, where Peter and John cured the lame man; a few yards away from this is Solomon's Tomb, and on the bars of the windows we noticed strips of clothes torn from pilgrim garments and tied for some reason I have forgotten for the present. We next came to the Pool of Bethesda, where in the time of Christ the sick were cured by the moving water. This pool has been covered in by rubbish for a number of years, and in 1876 excavations were started to uncover it. Excavations have also been made since the war started.

Seven Stations of the Cross.

Leaving the Pool of Bethesda, we came to the place where Pontius Pilatehad Jesus scourged. It is marked by a tablet in the wall.

We then proceeded to Calvary, noticing the various stations of the Cross, etc. The fifth stage shows the spot where Simon the Cyrenian took up the cross; the sixth stage shows the house of the lady who wiped the sweat off the face of Jesus, the seventh stage where He fell for the second time. We then saw the Crusaders' hospital, named after the Knight of St. John. It is from this hospital that the Red Cross Order of St. John started. It was in this building that the Kaiser preached to the people.

We now went to the Church of the Holy Sepulchre; before entering we crossed over the tomb of Philip of Daubey (Philip d'Aubigney), one of the oldest Crusaders said to have signed the Magna Charta. Next we came to the marble casket, the covering of the tomb of Joseph of Arimathea. We then went on to Calvary and the tomb, which, of course, is the centre of the world for Christians. We saw the chapel of Mary Magdalene and the pillar to which Christ was bound. We also saw the chapel of St. Serena, on the walls of which are thousands of crosses cut in by the Crusaders. We also saw the rent in the rock made at the time of the Crucifixion.

Here we also saw the figure of Mary, covered with thousands of pounds' worth of jewels, given by pilgrims, etc., when visiting; also the stone of unction, and the sepulchre showing the stone rolled away.

We then went into the tomb itself, which was most impressive.

THE WEEKLY SERMON

Not unto us, O Lord, not unto us, but unto thy name give glory, for thy mercy and for thy truth's sake.—Psalm cxv, 1.

It is not easy to put in few words, or many words, what is felt and shared by all of us for the great moral victory which has been achieved for what we all believe to be a good and righteous cause. We did not doubt that soon or late it would indeed be won. And yet the price which had been paid to win it and achieve it had been such a fearful and appalling price, in human loss and sacrifice and suffering and death, without precedent or parallel in all the long story of human strife and war, that when the strain was suddenly relaxed, when the whisper came flashed across the water that the victory had been won and that the war was over, it is not surprising that, without waiting for the official word to assure and confirm it, the people should have gone almost wild with joy. And yet while that rejoicing was so natural and human and irresistible, it did not express in the best and truest way what that victory meant for us and what it meant for the world.

And, what did it mean? May we not humbly and devoutly say that it was indeed a great moral victory which a righteous God had wrought for us and for all mankind. By that I do not mean that the physical force of man was not a factor in it, as it is indeed in all human affairs. What I mean is this—that it was not the dominant and vital factor in it. In this case, as in every case, physical force by itself, however great and strong and formidable it may be, without moral force to sanction, sustain and control it, is not strength but weakness.

Had Not Learned The Lesson

That is the lesson which, in its progress, from the brutal savage in the brutal wars, slowly through the ages, Civilization has been teaching. But Germany had not learned it. In the same brutal way, albeit with a more enlightened mind, she tried to arrest and to turn back the civilization, growth and progress of mankind. And she failed; and he fell. It was inevitable that she should fail and fall before the growing moral force and progress of the world.

Was not that the strength of our own Canadian contingent to the conflict? Brave and heroic men and youth they were, and what they did and suffered will never be forgotten. Always will it be most gratefully honored and remembered. But was it not the great and strong invincible morale which they embodied and which they carried with them that helped so much to win and bring about the Victory of Righteousness and Peace, wherefor we rejoice? In doing this, they were but true to all the high ideals and all the best traditions of the British Empire, which, as not inspired by any selfish aim but by a pure and high moral purpose, has made her voice on all her battle fields a Battle Cry of Freedom, a righteous freedom.

Built Upon a Rock.

So it has been in the past; so may it in the future be; that in all the future years, as in all the past, the greatness of the British Empire may be a moral greatness, her glory a moral glory, her strength a moral strength, against which the blasts and storms shall beat and dash in vain, because she is as a house not built upon the shifting sands of self-interest, but founded on a rock.

As we have sent our soldiers and sailors into this war for freedom with moral armor clad, so let us bring them back with moral armor clad, surrounding them with every safeguard, furnishing them with every inspiration and incentive to well doing during the period of demobilization. Thus shall we liberate into the citizenship of our Canadian life a great, strong, invincible moral force with which to meet and solve our problems here at home, and which shall help to make, and more and more to make, this Canadian nation a great moral force in the councils of the world.

The Victory of Righteousness! Not unto us, O Lord, not unto us, but unto Thy name give glory, for Thy mercy and for Thy truth's sake.—Rev. D. H. Greer.

A Visit to Topsy-Turvy Land.

Mr. James Foster was a great traveller, and when he visited his sister, Mrs. Dalton, Martin and James never tired of hearing him tell of the strange customs of other lands.

When they were enjoying ice cream, one day, he said: "If we were in Japan, we should probably be eating ice with sugar, and lemon, instead of ice cream."

"Do they like that better, Uncle James?" Martin enquired.

"Yes," he answered, "the Japanese are probably the only civilized people in the world who eat ice the way they do. Blocks of small cakes of ice are smashed into tiny, pebbly pieces, and are eaten with sugar and lemon, or any other flavor one may fancy.

"Another way they have of eating ice is to shave it into snowy flakes by means of a plane, and swallow it with sweetened water into which various appetizers may be thrown."

"Don't they have ice cream at all?" James asked.

"Yes, ice cream, and many cooling beverages are to be had, but the old style of eating ice like I have described, is still the favorite way.

"In eating your meals in Japan, I know you have heard, that you sit on the floor on a cushion, and they give you a stool to lean on. Much as you long for a knife and fork, you do not get them, the only eating apparatus you have is the chop-sticks. I can assure you that it isn't an easy job to eat soft-cooked foods with only these as helps.

"When I was invited into a Japanese home I found there wasn't any furniture at all. You have to sit on the floor. But one thing to be thankful for is that the floors are not boards covered with carpets, as we have them in Japan they are covered with matting three inches thick, and in addition you are given a cushion.

"A Japanese house hasn't windows as we have them. It is only the most stylish that have a pane of glass. Paper is pasted over the sliding doors, and though it's enough light filters to go about the rooms; this is an easy matter for there isn't any furniture to stumble over. The rain is kept out of these houses of paper partitions by a series of wooden frames which slide back and forth, for the hinge is unknown in Japan.

"When bed-time comes you look around for a bed, but there isn't one to be seen. The servant comes in, opens a drawer, unrolls the quilts on the floor, putting a hard, wooden box under one end for a pillow. Then she shuts up all the windows, and pulls to all the slides so that not a breath of air can get in, and the bed is ready.

"In a Japanese house there are no doors, no inside walls, no ceilings, no furniture, and in the kitchen they have no range, no pots, no pans, and in the whole language there isn't a native word for bread. About the only thing in a Japanese house is the floor, which is used for every purpose. Their cook stove is a round pipe with a couple of doors, that sits almost on the floor and comes about knee high. The houses haven't any chimneys. They use little gallon jars, called hibachis, with charcoal in them covered with fine ashes, for winter. There is very little heat from these but they keep the people from freezing, at least.

"In every way Japan is backward from our way of doing. A Japanese carpenter draws his plane toward himself, and a blacksmith sits down to work. A Japanese book begins on our last page, and finishes at our first paragraph. Their sentences begin at the top of the page, and read down, like a long column of figures. They do their writing with a paint brush, which is made of a bamboo stick with bristles on one end. They hold the brush straight up and down instead of grasping along their fingers as we do a pen. They wear white to funerals, and judge poetry by the beauty of the handwriting.

"One very commendable thing about their language is there are no words to express anger and bitterness. Japanese are expected to always be kind and polite. But although their anger kindles slowly, occasionally one loses his temper, and then he is at a loss to express his emotion. The worst thing that can be said in the whole language is, "Your stomach is not on straight." This is a great insult, for when a Japanese gets angry his first concern is about your ancestors, the next is about your stomach."

"Tell us something about the Japanese children, Uncle James," Martin asked.

"Both boys and girls are dressed in the same kind of a garment until they are five years old, but are distinguished by the colors. The boys wear subdued blues, grays, and browns, while the girls are dressed in bright reds, gorgeous gold and greens.

"When the boys are five they give up the kimono-like garment, and on the fifteenth of November, the third month in Japan, they put on soft flowing trousers."

"Aren't their months the same as ours?" James wanted to know.

"No, their New Year begins with September. They have many ways of welcoming in the year, but I believe you are more interested in the children of this topsy-turvy land. The most peculiar thing of all is the training of the baby to sit down. Japanese men and women double their feet beneath them and sit as it were, on their knees; and foreigners cannot understand how they do it until they see a baby taught. The little ones are placed in that position until their knees and muscles become remarkably flexible and when they grow up it comes to them easily. But the Japanese surgeons, who have been making investigations, attribute to this custom the shortness of the people as a race.

"The rich people send their babies out into their gardens around their houses in care of a nurse; but the poor people who cannot afford their gardens carry them around on their backs. The oldest sister takes charge of the baby, if there is an older one, and the babies soon learn to cling on. Girls are often seen playing games with babies clinging to their necks, and the babies seem to like it. The babies learn to talk before they leave their mothers, or their sister's backs, and at two, or three are taught to walk, and to wear the straw sandals. These are held on by the toes alone, and although they produce an awkward gait, are extremely easy on the feet.

"These shoes are very economical, however, and in these days of high prices it would recommend them on account of the fact that they are never outgrown. The heels may stick out a little, but the toes are never compressed.

"I wonder if you knew that there are not any cows in Japan?"

"No cows!" both children exclaimed.

"No, you never see a cow, of course, you never have any cow's milk to drink. It is for this reason, it is said, that Japanese babies are allowed to have their mother's milk until they are three, or four years old."

"No wonder you call Japan topsy-turvy land," said James, "for everything is very different from our way of living."

"How's Your Temperature?"

The best way of asking a friend how he is, is not to say flippantly, "How are you blowing?" or even "How's your liver" but simply and sufficiently, "How is your temperature" According to your temperature you are well or ill, alive or nearly dead. In fact, there are only ten degrees between blooming health and certain death.

The temperature of the air has nothing to do with the temperature of the body, which is the temperature of the blood. The Eskimo in health sends the clinical thermometer to the same spot as thenegro in Timbuctoo, viz.: Ninety-eight degrees Fahrenheit. The temperature of the air will sometimes vary forty degrees in the same day, but if the temperature of the body goes up two degrees, you are ill; four degrees, you are very ill; six degrees, and the doctor is very anxious; eight degrees and you are at death's door.

Anybody can take a temperature, even your own. It is a great safeguard to possess and use a clinical thermometer. Ninety degrees, all right; one hundred degrees, get to bed; one hundred and two degrees, send for the doctor. Anything higher than that is a doctor's job.

It has been computed that a man drinks one ton of water in the course of one year.

In Alsace-Lorraine.

French troops march gayly through each ancient street
Of Metz and Strasburg and Saverne again;
And happy folk of Alsace and Lorraine
With smiles and tears the war-worn soldiers greet;
Old flags, long hidden in some place discreet,
Once more wave proudly o'er a people free
From tyrants; and, in shrine and sanctuary,
A myriad voices grateful prayers repeat.
And, watching joyously the cavalcade
Of gallant France in rightful triumph come
To her lost provinces, a Holy Maid
Leans down, and, through the din of cheer and drum,
Hears the memorial rapture of the lark
Above the childhood's village of Jeanne d'Arc.

"The death of a hero convinces all of eternal life; they are unable to call it a tragedy."—Donald Hankey.

CANTIRE

Merry Christmas, and here's hoping that old Santa does not take the flu.

Mr. D. A. McIntyre has returned from the Farmers' Convention in Toronto. If those who visit the city are certain to contract the dreaded malady, they should be forced to cry out like the lepers of old, "Unclean, unclean," for fear we all be smitten at once.

Last Friday afternoon parents and grown-ups to the number of twenty or thereabouts accepted the invitation of the teacher and scholars to attend the closing exercises of the school for the year 1918. A programme given by the pupils was a credit to both scholars and teacher, and was enjoyed by those present. Clifford Walpole acted as chairman, and discharged his duties with such tact and despatch as to lead us to indulge the hope that he may some day in this democratic Canada be speaker in the House of Commons. After the first numbers were rendered imagine the surprise of some of the visitors who had got snugly seated in the back rows to hear their names called out for a speech. Mr. A. D. McKay, however, answered the challenge, and in a neat speech congratulated the teacher and pupils on the splendid manner in which they had conducted themselves, and also gave some sage advice to the boys, which we hope will bear fruit later on. Others who were called on for speeches were Alex Gowanlock, Neil Reid, Donald Reid and G. Stewart, all of which were remarkable for their brevity. At four o'clock the chairman announced the end of the programme had come, and all joined heartily in singing the national anthem, after which a splendid lunch with hot tea was partaken of, and all went home feeling they had renewed their youth and been well entertained besides. Miss McCurdy is a painstaking and efficient teacher, and the ratepayers of this section appreciate her efforts.

Now that the war is over the next excitement will be municipal elections. When there is no political election in sight people are in the habit of talking of the evils of party-ism, and yet when it comes to a municipal contest very often the man who can tell the best story on nomination day or cackle at the most shaking hands or ask for the baby is preferred to the man who may possess real executive ability. In the past Elderslie council has been somewhat of a matrimonial bureau. Some years ago ratepayers took a notion to elect young men, and accordingly R. C. Pearce, Clements, McEachern and McGrath were returned as councillors. Under the influence of the genial clerk, the late J. C. McIntyre, and the reeve, the late John McDonald, these young braves were led to see the error of their ways and soon took to themselves helpmates. The treasurer, S. M. Ewart, after coming to office unconfollowed the same precedent. Later Wm. Pearce, who was immensely popular, could not see the necessity of getting spliced and retired before his time, for no other reason we can see than because he partook in following his lonely furrow. Wm. Fortune, who is in the same class, has been aspiring to the reeveship but has met with misfortune. We believe if Mr. Fortune would only be content to start at the bottom of the ladder and run for councillor should John Allen drop out, would find not misfortune, but Miss Somebody, just the same.

Ingratitude is said to be one of the basest sins of the human race. Editors at this particular time of the year are wont to complain of hard times, and the heartless treatment they receive at the hands of delinquent subscribers, etc. They meet in convention dressed in their threadbare suits and bewail their bondage to the paper manufacturer under whose oppression they have been unable to lay up either gold or silver only in the form of silvery locks. In their misery they have forgotten their poor correspondents who occasionally write up some little items not for any emolument or fame, but just from sheer love that their little community, like the little nations of Europe, might have a place in the sun, and that the dear ones who have gone out from us, and we hope still dream of home, may be kept in touch with doings around the old home. After having done this faithfully it is indeed a slight shock to be fully it is indeed a slight shock to hear from some whose faults have been glossed over or their virtues extolled, such a remark as "You can't be very busy at home when you wrote that." O, base ingratitude!

TURNER'S

Mr. Wm. Atkinson is busy threshing with his clover mill.

Mr. D. McRae was visiting last week in Guelph.

The Y. P. S. of North Bruce and St. Andrew's churches spent a social evening at the home of Mr. and Mrs. Neil McIllivray, con. 12, Bruce.

Mr. E. McKechnie spent a day last week in Walkerton.

Master Roderick McRae, after spending the summer with his uncle and aunts here, has returned to his home in Kincardine.

Reeve Christie will retire from the duties of reeve of the township of Saugeen at the end of the year. Mr. Christie has filled the office of reeve for the past two years in a capable manner, and has won the respect and confidence of all.

School has closed for Christmas holidays.

WILLOW CREEK

All public services are again closed in Bruce Tp. on account of the flu.

Bruce Tp. has one man in its council who was elected by the people, in the person of Councillor Baker. He will likely be on the war path in the coming election for deputy-reeve.

Mr. Frank Wrighton is moving to Kincardine.

Mr. Verna Geuer is home from the west where he spent the last two years. It will be remembered that he enlisted in the 160th.

CARGILL

(Intended for last week)

The full house that witnessed the play, "Elias Comes to Stay," put on by the Walkerton Dramatic Club, never attended anything better in the concert line in this burg. It was excellent, and the audience was delighted with it. All players did their parts in style that might make many a professional sit up and take notice. Besides pleasing the audience about eighty dollars was taken in at the door, which, after expenses were deducted, was equally divided between the Walkerton and Cargill Red Cross Leagues, thus helping a worthy cause also.

Rev. Mr. Tyler preached in the Methodist church at Paisley on Sunday. Owing to anniversary services in Eden Grove there was no service in the Methodist church here last Sunday.

Last week Messrs. Henstein & Wittich held a drawing contest among the pupils of the school here. Three prizes were given for the three best drawings of Santa Claus, and these were won by Mildred Grainger, first; Marjorie Mewhinney, second; Wilfred Pegelo, third. The judges were Miss McCoy, Messrs. R. A. Forbes and G. F. Saunders, who had the task of examining some thirty-five drawings. These are now on exhibition in Henstein & Wittich's window.

Mr. Edgar Brownacombe and family are moving here from Lovat, and will reside on River St.

MR. ROBT. PARKER PRESENTED WITH GOLD WATCH

The home of Mr. Robt. Parker, lot 19, con. 9, Bruce Tp., was the scene of a nice gathering of neighbors and friends who formed a surprise party on the evening of Dec. 12th. The chief item on the programme for the evening was the presentation of a gold watch, accompanied by the following address:

Dear Mr. Parker—As we have learned that you are soon to leave our midst we, your friends, have assembled to spend an evening with you before your departure. During the years you have spent here we have always found you an ideal neighbor and worthy citizen. You have won the goodwill and respect of this community, which deeply regrets your departure. As a slight remembrance of your Bruce friends we ask you to accept this watch. Should it ever be that you again take up your abode in this neighborhood we assure you of a hearty welcome. Our best wishes for health, happiness and good fortune are with you. Signed on behalf of your friends and neighbors, Michael Nelson, Cecil McDonald.

Mr. Parker, in responding, expressed his high appreciation of the splendid gift. He said that during his life he had lived in three neighborhoods, and this was the best of all. A hearty invitation was given to the friends assembled to make the house their own for the evening, which they proceeded to do, engaging in dancing and other amusements until the sma' hours o' the mornin'.

EBENEZER

Merry Christmas, everybody!

We are sorry to report that Mr. John Grant's family are all confined to bed with the flu.

Mr. and Mrs. Wm. Bulger and family from the west are visitors at the home of Mr. F. Quigley.

Mr. and Mrs. Alfred Robinson visited at Mr. J Plant's a week ago Sunday.

A number from here attended the funeral of the late Clifford Monkman, wife and child, whose remains were brought to Mt. Hope cemetery for burial last Sabbath. Their deaths resulted from a fire on a western train bound for Toronto last week. Mr. Monkman and family have the sincere sympathy of the community in their sad bereavement.

Russell Fleming is engaged with Jos. Rathwell, of Greenock, to cut wood.

In a letter received from L.-Corp. G. L. Grant last week he stated that they had passed through Mons and were then at a place called Jepp. The people could not do too much for them, and gave them so much coffee to drink that they were almost fed up on it. Continuing, he remarked that it was great to see some country and more that was not a mess of ruin and shell holes.

We are sorry to learn that Mrs. Wm. McKelvey is very low.

ELORA ROAD NORTH

Mr. John Rae is home from Toronto.

Mr. Arch. Bryce spent a few days in Toronto last week.

Mr. Herb Walpole has sold his farm, lot Leon. 12, Elderslie, to Mr. Maxwell from Chatsworth.

Miss Lillie McDougall is visiting in Guelph.

Mr. Jas. Dudgeon was sawing wood for Mr. John Brown last week.

Mr. Harry Rudolph's family are recovering from the flu. Mr. and Mrs. Johnstone Bannerman are both ill with the same malady.

Mr. and Mrs. Thos. Irwin were away last week owing to the death of Mrs. Irwin's mother, Mrs. McAllister.

Mr. Wilfrid Tanner is home from Toronto for the holidays.

Children Cry

FOR FLETCHER'S

CASTORIA

SIXTH CON. BRUCE

Quite a number on this line are laid up with the flu.

Misses Margaret and Jennie Russell and Mr. Cairns were at Teeswater last week.

Miss Marie Mewhinney, who is visiting at Guelph, is seriously ill with pneumonia.

Mrs. Skipper, of Underwood, is at present engaged at Mr. Robt. Mewhinney's.

WALKERTON

Miss Greta McFarlane returned Tuesday from McDonald Hall, Guelph, which has been closed on account of the flu.

As Chief Ferguson has been instructed to ring the town bell whenever word comes that a Walkerton soldier is returning from overseas, our citizens who hear the tocsin ringing at other than the regular times will know that a local warrior is heading this way.

Harold Farr, a young Brant farmer, while cutting wood with a circular saw at the home of his brother-in-law, Mr. Ed Hopkins, on the South Line, tripped and fell forward, and in putting out his hand to save himself, touched the rapidly moving saw, which passed through the centre of his hand and divided it from the middle finger almost to the wrist. A doctor was summoned and after the removal of a lot of splintered bone, sewed the injured member up. Although not likely to be permanently disabled, it will be out of commission for many weeks.

The passing of ex-Reeve Robert Russell, which occurred at his home here about 3.30 o'clock on Wednesday afternoon, after a long illness from stomach and other troubles, removes a familiar figure from the scene and one who took an active interest in the great war which has closed, all his four sons enlisting, and he himself offering his services to the army, but being rejected for over age. The late Robert Russell was a noted athlete in his youth, and won many long-distance races here in the early days. As a citizen of Walkerton for forty-three years, he took an active part in the affairs of the town, he being Chief Constable and caretaker of the town hall for over twenty years, besides being in the council for two years, the last one of which, in 1917, he was reeve of the town.

The Brant municipal nominations will be held at the town hall, Walkerton, on Monday, Dec. 30th, from 12 to 1 o'clock, with the speechmaking commencing immediately thereafter. The old council are all willing to go back to their old places in the event of an acclamation, and if a contest ensues the fight will not originate from within. An effort is being made in some quarters, we understand, to particularize a contest, and in the event of this element being successful an old time battle is imminent, with the present reeve and all this year's council locking horns in the fray.—Herald and Times.

GLAMIS

Teachers who are home for the holidays are: Misses Minnie McNally of Lapeer, Mich., Reta McKinnon of Kitchener, Flossie McLennan of Wellesley, Mary Webb of Chippewa, Mabel Kirkhope, and Mr. Chas. McKinnon of Wallaceburg.

Mr. and Mrs. McColeman (nee Miss Lizzie Ferris), of Coronation, Sask., is visiting the latter's brother and sisters.

Miss Kate McKinnon, of Chicago, is visiting her mother, Mrs. Catherine McKinnon, on the 10th of Kincardine.

Mr. W. J. Graham has gone to spend the winter in Florida.

Mr. and Mrs. Coward and little daughter, of Toronto, are spending Christmas with the latter's parents, Mr. and Mrs. Malcolm McKay.

Mr. Lauchlan McDonald, of Montana, is visiting his sister, Mrs. W. H. McNally.

We are pleased to report a decided improvement in Mrs. McSween's condition. We trust she may soon be able to leave the hospital.

Christmas visitors at Mr. Angus Campbell's are Mrs. Francis and two daughters and Miss Sarah Colborne, of Toronto.

The marriage of Miss Margaret Currie to Mr. Artie Alexander takes place on Tuesday, Dec. 24th.

Miss Phyllis Moffat, who attended high school at Beamsville, is home for the holidays.

The Sunday school entertainment, which was to have been held in the Baptist church on Friday, is cancelled owing to the flu epidemic. The churches will also be closed for at least two weeks.

The annual meeting of the Red Cross Society was held Tuesday, Dec. 17th, in the work room. The officers of the past year were re-elected, with the addition of Mrs. Jos. Wrightson on the ladies' committee. The year has been a very strenuous one, but it also has afforded the workers an opportunity to see the end of the war for which they have been working. The shipments to headquarters show 576 prs. socks, 6 trench caps, 6 scarfs, 5 pillows, 306 towels, 216 personal property bags, 6 bottle covers, 60 suits pyjamas, 4 packages hospital cotton, 204 handkerchiefs, 18 wash cloths, 20 shirts, 150 pillow covers shipped in the year, 96 prs. of socks were sent directly overseas to local boys. 37 Christmas boxes were also forwarded. The expenses of the society for the year were $87.93, receipts $1107.22—balance on hand $233.29. The society will continue their work in the coming year by doing refugee work. They ask for women's and children's knitted stockings all sizes, also underclothes made according to standard patterns issued from headquarters, for women and children. All kinds and sizes of quilts will be gratefully received for this refugee work. Anyone who wishes to donate quilts may leave them any time at Mrs. Cunningham's.

Information Wanted

FOR the purpose of compiling a complete record and honor roll for Bruce Tp., the parents or friends of all Bruce Tp. boys serving in the overseas forces during this war are requested to furnish the following data: Name of soldier, parents' name, date of joining, whether by enlistment or under the M. S. Act, if killed in action, wounded or gassed, date and battle, number of battalion, residence when joining; has he received any special decoration, if so, what; served in what force—infantry, artillery, navy or aviation.
